3 A bowl is prepared for the sealing of the house and the wife and the children of Dinni, son of Ishpardarmid, that the Terrifer (frail) and evil dreams may depart from him. The bowl is made of clay and has been baked in the sun and is of a red color. It has a hole in it which was established by Rab Joshua bar Peraylah, who wrote against them—a ban against all Demons and Devils and Satans and Liliths and curses which are in the house of Dinni, son of Ishpardarmid. Again: he wrote against them a ban which is for all time, in the name of Aran, Aron, written in the name of 7 place, &c., the name a scroll within a scroll. Through which are written human and earth and the mountains; and through which the heights are raised (lifited) up; and through which are fettered the magician, Demons and Devils and Satan's and Liliths and curses; and through which he passes over from this world and climbed above you to the height (of heaven) and learned all counter-charms for hurt and for good, forth from the house of Dinni, son of Ishpardarmid, and from everything that belongs to him. I have dismissed you by the ban, and it is bound and sealed and countersealed and is a ban in the name of Aron, Aron, and of Yarava, Yurva, Amen. Amen, Amen, Selah.

Sealed and protected are the house and dwelling of Dinni, son of Ishpardarmid, from the Terrifier (frail) and evil Dreams and the Curse. And sealed and protected be his wife and soul from the Terrifier and evil Dreams and Curses and Vows and Yellings.

This inscription has been selected because it contains the name of the famous Joshua bar Peraylah who was so important a figure in the time of John Hyrcanus at the end of the 2nd cent. B.C. He was the teacher and friend of R. Simeon b. Sheṭah, whose dealings with the witches of Ashkelon are mentioned below. In the apocryphal stories about Jesus a noteworthy part is assigned to this Joshua b. Peraylah, who had fled to Egypt, where he was believed to have learned the art both of working and of combating magic.

The Jērus. Talm. (Sanh. vii. 19, 10, col. 325) tells a curious legend concerning this same R. Joshua, who is made the contemporary of R. Eleazar. He came to a place where they found a young man whose manhood had been taken away by a witch. R. Joshua wrote the words on the table, and they appeared: and when the young man got up, out of the midst a woman with dishevelled hair suddenly appeared—the witch. R. Joshua seized her and ordered her to drink the potion, but she drank, and the young man was restored and was allowed to divulge her name. She then answered that she could not undo the spell, because the things had been done by Solomon. R. Joshua then ordered the angel of the sea to throw them up, and thus the young man was restored to health, and later because the father of R. Joshua, b. Béthah, was a seer.

In the light of the Babylonian bowls, it is not improbable that this is a story of Joshua b. Peraylah, but, as nothing was known of his magical powers, it was transferred later to another Rabbi also named Jērus. b. Sheṭah.

The Rabbis had no doubt as to the origin of witchcraft: it came from Egypt. According to Kaddishin, 490, ten measures of witchcraft have come down into the world, nine of which have gone to Egypt, while one has spread throughout the rest of the world. The Talmud names one or two witches who are said to have practised in Jerusalem, among them being Yōnā, the daughter of R. Ethī (Sēd. 22b), famous as a witch affecting child-birth.

One day, whilst she was assisting a woman in a travail, a neighbour came into her house. Hearing a noise in a vessel like that of a child in the womb, she lifted the cover and saw that it had ceased, and the woman was easily delivered. Hence it was recognized that Yōnā was a witch. Evidence of the same origin is the word witchcraft and the fact that, if put to the proper test, it vanishes—i.e., is seen in the Talmudic story of Zērāf. She was said to be the first witch in the world, and to have had the power of controlling the spirits of the dead.

He bought an ass in Alexandria, but, when he attempted to cross the river on it, it turned into a plume and then instantly touched the stream, for no witchcraft can withstand running water. All who saw him laughed at his discomfiture, but he recovered the money which he had paid for the ass. Another Rabbi, Jamāi, being offered a drink of water, poured some of the liquid on the ground, whereupon the rest turned into scorpions. He then compelled the witch to drink and she was transformed into a woman—this given by R. Jonathan. R. Jonathan, recognizing her, broke the spell, and the Rabbi was then seen to have the witch for his steed (Sanh. 676).

As soon as magical operations came to be regarded as diabolical, the extraordinary power of the world's greatest magicians was noted. Theatres or temple, to which stood one of the foremost opponents of magic being R. Simeon b. Sheṭah, who lived in the time of King Jattan and Queen Alexander (1st cent. B.C.). He went to Ashkelon, where, with the assistance of eightyjudges, he caught eighty witches actually practising their magical arts, and he hanged them all in one day.
And they are called "the princes of bêliûm." Take bêliûm and write upon it with olive oil 1 'Asouz (nori) & Azouz; 2 and take a boy seven in the middle of the night, and put the bêliûm into his hand and put the boy between thy knees so that his car shall be against thy mouth and you shall turn your face towards his car: "Amãg, I adjure thee in the name of the Lord God, God of Truth, God, Keeper of the hosts, Aphi, Aphi, 3 that thou shalt send from thee three angels. And the boy should stand upon the top of the thumb to the end of the finger: and put the bêliûm into his hand in the pointed place and seal his hand; and you shall sit upon the ground, whereby she lost her magical power, the reason given for this procedure being that no harm could befall a witch as long as she stood on the earth.

It was, however, found necessary to bring some order into the chaos of magic, for the Rabbis could not transgress a clear prescription of the Bible, and a sin which was punished with death could not be passed over lightly. Other than the ground, whereby she lost her magical power, the reason given for this procedure being that no harm could befall a witch as long as she stood on the earth.

MAGII (Jewish)

The details are of much interest, for they show a complete continuity of practice from that day onward. The woman procured food and drink in a miraculous manner, and in the midst of their feast did not disdain to invite the Rabbi's pupils to share in their banquet. Each of the young men then took one of the bottles, and when he drank from it, a light appeared over the ground, whereby she lost her magical power, the reason given for this procedure being that no harm could befall a witch as long as she stood on the earth.

scribed in an anonymous chapbook, between a bishop magician and a red Jew, who had come from beyond the waters of the mysterious river Sambatu, for upon the issue of the struggle depended the life of the Jewish communities in Germany. To this very day the Jews in Syria perform such magical operations as fumigation, libations, and offerings of oil, bread, and lighted candles, which are put in the four corners of an empty house to precipitate the šédékin before the people venture to enter the dwelling and make the proper dedication. Gradually, however, the belief in the šédékin is waning, and the literature of practical ḫalalátah is slowly but steadily being discarded. Indeed, much of Jewish life to-day is, in reality, little more than a concession to ignorance. When a Rabbi was asked why the aid of a magician may be invoked in case of serious illness, he replied, according to Joseph Karo (commentary on Tūr, Yoreh Deyyōv), "We no longer invoke him, except in cases of extreme need." LITERATURE.—In addition to the books mentioned in the text see the Literature at Arta, Charms and Amulets (Jewish), Divination (Jewish), and Birkot (Jewish). M. Gaster.

MAGIC (Slavic).—The Slavic countries are a peculiarly rich field for the study of folk-lore, as they were not Christianized until the 10th cent., remained isolated from Western influences, and have conserved their written traditions.

On the vast uplands of the northern steppes man's relations to nature were characteristic. The Greeks, in their narrow, diversified, hilly country, developed a corresponding mythology, varied and beautiful; the modern Western European, a city-dweller, turns to nature in a romantic manner, semi-religiously idolizing what is to him unwonted and freak. But to the Slav peasant nature was business, his everyday surrounding, people which he never asked why they continued to believe in the harm done by demons, and in magical operations intended to propitiate them and to obtain relief and safety. It is merely a temporary comfort to those who are loath to give up old beliefs which are considered as vain imaginations.

The Norsemen and the Greeks created mythologies out of natural phenomena, the Slav, in the dreary monotony of his plains, fell into neither the deep religious enjoyment of the Mediterranean—nor the bright imagery of the Greeks; he simply saw that the sun ripened and the sun scorched; that the earth was moist and fertile or parched and frozen; that he was envied by unknown powers to be obeyed or to be subdued; he addressed prayers and incantations to them in a prose, almost rationalist, attitude of mind, without adoration, with merely a recognition of inevitable dependence. His spells and invocations (the bastard descendants of heathenism) are unformed science, but good rationalism. A. N. Rambaud says that the primitive Slavs adored matter and never felt the incentive to personify, idealize, or philosophize it; perhaps it was a mere acceptance of necessity.

The Pomeranian Slavs, the only Slavs who had access to the sea, had a very elaborate ritual, and worshipped many-headed images in temples, not in groves, like the other Slavs. Their greatest oracles and pilgrimages were in the Isle of Rügen; these pagan shrines were destroyed by Valdemar I. of Denmark in 1168.

The recollection of this sacred island has strongly influenced Slav myth and magic. The word Rügen is derived from the same root as the English rough, and is called in Early Russian Ruyan. Now the word Bayan comes from a miscellaneous root, and looks like a transliteration of the Teutonic name Rügen; and it is thus a safe and probable theory to identify the fabulous island of Bayan with the historical shrine of Rügen—all the more so as the mysterious stone Nalyyr is thought perhaps to mark number, which was an article of Baltic commerce.

When Christianity had effaced the old Slavic nature-gods, the need for which they stood still remained—that of dealing with nature, conquering and dominating her, and mastering her secrets. Fragments of the old ritual, degenerating into incomprehensible patter, continued to be used at the old sacred haunts, but these incantations were clandestine; though the beings invoked were believed in, they were considered illicit or hellish; heathendom had changed into magic.

Every village had its magician or witch-doctor. These practitioners certainly possessed great knowledge of healing, as healers and masons; but, where all nature consists of discontinuous miracles, such curés had to be accompanied with the ritual that was calculated to conciliate the powers and convince the patient.

The Russian sorcerer lived alone; he had learnt the magic formulae, and had been instructed by the wood-sprites (těšil), the goblin of the hearth (domojev), the fairies of the fields and the water (pelėvja, vodnyjev). Such practitioners are known by many names—e.g., Enaktauer, holstygur, kihol, mikołaj, polvan, vodnyjev, etc.; the women-witches are called vedina; and to them more extraordinary powers are attributed. These magicians hand down their wisdom to their youngest children—a custom signifying that this magical knowledge was derived from non-Aryan peoples, and taken over by the Aryan conquerors.

It is said that the znakhar has physical marks—a troubled eye, a grey complexion—that he suffers, has a hoarse voice, and so on. Unless he communicates once a year, earth will not receive his body, and then he wanders after death as a vampire, sucking others' blood. Witches are credited with the power of flying, and are supposed to have wings or claws instead of hands; and a spotted skin. They are said to forget in the gusts and whirls of snow at cross-roads; a pious man should cross himself when he comes upon such swirling columns, for in them the witches manifest themselves. If a kavarnia saw the bright imagery of the Greeks; he simply saw that the sun ripened and the sun scorched; that the earth was moist and fertile or parched and frozen; that he was envied by unknown powers to be obeyed or to be subdued; he addressed prayers and incantations to them in a prose, almost rationalist, attitude of mind, without adoration, with merely a recognition of inevitable dependence. smile with thy invisible might the hostile weapons. If they shall shoot from their guns, may their bullets not hit, but strike the moist earth, the open field. May I be whole and miniplured in so much water as I shall wish, and my head shall shine with the moon, not fiercer than armour. I close my eye with a lock, and I hurl the key into the flames, on the burning stone Alatý. And, as if it were the sea to dry, as the stone may not be seen, the keys not be reached, so may I not be hit by bullets for all my will.

A charm against fever runs as follows:

"On the Mountains of Athos there is an oak, and under the oak there is a spring with the Sage Pafniiti. To them there are twelve maidens, fair, with simple trusses, and simple belts. And the Sage Pafniiti with the thirteen sages says: 'Who are those who come to my garden?' And the twelve maidens say: 'We are the daughters of King Herod, we journey across the sea, against the sins and torture the body.' And the Sage Pafniiti spoke to his sages: 'Break off three rods, and we will beat them on for three days and three gleanings.' The twelve maidens bestowed the thirteen sages with the Sage Pafniiti; but in vain. And the sages became begging them, saying: 'Half, ye twelve maidens! Be ye turned into water-sprites, and weakened, and live in the chilled water; nor enter the world, nor afflict bones, nor torture bodies.' The maidens fled into the cold water as water-sprites, etc.

These charms contain weird mixtures of legend: beyond the sea of Khvalynsk (probably the Baltic), on the isle of Buyán, on the mystic stone Alatý, or on the sacred oak magical maiden sits; or there is a mighty sword, a man with a huge bow, a giant, or a woman, or a castle with seven locked gates. In fact, the epic portion of the incantations is a medley of all the ancient myths, the one common feature being the locality of the island, and, occasionally, distinct recollections of the Ritual practised at Rügen by the Pomeranian Slavs in the 12th century. These incantations also contain, as necessary parts, an invocation in which the 'serving of God,' the supplicant, states his request, and a conclusion, such as 'my word is sealed' and the like. And in the course of these, it were, and assert the mastery over nature ensured by the spell.

Incantations must be pronounced in the traditional manner and at the right time and spot—e.g., on midsummer's day, facing east, on the threshold, etc., during the offices at church (to contrive murder, a candle should be held upside down during the hearing of Mass). The professional enchanter expresses his desires forcibly and effectually to the natural powers whom he has under his sway, by means of formulae which are a farrago of ancient Finnish magic, Aryan folklore, and Christian apocalypse. The incantations contain words of action, such as 'I stand up,' 'I was born,' 'I shall offer sacrifice,' 'I am surrounded with the sun' and the expression creates an illusion of the reality of the action.

Among the incantations against toothache, one invokes the dawn-goddess to cover the aching teeth with her veil against the attacks of the fiend Limar; the epic part goes on:

"In the field there is a hare, in the sea there is a stone, in the depths there is Limar."

Another invokes the horned moon to ease the affliction. A third invokes, literally in the same breath, the Chris-tian saints Martha, Mary, and Pogaleas, and the water-demon. A fourth runs as follows:

"I go neither on the road nor on the street, but on empty lanes by copes and canals. I meet a hare. Here, where are your teeth? Give me yours, take mine. I go neither on a road nor on the dark forest, to be dark forest, to be a grey wood, I meet a devil, a wolf, a devil, where are your teeth? I will give you mine, give me yours. I go neither on earth nor on water, but on ends and means, the Bow-pudding, I meet an old woman, where are your teeth? Take out your wolf-like teeth, take out my falling teeth."

By its incantation to stay the flow of blood the znakobar squeezes the wound and recites three times in a breath:

"In the Ocean, on the Isle of Buyán a fair maiden was weaving silk; she did not leave off weaving silk; the Moon ceased flowing.

Again, in another formula, the Holy Virgin is depicted, like Svantovit, one of the principal gods worshipped at Rügen by the Pomeranian Slavs, or St. George, as riding across the golden bridge on her horse—a unmistakable reminiscence of the chariot of the sun on the rainbow.

There are charms to dull men to sleep, and these sometimes invoke mysterious beings—Kriks, Plaks, and Sękotuna—as well as the dawn, coupled with the names of Christian saints.

To save a man from drunkenness a worm is taken out of the belly of the earth, and then steeped anew in wine, whilst this formula is recited:

"Lord of the sea-depths! Carry the mettle some heart of thy servant out of the shifting sands, the burning stones; breed in him a winged brood."

The following examples illustrate the lyrical quality occasionally found in these strange compositions, especially in some of the spring invocations:

"Then, Heaven, nearest, then, Heaven, seest what I wish to accomplish on the body of the servant X. (There follow four words unintelligible. An unintelligible pat is sometimes found, which looks very like a tradition of a lost language.) Then Moon, turn away the servant of the little Sun, bring peace to the servant of God from wine. Ye bright stars, do ye assemble in the wedding-cup? But in my cup be there water from the mountains-still, dry, do ye mean X, the servant of God, from wine. My word is potent."

"Then bright Moon, come into my net! But in my net there is neither bottom nor cover! Then generous Sun, approach my door, my courtyard, but in my courtyard there are neither men nor beasts."

The field of Slav magic is too vast and intricate for adequate treatment in these few words. The varied superstitions have been voluminously compiled by Sakharov and his generation; but it should be particularly noted that there are extant songs of witches in a meaningless gibberish, which some philologist might very possibly interpret and so assign definitively some origin to part of the magic ritual, at any rate, of Russia.

In the 18th century, Russian magic became specifically demonological. An infernal hierarchy was foisted upon it with anti-ecclesiastical ritual. These late charms impress the reader as being identically artificial, like the initiatory ballads of the same period; in form they copy the mediaval spells.

Summary.—The history and decline of Russian magic, it would appear, traced the following course. The primitive vague and inchoate nature-worship of the Slav was in the clouds, deflected by the subject races of the Finns, Cuts, and other Tatarian races, who became typical magicians and had mystic powers ascribed to them. The elaborate ritual of the Pomeranian Slavs originated in a greater intermixture of races and, when suppressed, was soon forgotten; but it lingered on in tradition and folk-lore, in the incomprehensible patter of the spells, and especially in the legend of the isle of Buyán and the stone Alatý.

As Christianity spread, the ancient gods of thunder, spring, and prophecy, the sun and moon, etc., were duly canonized, whilst the pagan soul and the pagan adoration of nature remained the same, and the festivals were held, often on the same day in the same place, and with similar ceremonies.

In the second medieval stage, merged in and with the incantation are village science and medicine, village poetry, and primitive religious lore. The specialization of the medicine-man, the healer, the priest, and the minstrel came with advancing civilization, the herbalist degenerating into the magician and enchanter. Post-medievally, a formal demonology arose, a positive anti-Christianity, artificial, sporadic, and short-lived.

L. A. MAGNUS.

MAGIC (Teutonic).—In all ages and in all localities the belief in magic is found to have sprung from the same roots: panvitalism, i.e. the conception of nature as alive in every part; the incapacity of primitive man to distinguish persons or things from their names or representations; the belief in the transmissibility of the powers of nature and of human souls; and the dread of souls or demons, as also of such hostile persons as were in league with these supernatural existences. We need not wonder, therefore, if the means by which the various peoples of the earth have sought to defend themselves from all sinister influences of the kind should likewise show a large degree of uniformity. Naturally the most effective mode of securing immunity from the magical influence was to be careful to disavow it, or, if possible, by a magic still more potent. From the earliest times the amulet and the spell have been specially resorted to as protective expedients.

While the former, however, was employed exclusively as a magical formula, the latter was used in the practice of other kinds of the occult art, whether its design was beneficent or the reverse.

With reference to the ideas and customs associated with the belief in magic, there is no exception to the general rule. Among them, as among other races, are found the belief in the soul and the various forms of superstition developed from and dependent upon it. The souls of the departed were believed to pervade and animate all nature; they could assume at will human or animal forms, and bring good or evil fortune to men. From the soul of the sorcerer came the powers of the witch whose devices could work injury to his enemies. The latter were mostly of many of the nature-demons, whose place of origin was the physical world, regarded as being endowed with magical powers. Among the Germans, likewise, the practices of soulsaying and magic were intimately connected. The prophetic faculty was attributed to women as well as men. In the north of Europe the Völfin had a great reputation as prophetesses and sorceresses. The practice of magic was on the whole more fully developed among the Northern Teutons than in Germany, being fostered in the former case by the shamanism of the neighbouring Finns, a people famous over the whole north for their magic. The most powerful and formidable sorcerer of all the Norse sagas belong, for the most part, to the Finnish race, which, again, in its religion, its demonology, and its magic, is very closely allied to the ancient German peoples. It is possible that many elements in the magic and demonology of the Northern Teutons were borrowed from the Finns. At all events, the practice of resorting to the latter people in order to acquire their magical arts became so prevalent that at a later time the Christian Church found it necessary to enact laws prohibiting it. But this was not the only channel by which the Teutons became acquainted with the magical ideas and usages of foreign, and especially of the Roman, Greek, and Oriental, peoples. The Northern Teutons visited the Mediterranean Sea both as Vikings and as peaceful merchants, while the Southern Teutons were the near neighbours of the Romans, and were sometimes in their pay as mercenaries. In point of fact, however, the occult art and its adepts are found among the Teutons from the outset. Here, just as on Greek and Roman soil, the idea prevailed that it was possible to work changes in the condition of objects simply by the magical virtue of the spoken word, incantation or of the symbol. The magic utterance and the magic rune—the engraved talismanic symbol—were used for the most varied purposes. According to the nature of the ends they pursued, and their origin to Odin, while the rune-master of the Hávamál knows the right method of engraving the characters, as well as the songs which effect cure, restrain enemies, render weapons harmless, quench fires, subdue winds and waves, call up the dead, and awaken a maiden's love, though the words of the songs are not given. Other magic songs are referred to in the Sigrdrifumál. That a similar profusion of magic songs was to be found among the Southern Teutons is shown by the Hénelot de sacrelogique, which came into existence in the Southern Frankish Kingdom under the Merovingians. Alas in the North and in the South these songs were in great part employed as expedients to cure the sick and to assuage the pains of love, but it is to be wondered at when we remember that disease itself was regarded as due to demons and malefic magic. Magic alone, in fact, could undo the work of magic.

Now, the articles exclusively employed for the purpose of influencing the magical properties of things were amulets and figurines. There was not the slightest misgiving as to the efficacy of the appropriate amulet. Discoveries in tombs furnish ample information on this subject. The objects specially in request as amulets among the Teutons. Thus, for the protection of the dead, blemurites, amber rings, stone arrow-heads, and hook crosses were laid in the grave along with the body. Amulets were also fashioned out of all kinds of objects bearing figures and drawings, while a special vogue was enjoyed by the so-called bracteates, which were imitated from Roman coins, and brought to the North in the early centuries of our era. These were metal images of gods which served as amulets likewise date from the period of Roman influence.

When the missionaries of the Roman Church introduced the Christian religion among the Teutonic tribes, they met with the same resistance as had previously prevailed in pagan Rome and its provinces. Accordingly, they sought to apply the same procedure as had been previously resorted to, i.e., they incorporated the deities of the pagan Teutons into the system of demons whose existence the Church recognized, while they forbade all worship of them, as also the practice of magic in general, and inflicted severe penalties upon the disobedient. From the early centuries of the Church's history, we find reports extending from the 8th to the 13th, of the eradicating the objects specially in request as amulets among the Teutons. Thus, for the protection of the dead, blemurites, amber rings, stone arrow-heads, and hook crosses were laid in the grave along with the body. Amulets were also fashioned out of all kinds of objects bearing figures and drawings, while a special vogue was enjoyed by the so-called bracteates, which were imitated from Roman coins, and brought to the North in the early centuries of our era. superstitions—a peculiar place is occupied by those of the Anglo-Saxons, as the Frankish regulations are in great measure verbally dependent upon them. They warn against 'divinationes, 'auguria, 'somnia, 'mathematici, 'emissores temperamentum, and especially against 'divinationes diabolicae, 'Bacteria, 'and 'ligatures.' As yet excommunication was the extreme penalty for transgression. The Venerable Bede (HE iv. 27) relates that, during a time of pestilence and high mortality, recourse was had to adjurations and spells. The abbot Regino of Prüm has incorporated an entire series of the decrees of councils dealing with the subject in his work de Synodalibus Canis (A.D. 906; PL cxxii. 157 ff.), and from that work much has been borrowed by Burford of Worms, who wrote about the beginning of the 11th century (PL excl. 557 ff.).

That similar ideas and usages were still flourishing in England at this period is shown by Efric's Passio S. Bartholomaei Apostoli, with its injunction that no one shall seek to regain health by using a ligature of medicinal herbs or praising a herb in a 'magic song.' The ecclesiastical ordinances of Eadgar and the Northumbrian priests-laws regulate regulations to the same extent. Among the Northern Teutonic likewise canon law directed its mandates against superstition and magic.

Till well on in the 16th cent. synods and councils of the Church were constantly under the necessity of dealing with the offenses and amulets and the evils arising from them. Thus can. 9 of a papal bull enacts for the Lateran Council of 1514 that sortilgia made by invoking demons, by incantations, or by other superstitions practices are unlawful, and that such offenses as had been punished by the discretion of their superiors, and laymen are to be excommunicated or visited with civil penalties.

In dealing with such offenses, the national codes of the various Teutonic peoples do not show the same unanimity as the Church. The Teutonic nations that came into existence on Roman territory found it necessary to base their legislation against magic directly upon the ordinances of Roman law. The earliest Teutonic code, the Lex Visigothorum, enacted (bk vi. tit. 2, 4) that those who 'quinbusdam incantationibus' bring hailstorms upon the fields and the vineyards 'dextemeri flagelli publici verbenerut et decalvati deformiter deceper convivias possessiones circulate cogantur inuria.' As late as 1700, it was still prohibited the belief in cannibal witches. Among the Germans, as among all other races, the feeling prevailed that one who practised malefic magic must at all costs be got rid of, whether by expulsion from the tribe or by death. But, on the other hand, we have a variety of testimony from Northern Europe which seems to show that the practice of magic was not in all circumstances deemed criminal.

In the civil law of the Anglo-Saxons, from the 7th cent. onwards, we find penal enactments against superstition and magic, and in particular against the employment of spells and amulets. The laws of Alfred the Great dealing with magic are founded mainly on the Biblical denunciations of the practice. Of similar character are the legal ordinances directed against the occult art among the Northern Teutons. The older Icelandic canon law of the 12th cent. ordains that those who tamper with incantations or witchcraft shall be punished by banishment. The evil against which the enactments of the Teutonic codes were mainly directed was malefic magic (maleficium). Until the 8th cent. we find no similar enactments against other superstitions with the only exception being the belief in the witchcraft. But the belief in the existence of cannibal witches and in witches' flights was explicitly forbidden by ecclesiastical and civil legislation, though Ivo of Chartres (c. A.D. 1100) thought it possible that witches exerted some influence upon the sexual functions. The Church, however, notwithstanding all its exertions, was by no means successful in ridding men of these beliefs and practices. Both continued to flourish abundantly in the department of medicine, thanks to the recrudescence of the old neo-Platonic—in reality, the Babylono-Egyptian—doctrine of demons. At an early period medicine had become the monopoly of the cloister; the demons of disease were exorcized by the priest; and to relics, to the rosary, and to the 'Agnus Dei' were ascribed the greatest virtues. Those who in sickness and trouble applied to the priests were treated by means of the amulet and the incantation, so that as late as the 16th cent.—at a time, that is, when a medical profession in the proper sense existed—adjudgments were still resorted to by doctors.

The attitude of the Church towards the belief in magic was twofold. On the one hand, it accepted magic as an indisputable reality. On the other hand, it ranged itself with the civil legislation in an uncompromising opposition to certain dangerous superstitions, especially against popular squares and the like. An important change took place in the 16th cent., when the doctrine of Satan was now made the basis of the doctrine of magic and witchcraft. The nightly journeys of witches, the transformation of human beings into animals and amulets, the operation of witchcraft against malefic magic in the religious function—all these things were now accepted as facts not to be gainsaid. Then in the 14th cent. the two currents of heresy and witchcraft, which had hitherto been amalgamated with each other, and merged in the belief in witchcraft. While among the Teutonic tribes the practice of magic had hitherto been penalized—to speak strictly—only because of the mischief which it might work, in the 13th cent., the civil legislatures in Germany likewise resolved upon a new policy. The Old Saxon code (Sachsenreichtum) sent those who practised magic of any kind to the stake, and its example was followed by other municipal and territorial codes. In spite of the rigour of the Inquisition, it is true, the earlier penal law (which threatened with excommunication the user of incantations, amulets, or other magic devices) was still pleaded for by the councils and by certain Long-barls, even when the belief in the Inquisition at length silenced every stricture against its competence to deal with magic. By the civil legislation of the 16th cent. those who dealt in magic and soothsaying were punished mainly by fines; the death penalty was scarcely ever mooted. On the other hand, the Hamburg criminal code of 1508 enacts that the punishment of malefic magic shall be death by fire, and this clause was taken over by the Imperial legislation—the 'peinliche Gerichtsordnung Kaiser Karls v.'—while we find that the criminal code of the Electorate of Saxony (1572) sentenced witches to death by fire, and its example was followed by the legislation of the several States. The persecution of witches was gradually introduced into the various territories of Germany during the second half of the 16th cent. In England the earliest processes of this kind seem to have been trials for real or alleged attacks upon the person of the sovereign, as from the reign of Henry viii. In England, the laws against witchcraft were in general much more lenient than was commonly the case on the Continent. Witch-persecution in England dates from about the middle of the 16th cent. In Scotland cases are still rare through the second half of that century. With regard to Sweden, we are not in a position to say whether witches were burned
before or during the Thirty Years' War. These measures, however, were incapable of extirpating the belief in magic—just as the Reformation itself failed to destroy it, though the delusion certainly received a stimulus to grow from the Reformers. And the question whether sorcery has a foundation in fact, the Reformers themselves shared the ideas of their age, and the final deathblow to the belief in witchcraft and sorcery was administered by the mechanical and experimental sciences of modern times.

Even in the earliest ages a clear line of demarcation was drawn between lawful and unlawful magic. The latter was treated by all races with the utmost rigour, and not seldom punished with death. Among the Teutons, as elsewhere, incantations and amulets were utilized as a means of securing protection and profit to the individual and its belongings, and also to work injury upon others, and their possessions. The magic spells of the Teutons may therefore be arranged in two main divisions, according to the purposes that they were intended to serve: (1) magic formulae supposed to secure protection and advantage; (2) magic formulae intended to injure others. But, as the subject itself suggests, the former class may be further divided according to the effects which the spells were intended to produce. Their object might be either (a) to drive away an existent evil, or (b) to avert a possible evil by means of a 'blessing.' This dichotomy of the former main group, however, will not be found exhaustive, and it is necessary to mark off another subdivision. Magic formulae were used not only for the purpose of driving away present and averting future evils, but also as a means of inducing spirits to throw light upon the future, and upon hidden things generally. In so far as this (c) prophetic magic (as it may be called) had often to do with things which lay in the future, it came into the class of magic formulae designed to prevent possible evil. But, while the received spells can for the most part be assigned to one or other of these four genera, many particular species may be differentiated within the larger groups. The number of different varieties will in general correspond to that of the various purposes which the formulae were meant to serve.

Magic can be overcome only by counter-magic; such was at one time the universal postulate of the occult sciences. Present and future evil, occurring in words and symbols, are generally joined with actions. Thus, with reference to the Germans, Tacitus (Germ. x.) states that, when the deity was consulted by means of the lot, the priests held a magic spell in their hands, and muttering incantations the while. Sundry Anglo-Saxon spells specify the appropriate action to be performed. Thus the incantation for bewitched soil gives precise directions regarding the requisites of magical actions and sacrificial usages. For the formula against the machinations of witches the instruction runs: 'wil ffar-thce fefelfufge and seo rade netcge, Se þæm ærm inwxyz, and wegbredge: wyll in buteran; þen at the end, 'nim þonne pet se, ad on wætun.' But word and action had already been frequently employed independently of each other, and it is not surprising that the word came to be used apart from all accessories or symbolic actions. The Teutonic conviction that magical effects could be directly produced by the spoken word must doubtless have found expression in the particular form of the spell. But the simplest—and hence, no doubt, the oldest—vehicle of direct influence is the express command, and, accordingly, such must have been the nucleus of the Teutonic incantation. Two examples of Teutonic spells may be given here. The first is a formula from the 9th-10th cent., which has come down to us bearing the title 'contra vernem' (C. von Müllenhoff and W. Scherer. Denkmäler deutscher Poesie und Prosa, i. [1882] 17):

'Gang at, nesos, mid nigan nesslcolm
Ut fana themo marge an dei an,
fan themo an that berw,
Ut fan themo älle on this hold,
At fan themen is on this hold.

With this may be associated the Anglo-Saxon 'blessing of bees,' the 'wyrd yule,' from a Cambridge MS of the 11th century. After a direction regarding a magical action, and a verse explanatory thereof, it continues (G. W. M. Grein and K. F. Willecke, Bibliothek der angelsächsischen Poesie, i. [1883] 319 f.):

'Sitte ge, sigewit, siga an eorpam
tære ge wile, weon seorogan,
Beo ge swaegumdinga mid helces,
swe by花纹 genähet metes and eperes.'

It is quite conceivable that spells of this kind should exist independently, and unattached to any preliminary narrative. This has been observed also by Schroeder in his article 'Über das Spell' (ZDA xxiyi. 259):

'Probable as it is that at a certain stage of civilization the action of the gods, i.e. the spell in the proper sense, or of certain species of it, was produced in connexion with the narration of a particular event, it is a matter of fact, that the slightest doubt that in other periods the epic narrative and the magic formulae are disjointed, and may each maintain a separate existence.'

Besides these adjurations strictly so called, which were complete in themselves, and which may be regarded as the earliest Teutonic incantations, there were others which came down to us from the same age another species—that in which an epic narrative is prefixed to the formula proper.

The classical examples of this type are the two Merseburg incantations, and the Anglo-Saxon spell against the practices of the witch is constructed on similar lines. The substance of the introductory portion—the narrative—was generally borrowed from the existing mythology. The procedure was to relate some incident traditionally associated with an effect identical with or similar to that which the formula was meant to produce. It was not necessary to say in so many words that the spell should now operate with like efficacy; the bare recitation of the story invested the formula with all the potency required. But this dependence of the formula upon the narrative certainly indicates a change of view regarding the power of the formula. The performer has lost his earlier reliance on his own capacity, and this must, accordingly, be reinforced from without.

While this epic type of spell is often referred to as the primitive Teutonic form, the facts would seem to imply its secondary character, though its root may indeed lie in paganism, but in any case the recitations of the short narrative, before the actual formula is not peculiar to the Teutons—let alone the Western Teutons—this form of spell being traceable among other races and in much more remote times. It was certainly known to the Romans and their neighbours. But, as a matter of fact, there is evidence to show that it was not even a distinctively Indogermanic usage, since it is found also among the Babylonians and the Egyptians. An Egyptian papyrus of the XXth dynasty (now in Turin), for instance, contains a spell which in its whole design shows a striking resemblance to the Merseburg incantation for fracture of the leg. In the Babylonian and Egyptian spells, too, precisely as in the Teutonic, the scene of the narrative part is always laid in the upper world. But, in view of the vast influence exercised by the Oriental, and especially the Babylonian and Egyptian, magical ideas upon the nations of the West, it is a tempting conjecture that Oriental models may have been largely instrumental in popularizing this narrative spell among the Indogermanic peoples of Europe—first of all in the Greek and Roman area, and then derivatively in the Teutonic. At all events, the theory that the Teutons had a primitive type of spell consisting in nothing more than an incantation followed by a rhythmical formula, as adopted by Schroeder (loc. cit.), is beside the purpose. The primordial element was certainly the formula, the narrative being added later; and, as we have seen, each could.
be used by itself alone. We find, moreover, that in Christian times quite different introductions were made with regard to the spell. We must therefore think of each part as distinct in itself, and in no degree the less so because in the recitation 'saying and singing' came alternately. In all probability the spells were simply muttered in an under tone, there is a large mass of evidence—and not from Teutonic sources only—pointing to this mode of recital.

Thus the missionaries who came to evangelize the Teutonic tribes formed two types of indigenous invocations, viz., the purely imitative and the narrative. As the Church was unable to put an end to heathen customs and practices, or the use of magic formulae, it adopted the policy of assimilating everything that could in any way be reconciled with its own views, hoping that by the device of clothing the objectionable thing in a Christian garb, it might succeed in eradicating the superstitions of the heathen. It likewise endeavored to transform the ancient formulae, and here probably its first, as also its most urgent, task was to eliminate the heathen characters from the narrative spells and put Christian ones in their place. These new formulae were generally composed in verse, and were embellished with rhyme. Their use was also confined to actual situations such as Jesus, Mary, the apostles, and others, in perfectly appropriate situations—a fact which in itself conclusively shows that the spells in question originated in ecclesiastical circles. Such imitations of heathen traditions exhibited in such cases as that of the 'conscriptions,' or these were simply translated into the vernacular. This species is probably not older than the 13th century.

From this narrative species of Christian spell, again, was in part evolved a new type. This took the form of a composition by the clergy and its ritual was thus: 'As such and such a result was brought about then, so let it be produced now.' Very few of the surviving spells of this type are in metrical form; the great majority are in prose.

A further form of blessing, for the use and diffusion of which the clergy must again be regarded as mainly responsible, derives its origin from the special Roman Catholic ceremonies known as the sacramentals. New formulae were formed on the present footing, the 'exorcism' was composed by the clergy and its ritual ran thus: 'As such and such a result was brought about then, so let it be produced now.' Very few of the surviving spells of this type are in metrical form; the great majority are in prose.

Further the monks played an intermediate role. This group consists mainly of formulae handed down in ancient medical writings. The design of most of these is the cure of diseases, but adjurations for use in digging up medicinal plants were also transmitted in this way. These formulae were, of course, mostly in the Latin language. Their potency lay mainly in phrases and letters—magic words and characters largely of Eastern origin, being derived from Babylonian, Egyptian, and Sumerian magic. This group, accordingly, comprises the most ancient type of spell, which, it is to be observed, always exhibits an unintelligible jumble of words. From the earliest times, indeed, this very unintelligibility was the indispensable condition of the efficacy of the spell. From the 13th cent., however, we must take account also of another contributory source of the superstition which is concerned with words and letters—and, it may be added, numbers also. This was the relaps into the use of the Incantation, as set forth in the works of the Kabbalah (p. c.).

These leading types will suffice to classify the great majority of magic formulae, and even the hybrid, composite, and other derivative varieties which inevitably made their appearance in the course of centuries. But the prime factor in such secondary formations was doubtless oral tradition, to the action of which a large proportion of the spells would certainly be subject at some stage of their development. The learned formulae of the Church are usually of considerable length, and in their full form would have relatively little vogue among the common people. From these large spells, accordingly, certain typical portions were excerpted, and then used independently. The popular mind laid the main emphasis upon the melodies of the spell—the formula proper; and examples of this type became numerous from the 16th century. In these the strict parallelism of the earlier ecclesiastical blessings is to some extent abandoned. It was now considered sufficient to say: 'As surely as this act has taken place, so surely may this effect ensue.' Sometimes, in fact, the place of the parallel is taken by the antithesis. It became the practice, further, to draw upon still more remote quarters for the conclusion of the blessing, and to introduce formulae which in themselves had formerly done duty as spells, so that the formulae of blessing, being supplemented by invocations of God and multiplied petitions, often actually approached the character of prayer itself.

When we consider the mass of Teutonic formulae—even with their very obvious Teutonic character—still in relation to the purposes which they were meant to serve, we see that the multiplicity of forms mentioned in the Hervoua, the Sigehriffnaud, and the Homilia de medieolos, is by no means an exaggeration. These caused disease certainly constitute the largest class. Many maladies were believed to be due to malignant demons and unfriendly magicians, and were therefore combated by the magic formula. But the same means was employed in dealing with diseases about the origin of which there was no uncertainty. The remedies employed in such cases were supposed to acquire peculiar efficacy by having a spell uttered over them.

Nor was it human beings only who in their distresses were benefited by spells. As had been believed from the earliest times, protection was equally indispensable for the lower creatures most closely associated with human life, viz., the domestic animals. From this point of view magic formulae were used to ward off disease and other evils. The dog, and especially the shepherd's dog, was protected in this way from the dangers to which it was exposed from wild beasts. People were very specially careful to guard against the bite of mad dogs. A certain blessing, 'ad pullus de molo,' was supposed to help the growth of chickens. The purpose of the somewhat numerous 'bee-blessings' was to keep the insects from swarming.

There was, besides, a multitude of adjurations for animals other than the domestic. People tried to rid their houses of flies, mice, and rats by appeal to the power of the formula; wolves were adjured not to hurt the cattle in the fields; serpents, to be easily caught. The bite of the serpent was averted by spells, and by means of adjurations the reptiles were induced to yield up the potent opiate stone, and to be obedient to all commands. The tooth and the right forepaw of the badger acted as charm against all kinds of injury, and with the shoulder of a toad a man could win the love of whomever he chose.

In the therapeutics of ancient and medieval times an important place was assigned to medicinal herbs. It was of vital moment, however, that these herbs should still retain their supposed virtues after being plucked, and certain magical formulae were believed to ensure this. The practice was to adjure either the whole world of herbs,
MAGIC (Vedice).—1. Definition.—The sphere of cult and ritual has two aspects in Vedice literature—religion and magic. The former (see art. VEDIC RELIGION) represents the relation of man to the gods and lesser divine beings. Its object is to cultivate their goodwill by means of hymns as well as sacrifice, and thus to induce them to bestow in return the benefits which man desires. The essential characteristic of Vedice religion, therefore, is prophylactic and persuasive. Magic, on the other hand, endeavours to gain its ends by influencing the course of events, without the intervention of divine beings, by means of spells and ritual. Its essential character is, therefore, that of coercive, rather than of the discovery of offspring or luck, of rain or victory, it was largely maleficent in the interest of individuals and not of the community, and, therefore, as being dangerous, was condemned by the priesthood, except in so far as it was applied by themselves.

2. Literary sources.—The sphere of religion, as considered apart from magic, is chiefly represented by the earliest product of Indian literature, the Rigveda, which contains a number of spells and incantations addressed to various gods, in which their greatness and their deeds are praised and all kinds of welfare are prayed for, and which are intended to accompany the ritual of the soma sacrifice (cf. art. Hymns [Vedice] § 11). Only in the past two centuries, however, are spells connected with magic, about one half of them being auspicious, the rest maleficent in character. As to any magical rites connected with the sacrifice, the Rigveda gives us no information. On the other hand, magic is the main and essential subject-matter of the Atharvaveda (art. Hymns [Vedice] § 11); it is a collection of metrical spells, largely to be accompanied by ceremonies aiming at the welfare of the magician or the injury of his enemies. The Yajurveda (art. Hymns [Vedice] § 13) occupies an intermediate position between these two Vedas as regards magic. In its original part, which consists of prose formulae, the gods are only secondary, bearing a kind of mechanical relation to the sacrificial ceremonial with which these formulae are associated, and which in its minutest details. Its character is thus of a magical rather than a religious type. The great period, however, in this period, an intricate ritual and the concentration of sacrificial thought on its perfect performance had led to the new conception that sacrifice was not meant to propitiate the gods, but directly to control the natural course of things. The prose theological works called Brāhmānas,
which represent the next stage of Vedite literature, being concerned with explaining and interpreting the details of the ritual, supply much information regarding the magical notions and observances with which these ceremonies are charged with magical notions. The Upaniṣads, though a continuation of the Brahmans, are philosophical rather than religious, but their speculations on the nature of brahman and on the supernatural powers acquired by knowledge and asceticism are charged with magical notions.

The final phase of Vedite literature, which comes down to c. 200 B.C., is represented by the Sutras. These concise manuals, especially those dealing with domestic life (tyykg), and to a less extent those concerned with esoteric knowledge, show how the observances of everyday life were saturated with magical beliefs and practices (cf. also art. Literature [Vedic and Classical Sanskrit], 88-12).

3. Importance of the subject.—A knowledge of Vedite magic is obviously important to the investigator of magic in general, for here we have magical material, bearing on every aspect of human life, which began to be recorded well over 3000 years ago, and which, from that time onwards, has been laboriously gathered together from scattered references, as is necessary elsewhere. It is here supplied not only in good quantity, but for the most part in an easily accessible collected form. Its aid is, moreover, essential to the student of Indian religion: without it he would be unable to make any serious progress in the study of the Vedic ritual.

4. Sacrifice and magic.—Considering that in the Rigveda we have a collection of prayers, and in the Atharvaveda one of spells, are we justified in supposing that the spheres of religion and of magic were already separated in the Vedic period? By no means. It is, indeed, certain that the sacrificial invocation had by that time assumed a literary type, and that the hymns of a magical character formed a part of the Rigveda and later. But it must, however, be borne in mind that the prayers of the Rigveda, being addressed to the great gods, offered few opportunities for references to magical practices, while the ritual which the hymns of the Rigveda were intended to accompany, and which is fully described in other Vedic texts, is, though handed down by the sacrificial priests, from beginning to end saturated with magical observances. Again, where there is a group of ceremonies directed to the accomplishment of a particular purpose, as the fire-altar, it is therefore, favourable to a greater prominence of the magical elements, such as the wedding and funeral rites, we meet with quite a network of magical usages bearing the stamp of extreme antiquity. It is thus impossible to suppose that the sacrificial priests of the Rigveda, the composers of the old hymns, should have occupied an isolated position, untouched by magical practices derived from a much earlier age and afterwards continued throughout the priestly literature of later times. In fact, a close examination of the hymns of the Rigveda actually affords evidence that even then the belief in magical power independent of the gods was to be found. Thus in one hymn (X. xcviii.) the sacrificer (Agni) declares to the gods: "I pour down the waters by the magical powers of my sacrificial art: the sage Devapati sat down to the duty of Hotr priest, familiar with the goodwill of the gods; he then poured down from the sea above to the sea below the heavenly waters of rain" (V. v). Every page of the Brāhmaṇas and of the ritual Sutras shows that the whole of the Vedic ritual was overgrown with the notion that the sacrifice exercised power over gods and, going beyond them, could directly influence things and events without their intervention. An inceptive form of this belief is already in existence in the Rigveda, where exaggerated sacrificial powers are in several passages mystically attributed to ancient priests; e.g., "with mighty spells the Fathers found the hidden light and produced the dawn" (VII. lxxvi. 4); the Fathers adore law (etherial fires) and stand on steed with pearls; they placed darkness in night and light in day" (X. lxxvii. 11); "with their kindled fire the Angirases (ancient priests) found the cows and steeds hidden by (the demon) Pāu" (X. lxxxi. 4); "they by their rite caused the sun to mount the sky" (X. xlv. 3); "the ancient fire priest" Atharvan by sacrifices first prepared the paths; then the sun, the guardian of ordinances, was born" (X. lxxxi. 5).

The ancient priest Visāvānta, by directly invoking the rivers, made them burn with the fire of the gods; and the Lhotaras (III. xxxii. 1-12). The composers of all such passages must have attributed to the sacrifice in their own day the powers which they thus projected into the past.

An examination of the ritual literature shows that the dividing line between a sacrificial act, which is meant to propitiate the gods, and a magical act, which is intended to control the course of things, is by no means always definite, but that the two are often intermingled. For the morning sacrifice at sunrise, of which we read in the Rigveda (e.g., IV. ii. 7), when the fire is kindled and an offering is made to the fire-god, in the Satyaputra Brāhmaṇa (II. iii. i. 8) assumes a magical character, the fire being kindled to produce sunrise; "By offering before sunrise he (the sacrificer) makes him (the sun) to be born; he would not rise, if he were not to sacrifice in it (the fire)." A similar view seems already to be expressed in a verse of the Rigveda: "Let us kindle thee, O Agni, that thy wondrous brand may shine in heaven" (V. vi. 4). Again, there are several passages in the Rigveda (e.g., IX. xlix. 1, xvii. 9, xvi. 9.1) in which the Soma ritual is spoken of in the magical character of producing sun and light, influencing the goodwill of the gods that shed rain.

The blending of a sacrificial and a magical rite may be of two kinds. A ceremony which is primarily sacrificial may assume a magical character by the nature of the object which is offered for the attainment of a special purpose.

There can be little doubt that only food eaten by man originally constituted the sacrifice offered to the gods in fire. On the Vedic sacrificial ground there was, by the side of the fire, the litter of grass (barahas) on which the gods were conceived as sitting to receive the offering. On the conclusion of the ceremony the baraha was thrown into the fire, originally, no doubt, to render it innocuous after, by the divine presence, it had become dangerous to profane contact. To the baraha corresponds, in the ancient Persian ritual, the bareman (a bundle of twigs; see art. Bareman) on which the tripod was placed, and which was the seat of the gods. This indicates that the oblation in fire was an Indo-Aryan innovation, and that the burning of the baraha not improbably formed the transition to the fire-sacrifice.

The ritual literature furnishes innumerable examples of sacrifice receiving a magical turn by the employment or addition of a non-catable substance; as when a man wishing for cattle offers the dung of a couple of calves (Gobhiya Gṛhyasūtra, IX. ix. 131); or when poison is added to an offering in order to destroy ants (Kusiśa Sūtra, cxvii. 1). On the other hand, objects with the intention of appealing to the gods for rain, but then himself brings down the waters by the magical powers of his sacrificial art: the sage Devapati sat down to the
bathing of injurious substances would become a sacred action, which might be offered, in order to destroy an enemy (ib. xlvi. 41). In this way the sacrifice came to assume the rôle of driving away demons; of helping a woman to overcome her rivals; of enabling a prince to conquer his enemies; and turn from evil spells and other kinds of prodigies; and many other magical results. The gradual mixture of the religious and the magical in the direction of the latter led the whole system of sacrifice to assume this character in the later Vedic period.

5. Predominantly magical ritual.—There are several groups of rites which, though belonging to the sphere of sacrifice, are predominantly magical in character. They are partly connected with family and partly with public life. The most important of these are:

1. The wedding ceremony. —What little worship of the gods is found in this group of rites is almost restricted to the cult of Agni, the divine host, who was constituted a witness of the marriage, and who, in the form of the domestic fire, was supposed to save the marriage from the evil influence of the evil powers. The ceremony was surrounded by magical acts, of which the following were the principal. The bride’s hand was grasped by the bridal cord, which was the religious thread that the bride was to become a master of. She stepped on a stone to acquire firmness. She took seven steps with him in order to establish friendship. She ate the sacrificial cake, and was thus charged with the maintenance of her husband. When she reached her husband’s house, she sat down on a red bull’s hide, and was covered with a tigress-skin. The son of a woman who had borne only living male children was placed on her lap in order to fulfil the hope of healthy male progeny. Later, during pregnancy, a medicinal powder was placed in her nose to secure the birth of a son.

2. Initiation.—Of the various religious ceremonies which were performed during boyhood, and which display the same predominantly magical character, the chief was that of initiation (aparajana). This, though not mentioned in the Rigveda, goes back to pre-historic times, as is shown by the parallel Svetish ceremony, and is the Vedic transformation of a rite by which, on the attainment of puberty, a boy was received into the community of men. In India it was regarded as a second birth, as being the entrance into a new life, when the boy was introduced to a religious teacher with a view to Vedic study. The outward signs of the initiation are the garble, which is wound round the body, the sweets and the sacred smear, worn over the left shoulder and under the right arm, with which the sacred thread is fastened. The ceremony included a number of observances and involved a number of taboos in regard to food, some of which will be mentioned below (see also Vedic Ritu, § 6, and cf. Varuṇa (Hindu) Ritu).

3. Public rites. —The public ceremonies of Vedic times were performed on behalf not of the clan or tribe as such, but of an individual, who in these cases was the king. The most prominent of them, aiming at the attainment of certain definite purposes, are magical in their main elements. At the royal consecration (abhiseka) (g) the king sits on a throne made of wood from the udāmbha tree, which to the Indian was the embodiment of all nourishment. The seat was covered with a tiger-skin, the emblem of invincible strength. The contents of a cup made of udāmbha wood, filled with butter, honey, and rice, were poured over the king in order to communicate to him strength and abundance. The royal inauguration (vajapeya) is a series of rites, obviating a symbolic character (cf. a. 64) intended to ensure a successful reign. A still more imposing ceremony was the Vajapeya, the two main features of which, a conventional race and another symbolic observance, have a magical purpose (a. 64; cf. further, art. Abhiseka). Finally, the horse sacrifice (devapāca, g.) was the highest sacrifice and an expression of regal power, which was undertaken for the fulfilment of all the most ambitious wishes of the king, of which the same rite transferred the swift might of the horse to the sacrificing monarch.

6. Priest and magician.—The magician of pre-Vedic ages, who manipulated only the lower ritual concerned with demons and natural forces, had long since, before the time of the Aryan period, or even in the Indo-European period developed into the priest, who dealt with a higher cult in which he invoked and sacrificed to gods. In the later Vedic period, however, the priest to a considerable extent reverting to the rôle of a magician; for he now constantly appears, independently of the gods, driving away evil spirits or influencing the powers of nature by the use of spells, and to some extent the lesser rites the priest acts quite in the style of prehistoric times. Thus he makes the bride step on a stone to ensure steadfastness; he causes fish to be eaten for the attainment of speed; he pronounces a spell that it may actually rain—here he is not a servant of the gods, but a magician. Yet even in the earliest period, that of the Rigveda, the sacrificer priest was a magician as well (though by no means necessarily the only magician, for both here and later references are made to sorcerers whose magic is directed against the sacrificial priest). It cannot be supposed that even the most advanced minds among the priests regarded prayer and sacrifice as the only means of securing welfare, while rejecting magic as an ineffectual and reprehensible superstition. Magic was still to some extent used by those who had occasion to apply it, as is apparent from the character of some hymns of the Rigveda which, although late, form part of its canonical text, and not yet rejected. But not every form of magic was approved nor the practice of magic as a profession, doubtless because alliance with evil spirits and the use of maleficent magic were liable to injure the community. This is sufficiently clear from a number of passages of the Rigveda: ‘May I die to-day if I am a sorcerer (yatubbhāna), or if I have harassed any man’s life; then may he lose his ten sons who falsely calls me “sorcerer”; he who calls me, that man no sorcerer is; for to this end only the demon, says that he is pure, may Indra strike him with his mighty weapon, may he sink down below every creature’ (VII. civ. 15.). It was because the Atharvaveda contained a body of maleficent spells that it did not attain to canonical recognition till after it had become associated with the sacrificial cult by the addition to its text of numerous hymns borrowed from the Rigveda. On the other hand, in the Atharvaveda itself (e.g., v. viii., vii. ixx.) magic is expressly approved when directed against the sacrifice offered by an enemy; and the ritual texts are full of directions for the sacrificer who wishes to destroy his enemy, in particular, when he desires to give his sacrifice a magical turn for the purpose of accomplishing this. The post-Vedic Code of Manu even contains the express statement (xi. 33) that the magic spells of the Atharvaveda are the Brahman’s weapon, which he may use without hesitation against his foes. In the Upanishads the magician-priest has become a philosopher who has passed from the path of ritual (karmas) to that of knowledge (jñāna); but his mode of thought is still full of traits derived not only from sacrificial, but from magic lore. In such a nature is his success in the world-soul (brahman (g. r.) and of the identity with it of the individual soul (ātmāna (g. r.)), as well as his speculations on the sacred syllable om (analogous in sense to ‘amen’). Such, then, is the development of the karmas (g. r.) as an impersonal power which, free from any divine influence, rules future existences with inexorable force. The same mental attitude is indicated by his approval of the grotesque and forcible exercises which the sages called the desired result (ahara), and which the magician transferred the swift might of the horse to the sacrificing monarch.

7. Ascetism and magic.—There is evidence that from the earliest Vedic period ascetic prac-
ties (tapas, iat. thana), primarily exposure to heat, but including other forms of self-mortification, such as fasting, abstinence, and silence, were regarded as a means of attaining various supernatural powers resulting from the ecstatic condition induced by them. Thus the Rigveda says (XII. xvi. 2) of those who are in such a frenzied condition that "the gods have entered into them." A poet of the same Veda tells (VIII. ix. 6) how, in a vision produced by austerity (tapas), he saw the old creations of ancient sages, the first sacrificers, in the remotest past of the human race. There are many other Vedic passages ascribing similar powers: dream is born from the soul filled with austerity (Atharvaveda, XIX. iv. 5); speech born of austerity penetrates to the gods (Tattvārtha Aṇgāryā, v. vi. 7); he who has practised great austerity reaches the sun (Rigveda, x. chv. 2); after practising austerity Indra won heaven (X. clxvii. 1): the magical power of austerity peculiar to the Brāhmans will bring calendarity on the man who injures him (X. cix. 4). Austerity confers the power to produce the mightiest creations: the goddess Asāka, performing austerity, produced the greatness of Indra (Atharvaveda, III. x. 12); the seers were born of austerity (XI. i. 26, XVIII. ii. 15, 18). In many passages of the Brāhmaṇas the power of austerity is attributed to the practice of austerity the power to evolve out of himself the worlds and all living creatures; and in one place (Satāpatha Brāhmaṇa, iv. 4. 2) he appears as practising such asceticism that from all his pores came forth lights, which were the stars. The Brāhmaṇas also tell how various mythological beings attained by austerity to a high degree of enlightenment that revealed to them some secret of sacrificial lore. It is for such magical effects that austerity is regarded as an essential element in the preparation for various particularly holy sacrificial rites. Thus the Soma sacrifice is preceded by a consecration (ubhaya) of the sacrificer in which he practises austerity fasting, according to some authorities (IV. XII. i. 7. 2), till complete physical exhaustion ensues.

8. Magical conditions and agencies.—Magical effect is largely, if not altogether, based on contact (very often impalpable), which has to be brought about so that the agency or the influence is beneficial to oneself, or to be prevented if the agency is injurious to oneself. The result desired is attained by the use of spells and rites of various kinds. The place selected for the practice of magic, except when it is an element of sacrificial ritual, is generally solitary. A cemetery, the seat of flesh-eating demons, is a specially suitable place for its operations. A cross-road is a favourite locality to divest oneself of evil influences. A secluded part of a house, a shed, and solitary spots in field or forest are also used. The time at which many operations of hostile magic take place is night; but that of others depends on their circumstances or their purpose. Direction is an important element. This is the line of the storm, hence performers of rites connected with them must face that point of the compass. In auspicious rites walking and other kinds of movement are directed from left to right, following the course of the sun, while in funeral and other uncanny ceremonies the direction is invariably reversed, the performers moving from north to south.

(a) Spirits and demons.—Some of the lesser spirits are concerned only with one activity, such as climbing the fields of other animals, with Asura, at their head, are invoked to spread terror and death among enemies on the field of battle (Atharvaveda, XI. ii. 11). The characteristic of most of the rest is to cause change and destruction in the sphere of human life. These demons are usually called by the generic name of rakṣas, pata, or piśācha, though many of them also have individual designations. Their appearance is for the most part human, though often with some kind of deformity; but they not infrequently have an animal or bird shape, such as that of a dog, wolf, or vulture. They also appear as air beings, and might assume animal form and thus injure his enemies. Belief in such transformation is already expressed in the Rigveda, where hostile magicians are spoken of as becoming birds and flying about at night (VII. iv. 18). Setting demons in motion is regarded as letting them loose against an enemy. Thus in the Rigveda (X. xvi. 12) the demon of disease Āpāvi is let loose against a hostile array with the spell: 'Go forth, Āpāvi, to confuse their minds, to seize their limbs; to arrest them; to burn them with thy heat in their hearts; let the foe fall into deep darkness.' Such spells might be accompanied by magical acts, such as letting loose a white-footed ewe, in which the power of disease was supposed to be embodied, or blowing in the face of a picture of the demon.

Evil spirits are thought to be everywhere—in the air, in the earth, in the water; but most of all in human dwellings; otherwise they especially infest the place where four roads or paths meet. Activity is chiefly evening and night; at night they seek to kill the sacrificer who has undergone consecration (ubhaya), but if they are partly exposed during the night of new moons. Their usual mode of attack (mentioned in both the Rigveda (XII. xvi. 29) and the Atharvaveda (VIII. xix. 6-8, XI. xxvii. 39) is to enter into a man, especially through the mouth; they then eat his flesh, suck his marrow, drink his blood, and create disease of every kind; they also cause madness and take away the power of speech. They are chiefly dangerous on the most important occasions of domestic life—births, weddings, and funerals. One of the main objectives of a sacrifice: the Rigveda speaks (vii. cxxi. 21) of the Yāsus that seize the sacrificial food, and the Atharvaveda contains (VIII. lxx. 11) the spell of a magician desiring to destroy the sacrifice of an enemy through the wiles of a demon. Hence the sacrificial ceremonial is, from beginning to end, accompanied by formulae directed to defend against demons. These evil spirits, moreover, do harm to man's property, drinking the milk of his cows, eating the flesh of his horses, and damaging his dwellings. In short, every moment of life, every act, every possession is assailed by hosts of invisible foes, the allies of human workers of calamity. (b) Injurious substances.—Closely allied to these demoniac entities are the numerous substances—the most general expression for which in the Vedic language is tana, or 'body'—which, conceived ethically as impure, is generally so regarded, and most of them with personality, perhaps represent an advance of thought. Hence the boundary-line between personal demons and impersonal agencies is not fixed; thus the term pījman, 'evil power,' as a masculine is used in the former, as a neuter in the latter sense. Nor are even injurious creatures like snakes, ants, and worms clearly distinguished from evil spirits, being often spoken of as demons to be driven away. Examples of impalpable agencies are threads of thorn, pieces of thorn, and thorn and thirst, of guilt, even of such abstractions as sonlessness; or the intangible influence proceeding from auspicious or harmful stars and from the waving or waxing of the moon. These are supposed to fly about in the air and to affect man by various forms of contact. The sphere of magical operations is greatly extended by the belief that, if a 'substance' or power is embodied in any creature or object—e.g., irresistible strength in a tiger, even if the power is imparted at remote distances by an object that is connected with it. Such a power, therefore, resides not only in the flesh of an animal, but in its skin, horn, hair, and so on. Again, the essence of water dwells in aquatic plants, like the aquatic animals like the frog; the nature of the bear is present in the soil.
MAGIC (Vedic) 315

that is torn up by its tusks; the force of lightning is latent in a splint of wood from a tree that has been struck; the virtue of one's native land exists in a cloud taken from it; a man is conceived when lightning strikes him; to the image or a name is conceived as containing a part of the essence of the beings or things which they represent or name. As all such powers are communicable by contact, the whole sacrificial ritual is full of rules as to the persons or things which the performers are to touch, so that the beneficial power of the sacrifice is transferred to them. For instance, the skins of various animals communicate the characteristic quality attributed to them; one who is possessed by the kind of evil spirit is, after acquiring the various types of action, partly auspicious and partly hostile, employed in magical ceremonies (§ 12).

10. Defensive magic.—This type of magic, though consisting in warding off injurious powers, is not less expressed in persons when demons are considered; they may then be attended by a certain amount of propitiation. Thus in the Atharvaveda (I. xii. 2) deterrent homage is paid to a demon of disease: 'Thee, butcher, by thy burning we, yeapping homage, would worship with oblation; lightning is similarly addressed (I. xii. 2): 'Homage to thee, child of the height, whom thou gatherest heat; be merciful to ourselves; do kindness to our offspring'; also instruments and ministers of death: 'To those weapons of thine, O Death, be homage; homage to thy benediction, homage to thy male-diction; homage to thy favour, O Death; this homage to thy dis-favour' (VI. xii. 2).

Again, sacrifices to demons are often mentioned (Rudhakṣaṇa Dharmasūtra, ii. 1. 32); and in the general sacrificial cult they receive their share, which, however, consists only of inferior offerings, such as blood and offal. Hostile words or actions are often performed by spells, as is shown in the Hiranyakṣeyin Gṛhyasūtra contains a direction (I. xvi. 20) that a brand burning at both ends should be thrown at a jackal (regarded as possessed by the evil powers of death), and that the animal should at the same time be worshipped with the Vedic verse, 'Thou art mighty, thou carryest away.' In a rite concerned with serpents the reptiles are addressed with homage, while the intention to destroy them is also expressed (Suraprabhī, xli.). A ceremonial intended to ward off ants (Kriṣṇatīra śītā, xxvi.) begins with propitiatory offerings and spells; but, if these fails, they are followed with a poisoned oblation surrounded by symbols of hostility and accompanied by an invocation of the gods to destroy their eggs and progeny. Propitiation, however, plays but a very subordinate part in this type of magic.

I. PREVENTIVE MAGIC.—On the principle that prevention is better than cure, the procedure of defensive magic is largely prophylactic, everything being avoided that might attract injurious powers. The precautions taken are of the following kinds.

(1) Avoidance of contact.—The touch of beings in which felonious spirits or substances were supposed to dwell was eschewed. Thus to touch the mother during the ten days of impurity after childbirth was regarded as dangerous; and the stones used in erecting an altar for Nirṛti, the goddess of dissolution, were put in their place without being directly handled. The access of injurious powers through other senses was similarly avoided. Thus listening to impure sounds involved performing the Dikṣā Precautions; even an image or a name is conceived as containing a part of the essence of the beings or things which they represent or name. As all such powers were communicable by contact, the whole sacrificial ritual is full of rules as to the persons or things which the performers are to touch, so that the beneficial power of the sacrifice is transferred to them. For instance, the skins of various animals communicate the characteristic quality attributed to them; one who is possessed by the kind of evil spirit is, after acquiring the various types of action, partly auspicious and partly hostile, employed in magical ceremonies (§ 12).

(2) Fasting.—One of the chief precautionary measures against the attacks of hostile powers was abstention from food, in order to prevent their entering the body, and thus to secure a part of the beneficial element in the preliminary consecration (dikṣā) for theSoon sacrifice. With reference to this, one of the Sūtras remarks (Aṣṭādhyāya Śatāṣṭhāna, x. xiv. 6): 'When an initiated man (dikṣita) grows at the very beginning of the day for the dikṣā sacrifice the special form of fasting was the avoidance of particular kinds of food. Thus the performer of the new and full moon sacrifice had, on the eve of the ceremony, to refrain from eating either flesh or the kind of food which was going to be offered on the following day. The teacher who has invested a pupil with the sacred cord may not eat flesh for a night and a day; while the student himself has to refrain from eating salted food and drinking milk for three days after the ceremony; he must also abstain from food altogether for three days, or a day and a night, before he enters upon a particularly holy part of his Vedic course. A newly married couple must, during the first three nights following the wedding ceremony, avoid all salted or pungent food. The efficacy of fasting is illustrated by the precept (Gobhita Gṛhyasūtra, iv. vi. 13) that one who desires to gain a hundred cartloads of gold should observe the vow of fasting during one fortnight of lunar months.'

(3) Abstinence.—Another safeguard is the practice of chastity. This is enjoined for three nights after the wedding ceremony in order to ward off the attacks of demons that destroy offspring. It is observed by the performer of the new and full moon sacrifice on the night before the rite takes place for a day and a night by the teacher who initiates a pupil; for twelve nights by the offerer of the Sābali sacrifice; during the course of the Dikṣā by him who undergoes that consecration; and by the Vedic student during the whole period of his apprenticeship.

(4) Ascertiān.—This experiment appears in various forms. One of them is exposure to heat; it is an element in the Dikṣā ceremony, a special formula being quoted for use when the initiated man breaks into perspiration. Sleeping on the ground is prescribed, during the same length of time as abstinence for the newly married couple, the Vedic student, and the performer of the Dikṣā consecration, of the new and full moon ceremony, and of the Sābali sacrifice. As a safeguard against demonous dangers to the sleeper, watching through the night is enjoined during the Dikṣā ceremony, and on the eve of setting up the consecrating touch of the new and full moon sacrifice. Silence is to be observed by the sacrificer undergoing the Dikṣā consecration, by the man about to set up the three
sacrificial fires, and by the Vedic student on
various occasions. Holding the breath, which
was regarded as an important form of asceticism,
appears, for instance, in a rite during the funeral
ceremony. It may here be added that astonies
of various kinds had to be undergone by one pro-
priety of the rite, and in other cases, was qualified to
perform the magical ceremonies intended to effect
the recovery of the patient.
(5) Concealment.—Another means of guarding
against the attacks of hostile powers was conceal-
ment of one's person or of its parts, as exclusion in
a shed and covering the head during the observances
of the Dikṣa ceremony; or putting on garments to
make oneself unrecognizable; or hiding the hair
of the head and beard or nails cut off at sacramental
rites, such as the initiation of the Vedic student
(cf. § 8 (b)).
(6) Amulets.—Charms worn on the body were
frequently employed both for the negative purpose
of warding off evil influences from one's person
(amulets) and for the positive purpose of attracting
prosperity (talismans). Sometimes the same charm
serves both purposes; thus the pearl destroys
demons, disease, and poverty, and at the same
time bestows welfare and long life. Amulets
were made of the pepper-root wood, and also of
various other substances. Their efficacy is
regarded as dependent on the particular power
of repulsion inherent in them, and is not infrequently
spoken of as imparted by the gods. They are
called god-born, are said to have been given by
gods to men, to have been strengthened by the
gods, or to have had their power communicated to
them by the gods, who co-operate with them; the
gods themselves are described as having once been
sacred on account of their power in warding off
demons, and may be addressed as the protectors
of all men, so that they are often referred to
as a magico-remedy, and its general curative powers
are thus expressed by the following spell of the
Atharvaveda (VI. x. 3): 'The waters verify are
healing, the waters chase away disease, the waters
cure all ailment in them; by amulets Indra overcome the
demons (Atharvaveda, x. iii. 11). Their potency sometimes emanates
from their names. An amulet derived from the varuna
tree (Crotalaria Roxburghii) destroys enemies because,
according to the meaning attributed to the name
(ib. X. iii. 5), it drives off (niyagati). An
amulet made of this wood is thus addressed in the Athar-
vaveda (X. iii. 14, 11): 'As the wind and the fire
consume the trees, the lords of the forest, so do
thereby, O friend, my magic ray upon thy breast, the kindly, divine
tree, shall smite assuer my foes, as Indra the demons.' One of the amulets
most frequently mentioned in the Atharvaveda is
that made from the jānagī tree, which protects
people from the wind, air, and longer astringent
of the same Veda (VII. 5.) dwells on the aggressive
powers of an amulet fashioned from the wood of the
śrāgląd tree, which destroys foes, demons, and
sorceries. Cf., further, art. Charms and Amulets
(Vedic).
ii. Medicinal Magic.—Magical operations are
performed not only to ward off maleficent powers
that are threatening, but also to expel them after
they have taken possession of their victim in the
form of demons or landscape spirits. The magic
of the Sītras shows that these incantations, at least very often, formed part of a
magical rite in which conjurative remedies were an
element. Examples of simple spells for the cure of
diseases are the following: 'As the rays of the sun
swiftly fly to a distance, thus do thou, O cough, fly
for me over the seas, and from the flood of death;
The disease that racks and wastes thy limbs, and
the sickness in thy heart, has flown as an eagle
to the far distance, overcome by my charm' (V. xxx.
9). Curative spells are, however, more usually
accompanied by the express employment of material
objects, chiefly plants. The hymns of the Atharva-
veda abound in references to such remedies.
These represent the earliest beginnings of medicinal
lore in India. The border-line between magic and
primitive science here is not always definite, for in
some cases the plant used with the spell may have
been an actual cure for a particular disease, while
in other cases it was used only as a charm,
as that of the herbs used to promote the growth of
hair on bald heads (these were doubtless as ineffect-
ive as the hair-restorers of modern times).
The following are two charms from the Atharvaveda
intended for this particular cure: 'That hair of
which drops off, and that which is broken
root and all, upon it do I sprinkle the all-healing
herb' (V. xxvii. 3); 'Make firm their roots, draw
out their ends, expand their middle, O herb! may
thou grow as reeds, may they cluster black
about thy head!' (V. xxxvii. 3). The Atharvaveda
contains many spells in which the kuṣṭha plant
(probably Costus speciosus or arabicus) is invoked
to drive out fever; two of its hymns (x. xxiii.) are
meant to cure leprosy by the use of a dark plant;
one (VII. 6.) operates with a herb that destroys
snake poison, and another (VI. xvi.) with a plant
against ophthalmia. Fractures are cured by the
plant arunāhātī (VI. xii.), and wounds by the use
of the root of the same plant. The latter is
associated with one hymn of the Atharvaveda (IV.
ix.), of which this is one of the spells: 'From him
over whose every limb and every joint thou passest,
O salve, thou most, as a mighty interceptive, drive
away disease. This water, O hero, is never not infrequently appears as
a magico-remedy, and its general curative powers
are thus expressed by the following spell of the
Atharvaveda (VI.xxxi. 3): 'The waters verify are
healing, the waters chase away disease, the waters
cure all ailment in them; by amulets Indra overcome the
demons.' It also cures individual diseases, as excessive
bodily discharges: 'The spring water yonder
which runs down from the mountains, that do I
render healing for thee, in order that thou mayest
contain a potent remedy' (II. iii. 1); or heart-
disease: 'From the Himavat mountains they flow
forth, in the Indus is their gathering place: may the
waters, indeed, grant me that care for heart-ache'
(VI. xxv. 1). Parasara Gṛhyastra (iii. vi. 2)
describes how water upon thy breast, the kindly, divine
tree, shall smite assuer my foes, as Indra the demons.' One of the amulets
most frequently mentioned in the Atharvaveda is
that made from the jānagī tree, which protects
people from the wind, air, and longer astringent
of the same Veda (VII. 5.) dwells on the aggressive
powers of an amulet fashioned from the wood of the
śrāgląd tree, which destroys foes, demons, and
sorceries. Cf., further, art. Charms and Amulets
(Vedic).
I. II. Offensive Magic.—Aggressive operations
against maleficent powers cannot always be distin-
guished, especially in regard to demons, from that
form of defensive magic which is directed to
warding off their attacks. Hence the expedients
adopted are to some extent the same for both
purposes.
I. Means employed.—(1) Fire.—Fire was one of
the chief direct means of driving away demons and
all hostile sorcery. Thus in the Rigveda Agni, the
god of fire, is frequently invoked (I. xii. 5, xxxvi. 20)
with such verses as: 'Barn, O Agni, against the
sorcerers; always burn down the sorcerers and
the allies of the demons. This use of fire, probably
the earliest (V. iv. 34, 39), became much more
frequent and much more extensive sacrificial
application, still survives in the Vedic ritual. Thus a special
fire called the 'lying-in fire' (sūtkānī) is intro-
duced into the lying-in chamber (sūtkā-grha). Of
this fire the author of one of the domestic Sūtras
remarks (Hiranyakṣiṃ Gṛhyastrā, ii. iii. 61):
"Sacred rites, except immersion, are not performed with it; he fumigates the child with small grains mixed with mustard seeds: he then adds a number of spells to drive away various demons that prowl through the village at night, that drink out of skulls; Agni is invoked to burn their lungs, hearts, livers, and eyes. At the sacramental ceremony of cutting the baby's hair (Taittirīya Samhitā, vi. 1. 4. 6) that Agni is here appointed for the destruction of the demons. It can hardly be doubted that in the great sacrificial ritual of the three fires the southern fire was understood to have the magical power of dispelling demons, for the south is the direction from which the souls of the dead and the injurious spirits allied to them appeared at the funeral rite; fire was taken from the southern fire and laid down pointing to the south, while a formula was pronounced in which Agni was invoked to drive away all demons that, assuming manifold forms, might venture near. At all other ceremonies, a fire was used by the survivors for the purpose of warding off the powers that cause death. Fire was also on various occasions carried round what was to be protected against the attacks of evil spirits, a bough of laurel or laurel leaves was placed behind the sleeping person, a firebrand placed behind the object, and a firebrand was also borne by the priest round the victim, the post, and other accessories of the animal sacrifice.

(2) Water.—Water is another efficacious means of repelling hostile agencies, as is indicated by the statement (Maitreya Samhitā, iv. vili. 5) that 'the demons do not cross the waters.' We have already noted some examples of the use of water in curing diseases and ailments. Water is further regarded as a chief means of removing possession by evil spirits. At the birth ceremony water is supposed to wash away all injurious powers from the new-born child. A purifying bath is prescribed before entering on various ceremonies, as the Dikṣa, to remove superstitious superfluities that would impede success. Thus the bride and bridegroom take a bath or perform ablutions before the wedding ceremony. In rites of expiation especially, bathing and washing play an important part. Various ceremonies also conclude with a bath in order to avert the risk of taking back into ordinary life the magical influence inherent in the rite. Such is the case at the end of the Dikṣa, when clothes and implements used during the ceremony are also laid aside. The significance of the bath taken by the Brāhman student at the end of his apprenticeship is similar. There is, further, a rule that after the utterance of spells addressed to uncanny beings, such as the dead, demons, or Rudra, one should purify oneself with water from the contact with those beings which has thus been incurred. The urine of cows was specially esteemed as a means of purification, being perhaps at the same time regarded as communicating the abundant nutritive power and divine energy contained in it, along with a magical condition is meant to continue, bathing or washing is avoided; hence dirt is the characteristic of one who, by means of asceticism (topas), acquires a repelling special magical power.

(3) Plants.—We have already seen that plants were frequently used along with spells as a magical cure of disease. Cognizant to this medicinal employment is the application of herbs to the purpose of securing the love of a man or a woman, and promoting or destroying virility; of both these classes of charms the Atharvaveda contains many examples. But they are also resorted to for other objects. Thus some are employed against demons and sorcerers, which latter, when lit and several are associated with blast-charms. Aquatic plants, together with frogs, as representing water, are combined with spells to quench fire. Bedellium (gopulu), the fragrant exudation of a tree, frequently occurs in the ritual as, in fact, driving away demons of disease or frustrating a curse.

(4) Stones, etc.—In the wedding ceremony, as we have seen, the bride stepped on a stone to ensure steadfastness. A stone, as representing a dividing mountain, was regarded as a means of keeping off evil spirits, and with this intention it was employed in the funeral ritual to separate the living from the dead, where also a eul of earth taken from a boundary was similarly used. In the same ceremony a mat was laid down while the formula, 'This is put between against calamity,' was pronounced (Kausika Sūtra, lxxxvi. 14). A wooden fence was placed round the sacrificial fire, the fence was crossed with the symbols of the demons (Taittirīya Samhitā, vi. vi. 2).

(5) Lead.—This metal was frequently employed in magical operations, as, e.g., in wiping off dangerous substances. The Atharvaveda contains a hymn (iv. 14) addressed to demons and demons and sorcerers, this being one of its spells: 'If thou slayest our cow, if our horse or our domestic, we pierce thee with lead, that thou shalt not play our heroes.'

(6) Repons. These appear on various occasions as a protection against demons. Thus a man who wos a bride is accompanied by one armed with a bow and arrows. At the wedding ceremony little stakes are shot into the air, with the formula: 'I pierce the eye of the demons that prowl around the bride who approaches the fire' (Māvana Gṛhyasūtra, i. x.). At the royal inauguration the priest beats the king with a staff, saying, 'We beat evil away from thee' (Kātyayana Śrautasūtra, xvii. viii. 6). The staff is a part of the ritual equipment in the Dikṣa ceremony, its significance here being explained by the Sūryapatha Brāhmaṇa (iii. ii. 1. 32) thus: 'The staff is a thunder-bolt to drive away the demons.' The Vedic student, as explained above, is entitled to the use of the staff, as it is the word of the gods, by which spirits, is provided with a staff at the time of investiture. This he must always carry, never allowing any one to pass between it and himself; he parts with it only at the end of his apprenticeship, when he casts it away into water, along with his girdle and other sacred objects. On entering the next stage of religious life the Brāhman receives a new staff made of a different wood, the purpose of which is sufficiently expressed by the spells employed at the accompanying rite: 'Protect me from all powers of destruction on all sides, and destroy all hosts of enemies on every side' (Hiranyakshī Gṛhyasūtra, i. xi. 8). A wooden implement shaped like a sword, technically called sphyra, and very variously applied in sacrificial rites, has evidently the significance of a demon-repelling weapon. At the sacrifice to the dead the sphyra is passed over the altar with the words, 'Smitten away are the devils and demons that sit on the altar' (Sūryāpya Brāhmaṇa Śrautasūtra, iv. iv. 2). It is invested in its power by various ritual operations, and is regarded as producing a magical effect in various rites. They may be grouped as follows.

(a) Hostile.—(1) To make a noise is believed to be an efficacious means of driving away demons. At the solstitial festival drums were beaten in order to scare evil spirits, which were deemed to
be especially powerful at the time of the shortest day. A gong was sounded at the ritual for exorcising the demon of epilepsy. At the funeral ceremony, grains of mustard seeds, pounded with shattering potteries, were used to help the deceased pass to the afterworld. (2) A frequent method of removing injurious influences is to *wipe* them off. Thus lead or a black thread of wool was used as an aid in the process. In particular, the *apāṁārga* (*Acyutathes apāṁārga*; popularly known as *puli-panch* or *puli-pat*; *wiping out*) was most widely employed for this purpose. The Atharvaveda contains several hymns with the plant is applied, the following being one of the spells in which this action is expressed (IV. viii. 8): ‘Having wiped out all sources, all maladjustments, all plague with the *apāṁārga*, we wipe all that evil out.’ The *Satapatha Brāhmaṇa* remarks (vi. 4. 14) that by the aid of this plant the gods wiped away fevers and demons. Among other magical applications of this action may be noted the requirement that one who has seen an evil dream should wipe his face.

(3) Another means of getting rid of demons or injurious powers is to *shake*, *cast*, or *strip* them off. The black antelope skin used at a sacrifice is shaken out, and with the world is the demon shaken away are the goddesses (*Vijayāṣaya Sannvitā, i. 14*). After feeding the souls of the dead, the officiant shakes the hem of his garment in order to remove the souls that may be clinging to it. At the conclusion of the funeral ceremony, the bundle of twigs, used to efface the footstamps of death, is thrown away for fear of the dangerous substances which may have derived from those footprints.

For similar reasons clothes worn at unclean rites, such as funerals, are discarded. Injurious substances are deemed to be stripped off by passing through some aperture the person to whom they adhere. This notion is found even in the Rigveda (VIII. lxxx. 7), where Indra is said to have cured the girl Aśā, who suffered from skin disease, by drawing her through an opening in a car. It is doubles a survival of this form of purification when, in the wedding ceremony, the aperture of the yoke of a car is placed on the head of the bride.

The removal of injurious substances is not always a mere rite, but is often also a transference to remote places or to other objects animate or inanimate. The Rigveda and the Atharvaveda contain several formulas or spells to solicit evil agencies to particular places or persons in the far distance. Thus hostile magic is expelled beyond the ninety streams (Atharvaveda, vii. 10); the demon Ayu, if sent away to far-off peoples, such as the Gandharvins and the Magadivas (*Tircystitāṇa*), is tied to the divine being Trita Aptya in the remotest distance (Rigveda, viii. xcviii. 13-17). Injurious agencies are also transferred to others, particularly unclean spirits, especially cross roads. A garment containing certain impurities is removed to a forest, suspended from a tree, or hung over a post, to which its dangerous influence is conveyed, and thus rendered innocuous (Atharvaveda, xiv. 49f.). Snake-poison is removed to a firebrand, which, being then thrown on a snake, returns the danger to its source (*Kṣṇidgātra, xxi. 6*). Fever is transferred to a frog as an antidote representing water (Atharvaveda, vii. xcv. 21); while jaundice is conducted in a homoeopathic manner to a yellow bird (ib. xiii. 4).

(b) Auspiciou. — (1) A very prominent part is played by *eating* in the communication of beneficial influences, in contact with injurious substances, and which, with, of course, be equally well effected by eating, is avoided by fasting (cf. § 10. i. (2)). The Vedician contains innumerable examples of the magical power conveyed by the eating of sacrificial foods. The eating of the food is regarded as communicating the blessing embodied in it; and in the most various forms the view appears that the sacrificial substance conveys the special kind of power implied in a particular sacrifice. Thus, when a student11 teaching beginners gives him the remnant of the offering with the formula, ‘May Agni place his wisdom in thee.’ On the occasion of the ploughing festival a mixture of the milk of a cow that has a calf of the same colour and dung, bdellium, and salt is eaten. At the ceremony for the obtaining of male offspring the wife has to eat a barleycorn and two grains of mustard, and each has been laid on each side of it (as symbolizing a male being). The act of two or more persons eating together establishes a community between them; at the wedding ceremonial the bride and the bridgroom together eat, and at the royal inauguration the king and the priest.

Based on the idea that an animal, when eaten, communicates its special characteristics to the eater is the correspondence in effect, colour, and other qualities between the animal and to whom it is offered. To Indra a bull (or less often) a buffalo, to which he is often compared, is sacrificed; to the Aśvin, twin gods of the mornings, with these, the *Apāṁārga*, we wipe all that evil out.’ The *Satapatha Brāhmaṇa* remarks (vi. 4. 14) that by the aid of this plant the gods wiped away fevers and demons. Among other magical applications of this action may be noted the requirement that one who has seen an evil dream should wipe his face.

(2) There are several ceremonies in which *eating* is applied for the attainment of auspicious ends. In the Dikṣa rite the sacrificer is anointed with fresh butter to give him unimpaired vigour and sound sight. In the animal sacrifice the stake is anointed with clarified butter, and bringing blessings to the sacrificer. At the royal inauguration the king is anointed with a mixture of butter, honey, rain-water, and other ingredients, which communicate to him the powers and abundance inherit in them. At the same ceremony the king anoints himself with the fluid contained in the horn of a black antelope and refrains for a year from cutting his hair, which has been moistened by it. At the Santrāṃsini rite, an expiatory part of the Soma sacrifice, the priest anoints the king by sprinkling it from the fat grains of the sacrificial animals: ‘With the essence of cattle, with the highest kind of food, he thus sprinkles him’ (*Satapatha Brāhmaṇa, xii. viii. 3. 12*).

(3) *Charas*, made for the most part of wax, but also of other materials, were frequently attached to parts of the body for various auspicious purposes. A talisman made of wax from the *puraša-tree (Butea frontosus)* was worn in order to strengthen royal power (Atharvaveda, iii. v.); a bridegroom, who, before entering a bride’s house, was dressed in white, was also anointed with a part of the *charas*. A ritual was prescribed for this anointing, and a view that such anointing would bring good luck. A talisman made of wax from the *puraša-tree (Butea frontosus)* was worn in order to strengthen royal power (Atharvaveda, iii. v.); a bridegroom, who, before entering a bride’s house, was dressed in white, was also anointed with a part of the *charas*. A ritual was prescribed for this anointing, and a view that such anointing would bring good luck.

(a) *Chara*: — (1) ‘An acquirer of offspring and wealth this bracelet has become’ (vi. xiv. 21).

(c) *Indifferent*. — (1) *Burying* was a frequent secret method of conducting magical substances to others, generally connected with hostile intent. The Atharvaveda is full of spells expressing fear of magick buried in the earth, in the fields, or in cemeteries. Objects belonging to a woman, who is to be injured—a garland, hair, a twig for cleaning the teeth—together with other things productive of misfortune are placed between three stones
in a mortar (a symbol of crushing) and buried. The lack of a person thus attacked might be restored by digging up the objects, while an auspicious spell was uttered. The Sutapaṇḍa Brāhmana relates (III. v. 4. 21) a myth how the demons blighted the host of the gods; when the latter, by digging them up, made them operative. The Soma sacrifice even contains a ceremony the express purpose of which is to dig up the magical objects buried by rivals or enemies. This idea of burying the objects sometimes has an auspicious intention, as when a mixture of milk, dung, beiḍhām, and salt is buried in order to promote the welfare of cattle (Kāṇḍuka Sātra, xix. 19).

(2) The action of looking at an object may be either beneficial or injurious. It has the former effect, e.g., when the sacrificer says (Vaiṣṇava Sūtbha, v. 34) to the priest, 'Look at me with the eye of Mitra' (the ān-gāl); or when a guest addresses the sweet food that is offered to him, saying, 'Look not with an evil eye, bring not death to thy husband' (Pāndavāra Gṛhṣṭa, i. 4. 16). In the Atharvaveda (IV. v. 6. 9) ointment is conjured against the evil eye with the spell, 'From the evil eye bring me the salve'; the jīvīṅga-tree is invoked against the evil eye of the hostile-minded (XIX. xxxv. 3); and a certain plant is employed with the spell, 'Of the enemy whose bewitching eye he hew off the root' (vii. v. 3. cf. XVII. 1). On the other hand, the evil effect produced by an inauspicious object on him who sees it is shown by innumerable directions enjoining avoidance of such scenic spots. Thus the Vedic agnostic who, at the conclusion of his apprenticeship, has taken his purifying bath must not look at an enemy, a malefactor, a corpse-bearer, or ordure. For similar reasons, one returning to the sacrificial ground should not look towards the host of sacrificial ceremonies, such as an offering to the goddess Nīrti or a rite for the slaughter of demons.

(3) The action of circumambulation, which occurs very frequently in the Vedic ceremonial, is regarded as magical because particularly when the performer walks round an object in sunwise fashion by keeping his right hand towards it (povadāṣaṇa). Both living and inanimate things are three times circumambulated in this manner; e.g., priests walk three times round the objects, while the wife of the king walk round the dead sacrificial horse. Sacrificial altars and temples, the ground where a house is built, as well as houses (as a protection against serpents), are circumambulated. This rite is especially often performed with the sacrificial fire, as at the wedding ceremony and at the initiation of the Vedic student. Water is circumambulated at a wedding, as also a new house, while water is at the same time sprinkled round it. When the ceremony is incomplete, the direction is reversed, the left hand being kept towards the object. This is done especially in funeral rites at the burning ground and at cross-roads. Thus the mourners walk three times round the unlit fire deposited where four roads meet, with their left sides towards it, beating their left thighs with their left hands. When a patient is to be cured of snake-bite, the priest walks round him to the left. When a servant who is disposed to run away is selected by his master, washing into the horn of a living animal, walks three times round him to the left, sprinkling the water round him with the spell, 'From the mountain on which thou wast born, from thy mother, from thy sister, from thy parents, and thy brother, from thy friends—never (Pāṇḍava Gṛhṣṭa, III. vii. 2). Movement both in the auspicious and in the reverse direction is not restricted to walking. Thus in the sacrifice to the charger great energy is exerted with his left hand and pours out its contents from right to left; he also holds the ladle in his left and deposits the offering on the grass in the same direction (cf., further, art. CIRCUMAMBULATION).

12. Sympathetic magic.—It is the theory of the Vedic magician that which has been called 'sympathetic,' being the influence exercised on a remote being or phenomenon by means of a telepathic connexion between it and what is manipulated by the magician. It may be either beneficial or injurious. (a) Effigies.—An image is frequently made and operated on for the purpose of producing a similar effect on the victim. Thus an enemy is destroyed by piercing the heart of his clay effigy with an arrow, or by being cut down. The image is also produced by melting a wax figure of him over the fire, or by killing or burning a chanoeel representing him. The elephants, horses, soldiers, and chariots of a hostile army are irritated in nap, and sacred persons are put to death as a symbol of their destruction. The magician amasses worms by stamping on or burning twenty-one roots of the nepra plant, while he pronounces the spell, 'I split with the stone the head of all worms male and female; I burn to ashes!' (Atharvaveda, v. xxiii. 13). In order to exterminate the field vermin called tūrdā, a single tūrdā, as representing the whole class, is buried head downwards, its mouth being tied with a hair so as to prevent its eating grain (Kra. ii. 1). On the other hand, the effect of the evil spirits is driven out of the ground. One who pounds the Soma-shoots for sacrifice directs the blows against his enemy by fixing his thoughts on him during the operation.

The sympathetic connexion is sometimes very remote, as when implements or materials are used in which a particular power is regarded as inherent. Thus an exiled prince receives food encased magical being cooked with wood that has grown from the stump of a tree, symbolizing the restoration of fallen fortune. At a ceremony for the removal of troublesomeness an auspicious ladle of bahucah wood is employed simply because the name of the tree means 'remover.' At a rite to destroy demons the dipping spoon is made of wood from the pātāla (E Datum f brown) tree as representing the magical spell (brahmam), which is a slayer of demons. When the sacrifice for the removal of a certain pest, earth, and other material from his native country are employed. As a sacrifice for victory in battle, the soil taken for the altar (vedi), with a view to communicating the fierceness of that animal to the combatants on behalf of whom the offering is made. (b) Imitative processes.—The highest use concerned with the three sacrificial fires abounds with rites in which the desired effect is produced by an imitation of the event or phenomenon. Thus the kindling of the sacrificial fire in the morning develops into a magical rite to make the sun rise; and the dipping of the Soma-juice through the purifying sieve becomes a rain charm. At the ceremony of the royal inauguration, the conventional chariot race in which the king wins is meant to gain him speed and victory. On the other hand, some of the acts in the ritual a game of dice is played; this has clearly the magical purpose of securing luck and gain for the sacrificer. At the solstitial ceremony an Aryan and a Sudra (representing a white and a black man) engage in a struggle for the possession of a circular white skin, the former ultimately wresting it from the latter; the magical aim of this performance is the liberation of the sun from the powers of darkness. In the same ceremony, as well as at the Soma and the horse sacrifice, there are certain sexual observances the obvious purpose of which is to produce fertility in women. A good example of the imitative method is the procedure
MAGIC (Vedic)

meant to deflect a river into another channel. The new course is first watered; it is then planted with reeds; and, finally, representatives of water, such as the magician, are posted on it; the imitation is believed to produce the reality.

(1) This type of magic is very frequently found in the particular form of rain-making. Such is the purpose when, at the solstitial festival, a cowhide is pierced with arrows—probably an imitation of the myth of Indra's release of the waters by piercing the rain-clouds (which frequently appear as cows in the Rigveda). On the same occasion girls descend upon the fire with hair which they pour out, while they sing a song calling upon the cows to bathe. At the ceremony of piling the fire-altar jars of water are emptied on the ground, on which rain is thus said to be shed, and grain is sown on the spot. When an otter is thrown into the water, rain falls in abundance; or, if any one desires rain, he casts herbs into the water, submerges them, and then lets them float away.

(2) A modified form of sympathetic magic is division, the aim of which is to finds out what is hidden or future, largely from the occult correspondence between the representation and the reality. Dreams and sacrificial and funeral rites are the most significant representations; these can be interpreted by spiritual persons who possess inner illumination, strengthened by the power of asceticism and other magical means. From the direction taken by a cow at a particular point in the ritual it may be inferred that the sacrificer will attain a particular purpose. If at certain sacrifices the fire flames up brightly, the sacrificer will obtain twelve villages; if the smoke rises, he will obtain at least three. The fire kindled in a special way between two armies about to fight prognosticates the result; the battle is decided by the sacrifice. The observer who, at a funeral, notes which of the three sacred fires catches the corpse first can tell whether the soul of the deceased is in heaven, in air, or on earth.

The following examples of divination are of a more general type. If one wishes to know whether an uncircumcised child will be a male, the son of a Brahman must touch a member of the mother; supposing the member has a masculine name, the child will be a boy. When it is desired to ascertain what disease a sick man will make at, he is to choose between various dyes taken partly from auspicious soil (as that of a furrow or a cowshed), partly from an unlucky spot (as a cemetery or cross-roads); her choice betokens her character and her future. A special form of prognosis is the foretelling of weather by old Brahmanas from the smoke of dung.

Mixed with the knowledge of the future obtainable from a symbolic process is that derived from gods or spirits, by interpreting the movements, the flight, or the cry of animals or birds specially connected with gods or spirits, such as the wolf and hyena, the owl, crow, pigeon, and vulture. Thus, in one of the two hymns of the Rigveda concerned with augury, the bird crying in the region of the Fathers (the south) is invoked to bring auspicious tidings (II. xiii. 2). Again, in one of the Sattras, the owl 'that flies to the abode of the gods' is addressed with the words, 'Flying round the village from left to right, portent to us by thy cry, O owl' (Hiranyakshin Gṛhyasūtra, i, xvii. 1, 3). The direction from which the wooer will come is indicated by the flight of crows after the performance of the rite for obtaining a husband for a girl. Such omens seem to be a later development, resulting from the simplification of the symbolical method of divination by isolating a single feature of a complex process.

13. Oral magic.—Magical formulae are usually accompanied by some ritual act; but the spoken word in the form of a spell, a curse, or an oath also has a magical effect by itself.

(a) The spell, or witchcraft, in general is a metrical form, being sometimes an old religious verse degraded to magical use. Though the formula is magical in application, it is in form often a mixture of prayer and spell, the gods being mentioned or invoked in it; e.g., 'Between the two rows of Agni Vaiṣṇavāna's teeth do I place him that plans to injure us when we are not planning to injure him' (Athravaveda, iv. xxxvi. 2; cf. xvi. vii. 3). 'Thy ninety-nine spirits, O Night, shall help and protect thee' (XIX. xvi. 3). In the interpretation of the hymns of the Athravaveda to contain the names of numerous deities, while the panegyrics of the Rigveda are addressed to one only; e.g., 'Heaven and Earth have anointed me; Mitra has anointed me here; may Bṛhaspati anoint me also; may Savitar anoint me' (VII. xxx. 1). The magician very usually threatens or commands in his own person; e.g., 'I plaque the demons as the tiger the cattle-owners; as dogs that have seen a lion, they howl and perish'; (Gṛhyasūtra, iii, xxviii. 1). As the lightning ever irresistibly strikes the tree, so would I to-day beat the gamesters with my dice (VII. i. 1). 'Swift as the wind be thou, O steed, when yoked to the car; at Indra's urging go, swift as the wind, the chariot of the heavenly hosts; shall place fleets in thy feet' (VI. xii. 1). But he also often mentions in his spell a parallel case, in order to effect his purpose, like the symbolical process in sympathetic magic; e.g., 'With the light which illuminates the night, having cooked porridge for the Brahmans, ascended to heaven, to the world of the pious, with that would we go to the world of the pious, ascending to the light, to the highest firmament' (XI. i. 37); 'As one pays off a sixteenth, the eightieth, or the entire debt, so shall the evil dream to our enemy' (VI. xiv. 3). 'As the rising sun robs the stars of their brilliance, so I rob of their strength all the men and women hostile to me' (VII. xiiii. 1); 'The cows have lain down in their resting-place; the bird has flown down to its nest; the mountains have stood in their site; I have made the two kidneys stand in their station' (VII. xivi. 1). A frequent feature of spells, in order to make sure of striking the injurious spirit, the seat of evil, or whatever else is intended, is that the whole series of possibilities; e.g., 'Out of eyes, nose, ears, brain, neck, back, arms I drive the disease' (II. xxi. 11). If, however the demon is known, this knowledge is emphasized as bestowing magical power over him; e.g., 'This is thy name; we know thy birth; this is thy father, this thy mother.'

On the most varied occasions spells are uttered without any accompanying rite. The application of one that may be pronounced by a man on entering a court of justice is thus described (Parāśara Gṛhyasūtra, III. xi. 6): 'If he should think, "This person will do evil to me," he addresses him with the words, "I take away the speech in thy mouth, I take away the speech in thy heart; wherever thy speech is, I take it away; what I say is true; fall down inferior to me." Spells are also uttered, e.g., when a man mounts an elephant, a camel, a horse, a chariot, when he comes to cross-roads, when he swims across a river, and in many other situations.

A formula sometimes consists of two or three words, or even one word. If a man has spoken what is unworthy of the sacrifice, he has only to murmur 'Adoration to Vigna' as an atonement. The daily repetition of 'The god Indra is my protection, Aśvita has come to help the Aryan; Indra's two Sārvas have come to help the Aryan' (Gṛhyasūtra, iv. vi. 1) has been interpreted as a prayer meant for a totally different purpose may have a magical effect. Thus, the celebrated Gṛyasaṇi verse of the Rigveda (ix. ix. 10) 'We would attain that excellent glory of Savitri the god, that he may stimulate our prayers'—
The circular form of certain shrines and religious structures may involve some symbolism, possibly astrological. According to the Talmud, a round house and a three-cornered house do not become unclean—e.g., from the contamination of leprosy—whereas a square house does. 

The circle as a supernatural protective barrier has several analogies in primitive custom, and variations of form involve corresponding variations of meaning. Throughout, for examples to the latest, importance is usually attached to the material or the instrument with which the circle is traced.

Among the Shumaw Indians the bed of a mourner is surrounded by thorn-bushes, the object being to ward off the ghost of the dead person. The Bella Coola Indians, also of British Columbia, have a similar practice. Besides surrounding the bed with thorns, mourners cleanse their bodies while standing in a square formed by thorn-bushes, as a protection against the ghost.

Here the mystic zaraqa depends not on its shape but on its completeness in the geometrical sense.

Water and fire, excellent, bullwarks both in human warfare and in spiritual conflict, and, possibly for this reason, among others, regarded as supreme cleansers, are often used to avert evil influences.

The Latins had a custom of keeping a fire burning in a circle around the bed of a mother for some weeks after childbirth. In Abyssinia the bed was surrounded by blazing herbs, while the mother herself was held in the circle by "youthful fellows." In a moving or dynamic form the fiery circle was used for the same purpose in Scotland. Mourning and night fire was carried on.

The most important of the Romani Sutras (belonging to the Atharvaveda) have been translated into German by W. Caland under the title of Altindische Zauberformeln, Amsterdam, 1890.

5. This seems to be Kshatra Siga, the use of the pentagrams or penta (see Thompson, loc. cit.).
round the mother till she was churched, and round the child till it was christened. In some parts of Scotland a br-candle was lighted three times round the bed where mother and child lay.

It has been suggested that in some such cases the idea was to prevent the soul in its critical state from leaving the body, but the greater proportion of cases certainly depend on the idea of protecting the patient from external evil, though the fire-treatment of childhood may have originated simply in the clinical intention of producing comfort or obviating complications.

In China candles are kept alight round the coffin to 'give light,' or to light his way. The Chinese charm consists in laying a circle of ashes round the dead man; it is supposed to reconcile and appease him. The Romans used water or fire or fire mourners on their return from the funeral.

The curious custom of circumambulation as a mark of honour was practised by Hindus, Greeks, and Celts.

In ancient India, walking round a person three times to the right (surmise) was a ceremony of honour, as it was among the Greeks and Celts. The ancient Indians walked round the funeral pyre, as Achilles drove round the pyre of Patroclus (see art. Cremation). The ancient Indians also practised the rite as a cure for a sick person. Possibly the idea of protecting a person with a pillow, living ring is behind the homeric variety.

In Nias a candidate for the priesthood consults with spirits in the ancestral houses; he splits a young man and creeps through the fissure, 'in the belief that any spirit which may still be clinging to him will be thus left sticking to the earth.' The wanderings of Sotho used to send their shepherds through hoops of rope to ward off the witches. Similar customs are found in N. Europe and England as cures for sickness.

The lappes wore a brass ring on the right arm by way of protection against the ghost of the dead person.

Frazier instances superstitions about rings—arm or finger rings—suggesting that the idea is to keep the soul in the body. For this purpose magic cords are tied round wrist, ankle, or body among various peoples.

'To keep the soul in or the demons out' is a question where observation of practice is natural. In ancient India the medical magician encircled the bed of a woman at childbirth with black pebbles to ward off demons. This is carried in primitive practices mentioned above, but a suggestion of V. Henry possibly connects it with Babylonian magic: he finds in old Indian magic traces of the double pentacle, or Solomon's Seal, the famous emblem of the medieval magical circle, consisting of two equal and equilateral triangles, cutting each other so that the resulting segments are equal. The underlying idea may be that of the points of the star pierce the invisible enemies.

The use of the pentacle along with the magical circle, consisting of one astrological element, with the Semitic, and it is from the Semitic practice that the magical circle of medieval Europe, along with a considerable body of astrological magic, was developed. This is a remarkable case of permutation from one source. Semitic magic and its conquest of Europe may be described, not altogether fancifully, as a left-handed compliment to Semitic religion and the conquest of Europe by the Bible.

The Semitic texts continually refer to the HeTree, which Thompson justly identifies as 'the prototype' of the magical circle, possessing the properties of a 'ban.'

The zippo-priest recited over the sick an incantation: 'The man of Es am i, ... the messenger of Marduk am i, ... the circle of Es is in my hand.'

In more detail, the sick person was safeguarded by an enchanted circle (of the nature of a line of fire, salt, or other material, as 'a kind of heron through which no spirit could break.' The priest first performed a ceremony of exorcism, in which a kid was sacrificed and then the circle was drawn, and then described the circle. 'Enclose the man with kurnara (flower, flour) of line, surround the elbow straight right and left. The ban is hooned. A mixture of men and time and distance is to be intended: both substance possessed. The flower of Chimba (the corn-god) was the 'net of the corn-god.' In another ceremony, before the god Nergal, the priest described with line a circle round seven winged figures, and in yet another circle flour was used, the cycle of circle.

Here Thompson compares the medieval use of the Host as a protection against vampires and witches. The Semite described the mixture as the 'net of the corn-god.' Similarly the Jews of Jerusalem employed the virtues of food against evil influences, scattering a mixture of food round the bed of a sick person. A Semite parallel to the idea of stripping off evil by passing through a ring, or arch, or other circumambulated opening was found in a cure for headache, which consisted in making a circle round a desert plant with meal, plucking it up before sunrise, and tying it on the head. When the plant was removed, the headache disappeared simultaneously. On the same principle an ailing limb was cured by tying round it a charmed thread, and then removing this. Did the idea arise from the sickness?

The development of magic, white and black, in Europe, and its remarkable exploitation, lasting till well after the scientific period had begun, were bound up with Semitic animism, or rather demonism, if the distinction is maintained. It causes producing a state of culture in which every man of science was a necromancer and conjurer of spirits do not concern us here, but the inevitable employment of the magical circle for the conjuration of spirits is typical of the culture of those ages. The primitive Babylonian practice was now divorced from medical magic. As applied to the evocation of elemental demons, whose aid was invoked for alchemical research or prophecy or evil magic against individuals, its purpose was to protect the sorcerer from the dangerous servants whom he called up. At the same time the geometrical possibilities of the circle appealed to the mathematical instinct of the scholar, and geometry perhaps over something to magical experiments upon the circle. Kabalistical lore was also called upon for the exploitation of names and numbers of power, to be inscribed in the circle. Here begins the positive virtue of the circle, which, in connexion with the magical nature of the astrological occult, in the circle, was applied to it, and it thus became an intermediary between chemistry and astronomy, as the focus to which were attracted the infernal and supernal powers alike.

The Arabic and Hebrew developments of magic in the early centuries of the Middle Ages are obscure. The account given by Psellus of a Hecatus circleus, Ἐκατός σφραγίδα, calls for notice, though its meaning is confused.

'Hecate's circle is a golden sphere, enclosing a sapphire in the centre, turned by a torch of holy fire, and having characters throughout the whole of it. They made conjugations by turning this; and they were wont to call such things hence, whether they have a spherical or triangular or any other shape whatsoever. Shaking these, they uttered certain hieratic sounds, laughing, and striking the bronze. It accordingly belongs to the operation of the rite, or the circle, as possessing secret power. And it is called "Hecate's" as being dedicated to Hecate; and Hecate is a divinity among the Chaldeans.'

18 See F. Barrett, Magic, London, 1801, p. 310, for proof that magic was practised at the end of the Middle Ages.
This account may be simply confusing the Babylonian circle with the Greek magical wheel (τρίχη, torquilla); but, just as the medieval circle was made material and portable in the form of metal amulets and talismans, so it is possible that Graeco-Chaldean superstition may have derived the design of the wheel into a wheel like the τρίχη. The fact that such 'wheels' were sometimes triangular or of other shapes is an interesting hint in the direction of the pentagrams and other figures with which the medieval circles were filled. Psellus may have been the subject of the impression was astonishingly clear for the idea, no doubt, being to evoke spirits for the purpose of forcing them to predict future events. As for the Greek wheel on which the τρίχη, wyrmnek, was tied, there is considerable doubt as to its nature.

The magical circle of medieval occultism had innumerable varieties, according to the purpose, the time, and the species of spirit to be invoked; and it also varied according to the predilections of the operator. The following may be considered typical examples of the method of description and formula of blessing and of invocation. The magician, after purifying himself, collected the paraphernalia, including his dagger, his blessed candle, a circle of water, a magical sword or knife, and so forth, and traced the circle, usually 9 ft. in diameter, with his wand or sword. He then blessed the circle, a typical blessing being:

"Elaborate forms of the circle, and names might be described with holy water, charcoal, or consecrated chalk; when the magical knife was used for the drawing, the lines were sprinkled with holy water. This knife, which also served to frighten the spirits, had a black handle of sheep's horn, and the steel should have been tempered in the blood of a black cat and the juice of hemlock. For more important operations, especially in black magic, as when using the 'great kabbalistic circle,' the tracing should be done with the magical stone Ennuitel. A curious refinement was a gate in the circumference, by which the operator and his associates might go out and in; on leaving the circle, the circle was incised by inscribing names and pentacles. The more elaborate circles were filled with names and kabbalistic figures and 'characters.' Candles and varvain crowns were placed within the circle, and the operator had with him cold or silver coins to fly to the spirit when evoked, the 'seals' to be shown to the spirit, and talismans, generally made of coloured satin embroidered with silver. Incense was burned within the circle, or it was perfumed with Solomon's oil; this seemed to be done in this case in order to give the impression of a sacred place."

The 'great kabbalistic circle' was made with strips of the skin of a sacrificed kid. These were

7 Pentacle (properly pentagram) is used of any talisman with figures (not necessarily angular) incised or embroidered within a circle.
8 Linen or vellum plaques inscribed with figures.
fixed in the ground or floor by nails. Five concentric circles, close together, formed a strong protective magic square, theName took the place of the pentagram, and three small circles were described for the stations of the operator and assistants.\(^1\)

The elaboration of geometrical design and astrological figures within the circle was connected with its positive efficacy for conjuration and control of the spirit. Thus Giordano Bruno writes:

> "O! quanta virtus est interconsummatione circularum et quam sacratissima est hec occultate! Cornua capsae in Sagittario exsivit, diacredo lapis positus in aqua, naturaliter spirites ad dandum respondam venit."\(^2\)

Consultation of the stars and seasons was essential.

> Oportet in constituendo circulo considerare quae tempore autem cum horis circularia facias, quas spirites adveniant vele, eum stellae et regioni praestat, et quos functiones haecebat.”\(^3\)

For summoning channeled spirits or seeing visions generally, a circle was made (probably at crossroads) and perfumed, and the operator had to walk round its circumference, east to west, till he was giddy.\(^4\) For necromancy the churchyard was an appropriate site for smaller squares. The operator wore elaborate vestments, and was anointed with holy oil.

The circle was invariably obliterated on the conclusion of the operation.\(^5\) A similar practice of destroying the traces of magical rites is regular throughout the history of magic, even in primitive culture.

The talismans, pentacles, or seals, used freely by the magician, depended largely upon the magical circle which was described around them. In this, as in the large operating circle, the more concentric circles, the more potent the efficacy. Against the attacks of spirits they were very powerful, "presiding with wonderful influence."\(^6\) They were exhibited to the spirit on its appearances, and the means of the operator bound the spirit, and was able to prevent it from departing "without a licence." The issue of the licence was an important detail; if it was omitted, the death of the operator might result.\(^7\) The first virtue of a seal was from the star under whose influence it was, and, accordingly, it would be made of gold, if the planet were the sun, of iron, if the planet were Mars.\(^7\) Seals "of the names of God" were most properly enclosed within the names of angels, such as Raphael, Michael, Gabriel, inscribed between two concentric circles. Those which may be distinguished as pentacles proper had a Solomon’s Seal surrounded by a circle.\(^8\) The usual form was enclosed within the circle of the ‘table of the planet.’ These tables, it is interesting to note, were ‘magical squares’ in the mathematical sense (see below). Each planet, and each of the other forces, had its own magical squares.\(^9\) The Seal had an obverse and a reverse, and was the size of a large medallion.\(^10\) In connection with the pentagram, this figure was a synonym for health. It was also developed into a continuous figure, by combining two, resulting in five, not six, points.\(^11\) Another of spirits were taken by the operator within his circle. These were in a book, which, when completed, was consecrated in a triangle described just outside the circle.\(^12\) When a spirit appeared, it was asked to place its hands on the operator’s heart and swear.

Medieval amulets for general use were frequently stamped with the magical circle in its numerous varieties, as also were talismans of various make. The latter were effective, as a rule, only in cooperation with magical engraving with ‘characters.’\(^13\) This was worn on the finger, and the talisman on the arm or body.\(^1\) The magician’s wand was sometimes plant and could be made into a circle, the ends being joined by a gold chain. Described on parchment, the magical circle is a basis for astrological calculations. This use was prevalent wherever Arabic culture penetrated. Thus, in Malaysia at the present time the circle is employed for all kinds of divination. To select a lucky day for a journey or a business, a circle enclosing a heptacle is used, but every alternate day is skipped, the lines of the continuous heptacle running from, e.g., Sunday to Tuesday, Thursday, Saturday, Monday, Wednesday, Friday, Sunday, and so on.\(^2\) This heptacle is an ingenious development of the double pentacle. Magic squares of three or five numbers enclosed in a circle are less frequently used. Another form of divinatory circle has only radii from the centre. Colours emphasize the various parts of these circles.\(^3\)

As a mathematical curiosity, the so-called magical circle is a development from the magical square, known since the earliest Arabic science. The latter is a square divided into squares, and in each of which a number is written, and so arranged that the sum of the numbers in any row, horizontal, vertical, or diagonal, is always the same. The magical circle, or circle of circles, has numbers in concentric circles with radial divisions, possessing the same property as the rows in the magical square.\(^4\)

MAHABHARATA.

The Mahabharata is an epic poem of India in eighteen books, containing altogether about 400,000 verses of eight and eleven syllables each, although these verses are united into groups of four. The Mahabharata is not an epic in the narrow sense of the word, in that it is neither a literary composition nor is it based on a single author. But neither this most improbable hypothesis nor the basic theory—to wit, that the epic proper was merely ancillary to the didactic mass—has obtained general recognition. It is merely the exaggeration of a truth not denied by any one, viz. that moral and narrative poetry have always been more or less commingled in India. If the hypothesis of Dahlmann could be established, it would, of course, tend to show that the archetypal of the Vedas—a story without any historical importance. Not more successful has been the recent theory that the characters originally being by some earlier poet, and that it is due to the retention of older material that some ascribed to the Pandus and their ally Kṛṣṇa have been kept in the poem of to-day. This theory also has failed to find confirmation, both because it ignores the weight of inscriptive evidence, which shows that, half a millennium before the Mahabharata, according to this theory, had been completed, it was already of the size it is now.

The Mahabharata represents an age well acquainted with foreign nations, even Greeks, Scythians, Persians, and Chinese being occasionally referred to in it (e.g., viii. 49); it represents also a time of empire, when, however exaggerated the conquest of all India was regarded as quite a possible feat. It shows a superficial knowledge of the extreme north and south and a very intimate knowledge of the Middle West in itself, as the characters originally belong to some earlier poet, and that it is due to the retention of older material that some ascribed to the Pandus and their ally Kṛṣṇa have been kept in the poem of to-day. This theory also has failed to find confirmation, both because it ignores the weight of inscriptive evidence, which shows that, half a millennium before the Mahabharata, according to this theory, had been completed, it was already of the size it is now.

The Mahabharata begins with an Introduction, or Book of Beginnings, which tells how the childhood of the heros was passed and gives their origin, and also, incidentally, the origin of gods and men in general. For the story, it may be compressed into the following statements. Two brothers, Dhṛtarāṣṭra and Pāṇḍu, are educated by their uncle Bīṣma. The former brother grows up and marries a western woman, Gianītki, who has a hundred sons, called Kuru. Pāṇḍu has two wives, one of whom, Madri, commits sati at his
death; the other, Yidhá or Kunti, survives Pádus and brings up his five children, called the Pândus, who are really sons of the gods, whom Kunti and Mahé invoked. These sons are Yudhishthira (son of the god Dharma, or Right), Bhima (son of the god Indra), Arjuna (the chief hero of the epic), son of Indra), and the twins Nakula and Sahadeva (sons of the Aśvin, or Boskonu). After this Introduction, which, like most childhood-recitals, is in general late-comes the 'Śabha,' the title of the second part (book), taken from the assembly in the gaming-hall (śabha), where the epic drama begins. At Ilstainpat (about 60 miles north of Delhi) the Kürus hold an assembly, to which they have summoned the Pandavas, who, after various adventures, have built a town at Indraprastha (near Delhi). The Kürus intended to cheat the Pándus out of their kingdom by a game of dice, since they were afraid of the waxing power of their cousins. Yudhishthira plays away all his wealth and kingdom, and finally his brothers and himself. Then he plays Kṛṣṇa, the daughter of Draupadi, polyanamous wife of the five brothers, and loses her. Once more he plays, all that he has lost against a single dice, and on that again he and his brothers and wife are driven ignominiously forth to live for twelve years in the forest. The third book is called 'Vana' ('Forest'), and narrates the life of the exiles. It is a storehouse of legends, such as the that of Nala and Dantavanti, told to relieve the tedium of exile. The fourth book receives its name 'Vitāra' from the name of the king with whom the Pándus take refuge at the close of the twenty-fifth year. They stay there for twelve years, and assisting Vitāra against attacks by the Kürus. They are at first disguised, and incidents of court life form the main part of this book, which is obviously, in its details, a late part of the epic. The fifth book is called 'Udyoga' ('Preparation for War'). Kṛṣṇa (Vigun) is now enlisted upon the side of the Pándus, as, with her brother's consent, Arjuna has married his sister after eloping with her. The following four books are named after the leaders in the battle which now takes place, 'Bhiśma,' 'Drona,' 'Karna,' and 'Śalya.' Bhiśma and Drona are the uncle and teacher respectively of the cousins now at war. Into the 'Bhiśma Parvan,' at the beginning of the battle, is inserted the celebrated 'Bhakti.' This book ends with the fall of Bhiśma, and Drona then assumes the leadership of the Kürus. Numerous encounters are described with warlike iteration, and Śiva is hailed as the great One God. Karna, the half-brother of the Pandus, son of the god, had been insulted by the refusal of Kṛṣṇa to recognize him as a worthy knighth when she chose her husband, and had taken part with the Kürus against his brothers. He now leads them into battle, but is slain by Arjuna. This leads to the 'Śalya Parvan' (sixth book), in which Śalya is made leader of the Kurus; but, with the exception of a few warriors, they are all routed and slain, and the chief Kurus prince is killed (after the battle) by Bhima. The tenth book is called 'Sañjīvika' ('Night Attack'), and describes how the surviving Kurus make an attack by night on the camp of the victors, killing all the army except the Pándus themselves. It is followed by a short book called 'Shtri' ('Women'), which gives an account of the lamentation of women over their dead. The war is now over; but Bhima has miraculously survived, and in the long didactic books called 'Santi' and 'Amukasana' he is re-recreated to preach religious and philosophical, and ethical, behaviour. Yudhishthira is crowned emperor, and in the fourteenth book, called 'Aśvamedhikā' ('Horse Sacrifice'), he performs the horse-sacrifice, which is the sign of undisputed lordship (see Art. Aśvamedha). Into this book is inserted (16-51) the Anuṣṭā, a poem imitative of the Bhagavat-Gītā. The fifteenth book, called 'Śrīnaavāsikā' ('Heamatige'), takes up the life of Dhritarāstra and his queen, with Bhima, who has reigned, is driven by the Kürus, and then retires into the woods, where they are burned. The sixteenth book, called 'Mausaka' ('Club-Battle'), tells of the death of Krsna and his brother Baladeva, and the fate of their city Dwārapa, which was flooded by the sea. The family of Kṛṣṇa, the Yadus (Yadava), are cursed by a Brahman, and destroy each other. The seventeenth book, 'Mahāprashānīka' ('Great Remuneration'), tells how the Pándus give up their kingdom and deposit in the way of the northern mountains; this is supplemented by the last book of the epic proper, called 'Svarogārahaṇa' ('Ascent to Heaven'), describing the journey. To this is added the Harīvīnaka ('Genealogy of Viṣṇu'), a long account in three sections of the life and family of Kṛṣṇa as a form of Viṣṇu. It has, in part, the characteristics of a Purāṇa (q.v.), and is, without doubt, a subsequent addition, dating perhaps from the 3rd cent. of our era, though generally, and even if the Mahābhārata may be viewed as a rich store of philosophical and religious lore as well as a tale, and as embodying important geographical and historical data. It undoubtedly reflects some real contest, which of Sāvītṛ, and the tenth of Nala and Dannya, at the beginning of the tale. They stay there for twelve years, and assisting Vitāra against attacks by the Kürus. They are at first disguised, and incidents of court life form the main part of this book, which is obviously, in its details, a late part of the epic. The fifth book is called 'Udyoga' ('Preparation for War'). Kṛṣṇa (Vigun) is now enlisted upon the side of the Pándus, as, with her brother's consent, Arjuna has married his sister after eloping with her. The following four books are named after the leaders in the battle which now takes place, 'Bhiśma,' 'Drona,' 'Karna,' and 'Śalya.' Bhiśma and Drona are the uncle and teacher respectively of the cousins now at war. Into the 'Bhiśma Parvan,' at the beginning of the battle, is inserted the celebrated 'Bhakti.' This book ends with the fall of Bhiśma, and Drona then assumes the leadership of the Kürus. Numerous encounters are described with wearisome iteration, and Śiva is hailed as the great One God. Karna, the half-brother of the Pandus, son of the god, had been insulted by the refusal of Kṛṣṇa to recognize him as a worthy knighth when she chose her husband, and had taken part with the Kürus against his brothers. He now leads them into battle, but is slain by Arjuna. This leads to the 'Śalya Parvan' (sixth book), in which Śalya is made leader of the Kurus; but, with the exception of a few warriors, they are all routed and slain, and the chief Kurus prince is killed (after the battle) by Bhima. The tenth book is called 'Sañjīvika' ('Night Attack'), and describes how the surviving Kurus make an attack by night on the camp of the victors, killing all the army except the Pándus themselves. It is followed by a short book called 'Shtri' ('Women'), which gives an account of the lamentation of women over their dead. The war is now over; but Bhima has miraculously survived, and in the long didactic books called 'Santi' and 'Amukasana' he is re-recreated to preach religious and philosophical, and ethical, behaviour. Yudhishthira is crowned emperor, and in the fourteenth book, called 'Aśvamedhikā' ('Horse Sacrifice'), he performs the horse-sacrifice, which is the sign of undisputed lordship (see Art. Aśvamedha). Into this book is inserted (16-51) the Anuṣṭā, a poem imitative of the Bhagavat-Gītā. The fifteenth book, called 'Śrīnaavāsikā' ('Heamatige'), takes up the life of Dhritarāstra and his queen, with Bhima, who has reigned, is driven by the Kürus, and then retires into the woods, where they are burned. The sixteenth book, called 'Mausaka' ('Club-Battle'), tells of the death of Krsna and his brother Baladeva, and the fate of their city Dwārapa, which was flooded by the sea. The family of Kṛṣṇa, the Yadus (Yadava), are cursed by a Brahman, and destroy each other. The seventeenth book, 'Mahāprashānīka' ('Great Remuneration'), tells how the Pándus give up their kingdom and deposit in the way of the northern mountains; this is supplemented by the last book of the epic proper, called 'Svarogārahaṇa' ('Ascent to Heaven'), describing the journey. To this is added the Harīvīnaka ('Genealogy of Viṣṇu'), a long account in three sections of the life and family of Kṛṣṇa as a form of Viṣṇu. It has, in part, the characteristics of a Purāṇa (q.v.), and is, without doubt, a subsequent addition, dating perhaps from the 3rd cent. of our era, though generally, and even if the
Sanskya system throughout. The chief interest of the religious doctrine lies in the insistence upon the loving devotion of the worshipper and the saving grace of the supreme spirit (see BHARTI-
MARGA). *Krśna* as a form of *Vīṣṇu* is not revered (as is often thought) for anything more than his being the lover of milk-maids, though both these traits are recognized. They come out strongly in the *Harivamśa* and later Purāṇas, and it is perhaps unjustifiable to conclude that they did not form part of the worship as originally adopted into Brāhmanism.

Directly opposed to *Krśna-Vīṣṇuism* is the Siva-cult also found in the epic, as already indicated. This cult appears to have been, perhaps, the more orthodox upholders of Brāhmanism, although neither Siva nor *Krśna* was a Vedic god. But Siva had long been recognized as a form of the Vedic Rindra, and, though probably at first a popular god, it is noteworthy that he was already accepted by the Brāhman priests. The parts of the poem exalting Siva as All-god or as the One God are not early; on the contrary, they bear the marks of later composition and the trait now so familiar, that of phallic-worship, appears only in a few late passages. As this aspect cannot be in itself a late feature, it must have acquired the seal of respectability only by degrees, being probably repugnant to the orthodox priests of the period. The special seats or forms of cults as advocated in the Purāṇas are unknown in the epic. The cult of *Vīṣṇu* is that of the pantheistic All-god; the cult of Siva is that of the only One God. But, with the opposing claims of each sect now generally assumed, the exaltation of the attributes of the other, *Vīṣṇu* is the onoe theistic god and Siva is the pantheistic All-god. Each in turn claims to be maker, preserver, and destroyer; and Brāhman also, though originally creator-god, became the exaltation of the attributes of *Vīṣṇu* and Siva and the older Brāhman of *Krśna-Vīṣṇu* and Siva and the older Brāhman of *Krśna-Vīṣṇu* and Siva and the older Brāhman in the one god with three forms, or, as the Hindu says, 'three gods and one form.' Besides these gods, *Vīṣṇu* is also the Sun-god and probably also the sun-god, whose worship leads to strange exaltation of the sun as supreme god (but only in late passages), probably because of the identification of *Vīṣṇu* with the sun on the one hand and the later Persian religious form on the other; for, though the sun was probably round out to its present size by the 2nd cent. of our era and was virtually complete in all probability as an epic two or three centuries before (by 100 B.C.), yet numerous epic, inscriptive, and latory hymns have been added at later times, as may be seen by the manifold additions in the recently published southern text of the epic, which contains thousands of verses in great part of this character (in part, narrative). Of such sort also are the hymns to *Durgā* and probably also the exaltation of Skanda as the great army-leader of the gods, raised far above his earlier conception. All these later additions are of priestly sectarian origin. The original lay of the *Bharata war may also have been that of popular heroism, though 'hero-lands' sung by hired minstrels are not unknown in early literature. But it was part of the business of the king's chaplain to recite laudations in his honor, and it is not impossible that in the chain of the epic kings may have expanded the theme, for not only the king living but 'dead kings and their glory' formed the topic of lays and enlogies. The completed *Mahābhārata* was intended for recital, but this was in dramatic form, so that even to this day it is acted as well as recited by the purveyors of amusement at country fairs.

MAHAR, MHR, MEHRA.—One of the menor or depressed castes of W. India and the Deccan, numbering 3,342,680 at the Census of 1911. Their name is very doubtfully connected by G. Oppert (*Oryg. Inhabitants of Bharatavarasa or India*, London, 1853, p. 28 ff.) with that of the modern tribe of the same name. They are not called *Mahār* by the Marāṭhas, but are practically all Hindus by religion. Another caste, the Dhobi or washerman, is generally included with them, and, if not identical, they are allied with the Holeya or the Padras. They are divided into three groups, viz., of the Madras presidency (E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, ii. 329 ff.).

In the Central Provinces the Mahars say they are descended from Mahārānu, who was a founding picked up by the goddess Parvati on the banks of the Ganges. At that time beef had not become a forbidden food; and when the divine cowl, Tripiṭā Vaiṣṇavī, died, the gods determined to cook and eat her body, and Mahārānu was set to watch the pot boiling. He was as inventive as King Alfred, and a piece of flesh fell out of the pot. Not wishing to return the dirty piece to the pot, Mahārānu ate it; but the gods discovered the delinquency and doomed him and his descendants to live on the flesh of dead cows (R. V. Rossell, *Central Provinces Ethnographic Survey*, pt. 1, Allahabad, 1911, p. 84; cf. E. F. Rütz, *Census Report, Bihar*, 1881, p. 114 n.).

Their religion is of the primitive animistic type, with a veneer of Hinduism. In the Khânchā District they keep the regular Hindu fasts and feasts, and worship the popular gods of that country— *Vīṣṇu*, or *Viṭhōva*; *Siva* as *Kharpobha*; *Māhāsōka*, an evil spirit who should be cast out of stone smeared with red lead; *Bhāirava*, or *Siva* in his terrible Bhairava form; and the Mother-goddess in the form of Āī Bhavāni, whose image they keep in their houses. Besides these they worship snakes and the spirits of their ancestors (*BG* xii. [1880] 115 ff., xvii. [1884] 172 ff.). At a temple in Kâthiāwar the Dhobhs worship what is actually an image of *Vīṣṇu* reposing on his serpent Seera as Hanumā, who is said to have been the woman of the caste. Women were unable to nurse their babies and owners of cows which give a scanty supply of milk yow to wash this image in milk if their milk be increased (*BG* xiii. [1884] 416 ff.).

In the Central Provinces 'the great body of the caste worship the ordinary deities Hanumān, Dūndūl Deo, and others, though, of course, they are not always to be found in the temples. They principally observe the Holī and Devalī festivals and the days of the new and full moon. On the festival of Nāgaśchachi they make an image of a sugar and eat it. At the sacred Amalaka tank at Kamthē the Mahars have a special bathing ghat set apart for them, and they may enter the citadel and go as far as the lowest step leading up to the temple; here they worship the god and think that he accepts their offerings. They are thus permitted to
traverse the outer enclosures of the citadel, which are also sacred. The Mahârâjas may not touch the shrines of Mahâdeo, but must stand before them with their hands joined. They may sometimes deposit offerings with their own hands on the seats. Originally a good god, and Mathi Deit, the goddess of smallpox.

In Berîr they worship a curious collection of deities. These are included in the archangels Gabriel, Azrael, Michael, and Anâdîn, all of whom, they say, come from Pândâharpur. In Berîr the worship of these archangels was probably borrowed from the Muhammadans; but in Gujarât it was probably adopted from Christian sources.

It seems that the attraction which outside faiths exercise on the Maähr is the hope held out of accelerating the social decline with which they would fungalise Hindu theory of caste. Hence they turn to Islam or to what is probably a degraded version of the Christian story because these religions do not recognize caste, and hold out a promise to the Maähr of equality with his co-religionists, and in the case of Christianity of a recompense in the world to come for the sufferings which he has to endure in this one. Similarly the Mahârs are the warmest advocates of the Muhammadan saint Shahîd Parî, and flock to the fair held in his honour at thr, in Vâridha and Prântigâr in Bhandara, where he is supposed to have slain a giant of cows (Russell, p. 90 ff.).

LITERATURE.—Besides the authorities quoted in the art, see CEUENS REPORT, Central Provinces, 1901, i. 182, Bombay, 1911, i. 251; A. BAINES, Ethnography (f=GLB II. 31). Strassburg, 1912, p. 501. W. CROOME.

MAHATMA.—See THEOSOPHY.

MAHAVASTU.—The Mahâvastu, one of the most noteworthy books of Buddhist antiquity, is a huge confused compilation of legends on the origins of Buddhism, on the persons of its founder [up to the gift of the jâtâvâna] and his first disciples on a word, on that ensemble which, with infinite varieties of detail, crossed and rami-fied in every way, is the common property of all Buddhists. Besides all this, it includes a gnomic treasury, it is also traditional, an enormous mass of jâtâkas (birth-stories), and tales, certain dogmatic speculations (see below, § 3), interchangeable lists of Buddhas—needless digressions, mere padding—two, three, four accounts and more of the same episode, from different sources, sometimes contradictory, sometimes following one another, sometimes scattered through the book, dovetailed into one another, dismembered, lacered. 1

The interest attaching to the Mahâvastu is of several kinds:—(1) it is, in effect, a (discipline) of one of the ancient sects, and its history, so far as it can be traced, is instructive; (2) it is a vast repository of legend and folklore, which, when compared with Pali literature, supplies uncommonly rich material for the study of Buddhist tradition; (3) the Mahâvastu, from the point of view of dogmatic ideas, marks a period or a transition stage between the Hinayâna and the Mahâyâna; and (4) its language, too, deserves attention.

I. History and contents.—The Mahâvastu, or, according to the colophon (which is open to suspicion), Mahâvastu-vârâdâna, claims to be a part of the Vinayapitaka, of the 'recitation' (i.e. the canon) of the Lokottaravâdin Mahâsânghikas of the Mahâdyânas.

(1) The Mahâsânghikas are one of the old sects or branches of the Order, the other branch being that of the Sthaviras or Theras (see Sects [Buddhist], below). They had largely adopted special rules of vinaya, or 'discipline.' (2) The expression Lokottaravâdin, 'believer in the supernatural character of the bodhisattva' (see below, § 3, and art. BODHISATTVA), indicates a dogmatic school. It is, therefore, that Mahâvastu, partly, at least, was not Lokottaravâdin. It would not be difficult to eliminate from the Mahâvastu the passages which have a Lokottaravâdin tendency. (3) The Mahâdyâna, or 'middle country,' of the Buddhists comprises N. India, Magadhâ, Kośala, and Videha; but there were Mahâsânghikas outside of the Mahâdyânas, notably the Purvâsillas and the Aparâsikas, who were also Lokottaravâdin.

In order to understand the word mahâvastu and to see how the Mahâvastu, in which discipline takes only a very small place, can belong to the section on 'discipline,' it is necessary to go far back.

The disciplinary literature (Vinaya) was from the beginning composed of two parts: (1) the formula of confession (pratitîmokkha, pâtimokkha), a list and classification of grave and venial faults, to which an explanatory and historical commentary was soon added: on what occasion such and such a prohibition was made by the Master; in the Sarvastivâadin school this commentary is called Vibhaṅga, in the school of the Pali language Vibhanga and (2) the statutes of the Ordination collection of the texts (karmavîkhyâ, karmavâcha) relating to ecclesiastical acts (ordination, fortnightly confession, etc.) and of rules referring to ordination, confession, the cenobitic life during the rainy season, to parishes, medicines, beds, and schisms. These texts and rules were also embedded in a historical commentary. In the Pali canon they are divided into two sections (khandhâ, etc.), in two chapters or books (as the Great Vagga and the Little Vagga: Mahâvagga and Chullavagga), the latter being devoted to subsidiary questions. There is the same division in the canon of the Sarvastivâdins, under different titles: the Khandhakavastu (Kvātha), 'thing,' 'point of discipline or doctrine,' 'story'), corresponding to the Chullavagga, and the Vinayavastu, which, although it does not bear the title 'Great,' corresponds to the Mahâvagga.

One of the characteristics of the Mahâvagga (and the Vinayavastu) is that, especially in its first part, it assumes the form of history. It contains a short epitome of the origin of the Order, which is perfectly justified as an introduction to the range of ordination; it was in a book of discipline that the most ancient writers, for want of a better planned library, deemed it expedient to place some pages from the life of the Buddha—which, for illumination, his first sermon, etc. The editors of the Khandhakavastu, as well as the Mahâvagga of the Sarvastivâdins), who came long afterwards, took far more liberties: in the first ten chapters their work preserves the character of a historical treatment of monastic discipline; but in the last chapter (xv), in our text the first (tenth) chapter, called Fifth, like the corresponding chapter of the Mahâvagga, to the internal strife of the Order) contains not only a fresh statement of the biographical elements of the first chapter, but also the history of Sâkyamuni from the beginning of time, related in a continuous account down to the schismatic intrigues of Devadatta: a list of the chakravartin kings, the creation of the universe and life of primitive men, and the history of the Sâkyas (ancestors of Sâkyamuni); legends of the birth of Sâkyamuni, his education, his departure, his mortifications, etc.—a summa of ancient traditions among which are to be found existence in the Pali canon (e.g., the Aparâsikas). Of the five hundred pages in the eleventh chapter of the Vinayavastu, little more than forty are devoted to the schism which gives its name to the chapter, and which, in all probability, was at first only a stanza, its only subject. The Pali Mahâvastu, as a whole, is a faithful replica of the Mahâvagga; but it shows a very wide use of interpolation.

It is different with the Mahâvastu, and the manifest contradiction between the title and the contents raises a delicate question. Such a title

implies that the book was, like the Mahāvagga and the Vinayaṃga, meant to be a history of discipline. As a matter of fact, thirteen hundred pages about twenty treatise of discipline (especially at the beginning, two lines on ordination), and certain parallelsism with the Mahāvagga cannot be missed; e.g., the stories of the Mahāvagga in the Mahāvastu, in the Pali Mahāvagga, and in the Tibetan Vinaya which hold together, and really seem faintly to reproduce a common prototype (Barth, loc. cit. p. 464). But, on the whole, the Mahāvastu is a collection of legends without any connexion with discipline.

One can easily understand how a primitive Mahāvastu, a historical treatment of discipline, would be fed (Barth says nourri) by a mass of heterogeneous material. Although in its date and character, which, by their inorganic or chaotic accumulation, would explain all that non-disciplinary literature which forms ninety-nine hundredths of the present Mahāvastu. This task of enlarging and of forming "was carried on in all the Buddhist sects, for a longer or shorter time, with more or less moderation; and what is true of the literary units is still more true of the canonical collections. Although we at present know nothing about the history of the Mahāvagga, it may suppose that it had no shelves in which the 400,000 suttas, and stanzas would be arranged. The only course was to gather together in the Mahāvastu all that seemed precious. The development of the Mahāvagga, if it has any to do with an external history of discipline, and if some pieces of the framework of the Mahāvagga were perceptible, would seem quite simple. Must it be admitted that the last compilers of the Mahāvastu systematized the fragments of vinaya already sunk in the legendary mass? Or that, in the fearful disorder in which the literature of the Mahāvagga was weltering, these elements fell into oblivion? Or, that the Mahāvastu was never in any respect, except its title, a replica of the Mahāvagga? The three hypotheses seem equally inadmissible.

Some light is perhaps afforded by the history of the Dipayudasa (E. H. J. page and after him S. Levi) has proved that this book is, above all, a collection of anecdotes and legends taken from the Vinaya of the Sarvāstivādins. The Dipayudasa has never been always very consistent, and some fragments of vinaya proper—disciplinary rules—are to be found in the Dipayudasa. The Dipayudasa history of the Mahāvagga is probably similar. The colophon gives it the name of Mahāvagga-aradāna; it is the story of the narrative part of the Mahāvagga. In the Pali Dipayudasa the various episodes are linked to the history of the Mahavagga, by explicit references or allusions; those, without any connexion, are left out in the Dipayudasa. So those same episodes which in the Mahāvagga and the Dipayudasa are more or less prolix and discursive chapters of a treatise on discipline are here more narrative, and composed by making the Mahāvagga a book of stories. However this may be, the materials which have entered into the composition of the Mahāvastu are of widely different ages; the source of the compilation is certainly ancient, since it forms part of the canon of one of the ancient schools. It must be admitted, therefore, that its book long time to be formed, for it is certain that it was not completed until very late. The mention of astrologers under a Western name (horāpañca) and that of the writings of the Chinese and of the Huns, Peliyaksa (Felix U.) Upallabhuta (U. ete.), indicate the 4th or 5th century. At that date, however, the persistence, in the prose, of the ecclesiastical jargon, which will be discussed below (§ 4), is an astonishing fact.* We must, therefore, admit late interpolated parts, and try to dilate this interpolation a little further back. In order to realize the character of this compilation, it must be noticed that the editors do not allow themselves to invent anything, and do not even correct the most flagrant contradictions.1

2. Comparison with Pāli canon.—There are numerous parallel passages in the Mahāvastu and Pāli literature. Minayell, Oldenberg, above all Senart and Barth, have called attention to many, but not to all. Differences which seem to be marks of sect are rare. We are able to study the unsettled state of Buddhist tradition and the infinite diversity of arrangement and treatment of the same materials.

In these examples, the amount of similarity is of all degrees, from simple community of subject and vague resemblance to complete identity. The latter, however, is rarely attested, and never for long. The similarity, especially in the verses, is to a large extent an exterior one; it is shown in mode of expression, in general assuance, in words more than in matter, in sounds more than in words; the stanza is the same, when the meaning is sometimes different, like the egg of which nothing remains but the shell. They all go back to one original. The probabilities are not always in favour of the Pāli edition. But for the enigmatic of the fragments as well as for the detail of their rendering, it is the Pāli that is the best on the whole and that gives the best representation of the original version.2

It is well known that all the comparisons set up between the Pāli canon and the other canons arrive at the same conclusion. The Pali writings were fixed and codified.

3. Relation to Mahāyāna and Hinayāna.—The Mahāvastu may be said to form the bridge between the Old Vehicle and the New. As is seen in art. MAHĀVASTU, the two Vehicles are not inconceivable, that may have certain characteristics peculiar to the Great Vehicle while remaining unacquainted with the others.

(1) The 'Buddhology' of the Mahāvastu marks a stage between the conception of Buddha as a human mortal (little vehicle) and that of Buddha as a quasi-eternal god sending illusory images down to this world (Great Vehicle). The Buddha of the Mahāvastu is a superman. He feels neither hunger nor thirst; he lives in ignorance of carnal desires; his wife remains a virgin. It is from consideration for humanity, in order to conform to the customs of the world (lokānavartana), that he behaves as a man, or that he gives to men the false impression that he is behaving as a man. In technical terms, he is lokottara, 'superior to the world.'

(2) The infinite multiplication of Buddhas in the past and in the present is also a characteristic of Mahāyānastast. It must be noticed, however, that the Sarvāstivādins, who are reputed to be free from Mahāyānism, allow that several Buddhas may co-exist, though in different universes, or 'fields of Buddha.'

(3) Much more marked is the tendency of one of the chapters of the Mahāvastu, entitled Debhabhāsākara, 'the book of the ten bhāsas'—successive steps by which the future Buddhas have to mount up to the state of Buddha.

It is to the beings who aspire, resolutely, to the condition of Buddhas that the Mahāvastu sought to be set forth... for they will believe; the others will only cavil (I. 193).

The Mahāvastu, therefore, has incorporated a book which is addressed, in so many words, to beings who wish to become, not arhats, but Buddhahs, i.e. to the men who enter the Vehicle of the future Buddhas, the Mahāyāna.3

1 Senart, loc. cit. p. 624.
2 Barth, loc. cit. p. 627.
3 The text says that his body is mahaśākāra, 'mind-made.' This expression has been discussed by E. Senart and A. Barth (see art. BODHISATTVA). According to the Mahaśākāreśvara, it means, not 'manifestation of the consciousness created by the mind,' without intervention of seed and blood. Such is the body of the creatures called upāyavāsādīyas, 'apparitions,' one of whose characteristics is that they spring from a seed. 
4 Several other instances of Mahāyānast correspond by Senart and Barth (loc. cit. p. 623). Different interpretations may be suggested from that of these two scholars for
MAHAYANA

On the other hand, Amitabha, Avalokita, Maithri, the bhavarini (‘spell’), and the yasna (‘voidness’) and, we may add, karuna (‘compassion’)—are unknown in the Mahayana, which remains a book of the Hindu legend. The same holds, says Barthe, for the mythological and legendary part, as Barthe remarks (p. 527), and which is really Mahayaniast only in the considerable interpolation of the Daśabhūmikā.1

4. Language.—The ancient religious literature of Mahāyāna—with the exception of the Brahmanic—were written in popular and spoken dialects. In course of time these dialects became ‘fixed languages,’ subject to rules. This happened with the Jains (śāradhaviniṭṭhi), and with the church which was an order under that of Ceylon (Uśala). This is not the Buddhist school of the Sarvastivādins adopted Sanskrit, and Sanskritized both the ancient nomenclature and the traditional texts in prose and in verse. The language of the Mahāvīrapūrī school remained in an unsettled state: it was neither Sanskrit nor Uśala, nor any of the known Prakrits, but an arbitrary and unstable mixture of all these.

It is a literary language, says Senart, ‘and it is certain that it is not longer (i.e., at the time of the compilation of the Mahāvīra) a spoken language, and not less certain that, since 300 B.C., and after that time, inscriptions and books were written in much the same way. But, in the Mahāvīra, is it still a language? At bottom, there is undoubtedly the substance of a real language, akin to that of the most ancient inscriptions and to that which has come to us so admirably, śaṅkya sutras, but it is in prose, and, especially in the prose, ‘it was indefinitely open to the influence of Sanskrit.’

Such is the language of the Mahāvīra in the present state of the text—more Prakrit in the poetry than in the prose, and extremely interesting for the linguistic history of India. This language has received the name of ‘language of the Śaṅkara,’ because it was first studied in the books of the Great Vehicle, the prose parts of which are in Sanskrit or quasi-Sanskrit, and the verses or stanzas (gāthās) in this peculiar jargon. This difference of treatment does not exist in the Mahāvīra, in which the Sanskritisms seem to be unrecognised.

MAHĀVIRA.—See AJITKĀS.

MAHĀYĀNA.—I. DEFINITION AND DESCRIPTION.—1. In order to define Mahāyāna, we must first notice certain characteristics of the Hinayāna. Buddha has said that, as salt is the only flavour of the sea, the only flavour (rupa) of his doctrine, the true doctrine or religion (saddharmā), is the flavour of deliverance (nibbāna, nissvānta), or of nirvāṇa. Buddhism, therefore, can be looked on as a path (paripattipadā), or path of deliverance, called nirvāṇa, as a supramundane (lokottara) path leading to the end of the two passages in which they think they discern references to the two sects of the Mahāyāna—the Yādavādīs and the Mādhyamikas. (1) Yājñavalkya, in Mahābhārata, book 1, ch. 128, means simply ‘he who prātīsa poya, ’contemplation.’ ‘It is by this name that the Abhidharma (chh. 90, ad init.) designates the ascetic who practices ‘meditation of the horrible’ (uṇakabhikṣaṇa, contemplation of the corpse, etc.), the anyagāyatikāna, etc. (2) As regards the ‘middle path’ described in chh. 44, it is certainly Mādhyamika, but it is also ‘canonical’ (Sattvagupta-kālā).2

1 We know that one of the chief books of the Mahāyāna is called Daśabhūmikā (tr. into Chinese, A.D. 205-210). The Yājñavalkya says it is patrolling their doctrine, because it teaches that ‘all things are only thought’ (cittha)—a theory which does not appear in the Daśabhūmikā of the Mahāyāna. The Mādhyamikas of the two works have been compared at Amgāvatāra. The scholars of the Mahāyāna argue from the fact that the theory of the bhūmi is taught in the Mahāvīra, a Hinayāna book.

2 Barth, p. 429.

constant succession of re-births (sāntāna punar-bhava) which constitutes the ‘world’ (lokā) or existence (bhavatāloka), or as a vehicle (yāna) conveying those who mount it to the same goal, ‘the town of Nirvāṇa.’

The first metaphor has been adopted by primitive Buddhism; the second one by the new Buddhism. The adherents of this latter Buddhism found fault with the earlier Buddhism; and, accordingly, while styles their own creed mahāyāna (‘great vehicle’), true, great, and profound (paramārtha) doctrine of salvation, they characterized the creed of their predecessors as Hinayāna (‘little vehicle’), an inferior, imperfect, inefficient doctrine of salvation. Another name for the Buddhist school of the Sarvāstivādins adopted Sanskrit, and Sanskritized both the ancient nomenclature and the traditional texts in prose and in verse. The language of the Mahāvīrapūrī school remained in an unsettled state: it was neither Sanskrit nor Uśala, nor any of the known Prakrits, but an arbitrary and unstable mixture of all these.

It is a literary language, says Senart, ‘and it is certain that it is not longer (i.e., at the time of the compilation of the Mahāvīra) a spoken language, and not less certain that, since 300 B.C., and after that time, inscriptions and books were written in much the same way. But, in the Mahāvīra, is it still a language? At bottom, there is undoubtedly the substance of a real language, akin to that of the most ancient inscriptions and to that which has come to us so admirably, śaṅkya sutras, but it is in prose, ‘it was indefinitely open to the influence of Sanskrit.’

Such is the language of the Mahāvīra in the present state of the text—more Prakrit in the poetry than in the prose, and extremely interesting for the linguistic history of India. This language has received the name of ‘language of the Śaṅkara,’ because it was first studied in the books of the Great Vehicle, the prose parts of which are in Sanskrit or quasi-Sanskrit, and the verses or stanzas (gāthās) in this peculiar jargon. This difference of treatment does not exist in the Mahāvīra, in which the Sanskritisms seem to be unrecognised.

MAHĀVIRA.—See AJITKĀS.

MAHĀYĀNA.—I. DEFINITION AND DESCRIPTION.—1. In order to define Mahāyāna, we must first notice certain characteristics of the Hinayāna. Buddha has said that, as salt is the only flavour of the sea, the only flavour (rupa) of his doctrine, the true doctrine or religion (saddharmā), is the flavour of deliverance (nibbāna, nissvānta), or of nirvāṇa. Buddhism, therefore, can be looked on as a path (paripattipadā) leading to nirvāṇa, as a supramundane (lokottara) path leading to the end of the two passages in which they think they discern references to the two sects of the Mahāyāna—the Yādavādīs and the Mādhyamikas. (1) Yājñavalkya, in Mahābhārata, book 1, ch. 128, means simply ‘he who prātīsa poya, ’contemplation.’ ‘It is by this name that the Abhidharma (chh. 90, ad init.) designates the ascetic who practices ‘meditation of the horrible’ (uṇakabhikṣaṇa, contemplation of the corpse, etc.), the anyagāyatikāna, etc. (2) As regards the ‘middle path’ described in chh. 44, it is certainly Mādhyamika, but it is also ‘canonical’ (Sattvagupta-kālā).

2 We know that one of the chief books of the Mahāyāna is called Daśabhūmikā (tr. into Chinese, A.D. 205-210). The Yājñavalkya says it is patrolling their doctrine, because it teaches that ‘all things are only thought’ (cittha)—a theory which does not appear in the Daśabhūmikā of the Mahāyāna. The Mādhyamikas of the two works have been compared at Amgāvatāra. The scholars of the Mahāyāna argue from the fact that the theory of the bhūmi is taught in the Mahāvīra, a Hinayāna book.

3 Barth, p. 429.
this sentiment implies a living god—though the Ahhidharma-kosa employs the term. Generation of relics, śīlapuṇḍaras, etc., is useless and recommended; it is therefore not essential, as penance (tapaś) is, but it is not essential.

(5) Ancient Buddhism is not merely a vehicle of nirvāṇa; it also teaches how to be reborn in heaven, in the world of Brahmā.

There is usually distinct: (1) the Vehicle of the Sārvākās, (2) the Vehicle of the Pratyekabuddhas, (3) the Vehicle of the Śrāvakas, and (4) the Vehicle of the Bodhisattvas. The first two together constitute the Little Vehicle, the third the Great Vehicle (see E. Burnouf, Le Lotus de la benne loi, Paris, 1882, pp. 32, 315, 369; H. Kern, SBE xxi (1892) 90 n. 1; Tsung-tao, A Manual of Indian Buddhism, p. 62; Dharma-prakāṣa, ed. F. Max Muller and H. Weinzel, Oxford, 1885, p. 2, and sources cited on p. 30; J. H. Elliot, Handbook of Buddhist Literature, i.e. Tīrāyana, etc., pts. of Buddhāvatāra, [PTS, London, 1883]; Commentary, p. xi, where the Sārvākās, Pratyekabuddhas are opposed to the Śrāvakas and Bodhisattvas.

There is no difference between the Vehicle of the Sārvākās and that of the Pratyekabuddhas; both arrive at the same goal, although the Bodhisattvas appear at a time when the Law of the Buddha is known, and only by the teaching of others, the Pratyekabuddha attains to bodhi by the Law of the Buddha when he has attained it; while the Sārvākās preach (etayā vatataḥ śrāvakā, translated 'hearer,' means rather 'preacher' [see SBE xi, Subhākṣaraparāśāra, iv. 259], the Pratyekabuddhas do not convert except by miracles. There are still other differences, but these are no less significant to the Vehicle of salvation (see Alder, dharma-kosadhyaya, ch. iii. Fr. tr., London, 1915, p. 105 and note h, and Prayogi-kosadhyaya, [Fr. tr., Mr., London, n.s., vill. (1907) 2], etc., quoting literary authorities. It is natural, then, for the Vehicle of the Sārvākās and the Vehicle of the Pratyekabuddhas to be fused in the Little Vehicle (Hinayāna) (p. 6).

2. Great Vehicle.—The new Buddhism adopts the name of mahāyāna ('great vehicle'). The word 'vehicle' (vīhāra) is used to express the same idea as that conveyed by the 'supramundane path' (lokottarārtham), the 'path leading to nirvāṇa'.

But, as we shall see, there are various kinds of Mahāyāna, and this fact explains the diversity of definitions, etc., in the different Buddhist schools. The Chinese pilgrims—e.g., the Chinese pilgrims—found themselves when they tried to explain the difference between the Little and the Great Vehicle.

The Great Vehicle consists of (1) the practice of the virtuous (śrāvaka-sūtra); (2) the wisdom or knowledge of the Buddha (Buddhabuddha-prajña); (3) devotion; it is the path of the Path of Bodhisattva (bhūtottara-dharma-prajña).

(1) Carver of the bodhisattva.—The books which profess to belong to the Great Vehicle (Mahāyāna-sūtras) tend to assert that nirvāṇa cannot be attained by the ancient method. To obtain divinity, we have to destroy desire, ignorance, and existence; it is necessary to practise all the virtues and acquire all the knowledge of the Buddhas, to enter on the career of a future Buddha (bhūtottara-dharma-prajña) and pursue it for centuries. Instead of 'Great Vehicle,' they prefer the term 'Vehicle of the future Buddhas' (bhūtottara-dharma-prajña), or 'Method of the perfect virtues, charity, patience, etc.' (pāramitā-prajña).

Now the Buddha Śakyamuni, during his former existences, has always lived in the world. It is possible, therefore, to enter the 'Vehicle of the future Buddhas' although married. Nothing, however, prevents monks from making the vow to become Buddha. This is the reason why they call the 'Vehicle of the future Buddhas,' but by their monastic observances they belong to the 'old Buddhism,' and form part of one of the disciplinary schools of the Śrāvakas. Young laity often take the vows of monks, and, after acquiring the wisdom in this way, return to them in order to take the vows of a future Buddha.

(2) Vacuity.—The books that treat of philosophy explain that the ancient dogma, 'The soul is nothing but a complex of transitory elements (ārahamāṇa), is perfectly accurate, but unsatisfying; they would add that these elements themselves do not exist in themselves, but are 'void' (śūnya). (For the two ways of understanding vacuity, and the two schools of the Great Vehicle, see art. Mahāyāna.)

The doctrine of vacuity (śūnyatā) is the second characteristic of the Great Vehicle. By a layman or a monk can perform the 'vow to become a Buddha' without thinking about the doctrine of vacuity. The Theravādins declare that, as the beginning of the sāṃskāra career is entirely devoted to charity, it is not good to give too much thought to philosophy, i.e. to universal nothingness. On the other hand, an adept of the Little Vehicle, who does not believe in the necessity of becoming a Buddha may adhere to the doctrine of vacuity and become imbued with it, in order to attain nīlāmputra as an arhat, i.e. in the present life. Some texts even explain that, if the doctrine of vacuity is really indispensable to the attainment of nīlāmputra, it is sufficient, without the career of the future Buddha.

(3) Devotion.—A third characteristic of the Great Vehicle is the worship of the Buddha. It appears, both by historical documents and independent of any desire to become oneself a Buddha and independently of philosophical speculation. There is therefore a Great Vehicle that is merely devotional: (a) the Buddha (Amitābha, e.g.) is a god in the full meaning of the word, eternal or almost so (Amitābha, 'infinite splendour,' is sometimes called Amitāyus, 'infinite life'); (b) the only concern of the faithful is to be reborn in the paradise of this god, 'the blissful world' (Sukhāvatī), the western paradise, through various vows or by the repetition of the name of the Buddhas—which is not quite orthodox. It is to be noticed that the worship of the Buddha is总监, etc., is compatible with the strict orthodoxy of the Hinayāna, as has been remarked in regard to Java, which is very orthodox and yet attached to the Hinayāna.

3. Vedāntic and Tantric Vehicle.—The Mahāyāna, as analyzed above, is, from the philosophical point of view, a phenomenological system, and, from the religious and mythological point of view, a theism with monarchical and devotional tendencies. From early times phenomenonalism and polytheism led to conceptions of immannence and monism. 1 In the days of Asanga (A.D. 4th cent.) men believed in an Ādībuddha (g.o.v.) who would play the part of Brahmā in his various aspects as Brahmā, or Śrīma, or Śrīna incarnate. These speculations upon immannence and emanation, which often mingle with the doctrines of the Mahāyāna, have always lived in the world. 2

1 For the combination of the cult of the Buddha and compassion, or charity, with meditation on vacuity, see art. Bodhisattva.
2 See art. AMĪTĀYUS; BILD, ASOON OF THE (Buddh.) etc., Maitreya (Study of the Pure-land Sukhāvatī), Tokyo, 1909; and Matsumoto, Studies of the Pure-land of Maitreya), do. 1911 (Fr. tr., M. X. Pérez, in Bull. de l'École yon, d'Extrême-Orient, xi, 1911 339 ff.)
are the leads of the ‘Vehicle of formula’ (maññaptiśrava), the ‘diamond method’ (vinñayama), also called the ‘Triratric Vehicle’ (triratraya). This Vehicle is Vedanta in Buddhist disguise as regards its doctrine, and Saivite and pagan as regards its mystic representation of the world and its rites. Its goal is the condition of a Buddha, its doctrine that (1) every being is, in his inmost nature, a Buddha, and (2) every being can, by meditation, spells, (sādhanas), and theurgy practices of all kinds (often called, ‘realize’ this Buddha nature at little expense (see TANTRA).

4. Is the Mahāyāna the only Vehicle?—This is an interesting question and worthy of our attention. Do the Mahāyāna teachers regard the Mahāyāna as the only Vehicle of salvation? 1-Iseng’s remarks may be accepted as giving the general impression:

‘These two systems [Mahāyāna and Hiññāyana] are perfectly in accordance with the noble doctrine [of the Buddha]. Both equally conform to truth and lead us to Nirvāna.**

But the scholastic literature and the Mahāyāna-sūtras of course give different and often narrower views. Maitreya-Assāga says that ‘the meditation (dhāyana) of the Hiññāyana, though impure, leads to salvation’; but for Sántideva the Hiññāyana leads to nirvāṇa.* He says: ‘So the case of the Bhikṣu and the Bhikṣunī may be attained by meditation on these sūtras—in an extreme case, we say, because the follower of the Hiññāyana has no part in the spiritual aids that are reserved for the future Buddha; he does not have the great means (apāya) of salvation, compassion, great means (mahākārya), i.e. the desire and the vow to save all creatures; the possession of wisdom (prajñā) is unavailing, since he lacks the great means of remission of sins and elimination of passions. In fact, there is only one Vehicle, the Lotus of the True Law (g.v.) and several sūtras teach very clearly. The only way to salvation is to become a Buddha. But this demands a long career; so the Buddha has shown men a nearer goal, the nirvāṇa of the arhat, that they may not lose heart—like a caravan-leader who creates a mazie town in the midst of the forest, far from the end of the journey, that the travellers may think they are near their destination, and take heart to advance. The men who meet the Vehicle of the Sārūyas cannot obtain deliverance by the Vehicle of the Sārūyas’; embracing a false nirvāṇa, they are like a lover who embraces his mistress’s corpse; they have, however, advanced nearer to the true nirvāṇa. At death, they falsely think that they have attained deliverance and exemption from re-birth; they are re-born, for they are not yet delivered, but they are re-born beyond the world (tridhātita), in the ‘pure realm’ (purusottamālo), in lotuses which open their petals to the rays of Aṃtiśaha and other Buddhas. There they learn the true Vehicle, make the bodhi vow, and enter, through numerous lives, upon the career of a future Buddha.

The Chinese texts studied by J. M. de Groot (Code of Mahāyāna en Chine, Amsterdam, 1835, p. 94) reduce the Hiññāyana to the observation of monastic rules, taking no notice, either purposely or through ignorance, of all the Noble Path and meditation on the truths. They say that the Little Vehicle, thus understood, leads to re-birth in the inferior paradieses of the world of Kama (see Consoorte and Conway); it is therefore a Vehicle that leads to the gods (devadānaa, according to the Great’s translation), and not a Vehicle of salvation.

5. Speculative doctrines of the Mahāyāna.—These are examined in the artit. MADHYANAKA and VIJÑANAVIDAS, which discuss the two chief philosophic schools of the Great Vehicle. The doctrines connected with the ‘career of the future Buddha’ (bodhisa-ttavatāra) are treated in the artit. BODHISATTVA. Many details may be added on the technique of meditations; but the works on this subject (Abhāsa-māyādānakāvīroha, Bodhisattva-vatāna) have not been published, and present very serious difficulties.

6. Discipline (Vinaya) of the Mahāyāna.—The Indian schools of devotion (bhoṣita) are often not strict as regards morality and discipline. They existed, accordingly, lax Mahāyāna, inclining to Tāntrism, which proscribed salvation and the remission of sins by the recitation of formulas, etc., independently of rules of conduct.

But there is also a rigid Mahāyānist ‘monachism,’ sometimes adhering to the ancient Vinayas, sometimes in contact with the theurgic (mahāyāna). Sántideva speaks in the same strain:

‘The adept of the Great Vehicle will never give his hearers the vain hope of acquiring purity by simply reading the books of the Great Vehicle, and reciting formulas, while abandoning the rules of conduct.’

One fully realizes I-ting’s statement:

‘Which of the eighteen schools [of the Hiññāyana] should be grouped with the Mahāyāna or with the Hiññāyana is not determined. Both [Mahāyāna and Hiññāyana] adopt one and the same discipline [Vinaya].’

Monks and convents practising the strict monastic observance of the ancient Vinayas adopted the dogmas and worship of the Mahāyāna; Yuan Chwang therefore mentions monks who were ‘Mahāyānists of the Sātavahana-school and all perfect in Vinaya observance.’ It has been supposed that the Vinaya of the ancient Mahāyānakas was the most popular in Mahāyānist convents, because it was in a Mahāyānist convent that Fa Hian found the Mahāyānakas Vinaya, because the Mahāyānakas seem to have been the forerunners of the Mahāyāna.

(2) The Mahāyāna apparently introduced into the discipline some new rules concerning the use of milk and meat. The Sarvāvāgas (Hiññāyana) allowed the use of meat under certain conditions; the Mahāyānists condemned it. I-ting tells a touching story of a young Mahāyānist, Chitta-varman, who was refused ordination in a Hiññāyan convent until he renounced, in tears, his principles of diet.

Sooner or later, however, the Mahāyāna created a new Vinaya for itself—a Vinaya that was independent of the ancient Vinayas, that had a different purpose in view and that could be, and was often

expected to be, used together with the ancient Vīnaya. The ancient Vīnaya were for the use of monks; the Mahāyāna Vīnaya is the 'Vīnaya of the future Buddhists,' or, more exactly, 'of incipient future Buddhists' (ādikārmika bodhisattva).

(a) It was while making the vow to become a Buddha that Sakyamuni, protrasting himself at the feet of a Buddha, repeated 'a future Buddha'; this vow is valid, not only for present existence, but also for numerous future existences; like the vows of a bhika (see KARMA), it creates 'discipline' (sīvācara), the obligation and, to a certain extent, the 'grace' (the moral power) to perform certain duties. We have no longer a Buddha in our midst to receive such a vow from us; we must be content to take the 'discipline of a son of Buddha' (sūpaditāmārgajñanavatā) before a qualified preceptor, and before all the Buddhists of the quarters. 1 (b) The future Buddha must perfect the 'practical virtues' (pāramitā); theologians have therefore to explain how he is to fulfill the virtues of giving, energy, and meditation of different natures. Finally, he must know how to confess them, before whom (i.e. Buddhists of confession), and how to obtain pardon.

d) The ancient devotional practices, worship of stūpas, etc., are not sufficient for devotions of Avalokiteśvara, Amāvatāra, and Tārā; fixed rules of worship must therefore be made. 2 We have no exact information regarding the oldest forms of the Vīnaya for bodhisattvas. But documents of this kind give us, in conformity with the rules of life of the Mahāyānists, the principle that the essential conditions for the practice of this great being (mahāsattva) is the respect and meditation practised by the ancients towards the Buddha; what was formerly venerated in the Buddha, what men 'took refuge in' (dharma, dhamma) when they first became associated with the complex of the moral and intellectual qualities in virtue of which a certain person is Buddha. To admire and meditate on these qualities is an excellent means of attaining morality, tranquillity, nirvāṇa. The Mahāyāna addresses itself to living, gracious, parental gods.

There are, therefore, three formative elements in the Mahāyāna; and its history means the history of the development of these three elements. This comprises three distinct histories; for, though the three elements are sometimes united, they are often separate; and, though their development has been parallel, or almost so, they have no connexion from the logical point of view (parārūpa); we may safely attempt to give the scheme the evolutionary curve of these three elements, but it is very difficult to give chronological dates or precise details in the evolution.

1. Career of the great sattva. — Ancient Buddhists hold that Buddhas are very rare, but the Mahāyāna invites all who desire salvation to enter on the career of a future Buddha. This is a fundamental change from the dogmatic point of view, and involves a correction of a kind that is, in short, the monks believed that the quickest way to reach nirvāṇa was by meditation; he worked entirely 'for himself' (vedātana); the activity of the future Buddha, on the contrary, is, above all, altruistic (parārūpa).

Our literal evidence on the stages of this transformation is unsatisfactory. On the other hand, it is easy to guess the motives behind it. The following factors are of great importance.

1) The ideal of ancient Buddhism, the arhat useless to others and an utter egoist, to the extent of insensibility, appeared mean when compared to the Buddha, the being of compassion and pity. Hence the 'saint for himself,' the 'delivered while

still alive,' so long the dream of India, was no longer held in honour. The creation of the type of the Buddha, the hero of charity, saving the world at the cost of so many lives consecrated to the world, revered tenaciously in ancient Buddhism, was a normal way towards the doctrine of the 'carer of the bodhisattva' open to all.1

(2) The question arose, further, whether the arhat actually obtains nirvana. Formerly the arhat was required to show his only cittas, namely, 'harmlessness,' but also 'feelings of benevolence' for the mass of human creatures, as it is only just to mention, but his 'equipment of merit' appeared somewhat slight, and we may suppose that men were even tempted to think that the element of knowledge' was sufficient. Metaphysics and psychology had made progress. Many existences are necessary, they may have said, to obtain knowledge sufficient for deliverance; just as, in order to arrive at knowledge of things, we must see, feel, and taste for ourselves, and love of existence, the first necessity is devotion to others.

(3) It is possible, also, that faith in nirvana was shaken, or that, not knowing exactly what nirvana was in such words, they devoted their attention rather to the acquisition of celestial powers and the bliss of the Buddhas (now transformed into very happy and long-lasting personal gods), as below.

The Dvadasha-kathana, a very technical work on the 'career of the future Buddha,' was translated into Chinese between A.D. 253 and 316; the Mahavastu (q.v.) of much earlier origin, gives a lengthy account of the states or degrees (bhuma) of this career. According to Chandarati, (Madhyamakavatara), the Hinayana knows nothing of the 'Vehicle of the future Buddha,' which is the characteristic trait of the Mahayana.

2. VACAY. — We have more extensive information on the philosophical doctrine. Here we are dealing with a development rather than with a transformation: (1) the principles of analysis and speculative annihilation applied by ancient Buddhist philosophers to the ego and its entities (the body, the mind, the chariot) were now applied to the dharmas ('elements of things'), the minute elementary realities constituting the ego and the great unities; this is the Madhyamika system (see art. MADHYAMAKA). And the similar idealist tendencies were developed, which saw in thought the cause of all: 'All that we are is the result of what we have thought; it is founded on our thoughts, it is made up of our thoughts.' (Bhavanakirti, p. [SBE x. (1908) 3]). Hence the conclusion that matter does not exist; thought alone exists.

The two philosophical schools of the Mahayana (Madhyamakas and Vijnanaavadins) are both in line with the most ancient tradition. Nagajuna, the great master of the former, is placed in the 2nd cent. A.D. but there is a great deal of Madhyamika philosophy in the Pali canon,2 and the sutras of the Prajnaparamita, where this philosophy is predominant, are ancient.3 Chandarati establishes this.

3. DEVOTION. — As regards the dedication of Buddhists and worship of Buddhas and bodhisattvas, we have a sure date in the Chinese translation (between A.D. 148 and 170) of the Prajnaparamita, the book in which the monothestic religion of Amitabha (see above, l. 2, (3)) is formulated.1 The Gandhara monuments, the exact date of which is not known, but which can hardly be later than the 1st cent. A.D., trail of it, and the earliest date of the Chinese translation. They show, or at least may be held to show, the worship of the bodhisattvas associated with that of the Buddhas.2

On the other hand, we know from the documents of the Hinayana that the worship of Buddha is of great antiquity. In the art. ADIBUDDHA the present writer has mentioned some of these documents, and (although he no longer sees in certain cases the quasi-dedications of the Buddha which he saw in 1827) he is now of the opinion that at least certain Buddhists, came to the conclusion that Sakyamuni did not descend in person to the earth, but was content to send his image (cf. DOCTRINE [Buddhist]). This is, in substance, the teaching of the Great Vehicle on Buddha—the Buddha almost eternal and saving beings by means of magical creations. Scholars who admit the authenticity of the Kathavatthu as a whole are compelled to accept the teachings of Anacala. Without believing in the authenticity of this very composite work, the present writer would willingly admit that the dedication of the Buddha and his 'almost' eternity belong to a period long before the formalism.

It is almost certain, too, that this transformation of the Buddha may be explained by the natural evolution of the Buddhist dogma on Buddhist soil. The resemblance between the Buddha and the Buddha in the Buddhist tradition, the comparative greatness of himself down to the world, on the one hand, and, Kryya, goddening beings in his own world (Goloka) and appearing in a human form, on the other, is striking, and demands an explanation.

Nevertheless, it must be noted that, although Sakyamuni plays an important role in the Lotus of the True Law and in the Mahayana literature of which he is the revealer, he does not seem to have had a leading part in the religions of the great Vehicle. In the first rank are Maitreya,3 the future Buddha, more living than Sakyamuni, and especially personages of obscure origin, Avalokitêsvara (see art. AVAĻOKITÊSVARA), Amithaba,4 Vairochana, Vajrapa, and many others, whose Buddhist character is not very marked.

Several scholars, moreover (and on no mean ones), regard the origin of the devotion to the Buddhas as a real 'passe' (Max Muller), and believe that it is to be found in the influence of the 'barbarians,' notably the Madurao—an influence which was exercised especially in Northern India, the Punjab, and Kashmir, where religious ideas reached such high development. The pre-historic mythology of the Great Vehicle is veiled in obscurity, and future researches may perhaps confirm this hypothesis; but the comparisons to which attention has been called up to the present have little value and do not prove that Amithaba is an Ahura Mazda or an Apollo disguised. In any case it is useless to explain the worship of the Buddhas by the influence of Greek sculptors, as the first to make images of Buddhas. The whole 'theology' of the

1. See the tr. of Max Muller and Takakusu in SBE xvi. (1894).
2. See A. Foucher, L'Art du Bouddhm, 11, who treats of the difficult identification of the images of the Buddha and gives their date.
religion of Amâlâbâda is Indian; the belief in the providence of Amâlâbâda, the belief in their saving grace has very little in common with ancient Buddhism, but is exceptionally classical. The paradise of the west (Sukhavati), and that of the east, (Sukhavati), is probably an Indian "heaven"; reality "solar," have not up to the present been sufficiently studied.

The idea of multiple deities, however, each ruled by a Buddha, is very authentic Buddhism (see, e.g., the Mahâvastu).

3. CONTROVERSY ON THE AUTHENTICITY OF THE SCRIPTURES OF THE MAHÂYÂNA.

We know that the books of the Hinayâna appeared surrounded with a very definite ecclesiastical history. Whatever the exact date of the tradition referring to the Councils (e.g., R. O. Franke, Diighakâya, Göttingen, 1913, p. xliii), the Buddhists of the Mahâyâna and of the Hinayâna admitted the authenticity, in the strict sense, of the ancient canon. But the adherents of the Hinayâna did not recognize the books of the Mahâyâna for the simple reason that these books were unknown in ecclesiastical history.

This is the word of the Buddha which is found in the Sûtra which appears in the Vinaya, which is in harmony with religion, with Truth (dharmatâ). This old text in the form of the Digha, is, according to them, the condemnation of the Mahâyâna, which not only is not authentic, but is even full of heretical novelties.

The most weighty argument of the Mahâyânists is the speculative argument. The Mahâyâna, they say, is in harmony with the dharmatâ; it is the only vehicle of nirvâna. The Hinayâna is indeed authentic, but the Buddha taught it only as a provisional truth, taking into consideration the weak understandings of his hearers. Besides, if the doctrine of the Mahâyâna is not found in your sûtras, it is found in ours; if you do not admit our sûtras, we admit them. But, the Hinayânists reply, our sûtras are authentic since you admit them; yours are not, and that is why we reject them. To this the Mahâyânists answer that there are far more reasons for admitting the sûtras of the Mahâyâna, since they are the true path to salvation.

The Mahâyânists further maintain that the Mahâyâna is not new, and that the Hinaya-nist tradition shows that the Mahâyâna is authentic.

(1) The Sândhyavânikâya (ii. 17 and iii. 142) proves that even in the Hinayâna the Buddha taught the non-existense in themselves of the elements of the ego (see above, II. 2; Madhyamakâvatâra, p. 22).

(2) The doctrine of the multiple teaching of the Master, of his "accommodation to the ideas of the world" (lokâmrâjyam), is taught in the Canon of the Mahâyâna, a sutra of the Mahâyâna (Mahâyâna-sûtra), Fr. tr., Muslims, new ser. xi. (1910: 134); which is also (3) said to have possessed the sûtras of the Prajñâpâramitâ in Prakrit. This sect, however, is strict in the matter of doctrine, since it orders the expulsion of those who do not understand the "reserved questions" (see art. AGNOSTicism [Buddhist], vol. i. p. 221a; Madhyamakâvatâra, p. 251).

(4) The Mahâvastu (a book of the Hinayâna) puts the stages in the career of a bodhisattva and the perfect virtues.

If the whole of the Mahâyâna was not known to the ancients, it was because the doctrines were too sublime to be understood by the compilers of the Hinayâna. But it was the Buddha who taught them, and they were heard by the bodhisattvas. Mahâyânists, therefore, like the Mahâyâna with the Mahâyâna, think of the Mahâyâna, the Mahâyâna have a branch, is beyond doubt; but the antiquity of the doctrine of this school is rather doubtful.

4 For a description and analysis of the literature of the question, see Jh. Schueller, Buddhistische, pp. 157-207, and Winteritz, Gesch. des ind. Litteratur, ii. 257-293; see also Winteritz on the Lalitavistara and the Mahâyâna Literature among translations see 'The Lotus of the True Law,' SBE xxii., 'The Sukhâvatî, etc.', SBE xiii.

Mahdi.

The title Mahdi was first associated with 'Ali's son Muhammad b. al-Hanafiyah, and, apparently, given him by the adventurer Makhbār b. 'Ali. This title was bestowed upon him by the Kurbela, ostensibly championed the claims of this personage to the khalifate. The word is ordinarily interpreted 'the divinely guided,' from a verb which frequently occurs in the Quran in the sense of '引导,' though this particular derivative is not found there; yet this explanation did not give universal satisfaction, and several others were current (see Yāqūt, Geographical Dictionary, ed. F. Waizizenfeld, Leipzig, 1886-98, vol. 4, pp. 883-4). This title clearly used it as an epithet analogous to a title attached to the name of 'Ali, calling him 'the Mahdi, son of the Wasi' (Tabari, Chronicle, ed. Leyden, 1879-1901, ii, 534), where the latter title means 'the legatee,' i.e., he to whom the Prophet had bequeathed the sovereignty; it is, however, often interpreted as 'the trustee.' It is doubtful whether this Muhammad used it himself, as a letter purporting to be from him, in which it is prefixed to his name, was condemned as spurious by one of his correspondents on that account (Tabari, ii, 611 (66 A.H.). After the death of 'Ali's two sons by Fatima, the Prophet's daughter, it would seem that some Muslims were ready to recognize the legitimacy of this Mahdi, 'Ali's son by another wife, to the sovereignty, but he himself acted with extreme caution in the matter of assuming it; he was, however, imprisoned for a time by the parties-sans of Abdallah b. Zubayr, who endeavoured to wrest the throne from the Umayyads; when their supremacy was restored, he accepted a governorship, and appears to have ended peacefully. Some uncertainty existed with regard to both the time and place of his death, and a sect arose called the Saiyidinayh, who declared that he remained alive in his supposed tomb in Mt. Radwa, whence he would one day emerge; and the poet of this sect, the Saiyidinayh, fully expected this occurrence, though the Mahdi had disappeared for sixty years (Aghānī, Cairo, 1283, vol. 32). The poet Kuthayyir asserts that his reappearance would be foretold by Kā'b al-'Abbār († 34 A.H.), whose name is often mentioned in connexion with matter drawn from the Jewish Scriptures. This prophet may well owe its origin to that of the return of Elijah; but how the Mahdi came to be substituted for that prophet is not clear; if the reference to Kā'b be genuine, we should gather that the word had been used before the Mahdi in religious import. The poet further asserts that this Mahdi's book was studied by the Kaisanī in Mecca; but such a work must assuredly have been a forgery.

With this personage the idea of an awaited deliverer is first connected in Islam, and this notion is expressed by the name Mahdi, to which the participle 'expected' (vantāz) is sometimes attached. The various pretenders from the house
of Ali received the title—_e.g._, Zaidi (after whom the Zaidis are called); he was defeated and killed in the year 122 A.H., and his body was afterwards crucified. An Unayyad satirist said that he had never before seen a Mahdi hanging on a tree (Mans`udi, ed. and tr. by M. de Margoliouth, Les Pratiques d'or, Paris, 1861-77, v. 471). When the pretender Muhammad b. `Abdallah first made his appearance, the people of Medina cried out: 'The Mahdi has come forth' (Tabari, iii. 159 (A.H. 183); but see also the report in the Chronicle of Ibn Al-`Arabi, ed. W. Ahlwardt, Gotth., 1860, p. 58), speaking of the Mahdi Zaid (executed in 122 A.H.), curses those who deprived him of his 'right.' However this may be, the function of the expected Mahdi was, in the first place, to fill the world with justice in lieu of injustice, which often meant the abolition of unauthorized practices and the enforcement of orthodox doctrine and conduct; in the second, to achieve the wiping out of the errors, and often this was identified with the taking of Constantinople. Some, however, were satisfied with a partial execution of this programme; and among persons who had been accepted as the Mahdi by various writers up to his time Mutahhar (loc. cit.) mentions 'Ali himself, the pious Unayyad `Omar H., and the 'Abbasid al-Mahdi, who reigned A.D. 775-785.

About the signs whereby the Mahdi was to be recognized when he appeared there were differences of opinion; a common theory was that he should have the name Muhammad and the patronymic Abu-T`asim, and that he should belong to the Prophet's house; yet not all demanded the fulfilment of these (not very different) conditions. Some, indeed, saving the few who suppose that the Mahdi has come already—he is _6 χρυσέως_, 'he that shall come'; and, on the whole, the Sunni view is that his appearance will be that of an ordinary man whose career is that of a reformer, while the Shia view is that he is in hiding some-where, and has been concealing himself for an unlimited period. In our times there were in the Sudan two Mahdis simultaneously, representing these different opinions. The line between the two is not quite easy to draw, except where some definitely historical personage is expected to reappear; for it has been found possible to adopt the theory that the Mahdi is some one in hiding, without any suggestion of supernatural concealment. In more than one case of a successful revolution the victory has been won by a commander in the name of an obscure individual, who has been brought forward only when success has been assured. Thus the author of the _Hist. Arab_. (171), describing the rise of the `Abbasids, remarks that, while the Khur`as`anites under the brilliant leadership of Abu Muslim were fighting for the _inam_ of Haran (representative of the Abbasids), he was himself in retreat somewhere in Syria or Arabia, attending to his devotions and the affairs of his family, the greater number of his adherents being unable 'to distinguish between his name and his person, i.e. knowing nothing at all about him.

The rise of Mahdis from time to time, then, was due to the disorderly state of Islam in normal circumstances, but also to the wide-spread sentiment that the sovereign should be a descendant of either the Prophet or 'Ali, for with some communities the latter was regarded as the more important personage, and indeed the master whom the former betrayed (see Yaqut, Dictionary of Learned Men, ed. D. S. Margoliouth, London, 1913, i. 392). The pretenders of the house of 'Ali were repeatedly supposed by their adherents to have escaped death, notwithstanding their ostensible execution, and the Shi'a sects were to a certain extent divided by their loyalty to different shades of this Mahdi. Such pretenders were Muhammad b. `Abdallah, executed 145 A.H., whose return was awaited by some of the Jarridyyah sect; Yalay b. `Umar, executed...
250 A.H., expected to return by others of the same sect; Muhammad b. al-Qasim, who revolted in the year 219, was captured, but escaped and disappeared; and Musa b. Jafar, who died of poison in Bâghdad, in 186 A.H., are mentioned with these by Ibn Uzam (Kiteb al-Fiqih, Cairo, 1821, iv. 179 f.). The sect called Qa'tiyah got their name from making sure of the death of this Musa b. Jafar, without having ascertained it (Mahdi, ed. J. de Goeje, Leyden, 1894, p. 232). Believers in the continued existence of Muhammad b. al-Qasim were to be found in the time of Mâṣfî (382 A.H.; Führer d'or, vili. 117) in the district of Kâfîn, in the mountains of Tikaft and the Dukhan, and the districts of Khurâsân. The person ordinarily acknowledged to be the 'expected Mahdi' is Muhammad b. Ḥasan al-Aškârî, whose father died 260 A.H. There was, however, great doubt as to the age of this Muhammad at the time of his father's death, some denying that he ever came into existence, and all agreeing that he could have been only a few years old at the time. Shahristânî locates him in Sâmârâra (ed. W. Curton, London, 1833, 128), but at the 8th cent. A.H. he appears to have taken up his abode at Jîllâh. The traveller Ibn Batûta († 789 A.H.; ed. and tr. C. Defrémery and R. B. Sanginiti, Paris, 1853-58, ii. 98) gives a weird account of the ceremonies by which he is supposed to have been brought into connexion with Ali, which may well be an invention of posterity, as the Mahdi was born after the Book of Jafir, in which Ali had prophesied all that was to occur till the end of time (see art. DIVINATION [Muslimi], whence he obtained the letters which formed the name of the person destined to be his chief helper and successor, with a description of his appearance. In order to be armed with a miracle, he persuaded a learned associate to feign illiteracy and ignorance of correct Arabic; one day this person claimed to have learned the Qur'an by heart in a dream, and this miracle convinced the most stubborn; the confederate then proclaimed Ibn Tûnart the Mahdi, whereas he had previously been called 'Imâm. According to Ibn Khaldûn (History, Cairo, 1828, vi. 229), the only heresy of which he could be convicted was his agreeing with the Imâmîyah sect that the sovereign was infallible. In his treatment of opponents he appears to have been as ruthless and intolerant as any religious leader; but a singular feature of his career as a Mahdist was besides asceticism in diet, he observed strict chastity. His creed, which has been published (Majmû' al-rau'i, Cairo, 1828, p. 44 f.), does not appear to differ from the orthodox kalim. The prophecy of a Mahdi assumed special importance at the commencement of the century preceding the first millennium of Islam, especially in India. According to the details collected by H. Blochmann (Asr-i-Akbarir, i. [Calcutta, 1875], p. iv ff.), the Mahdist movement started in Badakhshân, where one Sayyid Muhammad Nâraqbkh gained numerous adherents, defied the Afghan government, and fled to Iraq, where he maintained himself till the end of his life. In India it assumed a definite form through the action of Mir Sayyid Muhammad of Jaunpur, who found an adherent in Gujarat in Sultan Muhammad i. Apparently this personage was, like Ibn Tûnart in his early days, a preacher and reformer, whose doctrines gave offence, and who was forced to leave one place after another. Ultimately he decided that the burden of Mahdistship was too heavy for him to bear, and that, if he returned home, he would recant; he died in 911 (= 1505) at Farâb in Bahâchshân, where his tomb became a place of pilgrimage. An interesting account of another Indian Mahdi of this century is given by the historian Ba'dawi in his Mandākhâb al-Qurârnîkh.
MAHDI

339

(tt. G. Ranking, Calcutta, 1898, p. 507 B.) This person was named Shaitkh 'Ali'i, and was born in Baiana in Hindustan. To the same place there came one Miyan 'Abdallah, who had come under the influence of Muhammad of Jaunpur.

He adopted the manners of a Mahdi (which would seem to have beenètre to have been inspired in extreme asceticism); making his dwelling in the corner of a grove far from crowds, he was identified by a fast, on the borders of a tank, he used to cast water on his head; and when the times of prayer came round, he used to gather together certain of the labourers who had to pass that way, and compel them to form an assembly for prayer, with such a degree of asceticism that, if he met any man disinclined for the meeting, he would give him a few coins and encourage him.

Shaitkh 'Ali'i was much impressed by this example. He too, 'trampling under foot his self-esteem and conceit, devoted himself to the poor of his neighbourhood, and, entering the valley of self-annihilation and abnegation, he bestowed all his worldly possessions, even to his books, upon the poor.'

He became a disciple of Miyan 'Abdallah; the two formed a community of ascetic socialists or communists, consisting of three hundred householders, who, abandoning all other source of gain and traffic, agriculture, and skilled labour, spent their time in preaching; in spite of their asceticism, they were in the habit of keeping arms and implements of war always with them as a protection against their enemies, but also in order to interfere with any proceeding in the city or the market of which they disapproved. 'They would go and call the offenders to account by main force, admitting no investigation by the governor, and on most occasions of this sort prevailing by the sword.'

After a time the place came to be too hot for Shaitkh 'Ali'i, who, along with his followers, whose numbers had now reached six or seven hundred heads of families, migrated to Khawaspur, near Jolhpur; but here, too, he interfered seriously with the government of the place, and he was compelled to go back to Baiana, accompanied by his disciples. Islam-Shah had by this time obtained possession of Agra, and he summoned Shaitkh 'Ali'i to his court, whether the Mahdi proceeded with a party of select companions fully armed; according to the chronicler, the Shaitkh nearly effected Islam-Shah's conversion to his views, but he was presently expelled and sent to the Deccan. Meanwhile, his former teacher and associate had started a sect of his own, which with some difficulty was suppressed by the authorities; and the Shaitkh 'Ali'i was himself long summoned again to Agra, and requested to abandon his communion, and to choose the community in which he was to live. When he was compelled to do this, he was tortured to death. His followers, however, were numerous, and increased, and were known as the Mahdnis; they were persecuted, but not exterminated, in the reign of Akbar.

Blohmansch observes that these Indian Mahdis were men of considerable eloquence, by whom their preaching obtained great influence over the populace, and that they regularly came into conflict with the authorized exponents of the law at the Muhammadan courts. Todblind estimates with pleasure in narrating how Shaitkh 'Ali'i triumphed over the official theologians who were employed to argue with him. "They endeavoured to bring the practice of their co-religionists into harmony with the strict principles of the Sunnite codes, and especially to banish practices which had been borrowed from their pagan neighbours.

The Mahdi who acquired the greatest fame in Egypt was the personage whose enterprise led to the Anglo-Egyptian conquest of the Sudan. The best account of the early stages of the movement is given by F. R. Wingate in Mahdism and the Egyptian Sudan (London, 1891). After the strong hand of Zulair Pasha, Samuel Baker, and General Gordon had been withdrawn from the Sudan, that country was subject to violent oppression, and the broad basis of the Mahdi's appeal was the injustice and cruelty of every sort which sprang up the moment Gordon's wholesome discipline was withdrawn' (p. 12). Muhammad Ahmad, who took this title, was born at Dongola in 1848 of a family of boat-builders; at the age of 22 he was already a shaitkh with a great reputation for sanctity, and became a powerful ascetic. He denounced the iniquities of the Egyptians, and laid stress on the promised appearance of a Mahdi, with whom he presented himself, and, indeed, in the Shi'te sense; he claimed to be the twelfth imam, the son of Hayan 'Askari. His claims were first recognized in 1881 at Abuin Island, 160 miles south of Khartum, when a band of men declared him their appointed leader, and he communicated to them the secret that he was the Mahdi. News of his 'issuing forth' and coming to Khartum, the governor sent to have him arrested; but he declined to obey, and, when troops were sent to enforce the order, he succeeded in animilitating them. He evidently possessed some skill both as an organizer and as a military leader, for he seems to have founded his followers tribe after tribe of Sudanese, and proceeded from victory to victory until, at his death on June 22, 1885, shortly after the historic fall of Khartum, his empire extended from Bara to 28 S., and from long. 23 to 38 E. of Greenwich. Wingate suggests as an epitome of Mahdist the sentence 'your money or your life'; in practice it was an enforced communism, maintained by plunder, divided arbitrarily by the god of the Mahdi. Success also appears to have made of the Mahdi a coarse voluptuary. Like some of his predecessors, he seems to have aimed at reproducing what were supposed to be the conditions of early Islam, and to have insisted on a pure asceticism; his followers were advised to go on foot, or at any rate to ride asses and not horses, except in war. Further, they were told to reduce expenditure on weddings. These ascetic tendencies were indicated by the name which his followers assumed, Durwah ('poor'), for which at a later period the Mahdi substituted the appellation Ansar ('helpers'), which had been given by the Prophet Muhammad to his entertainers in Medina. The Mahdi himself clearly aimed at reproducing the career of the Prophet, since he had a hajrah, or 'migration,' viz. from Aba, where he first came forward, to Masat in the Nuba mountains; and he assigned four chairs to persons representing the eminent associates of the Prophet who had set out first. One of these, the chair of Abi Bakr, the first khalif, was filled by 'Abdallah al-Ta'ishi, who afterwards became famous as the Mahdi's successor, or khalif, and is said to have suggested the title of Mahdi first to Zulair Pasha and then to Muhammad Ahmad (Hugotoff, xxiv. [1890] 5).

The asceticism of the Mahdi, like that of the Wahhabis, included the tabou of tobacco, the smoking of which it regarded as a greater offence than the drinking of wine; in his early days he showed leanings towards Sufism, and would gladly have obtained recognition from the head of the Saniis; this being refused, he abolished all 'orders' except his own.

After the fall of Khartum the Sudan was gradually evacuated by the Anglo-Egyptian government, and the khalif extended the Mahdi's empire by fire and sword till it reached the bounds of Egypt; in 1886 the reconquest began, and this was achieved at the battle of Omdurman (Sept. 22, 1898). The new State had achieved nothing but devastation and destruction.

The success of the Sudanese Mahdi encouraged many others to play the part. It seems that the title 'al-Mahdi' in the case of the head of the Saniis community was originally a proper name; its holder, however, gave it the familiar applica-
MAIMONIDES

After several years of obscure practice he became court physician to Saladin, pursuing his Rabbinical and philosophical studies undaunted while following out the exacting duties of his profession. The eminent position which he has ever held in Jewish estimation (the oracle which foretold his appointment being the beginning of the 13th Islamic cent. (1301 = 1883) was specified as the date. His theories will be found in the art. SAXUSIS. He was rarely seen by strangers himself, having a 'double,' or Ahmud b. Biskri, who resembled him closely, to play the part before them. In 1884 he enjoined the Muslims to pay no attention to the Sūdānese pretender, who was merely 'an impostor and a liar.' In 1888, when an appeal was made to the Sultan of Bāgūrī to assist in the suppression of Mahdiism by revolutionaries in the Sūdān, the data Mahdi, to whom the matter was referred, advised the Sultan to abstain from interference with Sudanese affairs and fight with the khalfī only if himself attacked.

The measures taken by the Protectorate of Nigeria in recent years to regulate taxation, emancipate slaves, and introduce other reforms led to the rise of numerous Mahdihs; between the years 1884 and 1903 there were a dozen in Sokoto, as many in the other provinces. In 1905 Mahdiism arose simultaneously in Saturn, Bauchi, and Koutgara. Most of these were caught, tried, and executed, the government regarding such severity as necessary for the preservation of order. In 1907 there was one Mahdi at Binn in Bauchi, 'but the situation was in general satisfactory' (Recueil du monde musulman, iv. [1908] 144).

While the tradition, which, as we have seen, has been carried down into some authoritative works, is likely to produce aspirants to the Mahdi-ship from time to time, it is probable that the general introduction of good and stable government will render their appearance constantly rarer and their adherents fewer. To the question whether there were any relics of Mahdiism in the Sūdān, the Cairene journal Muqāṭṭasī as early as 1902 (xxvii. 1126) replied that the introduction of security and justice in place of the long reign of terror which that system had produced had effectually destroyed its traces.

LITERATURE.—The authorities have been cited throughout the article.

D. S. MAEGOLIOUTH.

MAIMONIDES

I. LIFE.—Maimonides (Moses ben Maimon), Talmudist, philosopher, and physician, born at Cordova, 30th March 1135, died at Cairo, 13th Dec. 1210, is known in Jewish literature as 'Rambam' (the letters r, m, b, in being the initials of Rabbi Moses ben Maimon) and in Arabic literature as Ibn 'Uthmān Mā'ṣā ben Ma'mūn ibn 'Abd Allah. His native city falling into the hands of the Almohads, Maimonides, when yet a lad of thirteen, was compelled either to leave or to embrace Islam. He, together with his father, chose the latter course, and settled at Fes. Here there led for a time the dual life of Muslim and Jew. But, the Muslim authorities growing suspicious of their house, fled, father and son determined to leave Fes. Accordingly, in April 1155, they boarded a vessel bound for Palæstine. Ave was reached after a month's stormy voyage, and after a short stay there they went to Jerusalem; but, as Palæstine had just been the scene of the Second Crusade, and the Jews there were few in number and poor in goods as well as in culture, the Maimonides fixed up on Egypt as a more congenial centre. A home was made in Fostat, a suburb of Cairo. Soon after their arrival here, both the father and the brother of Moses had died, and becoming financially reduced in consequence, Maimonides took up the practice of medicine as a means of livelihood.
significant place both in Jewish and in general philosophy, his importance in these respects rest-
inantly on his three larger works—the 'Guide to the Perplexed,' the Siwar, or Commentary on the Talmud, and the "Mishneh Torah." The medieval, essentially 'Jewish' of the three is the Mishneh Torah. It is an elaborate text-book of 'law' as understood by Jewish orthodox tradition, its sources being the Bible, the Talmud, and the whole Rabbinical literature—precisely the works considered by Maimonides. What prompted the author to write it was the fact that the Talmud and the Rabbinical literature generally are a large, unwholesome, unsystematized mass of opinions and rules, laws, comments, pre-
scriptions, whose use and application are, to a large extent, left an open question. The author perceived that a systematic classification and arrangement of the sources and elaboration of any attempts at logical classification and arrangement; so that, unless a Jew possesses a complete mastery of those intricacies, he is puzzled to know what is, and what is not, Judaism as Judaism. But the Rabbinical tradition and the Jewish exigencies sanctioned by the Rabbis had deduced from Scripture and the Talmud for observance by the Jews, and by no means for the Jews alone. It is all done in a way which shows that, while Maimonides defended what he considered the eternal sanctity of 'ceremonial,' he was too spiritual, too mystical a thinker to omit giving due prominence to the ethical and spiritual aspects of Judaism—the aspects which justify and transfigure the rest.

The Siwar, or Commentary on the Mishnah, has not yet had full justice done to it by scholars and students. It has been in many instances overshadowed by the more popular commentary of Obadiah Bartenora, an Italian Rabbi of the 15th century. But there can be no doubt that, with its excellent and scholarly style, its admirable form of studying the Rabbinical literature on strictly scientific lines, the Siwar will yet come into its own.

The object of Maimonides was to enable the layman to understand the Mishnah and its phrasing as well as its general drift—without the necessity of working through the involved dispositions of the Talmud. The Talmud is per excellence the commentary on the Mishnah, but its elaborate and confused style of writing prevents the reader from grasping the meaning of the passage of Mossiah. Maimonides was of opinion—and critical study shows that he was right—that the Talmudic masters did not always understand the Mishnah, because their extraneous knowledge was faulty. He therefore planned a work in which the student would be able to see the Mishnah as it essentially is and irrespective of the Talmudic glosses. Not that Maimonides ignored, though the Talmud, and especially the Talmud of the Law; and thus, commenting on Mishnah xi. in the Treatise Sanhedrin on the words 'all Israelites have a part in the world to come,' he is led to write a treatise on the Jewish creed, in which he draws up the famous 'Thirteen Principles of Faith' (for which see ERE iv. 246b), being the first 'Rabbinitic' (i.e. as opposed to 'Karaitic') code of the Synagogue to accept a set, formulated creed of Judaism. For this he was severely criticized by a famous 15th cent. Jewish philosopher, Izhak Crescas, in his Or Adonai (Light of the Lord).

Thus, to-day resort is had to other codes only when enlightenment is sought on points of strict 'legalism' or strictly orthodox ritual—what is forbidden and what is not forbidden by the 613 precepts of the Torah—the code of Maimonides is a source of edification to the theological student generally, quite irrespective of its relation to the Jewish creed. The first of the fourteen books comprising the Mishneh Torah is entitled 'Madda' ('Knowledge'). Maimonides feels that, before a man can be ordered to worship God, he should first be informed of what God really is; so he sets out with proofs of the existence of God, of the impos-

Another remarkable excursus is that known as
MAIMONIDES

The Eight Chapters. Just as Philo attempted to expand the OT on the basis of Plato, so Maimonides here sought to present Judaism in the dress of Aristotle. Rabbinical ethics are viewed through Greek spectacles, and Aristotle's doctrine of 'the mean' is shown to underlie the sacred moral truths of Judaism.

This perfect Law does not teach us to subject the body to useless and unedifying tortures. On the contrary, its aim and intention is that man according to the dictates of nature should purify his heart, eat and drink moderately and according to his means (opening words of ch. iv.).

Adopting this standpoint and with the aid of the Aristotelian psychology, Maimonides shows how the Jew's faith to ethical perfection lies only through the adoption of the mean. With all its Greek colouring, the spirit and teaching of the book are thoroughly Hebraic. OT and Talmud contain the highest wisdom and are man's surest guide to God.

Maimonides' greatest contribution to metaphysics, however, is his 'Guide of the Perplexed.' It is designed, as he himself says, 'for thinkers whose minds have brought them into collision with religion, for men who have studied philosophy and have acquired sound knowledge, and who, while firm in religious matters, are perplexed and bewildered on account of the ambiguous and figurative passages of the holy writings.'

Thus the book is not meant for the casual believer, but, rather, to correct the believer. His introductory motto is, 'Ye who have gone astray in the field of the holy Law, come hither and follow that path which I have prepared. The unclean and the fool shall not pass over it.'

The object of the book is to provide a working harmony between reason and faith. But whose conception of reason does Maimonides take as the standard? No one but Aristotle... What is faith to Maimonides? Belief in the Torah, that is, in all time the true embodiment of the divine word. There is no contradiction between divine revelation as entrusted to the Jews and the metaphysical truths given to the world by the brains of the philosophers. For not only is it a fact that both in the last resort emanate from God, but it has also to be borne in mind that (so argued Maimonides) the prophets of the OT received a twofold oracular message. Besides the message which is manifest to us in their written prophecies, they were given oral revelations of a philosophical kind. The written prophecies are really instinct with these oral philosophies; and Scripture enshrines, in short, the ideas which, if they were not the student of philosophy, a body of metaphysical truth. As the average Jew, through the dulling effect of the repeated persecution of his race, fails to grasp this metaphysical truth, Maimonides concluded it to be his duty to devote the major portion of the first book of the 'Guide' to an exhaustive examination of the anthropomorphous expressions occurring in the Scriptures in order that the reader should thereby learn the first and fundamental tenet of all metaphysics, viz. that God is incorporeal, and that all the Scriptural passages which talk of 'the eye' or 'the hand' or 'the foot' of God, or which describe divine movements such as 'passing,' 'dwelling,' 'coming,' 'standing,' etc., must be understood metaphorically, really, seeing that they express transcendental metaphysical truths about the deity.

But there is another leading consideration. What about the Scriptural 'attributes' of God? Is not the misunderstanding of these liable to lead to an inductive development of both the incorporeality and the unity of God? Maimonides, therefore, and, therefore, after a severe examination of the meanings and inter-relations of the different attributes of God, proves the inapplicability of them all to God. All that can be predicated of God is that He exists. God is indefinable. Even to assert, as Scripture repeatedly does, His unity, eternity, etc., is inadmissible.

But how, then, can we justify hypostatic by assuming, he says, that, owing to the poverty of language, these terms must be understood as denoting not a positive quality but a negative of the opposite. Hence to say that God is all is merely tantamount to saying that God is not plurality. Hence the deity can be described only by negative attributes; and, since the number of these is infinite, the positive essence of the deity must for ever lie outside human comprehension. But, despite all this, the deity is unquestionably active in the universe; He is the creator of the cosmos, and the traces of divine design are everywhere obvious. How are these divine relations with the universe to be understood? Before grappling seriously with this subject, Maimonides enters into an acute criticism of the views of the Mutakallimun, or philosophers of the kalāma (q.v.). Against Aristotle, who maintained the eternity of the universe, these Arab philosophers defended the creatio ex nihilo. Maimonides, while as a Jew differing on this fundamental point from his teacher Aristotle, agreed with the Mutakallimun, but differed from the latter again on several other fundamental propositional theses. Maimonides' continuity of the world, and a fearless liberality of spirit in the investigation of religious truth can be clearly gauged in this connexion. He rejects, as has just been said, the propositions of the Mutakallimun, but only the propositions, i.e. theories or methods of proof. For he accepts their results. He believed, just as much as they believed, not only in the creatio ex nihilo, but also in the existence, incorporeality, and unity of God. On the other hand, while opposing Aristotle on the question of the creatio ex nihilo, he practically employs the whole paraphernalia of the Aristotelian cosmology in order to prove the creatio ex nihilo. The latter came about through the work of a Primal Cause, who is identical with the Creator alluded to in the Scriptures. From this Primal Cause there emanate the intellects of the spheres (these 'intellects' are identified with the angels of Holy Writ). All changes on earth are due to the revolutions of the spheres, which are, in turn, all the more endowed with intellect. God created the universe by producing first the intellects of the spheres, which give to the spheres the faculties of existence and motion and are thus the creators of the whole universe. It is of deepest interest to both the theologian and the mystic to note in this connexion the quaint Maimonidean exegesis of Gn 1 (Nâdâšh Brērēshîth) and Ezk 1 (Melâsh Merkâbôeh). His whole theory of emanation (hašhā'â) is a wonderful combination of what are usually regarded as two diametrically opposite frames of mind: viz. rationalism and mysticism.

Aristotle believed in the eternity of matter. Maimonides argues against this at great length in pt. ii. of the 'Guide,' in favour of the creatio ex nihilo—not that he believed that the latter thesis was really provable from Scripture, but because he felt it a necessary peg on which to hang the essentially Jewish doctrine of messianic, revelation, and prophecy. On the latter subject his views are strikingly original but highly debatable. There is a strong element of passive ecstasy in prophecy. The prophet is wholly the passive instrument in the divine hand. Imagination is an essential element in all prophecy. We are perhaps descending from the Active Intellect to man's intellect and imagination. Can any man become a prophet? No, because, while it is in the power of many a man to bring himself to the high pitch
of moral and intellectual perfection which prophecy necessitates, another factor is still required. This factor consists in a special vouchsafing of the divine will, i.e. divine inspiration, and in intellectual and morally perfect, but may be unable to prophesy, because prophecy arises, in the last resort, only at the call of a divine fiat; and the fiat is arbitrary.

Maimonides' subsequent discussions on the nature and origin of evil, on belief in divine providence and man's free will (in which he strikingly discusses the central problem in the book of Job), on the purpose of the Biblical precepts, on the meanings of the Biblical names on the stages by which man comes to hold real communion with the divine—all these are treated with a fullness of knowledge which makes them a contribution to general as well as to Jewish theology. A vein of unravelling optimism permeates his teachings on sin and evil. Evil has no positive existence, but is merely the absence of good, just in the same sense as sickness denotes the absence of the possession of health, or poverty the absence of sufficiency, or folly the absence of normal wisdom. In support of the argument he quotes Gn 15:1, 'And God saw every thing that he had made, and, behold, it was very good,' the Midrashic comment upon which is, 'No evil thing descends from above' (B'rachot Rit. 11). Divine providence extends to individual human beings, but not to animals, plants, or minerals. Here Maimonides differs from Aristotle, who held that Providence took no account of particulars, because His knowledge was limited, etc. Scriptural passages are quoted in refutation of Aristotle's views. Can free will be reconciled with the notion of omnipotence, seeing that the latter must imply predestination? Numerous passages from Scripture and in the Talmud indicate the difficulty of the question. Maimonides bases his answer on the words of Is 55:8, 'My thoughts are not your thoughts, neither are your ways my ways.' God's knowledge is unique; and the great mistake the men always make is that they persist in thinking and speaking of God's knowledge in the same senses as they think and speak of man's. It is identical with His essence, and is independent of existence or time—past, present, and future are all one to Him.

The object of the divine precepts is to give man true knowledge or to remove wrong knowledge, or to give a correct ordering of life or to remove oppression, or to give a training in good morals or to correct evil. Man's final consumption of 'knowing' God can come about only after man has perfected himself, not only inwardly, but in all his external relations to society, to the State, to the world. Maimonides discusses every passage of the Torah with the object of showing how their rightful understanding and practice lead to this goal. By an ingenious adaptation of Scripture he shows that the reason why God 'led the people by the way of the wilderness by the sea' (Ex 15:8), instead of leading them straight to the Promised Land, was in order to give them the necessary preliminary training in the endurance of hardship, in the cultivation of courage in face of difficulties and in all the moral and social qualities which a self-governing nation needs. Even so, says he, it is with man. Before he can live on the high level of knowing God, he must live on the lower level of an obedience to all the divine precepts which are the training-ground for his more exalted role. 'Knowing' God and 'loving' God are identical.

Maimonides influenced all succeeding genera-
tions of Jewish thought by his introduction of what we nowadays call 'the scientific spirit' into the study of Judaism. Henceforward an anthropo-
morphic conception of God became impossible. God is spirit, and the worship of Him—based as this is on the material and morally perfect, but may be unable to prophesy, because prophecy arises, in the last resort, only at the call of a divine fiat; and the fiat is arbitrary.

The influence of Maimonides on general European thought has not yet been adequately appraised. The Latin translations of the 'Guide' in the 13th cent. affected the great Franciscan, Alexander of Hales, as well as his contemporary, William of Auvergne. The great Christian scholars, Albertus Magnus and Duns Scotus, referred to it in their works. The 'Guide of the Perplexed' appeared first without place or date; then in Heb., Venice, 1521; Berlin, 1791; in Lat., Paris, 1826; Basel, 1829; in Germ., Krotoschin, 1834; in Arab. and Fr., S. Munk, 3 vola, Paris, 1856-60; Ital., Leghorn, 1870-81; Eng., 3 vols., M. Friedlander, London, 1855, 2nd ed. in 1 vol., 1864.

The commentary on the Mishnah was first published at Naples, 1842, and is accessible in the Lat. tr. of W. Surenhusius, his Mishn. Amsterdam, 1699-1703.

witz, Warsaw, 1909-26; 'Moses ben Maimon,' in JE IX, 194;
MAJHWAR, MANJHI.—A non-Aryan tribe numbering, Majhwar 14,210, Manjhi 4030, according to the Census of 1911, and found in the United Provinces of Agra and Oudh, Bengal, Central Provinces, Berar, and Assam. The name is usually derived from Skr. mādhyā, in the sense of 'headquarters,' and etymologically they are closely connected with the Gonds and Kharwar (q.v.).

In the United Provinces the Majhwar possess a well-marked system of totemistic exogamous divisions, some being named from trees, animals, or birds, each of which is held sacred and not injured or eaten by the members of the division who take their name from it. The tribal legend describes the rescue of their forefathers by a totoise; they therefore worship the totoise, and will not injure or kill it. In their death rites they recognize the survival of the soul after death, and they take measures to prevent the return of the malignant spirits of the dead, particularly those who have died by accident or in some tragic way. But some of the ancestral spirits are supposed to be reincarnated in the descendants, or in a calf which is taken care of and not used in ploughing. At marriages a fowl and spiritual liquor are offered to ancestors, and in their honour the potṣir, or tribal priest, offers a sacrifice among the special tribal deities of the Majhwar may be mentioned Dulla Deo, the spirit of a bridegroom who in the olden days perished in a specially tragic way. As is the case with the cognate tribes, there is, in their beliefs, a closer connection between those who live more or less within the range of Hindu influence and those who are less exposed to it. The former, worship, under the title of Mahadeva, 'the great god,' and name of Siva—a deity who seems to be identical with Bara Deo, 'the great god of the Gonds, both of whom are believed to use the ox as a 'vehicle' (vāhana). This cult has a basis of phallocism, which is more clearly seen in the worship of Linga or Lingal (Skr. linga), the phallic symbol. The potṣir, at his parishioners' visits, in the sacred symbol, worship Mahadeva by rattling a number of iron rings fixed on a staff. The collective village-gods are impersonated by a male deity Dih (Pers. dīh, 'the village'), whose name at least is the same as Dīn, while his female counterpart is known as the Deobārā (Hindí deobārā, Skr. devaghā, 'house of the gods'), so named because she occupies the village-shrine, a mass of rude stones piled under a sacred tree, usually the sal (Shorea robusta). More advanced members of the tribe identify her with the Hindú Devi. The shrine contains a water vessel, over which a red flag is hung, and the seat of the deity is a little mud platform on which offerings are laid and a fire sacrifice is performed. At the death of the sal tree at these rites is the bāgī (q.v.), the village medicine-man, who holds a goat or fowl facing the east and sacrifies it by cutting off the head and allowing a little blood to drop on the platform. The worshipper, his friends, and the priest then take the blood and eat the flesh. No blood sacrifice is offered to ancestors, but flesh cooked by the wife of the eldest son (perhaps a survival of mother-right) is offered in the family kitchen, where the honoured dead are seated, and is eaten by the family. It is believed that thus one little food on the ground for the earth-goddess. Women may be present at the worship of the higher gods, but not at that of the village-deities. They also propitiate a number of demons or evil spirits, such as Turkin, the ghost of a Turk or Muhammadan woman, and her consort Barwat, who rule all the mountain-spirits of the neighbourhood. Other spirits, such as Oli, Gorer, and V. R. T., are invoked. They offer prayers to the people dance round it to the beating of drums.

The rite is probably, like similar rites in other parts of the world described by J. G. Frazer (PR II, p. 247), a form of fertility worship, to avert the fall of rain and the fertility of the people, their crops, and cattle (W. Crooke, PR II, p. 94). Only the more Hinduized members of the tribe employ Bhārmans, the real priests being the potṣiri and bagī, who are usually drawn from the more primitive allied tribes, which are believed to preserve unimpaired the knowledge of the local cults. Fetishism, so called, appears in the reverence for the sacred chain (gurdu) hung in the village shrine, with which hysterical girls are beaten in order to drive out the evil spirit supposed to cause such attacks. The belief in witchcraft, the evil eye, and omens is widespread.

LITERATURE.—W. Crooke, Tribes and Castes of the North- Western Provinces and Oudh, Calcutta, 1898, vol. i, p. 146, 153.

W. CROOKE.

MĀL, MĀLE, MĀL PAHĀRIA.—A non-Aryan tribe, containing various groups, numbering, Māl 2,135,329, Mal Pahāria 24,689, at the Census of 1911, and found in the greatest numbers in Madras, Haidarābād, and Bengal. The inter-relations of the North and South groups have not been clearly ascertained, but they seem to be, to a large extent, pure Dravidians, and those in the Rājmahāl Hills in Bengal are closely allied to the Oraons (q.v.). The Māl, a cultivating caste in W. and Central Bengal, are mainly Hindus, and a few vestiges of primitive beliefs can be traced among them. The snake-goddess, Manāsā, is their special guardian, and they also worship the local village deities. The earliest account of their religion in the Rājmahāl Hills is that by Shaw, which has been supplemented by Risley and Dalton.

At the head of their system stands the Sun called Dharman Gosain, and represented by a roughly-hewn post set up in front of each house. It is worshipped with offerings of milk, goats, similar green leaf, and oil at the commencement of the harvest season, and at other times when any misfortune befalls the family. When people are gathered together on a feast, the village headman, who acts as priest, goes round the congregation with an egg in his hand, and recites the names of certain spirits. He then throws away the egg, and takes the priest's place in the sacrificial offering, and enjoins the spirits to hold aloof and abstain from troubling the sacrifice (L. Crooke, T.C., ii. 57).

Shaw describes various gods inferior in rank to the sun-god. Whenever a tiger, snail, or any other plague attacks the village, Ruksey or Rays is supposed to desire that a shrine should be raised for him. Accordingly the dehum is, or tribal priest, is directed to search for the god. He gets a branch of the sacred black stone, and, in the shape of a sacred black stone, is discovered. The manjhi, or headman, then sets out in search of a large tree, under the shade of which he places the stone, and encloses it with a stone fence and hedge. A fowl and a goat are sacrificed, and the headman or some other worthy person does worship to the god, and then leaves (ALI, i. 461). This great event the present day is the tutelary deity of strong drink, who is worshipped by the headman before he begins to distil liquor from his fresh crop of maize (Bassia inflata) (Risley, ii. 57). Chal, or Chalna, presides over a group of villages, but he is not worshipped until some
plague attacks the people, when the dogana dreams that a shrine should be raised, and the god, when
found in the shape of a stone, is placed under a
banyan tree near the village, the stone undergo-
ging no change in form from the chisel (Asiat.
Res. iv. 48 l.). Goats and pigs are usually offered
to him, but the triennial sacrifice of a cow, men-
tioned by Shaw, seems now to have fallen into
disuse (Riley, ii. 58).

The first worship performed by young men is
offered to Pau Gosain, god of the road, but it is
not undertaken till some accident has induced the
worshipper to consult an exorcist, who decides
whether or not, according to local opinion, there
is a deity present.

On the day of thanksgiving he proceeds to a high
road, and clears a space under the shade of a young
bel tree (Fungus mucidulus), in the centre of which he plants a branch of the mahakam tree. Round it he makes marks with red point and
lays rice and some egg decorated with three streaks
of vermillion near the sacred branch, he invokes the god of the
highway to protect him on his journeys. A cock is sacrificed,
some rice and eggs are offered, and the exorcist
praying is cooked and eaten by the worshipper and his friends.
The rite concludes with the breaking of the egg, and is never
repealed unless the person concerned should meet with an accident
in travelling (Asiat. Res. iv. 51 l.).

At present the offering prescribed for the god is a
whole chicken, and the sacrifice is so expensive
owing to the large amount of rice-beer which must
be offered to the god and then drunk by the assembled worshippers (Riley, i. 58).

"Of the village, spoken of by Lieutenant Shaw under the name of Dwara Gosain (god of the doorway),
is now called Bara-Dware, because he is supposed to live in a
temple with twelve doors. The whole village worships him in
the month of Magh (Jan.-Feb.). Colonel Dalton suggests that this
god is the same as the Oxana Bara, Kori Gosain, "the Cere of the mountainers;" and Ainge, the god of hunting, appear not to be known at the present day. Guudo
Gosain, another of the village, is represented in every house-
hold by the wooden post (guma) which supports the main
raters of the roof. On this the blood of a slain goat is sprinkled
to propitiate the spirits of ancestors. The fact that this god
is common to the males and Mal Fathers, and is worshipped by
both in the same way, seems to tell strongly in favour of the
common origin of the two tribes. As in Lieutenant Shaw's
time Chandu Gosain still ranks high among the tribe, and
demands offerings of a larger scale than any other god" (Riley, ii. 58).

At the present day the priests of the tribe are said
to be the dharma, who were originally diviners;
but it is declared that generally the dhaum
does not officiate as priest, but merely directs the village
headman, head of the household, or other influen-
tial person chosen for the occasion (ib.).

The Sama, or head of the Mal Paharias, is of much
the same type. Their chief god is the sun, who is
addressed as Gosain, 'Lord,' and to whom an offer-
ing of rice is presented and then given to a goat,
which is decapitated by a blow from behind. The
meat is preserved and shared among the
neighbours partake. The head alone, which is
regarded as sacred food (prosid), is carefully
reserved for the members of the family. Next in
honour to the sun are Dihti Matu, Mother Earth; her
serving of, as some say, her sister, Gaurim; and
Singhbahini, 'she who rides on a tiger,' who
rules tigers, snakes, scorpions, and all manner of
noisome beasts. The tribe also performs the
flowering tree rite (sakobe), and the expression is sacred tree (sakobe)
Mujhwar). Chordana, 'the chief demon,' is a
malevolent spirit, who must be propitiated by
sacrifice and the offering of the firstfruits of the
crop, which, as usual, are under tabu (J. G. Frazer,
Graff's tree near the village, The Malay Peninsula,
London, 1912, ii. 48 l.t). To Mahadana eggs are the
appropriate offering. Guano Gosain, the house
pillar, represents the houses of the household, and
every village has its own tutelary deity, which
lives in the house pillar (tree). This pillar
periodically dabbled with red lead, and may on no
account be cut down.

MALAY ARCHIPELAGO.-The religions
beliefs and customs of the natives of the
numerous isles of the Malay Archipelago, all of
them belonging to the great Malayo-Polynesian
family,1 were certainly in the main identical, but,
owing to the listlessness of facts and fables current
in the Archipelago, by far the greater part of the population
have forsaken their ancestral creed. The native
population, with insignificant exceptions, of Java and
Sumatra, as also peopled by Malaya, are
prostrate, as do the Macassars, Buginese, and
Mandarese, Bimaanse, and some other tribes of
the West and North coast of Celebes, and of
borneo; the small islands of Ternate and Tidore
are also peopled by Malaya. The Balinese
in Bali and Lombok are Saivites, with a
worship
of Buddhists, whereas the Sassaks of Lombok
are folowers of Islam. Christianity is the
prevailing religion in Ambon, the Minahassa, the
Sangir, and Tjaitan Islands, and has a great
number of adherents among the Battak, Torajans,
Sawuese and Rotinse; Roman Catholic
natives are chiefly found in the Eastern part of
Flores. Some small communities of converts to
Christianity are also found in Java.

1. Animism.-The religion of the pagan tribes of
the Archipelago is what is generally denoted as
animism. In speaking of the beliefs prevailing
in the Malay Peninsula Skene rightly says:
"The modes of thought and the beliefs prevailing
in the Archipelago, involving a certain common vital principle (pamagat) in Man and Nature, which, for want of a more suitable word, has been
here called the Soul. The application of this general theory
of the universe to the requirements of the individual man constitutes the Magic Art, which, as conceived by the Malaya,
may be said to consist of the methods by which this Soul,
whether in gods, men, animals, vegetables, minerals, or what
not, may be influenced, captured, subdued, or in some way
made subject to the will of the magician.

All this applies to the pagan Malaya, and, in
many respects, also to the natives who have adopted another
religion and, in their own opinion, are sincerely at it to this
Sama, with dietic varieties, is the general word with the Malaya also in Indonesia
for 'soul,' 'vital force,' penetrating the whole
body, but distinct from the latter, so that it can
leave the body temporarily, e.g., in dreams, and
finally at death. The Macassars and Buginese
use the same word, sama, sama with the
same meaning. The Battak use the term
sang, saad, for exactly the same idea; and the
Dayaks have hambauvon, anauvon, amauvon, bauvon,
and other dietic varieties of the same word.
With the Torajas in Central Celebes the usual
term is lambanacu, properly, "homunculus;" another
expression is malabot (Jav. wabang, Mal. beyang). When the soul
temporary leaves the body, it assumes the form
of a homunculus or a animal. A man whose
soul thus goes forth in order to feed upon the
organs of others (the organs of the host) is said
to be maliwawar (Mal. penangga, 'vampires.'

1 With the doubtful exception of the people of Ternate

2 Malay Magic, London, 1890, p. 634.
The word for 'soul' in Malay is *nasa*, which, like Skr. *prajna* and Gr. *pneum*, is properly the 'breath of life', or 'life'. If life is not the essence of being, it may be said of *nasa* (Jav., Mat. etc.). There are several other Indonesian words for 'soul'—e.g., Tontemuan *imbuhr*, *imbuhr*, Sangir *iminakul*, Bentenan *mainkur*, Donosakan *mainkur*. The common belief is that it not only men, but also animals, vegetables, and minerals have a soul. The Ngaju Dayaks make a distinction between *hamburen* and *ganja*, the former belonging to men, animals, rice, and money, the latter to slaves, some trees, and things. The *ganja*, like the *hamburen*, can leave its abode and appear in the shape of a human being to men in dreams.

The soul leaves the body at death, and returns to its origin, the creator, or passes, directly or indirectly, into another human body, an animal, or a plant. The residuum of the individual, however, continues a shadowy existence as spirit. Such a spirit of the dead is called *lilau* among the Ngaju Dayaks, and *dum**, *adum*, among the Olong Samoos. It is said that the *lilau* goes forthwith to Lewu laiu, the spirit land, which it often leaves to roam in the woods or haunt its burial-place. During that time it is often harmful to the survivors, particularly by causing disease.

The common word for 'spirit' in Battak is *buq*, *Nias bhuh*, which not only denotes the spirit of the departed, in which case we may translate it by 'ghost', 'spectrum', but is applied also to human beings of another quality, and even to things. The Torajas use the term *angga* for the spirit of the dead, and, in particular, *anitu* for the spirits of chieftains and heroes. This word *anitu*, or *nitu*, so wide-spread throughout the whole area of the Celebes, in the Moluccas, in the Philippines, and the islands of the Pacific, is the common term for the ghosts of ancestors in the Moluccas, Timor, and Tjott. The Rottines use it also for demons, whereas the Hill Torajas apply it to their gods, who, in fact, are deified ancestors. In general it is difficult to distinguish the ghosts of the departed from the spirits of higher beings or gods, but among some Torajas, who use the term *bunok*, we find that a distinction is made between higher beings and gods.

According to R. H. Codrington (*The Melanesians*, Oxford, 1891, p. 124 f.), 'it must not be supposed that every ghost becomes the object of worship and propitiation. A man in danger may call upon his father, his grandfather, or his uncle; his nearest of kin is sufficient ground for it. The ghost who is to be worshipped is the spirit of a man who in his lifetime had means to him.'

The same may be said with reference to the people in the Malay Archipelago, and not least exclusively. The ghosts of different kinds are not equal in power. The Karo Battak hold the ghosts of stillborn children in particular awe, making little houses for them, and honouring them with offerings. The inhabitants of the Luang Semata Isles believe that the ghosts of those who have died a violent death are most powerful and zealous to help their kinsfolk. In Halmahera the ghosts of persons killed in war or by accident are called *ditikhe* in Galehrese, *ditikhe* in the Ternateans. They are more powerful than other ghosts, protecting the living, especially in battle, and are worshipped in the village temple. The Torajas also honour the ghosts of those who have fallen in battle.

To another category of ghosts belongs the protecting genius of places, regarded as the founder of a village or the common ancestor of the population. In Java every village honours the ghost of its founder, the *flicked dean*, with frequent offerings. The tutelary deity of a place is called *banyakong*, i.e., 'the god', as the name implies, he is not the essence of being. The worship of the reputed founder of a settlement is very common in the Moluccas. The Galehrese call the genius of a village and the forefather of its people *tontenibuan*.

The Indonesians in general live in constant dread of innumerable ghosts, who are mostly malignant, and therefore must be propitiated by offerings or warded off by other means. Most feared is the *pontianak*, a word which with slight variations recurs in the whole archipelago, the Malay Peninsula, and the Philippines. The *pontianak* is the reputed ghost of a woman who has died in childbirth and, out of jealousy, penetrates the bodies of pregnant women to kill the unborn children. Usually she is thought to have the shape of a bird, but to be invisible when she approaches her victim. In the archipelago the customary prophylactic against her insidious attempt is to suspend the thorny branches of a certain lemon-tree, the fruits of which are also employed as a means of repelling ghosts (for other means see Kruit, *Het Animisme*, pp. 245-251).

All sorts of diseases are ascribed to the malevolent influence both of ghosts and of other spirits. Especially in Nias we find several names of *beughs* who are held responsible for the appearance of different diseases and evils. It is no wonder that the people employ every means in their power to cure sickness or to prevent threatening diseases. In apprehension of the danger which may accrue from the dead, the Malay people take care that the dead body is so treated that the ghost may not return. With many tribes one of the symbolic means of securing this is to cremate the body. In addition, the relatives of a deceased person have to undergo a longer or shorter period of mourning, during which they must wear the conventional mourning dress, observe certain restrictions in the use of food and drink, and refrain from amusements. At the end of this period it is customary for some tribes to offer human sacrifices, the ruling idea responsible for this custom apparently being that the ghost ought to be given a companion by way of propitiatory means.

It is commonly believed that the ghosts of the dead remain for some time in the neighbourhood of their former dwelling, whence the custom of erecting a hut in which to place the necessary offerings. With some Indonesian tribes it is customary to prepare a bed of state for the ghost during the first days after the death. Even the Christians of Ambon and the Sangir Isles believe that the dead man pays a visit to his former home on the third day.

The ghosts continue to wander and meet with all sorts of difficulties before finally reaching the realm of the dead, which is situated somewhere in the West. When they are supposed to have arrived there, a great commemorative feast is arranged, such as the *touth* of the Ngaju Dayaks and the *tengke* and the *monmopate* of the Western Bare's Torajas. For the ceremonies of the feast among the Dayaks of Sarawak see Ling Roth, *The Malays of Sarawak*, i. 209-210.

In the primitive belief of the less civilized Indonesians there is a bond of connexion between a dead man and his body, chiefly his bones. It is usually the skull that is used as a medium for
communication. It is preserved with great piety, honoured with offerings, and worshipped. Not seldom a magic power is ascribed to parts of the body, which thus come to be in reality miraculous worship. Among the Mentawai, a collection of communication is found in idols representing the defiled ancestors; these are held to be inspired after due initiation. Such images are very numerous in Nias, where they are called "idols," and occur also in Ceram. The Batuak are said to hold a ceremony called nukubu, "to worship the moon," in which, on certain days, they offer sacrifices to the moon. Among the Nagau Dayaks puppets called kampot-tong represent the ghost of the slaves of the deceased at the tiuak, but the term has also the more general meaning of "puppet." The Toraja tribes, on the other hand, except the To Lave and To Onda, have no images, but wooden masks (peniis). Stones are also objects of worship, as well as certain earthen pots or urns, which are regarded as sacred and inspired. The idea that persons, during madness, epilepsy, and sometimes abnormal states of mind, are possessed by spirits has led to attempts to reproduce the same phenomenal conditions in order to get into contact with spirits that may help to remove them. The medium or how to act in matters of importance. The medium through whom the spirits manifest themselves is the shaman, who is brought into a state of mental abnormality by artificial means, the rites employed for which vary greatly among the peoples of Indo-China, but, in general, similar to what we find elsewhere — e.g., among the Burmese (q.v.).

The Battak distinguish the shaman (sibau) from the priest (datau). Though their functions are not seldom analogous, there is this difference between them: the former acts unconsciously, under inspiration, whereas the latter gives his decision, based upon his knowledge of the books of his craft, in full consciousness. With the Dayaks tribes it is a priest or priestess who acts as medium. The dayong of the Kayans is a priestess who sends her own soul to bring back the soul (blua) of a sick person, or to conjure up the ghost of the dead. The word dayong means "a strong and exercised power," is with the Sea Dayaks the man who is able to meet and converse with spirits. The same character belongs to the scoliat, belian, basir, or dayong of other Dayaks. Such persons are more properly medicine-men than priests or shamans. Yet it is true that in doing their work they occasionally show signs of ecstasy caused by their being, however, is of foreign origin, is found in Halmahera.1

3. Fetishism. Various substances are supposed to conceal a powerful soul within themselves. They are therefore held sacred and worshipped in one way or another in the hope that by their power some desired object may be attained. All over the archipelago we find the use of so-called thunder-stones, chiefly as a means of gaining invulnerability in battle or as a preservative against lightning. Not less common is the belief in the wonderful effects attending the possession of the bezar.2 A high sacredness is attached to stones of a certain uncommon shape, especially in the eastern islands of the archipelago. In Timor the finding of such a stone, considered to be the abode of a spirit, often in a sacred place (clocke) and brings sacrifices to it. It looks as if such a sacred stone is a rude form of idol, for idols also are inhabited by the deity. Various other fetishes are used as amulets, and a prophetic fetish is called nukubu, "to worship the moon." Another collection of leaves and sticks, which are hung in fruit trees to repel thieves. With the Torajas and Dayaks the suspended materials are mostly of a sympathetic character.

4. Mythology. In general it may be said that the pagan Indonesians recognize the existence of real gods, and that the supreme god is the creator, more or less directly, of the world and the preserver of it, and punishes the transgressors of his laws. In the Macassars and the South Moluccas the supreme deity is generally known under the name of Upu Loro (with dialectic variations). The word means 'Lord Sun' — a sufficient proof of his origin. Upu Loro may be identified with Upu Langi, i.e. 'Lord Heaven.' The earth is a female deity, and represents the female principle, who, in the West monson, is impregnated and fructified by the male principle, Lord Sun-Heaven. Similarly, the Torajas recognize two supreme powers: Ua, 'the Man,' and Indara. Ua is the supreme god of the Toba among the Buginese, not preserved, the supreme god of the Borneans. It is a holy word, and is used by the Man Dayaks, 'the Great Lord Origin of the Creation'; and his subordinates are the three gods Debata na tohn: Batara guru, Soripada, and Mangala bulan. The use of the somewhat corrupt Sanskrit word bhuttara, in some more or less changed form, is found in many Indonesian languages in the sense of 'god' or 'divine being.' So the Nagau Dayaks call the creator Mahatara, but also Batara or Mahatara, borne 'god,' as in Adi and many other languages in the East Indies, and the same name is used by the Manyan Dayaks. With the Sea Dayaks petara or betara is a name for higher beings. Thoroughly original is the word for the supreme being in Halmahera, viz. Gikiri-moi, tulu: Totororo Gikiri-moi, called 'First Being.' The moon plays a considerable part in the myths, but not in the cult; but there are traces that formerly it was otherwise. In the belief of the people of Babar Karawali, the war-god, has his seat in the moon, with nine female ministers.

The host of minor deities or demi-gods is so great that only a few classes can be mentioned here. The sango (sang) of the Nagau Dayaks are benevolent demi-gods related to men. The most powerful of them is Tempon telon; his principal function is to conduct the ghosts to the land of spirits. The djitas (from Skr. devata) are water-gods, whose ministers are the crocodiles. The water-spirits are called toghetenengraga in Nias. The hantu and hantuwa of the Nagau Dayaks are malignant spirits, or demons, whereas the antu is considered by the Sarawak Dayaks to be a helpful spirit. The belief that demons make their appearance in the shape of snakes, dogs, ghosts, and noises, and men is very general. The Kayans have a great number of gods — e.g., a god of war, three gods of life, a god of storms and thunder, of fire,

1 See van Baarda, p. 214, 'Djifin.'
2 For the ideas of the Malays in the Peninsula see Skett, FP. 190-197, 278; see also following article.
of harvest, of the waters, and of insanity, and the gods who conduct ghosts to the subterranean world. Above all these gods or demons stands Laki Tenangan, whose wife is Doh Tenangan, the patroness of women. Laki Tenangan is identified with Pa Silong of the Klementans, and Bali Poultry with the Banyans.

5. Nature-worship. — Nature-worship, in its widest sense finds its expression in the sacred character of mountains, volcanoes, seas, and rivers, all of them being inhabited and ruled by supernumerary powers.

LITERATURE. — The following is only a selection from the works referred to in the Introduction, to which the reader is referred for further information:

Character rather than continent. At a comparatively late geological period its southern half was indeed actually inland, being at this time joined to the island of Sumatra, and entirely separated from the northern portion. The line of division ran, somewhat roughly, from Singora on the one side to Perkis on the other, and it is observed that at the very point where this line traverses the peninsula a marked change in the flora and district ethnographical differences occur. The lower and more properly Malayen portion of the peninsula is separated from the rest by a low divide. The backbone of the peninsula is formed by ranges, mainly of granite formation, the sources of numerous rivers and streams which drain the country. The ranges are steep and precipitous, rising to 7000 or 8000 ft. and containing stanniferous and spurious auriferous deposits. The wild aborigines make their homes chiefly on the foot-hills, but they are also found on the main mountain complex to a height of upwards of 2000 feet. The upland valleys are narrow and covered with dense jungle. They offer little attraction to any but the scattered aboriginal population who still find shelter in their fastnesses and, in some districts, to the Chinese miners. Further towards the coast the land becomes more level and clayey or sandy in nature. Owing to the rivers being tidal for a great many miles inland. On the east coast, for some four months of every year, the steady heat of the China monsoon seens all the river-mouths with a sandy bar, and during this period the water is too shallow to be navigable. On the west coast the land is sheltered, as it is by a colossal breakwater, by the neighbouring island of Sumatra. Here muddy mangrove flats are found, but with magnificent expanses of sandy beach at intervals. The light breezes that prevail have led to the evolution of quite different types of boats and canoes from those on the China Sea.

The peninsula is rich in tin ore. It produces an amount estimated, roughly, at three-quarters of the total output from tin from this industry has been sably applied by the governments of the native States to their development. Out of this income a railway has been built from Penang to Singapore, another is under construction round the island of Penang, and still another will be continued to meet the Siamese railways from Bangkok, while the railway from Penang to Singapore is also to be extended to meet the same railway system. Together with a most excellent road system, second to none in the East, these modern means of transport have changed entirely the old conditions of life, and have brought this part of British Malaya, in a one generation, into vital contact with our own economic world. Besides the mining industry here there are now large and important sugar industries, and rubber-growing with rubber-coconuts. In the main these industries are worked by a non-indigenous population from China and the south of India, for whose subsistence large supplies of rice are imported annually. The British possessions consist of the islands of Penang and Singapore, and of three small strips of land: Province Wellesley opposite Penang, and the Dindings and Malacca between Penang and Singapore. The Federated Malay States of Perak, Selangor, and Negri and more of the Straits of Malacca, and Pahang, on the China Sea, form a compact core dominating the centre of this part of the peninsula. To the north of the Federated Malay States are the States of Perlis and Kedah on the west coast, and of Kelantan and

MALAY PENINSULA. — 1. Geography. — The Malay Peninsula, a long seimitar-shaped piece of land, stretches from Burma and Siam to Singapore, its length from the northernmost extreme to the southernmost is about 1500 miles, and, in a straight line to the north of the island of Singapore, is about 150 miles, with an average width of 50 miles. The country consists of a series of high plateaus, separated by deep gorges, running parallel to the sea. The most important of these plateaus are the Malacca, which forms the backbone of the peninsula, and the Pahang, which runs parallel to the west coast. The Malacca is the highest, and is the most important of the plateaus, as it contains the most fertile and well-watered land. The Pahang is the lowest, and is the most forested.

349

Tenggarn on the east coast, all of which have recently been taken under British protection, and along the south-west coast, which is under Siamese suzerainty. To the south of the Federated Malay States lies the State of Johor, also now under British protection. It is common to speak of the units of the British sphere as British Malaya, a term which formerly included our far greater possessions in Sumatra and the densely populated island of Java. Occasionally the term is more accurately extended to include the island of Labuan, British N. Borneo, a British possession, and the protectorates of Brunei and Sarawak also represent British interests in Malaya, though the conditions there differ materially from those in the peninsula and ought to be considered with the archipelago.

2. Ethnological affinities and history. — The ethnological affinities of the area of which the Malay Peninsula forms a part, as well as of the adjacent areas, are still obscure in many respects. In so far as they have yet been elucidated by ethnological investigations and an examination of historical records, they bear out conclusions deducible from the geographical data. The Malay Peninsula itself would appear from very early times to have served as a causeway for migrations from the Asiatic continent, while the protected coasts of Malaya on the west side, and the richness of this part of the peninsula in minerals and other products, have favoured its economic development, and made it not only attractive to higher civilizations, as the study of its entire history shows, but also a reservoir of merchandise and workers from many far-separated countries. At the present day not the least important element in the population consists of a congeries of alien races, Chinese from the southern provinces of China, Canton, Foochow, and the island of Hainan, Tamils from S. India and Ceylon, and, in a lesser degree, Sikhs, Panjabi, and Pathans from N. India, and Japanese and Malays from all parts of the Eastern archipelago. In the north of the peninsula isolated outposts of Siamese have pushed for a considerable distance over the Kraw Divide, overstepping the ancient ethnological boundary of the peninsula. Old forts can be traced in the Patani valley and for some way down the valley of the lower Penang, strengthened with a hedge of thorny bamboo, which is not indigenous in this region. On the Upper Perak valley and in a few places further south there are distinct traces of Siamese influence in the present day peoples.

(a) Malays. — The peculiar importance of the native religions of the region here discussed is due to the fact that they exhibit a clearly-defined series of superimposed ceremonial strata, native (i.e. aboriginal of at least two different types, and Malay) Indian and Islamic. The most recent ethnological investigations confirm the view that the native population consists of the descendants of immigrants of a comparatively recent date, superimposed upon a more ancient stratum consisting, to a great extent, if not entirely, of aboriginal races. The Malays proper belong to the modified Southern Mongolid group of peoples found in Formosa, Sumatra, Java, and throughout the greater part of the Malay Archipelago. When the Palembang emigrants first began to arrive from Sumatra, about 900 to 1000 years ago, introducing a Hinduized civilization into the peninsula, it is probable that they found some Indo-Chinese type of superimposition. This is suggested by certain features of the aboriginal dialects, and by other considerations.

It is of great importance to note that some of the Sumatran settlers, who followed, after some centuries, the earlier Palembang colonists, are still in the matrilineal stage as distinct from other aboriginal groups in the peninsula, by which custom of a patriarchal type is followed. In the Malayan phrase, the people of the Negri Sembilan "follow the adat perpatih," which may be described as "Perpatih custom", whereas the other Malays of the peninsula follow the "adat Temenggong" ('custom of the Temenggong'), these two contrasted bodies of custom being based on mother-right and father-right respectively. These Sumatran settlers, who were agriculturists, unconnected with the aborigines, at least in some districts — e.g., in the State called Negri Sembilan — but the conversion of the Malays from tolerant Hinduis to Muhammadanism from the late 14th to the 15th century, began to drive the aborigines into the jungles and hill fastnesses of the interior. Since that time Summi Muhammadanism of the Shafiite school has remained (as in Java) the official religion of the peninsula, although among the less educated of the Malay population it is the nearest veneration of a vast body of practices and beliefs which can be traced either to the influen ces of Hinduis or to primitive shamanistic beliefs, such as are still held by the aborigines. Malay Islamism is nevertheless still fervent.

It may be remarked that the Malay Peninsula belongs, geographically and ethnographically, to Indo-China, a name which well expresses the fact that, with hardly any exception, the common races inhabiting the peninsula in times immemorial represent strains of races belonging to one or other of the two chief families of nations in various parts of Asia, viz. a Mongolid and a non-Mongolid, both terms being used broadly. Belonging to the latter family we have (1) Indo-Peran (though, 'Malaya') the pre-Malay 'Caucusian' element of which the Veddas and Korumba, and one at least of the Australian aboriginal races, are typical, often called 'Dravida' (though, like 'Malayo-Polynesian', this term should strictly be confined to linguistic affinities); on the other hand, we find, as representatives of the same great family, (2) a more highly developed or specialized type, possibly the tall brown-skinned Polynesian. These two main Malay types are said to be represented in the peninsula, the pre-Malay 'Caucusian' element of the Kornub-Vedd type, by the aboriginal Sakai, centred in S.E. Perak and N.W. Pahang (cf. one of the basic elements in the Malay language), while the pre-Malay Oceanic (cf. the Polynesian or Maori type) belong the eastern coast 'Malays' of Kelantan and part of Patani. The latter may be described as very tall, somewhat flabby, large-bodied men, with light brown or cinnamon-coloured skins, straight or wavy black, sometimes nearly curly, hair, and regular, sometimes almost European, features.

Again, the great Mongoloid family of nations is represented both by the Siamese (or Thai) in the northern part of the peninsula, and by the Malays themselves in the southern part, the Malays proper being perhaps best regarded as a highly specialized offshoot of the southern or 'Oceanic' Mongolid race, immediately immigrant from central and southern Sumatra. They have long, lank, bluish-black, straight hair, of circular section, and are almost hairless, with skin of a dark yellow-brown or olive hue (or the 'colour of newly-fallen leaves'); they are round-headed (brachycephalic already in possession from the time of the Negri Sembilan). Two of the following features are more widely observed.

and flattened noses, and somewhat thick ears, and on
the average are about 1.61 m. in height. The
women are usually much shorter than the
men. Both sexes have rather short, often almost
stumpy, feet, with toes that are to some extent,
probably not always real, firmly set in the
shoes. The fingers lead to a raised platform or house-floor by
gripping it with the hands and at the same time
holding it between the great toe and remaining
toes of each foot. Their joints are remarkably
true and small; the dagger-rings of a well-developed
old-style rebel chief, which was worn on his fore-
tongue, was too small for an average-sized little
finger of a European. A jungle Malay can com-
monly perform certain feats with his limbs that are
impossible to a European unless he has been
more specially trained as an acrobat.
In Sumatra the race was monikled by Indian
influences into a comparatively civilized condition
before they crossed to the peninsula. When they
arrived, they found the country occupied by
the three pagan races (see below, (b)), whom they
drove before them into the fastnesses of the mountainous
and jungle-clad interior. It is thought that they
also found some branch of the Mon-Khmer or Mon-
Khmer-speaking people, holding the other position
of vantage, and thus occupying almost the same
relation towards the aboriginal races as the Malayas
do at the present day, and that they then partly
absorbed the Mons, by thinning them of their
women, and partly drove them into the jungle.
This episode is, however, a lost chapter in the
history of the peninsula, although some such
theory seems evidently necessary in order to ac-
count for all the existing conditions.
The Malayas proper are but partially civilized, a
great number living in bushy or mountainous
islands to the Central and Southern Sumatrans and Indosoumians,
but also perhaps ultimately to the Chams of
Champa. See CAMBODIA. CHAMS.
The hereditary savagery of the Malay nature,
for many years after the introduction of the Brit-
ish Residential system (introduced to curb the tur-
bulent Malay Rajas, who were fostering piracy),
continually broke out, the commonest form in
which it showed itself being perhaps the Arak, that
Malay method of suicide that is practised until the gradual strengthening of the right arm
of British law made it too risky to indulge in,
when by degrees it became unfashionable. Other
striking evidence of the high-strung excitability of the Malay temperament is the form of the mysteries disease called latah
(corresponding to what has been called 'arctic
hysteria'), which also has not yet been thoroughly
investigated.

(b) Abo'rigines.—Various theories have been
put forward as to the ethological character of
the several wild races which form the substratum of
the population. It was held by the older etho-
logicals that they belonged to a homogeneous group—
the Negrito race—modified by admixture with the
Malay population. This is what has been termed
the 'Pan Negrito' theory of A. de Quatrefages,
N. von Miklucho-Maclay, and others. This
hypothesis, however, has proved untenable, and
the result of later researches has established the

1 Pronounced 'Mowm.' The Mons, or Talang, are remnants of an old pre-Malay ('Caucasian') race which once covered the
whole of lower Burma. The Talang language is the oldest literary vernacular of Indo-China, and is fast dying out, though it
is the general language of the Mongs, and religion and wore, and in which were composed the Mon inscriptions, which go back to about the 15th cent. of our
era.
2 The Chams dialect has in the last century been shown to contain many similarities with the Sanskrit, Arabic, and Vedic
languages. The Larry, a Cham-dialect, was published in Paris, 1906. One of the most peculiar customs
(though this case non-Malaya attributed to the Cham's is
that the women are bare in marriage.

fact that at least three types are to be found
among these primitive tribes. Of these tribes
the three, at least (the Semang and Sakai), can be found
in a relatively pure state, though only in very
limited areas, and the third (the Jakun) is probably
nowhere really well-defined. Adumbrated when
the three has taken place in varying degrees through-
out the peninsula, and the only satisfactory pro-
cedure anthropologically is to compare each tribe
with the pure, unmixed standard or standards
to which it is most closely related. By no other
method can any really useful conclusions be reached,
or, indeed, the drawing of the most fallacious in-
ferences avoided.

(1) Semang.—The Semang are a nomad Negro
race—comparable with the Negrito (Pygmies)
peoples of Central Africa, and probably most
closely connected with the Andamanese, whose
race of islanders lies off the Burmese coast at its
southward end—belonging to a primitive group of
peoples found to a greater or less extent as a
relief of the aboriginal population as far as New
Guinea and the Philippines, although it is remark-
able that no traces of any such race have yet been
quite proved in Borneo midway between these two
Negrito central and other peoples of vantage,
for the South American Indians are short stature (1-491
mm. male, 1-108
female), brainy, only skin from dark
copper or chocolate to shiny black, hair woolly,
rose brief, lips everted, beard scanty. They
extend from Patani to Kelah, and from Kelah to Mid-Perah and
N.W. Pahang.

In view of the fact that the Semang (or, as they
are called on the east coast of the peninsula, Pang,
are so frequently described as being of Negro
character—like African negroes seen through
the reverse end of a looking-glass. 2—it cannot be too
strongly stated that this is a mistake. At the
utmost, it may be conjectured, with W. H. Flower,
the Negritos, as that have the true Pygmies, an
original unverifiable stock from which the Papuans,
like the Negroes, may have branched off. But even
for this theory there are many difficulties, and it
cannot be said to have been in any way established.
Hence the Negrito and the Negro must be regarded
as totally different races—the former having short or
round head, square visage, dark skin, pure.

(2) Sakai.—The Sakai were at one time regarded
as Semang admixed with Malay, but are now
clearly differentiated as a separate and independent type 3 most nearly skin to the Dravidian group
of peoples. They are tall (average height 1-504
mm. male, 1-37 female), dolicho-
cephalic, skin very variable, light to dark brown,
hair wavy, nose-line and snarl, cheek-bones broad,
mouth small, lower lip full and projecting, beard
as a rule non-existent. The habitat of the purest
Sakai is S.E. Perah and N.W. Pahang.

(3) Jakun.—The Jakun are a mixed group in-
habiting especially the south of the peninsula,
probably everywhere blended, to a varying extent, with Semang and Sakai. This fact is the more
remarkable since a relatively important element
running throughout all the aboriginal dialects in

1 Wilkinson has recently suggested that five aboriginal race
types should be recognized. When, therefore, the new elements,
such as would be required in order to form the two proposed
new types, have been differentiated, and these elements are all
showed not to be referable to either one or the other of the three
factors already identified, the fact will have reached a final stage of development. Certainly, as there are still many unex-
plained points, it is probable that some further racial element
is the octagonal of the earth. Java, 1909.

2 Hugh Clifford, in Court of Kompong, London, 1897, p.
172. But this is a microscopic slice for an author who has done
such work as any other men to familiarize the English public
with the peoples of the peoples: Pahang, 1904.

3 This all-important differentiation was first clearly established
by R. Martin; see his monograph, published under the aus-
ricous Archipelago, Halle, 1899.
varying degrees consists of some Malayo-Polynesian tongue, the vocabulary of which shows affinities with the Malayian languages of the Far Eastern Archipelago, unlike modern (peninsular) or standard Malay. The reason for this is not apparent, unless we may conjecture that at some remote period a race whose national speech was of this Malayo-Polynesian type prevailed in the peninsula. The Jakun may be classified as consisting of at least three related groups, blended as above. In so far as they are of Malayan type, they should be to that extent regarded as aboriginal Malays.

In physical character they are a little taller than the Sakai, the head is longer and more aquiline, the skin darker, the hair long, straight, and smooth, nose thick, flat, and short; the eyes show little tendency to obliquity, and the mouth is large and broad, with well-formed lips. The Jakun proper are divided by the Malays into Hill Tribes (Orang or Jakun Bukit) and Sea Jakun (Orang Laut).

The surest test in regard to these tribes is the hair-character; hence we may distinguish the three main racial groups as ubotrichi ('woolly-haired'), cyrtotrichi ('nearly-haired'), and'llosotrichi ('smooth-haired').

There has undoubtably been a considerable admixture between all the wild tribes, but, owing in particular to their being still pagans, it is improbable that they have been intermingled with the Malays, since nothing could be rarer than that a Malay woman should demean herself by marrying a heathen husband. The case is rather the other way about, since a Malay woman who reaches a tribes would see that his children were brought up as Muhammadans, while in many districts, especially in Kedah, the adoption of the Muhammadan religion by a large portion of the aboriginal Semang element has compelled them to be thinned out as part of the recognized Malay population.

3. Culture.—(a) Malaya. — Apart from such tendencies as have already been mentioned, the Malay character may be regarded as a softened and more civilized form of the Mongol, since under ordinary circumstances he may be relied upon to show himself a peaceable, quiet, civil, and loyal subject, though he still retains much of his old proud sensitiveness, and in inland districts he is still remarkable for his ways of entertaining visitors or suspicious of strangers. In countries where he is less tampered with by civilization, the Malay is frequently of a bold and even savage character and makes an excellent soldier; there should, therefore, be no fear of the way in which tribes would see that his children were brought up as Muhammadans, while in many districts, especially in Kedah, the adoption of the Muhammadan religion by a large portion of the aboriginal Semang element has compelled them to be thinned out as part of the recognized Malay population.

Among the institutions of the Malay race which it shares more or less with other races in the same region are the use of sea-canoes (prahus, 1 once associated with piracy), the building of houses on piles (inland as well as on the border of tidal rivers), the use of the blowpipe with poison-tipped darts (now practically confined to the aborigines), and the kris, the serong (the national Malay plait skirt-like garment, closely corresponding to the Kil of our own Highlanders, though worn somewhat longer on the western seaboard of the peninsula), the tiling, gold-plating, and blackening of the teeth (now all but completely obsolete customs), the use of the beritai, or council-hall (now confined to Rajahs), and a strong belief in animism. In spite of being animists at heart, however, the Malays are not infrequently more or less bigoted Muhammadans, being in this respect at the very antipodes to the Battak of Sumatra, who have a literature of their own, and who are still to some extent inclined to be cannibals.

The Malay traditions and romances contain distinct references to human sacrifices, which would appear to have lasted until the advent of the British. The men show mechanical skill of a high order, and would probably respond readily to a more advanced training especially in engineering. Many are still adept in manual arts, notably in those belonging to the jungle and the sea.

The material culture of the Malay is of the insular Malayian (chiefly Sumatran) character. It has never been influenced by Hinduism to such an extent as, for instance, the culture of Java (as exemplified in the teak furniture and other famous temples of ancient date in that island). The Malays are skilled and artistic craftsmen in certain arts, though in others they are somewhat conspicuously backward. Their textile industry is limited, and their manufacture of cloth is of a very simple character. Their cooking utensils are of copper, and are appreciably common. They pay special attention to the manufacture of wavy kris-blades, and their damascene-work is a technical process of considerable elaboration, the more so because the proportions and even, in some cases, the design of the blade are determined by an elaborate set of rules governing the dimensions and intended properties of the various portions. These rules are not entirely technical, though compliance with them requires some degree of technical skill, but are in part magico, and designed to secure excellence in the blade and success in its employment. Similar rules are sometimes applied in a lesser degree to the piring (woodman's knife). Metal casting by the eire pured process is known and employed not only for copper but also for white metal or lutengue (sometimes popularly called 'tooth and egg' metal). Coins (round cash) were formerly cast on the east coast, on 'cash-trees', from which the cash were snipped off, and before the British entered the country the superfluous tin was run into ingots shaped like elephants, crocodiles, cocks, etc., which were used as currency. 2 Thorpe of Lorn (as in India and Ceylon and also, it may be mentioned, in ancient Britain). Thus for the mains at cockpit-fights in Kedah it was kept by means of a

1 R. C. Temple, The Obsolete Tin Currency and Money of the Federated Malay States, Magasin, 1914 (reprinted from I.2).
perforated half coconut-shell set about in a water-bucket, and tied to sink in a definite period. Poled masts are both with and without the wheel, and also by moulding in a split trunk, but in a few places only, and is often crude; on the west, in some cases, Indian influence is traceable, the types being both graceful and artistic. In some cases incrustation, which turns black on firing, is used as a varnish. The wide-spread use of bamboo and the palm-spathe bucket as a receptacle is, no doubt, responsible for the lack of a more extended development of fittle ware, in spite of the great abundance of clay suitable for pottery. On the east coast generally, and less commonly on the west, mat-making is a fine art; at Malacca highly artistic baskets are made of twisted strips of pandanus. The woodwork of the Malays, as shown in the ornamentation of their house utensils, as well as on the structural side of house and boat manufacture and furniture, is excellent, though as regards mere ornament it is decidedly scanty—the heart-breaking effect of the superficial Muhammadan veneer, which has been imposed on the Malays from without. The further from such influences, the commoner such ornament becomes, and the better its quality. The Malays are especially ingenious in adapting means to ends and in conforming their institutions to the conditions of life of a jungle-dwelling race, whilst the seaworthy qualities of the Malay prahu, or sailing-boat, bear witness to the reputation of the Malay as a sailor.1 The wild tribes, on the other hand, present generally many features of similarity. The Inland tribes are still nomads to some extent, existing largely by hunting, fishing, and the produce of their search for fruits and roots of the jungle. But most of them are semi-agriculturists, sowing in a rude way small patches of rice or millet; their method of cultivating their half-wild orchard-tree-crops, which grow as well in the jungle as elsewhere, is limited to throwing away in certain patches of the jungle the seeds or stones of the fruit they have eaten. The Sea Jakun are especially skilled in all devices for securing a livelihood along the foreshore, while the jungle tribes give evidence of a high degree of ingenuity in slaying and capturing their game by hunting and trapping.

The Semang are the most nomadic of the pagan tribes, though they are now taking to agriculture. Their typical clothing consists of a girdle of leaves or cloth, or, on festive occasions, a belt of shining black strings, made of the rhizomorph of a toadstool. Their typical habitation is a primitive shelter, of which the type is the tree-bark, planted on the ground or in trees. Those of a more developed type are large enough to shelter a whole tribe, each individual having a separate fire and bamboo sleeping-place. Frequently the head is more or less shaved and the teeth are filed to form a concave surface, possibly in accordance with a once usual Malay custom. They do not circumcise or (as a rule) chew betel, nor do they tattoo or scarify the body. They have no boats, but use bamboo rafts on the river-reaches. Their most distinctive weapon is the bow with poisoned arrows; in fact, among the pagan tribes, the bow is, in the present writer's opinion, a good prima facie evidence of Semang admixture; the northern Sakai, who also possess it, have most likely got it from the south. Almost since the beginning of the district, the blowpipe, of a different type from that of the Sakai, the idea of which has been copied, in all probability, from their Sakai neighbours.

The Semang have no organized body of chiefs, but each tribe has a single head-man. The tribes are organized in villages, each under a chief, to whom disputes are referred. Quarrels between villages are settled by meetings of these chiefs. Complete equality exists as between individuals, and all property is held in common. Crime is rare, and punishable generally by fines.

The Sakai, a mountain race, are still largely nomadic. Their habitations consist of tree-huts and temporary shelters; their clothing is a long cloth of tree-bark, though they also decorate themselves on occasion with a girdle of leaves. They tattoo the face and practise scarification and body-painting, and sometimes wear a porcupine quill or a metal ring through the nasal septum. Their distinctive weapon is the bamboo blowpipe. Agriculture is of a very primitive type, the principal implement being a digging-stick. They use neither boats nor rafts. The ornamentation of their implements, more especially the blowpipe and quiver, is considerably more artistic than that of the other aboriginal races.

Their social order, like that of the Semang, is of a primitive type; the only functionary is the head-man, or the head-woman if the tribe is organized over his tribe. Except when enforcing his position, however, he is only the equal of his fellow tribesmen. The office is hereditary, but, failing a direct heir, the pungkuh may appoint his successor during his lifetime. The wild tribes, on the other hand, make compensation, if the victim property does not exist, its place being taken by family property. The family as a unit cultivates the land, and the produce is shared between the members. The limits of the family property are designated by the pungkuh, and abandoned land may not be taken up without his consent.

More highly developed social order exists among the Jakun, or aboriginal Malayans, as represented, e.g., by the Southern Sakai, who show strong Malay influence.

The Jakun are still to some extent a community of hunters, although among the Land Jakun agriculture is practised, more especially rice-planting. Their clothing resembles that of the Malays, but the tree-bark is fitted into a fibrous sleeve-point. Their typical weapon is a blowpipe of bamboo, or, as in Kuantan, uniquely made of two half cylinders of wood fitted together for the purpose—corresponding exactly to a form of blowpipe used in Peru. They have no bow. They use spears and entwistles; in some cases they also carry sword and kris like the Malays. They live in huts built on piles and use 'dug-out' boats of hollowed tree-trunks, but on the river only, not on the sea. They use these face- and body-paint, but do not tattoo or scarify the face. Their marriage customs include, like those of the Malays, 'bride-purchase,' the ceremony of eating together, and, in addition, the birth-chase, which takes place round a large bell-shaped mound, constructed for the occasion, or an ant-hill or tree, if the tribe is a land one, or in a dug-out canoe—the form which it took among the sea-gypsies (Orang Laut). Their social organization is of a distinctly higher type than that of any other aboriginal tribe. The head of their tribe, the bang, is the head of a group of villages, and has certain subordinate officers.

1 *Pungkuh*—Mal., 'head-man' (from obs. Mal. *bume* or *bn*, 'head'). On the other hand, *pelima* or *pungkuh*—Mal., 'headman' (from obs. Mal. *lum*, 'hand'), i.e., executive officer.
who represent or act for him upon occasion. Thus, among the Besis of Lancel, the betina is the arbiter of all disputes referred to him by the sub-chiefs, besides being the priest at marriages, the magician in cases of illness or disaster, and the judge whose duty it is to punish wrong-doing. His substitute is the leon, who is an officer of inordinate authority, known as the penghulun betina, who has charge of the triennial feast and councils, whilst the jukrah (probably = Mal. juren-krah, or 'coree officer') is the summoner of the tribe; the penglima is the betina’s executive officer. Another body, the balai betina, has authority within his own jurisdiction, but difficult or unusual cases are referred to a council composed of all the betinas. In this division of the Jakun, as indeed among all, crime against personal and property rights is punished by payment of fines in the form of coarse Chinese plates or scarers. One half of the fine goes to the betina and one half to the injured person. The office of betina descends, as a rule, from father to son, and finally to the eldest son, when the eldest son has to be accepted by the tribe, and, if his brothers as well as himself are rejected, a stranger to the family is elected. If suitable, the sons of minor officials would be appointed by the betina to assist him in his functions. The inheritance of property was generally from father to children, but varied from tribe to tribe in the proportion assigned to sons and daughters or to wife and other relatives.

Property held by a man before marriage among the Malayan peoples was, as a rule, placed on his death to his parents, brothers, and sisters.

4. Languages.—(a) Malay.—The Malay language belongs to the Malayo-Polynesian family, related forms of which occur sporadically over an unusually vast area, extending from Formosa in the North to New Zealand in the South, and from Western India to the islands of the Eastern Pacific.1 Malay itself has, moreover, very considerable importance as a linguistic focus over a great part of the same region. In this respect, the language has been sought between the Malayo-Polynesian family of languages and a family of 'Austro-Asiatic', 'Sinitic', B.E. Asia, 'Tjap' (Central India), 'Khâi' (Assam), Môn, of Taling and Khmer, or Cambodians (indo-China), Nicobarese, and the aboriginal dialects of the Malay Peninsula; *this connection is now generally accepted.*2 This fact would actually link up the Malay language in pre-historic times with the corresponding element in the Sakai and Sumban dialects of the peninsula. This fact has been entirely the work of Schmidt; but G. Blagden’s work 3 is tabulating the various elements in these aboriginal dialects first made this identification possible.

The Malay tongue, by which the standard speech of the peninsula is meant, is of an agglutinative character, the roots being, as a rule, unchanged, and new words being formed in various ways, and reduplicated. The roots are mostly disyllabic, and the derived words frequently very numerous, while any harsh juxtaposition of consonants is avoided. The vocabulary, on the other hand, is largely of Malay origin, and the aboriginal words are, with the exception of a few, of minor account. There is a very marked and characteristic, no doubt, tendency to avoid the use of any word which is not of Malay origin; if a Malay word is known to be in use, it is not used if a native word can be substituted. This is the case, for instance, when the words (b) kudah, (c) 'squirrel', and (d) 'bathing pin' (on a mast, which is compared to a squirrel running up a tree).

With regard to the difficult question of the penultimate accent, Winstedt (with H. van der Waal) has recently (1911) come to the conclusion that the stress falls, even in standard Malay, upon the penultimate syllable, both in the case of simple words and in words the stressing of which is uncertain. In his study he is probably correct, although it is far from being in accordance with the usage of the Malays.

The Malay parts of speech frequently fail to coincide with our own; a root-word or radical, e.g., may often be used either as substantive or as an adjective, with consonant and vowel variation, and the same root holds true of substantive and verb.

The words which logically would have prefixes, which would not, are in those which should not do so. Thus the actual subject or thing talked about, having prior importance logically, precedes any word which is merely qualitatively; all and the subject is verb, object. There is no inflexion for gender, number, or case, and the syntax is as simple as that of 'polish English. Thus it has been accounted for that the lines, *Little boy, box of paints,* would be verse only to a Malay, who would express it as follows: *Little boy, box paints.* 4

Similarly an up-country European traveller who happened to inquire whether there would be time for him to reach a neighboring village before nightfall might be puzzled to receive by way of reply the mysterious monosyllable 'Can' or 'Park' (as the case might be), the meaning in the first case being, he could safely reckon on doing so, and in the second that night would fall before he reached his destination.

Malay may, therefore, be advanced as an expression that this language it often reaches the opposite extreme of exuberant verbosity.

The dialects of Malay are many and varied, but the three that are of most importance to the present subject are: (a) the betina dialect of Kelantan and Trengganu; (b) the Hausa dialect, spoken in the Jakun, Sumban (i.e. especially in Nanging and Kombo); and (c) the Riau-Johor dialect (spoken in Belanger, Perak, Pahang, etc.). Of these the first is that which especially shows the contact of the Malay-Polynesian tongue, to which reference was made above. This correspondence, moreover, is fairly close, as can be seen from the Malayo-Polynesian principles of the Malay betina (‘fish’); cf. even the Easter Island mates-Malay kai (‘dead’). Malay nouns — Malayo-Sumban (i.e. Sumban) "mowan jukrah-Malay perak ‘(silver).5 Even New Guinea dialects (usually supposed to be free from Malay) contain some words of evident Malayo-Sumban or Malay origin, as, for instance, ‘favourable’; in the insular Malay, the Malay-Polynesian word has been retained.

The corresponding social links are (d) their very similar kin-systems and (e) the general use of titles.

(b) Aboriginal dialects.—The languages of the wild tribes are split up into a number of dialects, each division forming a small area. They are rapidly disappearing, especially in the southern districts of the peninsula, their place being taken by Malay as the wild tribes come under the influence of Malay. In the northern districts, the Malay is in status and culture under modern conditions. Setting aside purely local and unimportant differences, the linguistic material of each of the three main groups, which may be referred to three principal types or standards: (i) typical Sakai dialects, which are represented by the speech of the aborigines in central Kelah and the adjoining State of Raman; (ii) typical Sakai dialects, the best specimens coming from north-eastern Perak and the adjoining district of Pahang; and (iii) in the southern part of the peninsula, the Jakun dialects, which may be classed together as Jakun or Malayin in spite of the fact that they contain a large number of Malay words, because the great bulk of their words are Malayan and not Sakai, although they do not afford material so favourable for clear type-differentiation as is found among the Sakai and Semang. Both in phonology and in vocabulary, the Sakai and Semang above come under broad classification, though between the strongly contrasted type-dialects are intermediate variations, the linguistic evidence in pointing to contact and admixture.

Thus, the dialects fall into groups which correspond,
more interesting element has been proved to show a very close affinity with the Min-Man or Mdn dialects of western India. The lexicon, though certain and numerous and even striking, is rather disappointing, if considered as a whole. Sidney had himself no reservation of the present writer: 'What is the use of our assuming (as certain scholars had done) that the Sakai dialects are identical with Malay? All that has been identified is about 20 per cent of the entire vocabulary!' The question is, what is the remaining 80 per cent?

To reply, we must study attentively both the Semang and Sakai syntax and a considerable percentage of the vocabulary. Especially, as regards Sakai, the phonology and modern Javan dialects are of no less importance. In each group there remains an unidentified element. Semang embodies a vocabulary which are confined to the Negritos and which are completely sui generis. It is clear that the Semang dialects did not originally belong to the Mdn-Annam group. These words relate to matters of everyday life, and presumably they represent the old original dialects of the Negritos. Relations with Andamanese has been suggested, but remains completely hypothetical; for hardly a single word of Semang is recognizable in the Andaman dialects, and this fact is one of the principal puzzles of the Semang problem. For the unidentified element in Sakai no suggestion as to origin has been made, though it is possible that many of the uncertain words may yet be traced not to a Malayan but to a Mdn-Annam origin.

In the case of the Javan it is pointed out that some of the words of unknown origin occur in Semang, but not in Sakai, but they hardly of sufficient number to support the view that Javan dialects actually belong to Semang; on the contrast, the large number of Javan words are certainly allied to Sakai and Wilkinson, treating as Javan certain southern Sakai dialects, says Blagden's linguistic Javan, but he has not explained both Rendel and the common element in which Mdrrito, Bedunada, and Jakan differ from every other known language.

5. Religion: greater gods.—(a) Malay.—The official Malay religion, as has already been stated, is Muhammadanism, but the popular beliefs and ritual affect the Buddhist priests, which is supported by the historical evidence, that this religion has been superimposed upon some form of Hinduism, which itself, when introduced into the country, superseded an earlier and more primitive form of Animism characteristic. Folklore, charm-books, and romances go to show that the greater gods of the Malay pantheon—so far as their names go—are borrowed Hindu deities, while the lesser gods and spirits are native to the Malay religious system, incorporated in and modified by the higher religions, but not entirely forgotten.

Taking first the Hindu deities, we find Visnû the preserver, Brahmâ the creator, Batara Gurn (Siva), Kala, and Sûri simultaneously invoked by the common people. Of the gods who are designated as Durga, is in the minds of the Malays, unquestionably the most important; in other words, the Malays were of the Sawite sect of Brahmanism. In the Hindu Sang Sebuk, the Malay version of the Dyag, Batara Gurn appears as the supreme god Siva, with Brahmâ and Visnû as subordinate deities. He alone has the Water of Life which reanimates slaughtered heroes. The Malay magician will, on occasion, but be holded that he was the all-powerful spirit who held the place of Allah before the advent of Mahomedanism, a spirit so powerful that he could restore the dead to life; and that to him all prayers were addressed at that period. It may be noted that most of the higher religious spirits in use among the Malays are of Sanskrit origin, and that the titles Sang-yang ('the deity') and Batara are used mostly of the older Hindu deities. The Malays, however, in adopting the Sanskrit title of Gurn, seem to have retained it for their hunting god, while they identify in certain localities with the 'Spectre,' or 'Demon Huntsman,' though pure Hinduism would certainly not have recognized hunting (one of the deadly sins of that religion) as a pursuit fit for one of its deities. Further, there is a mixture between a good and a bad side of Batara Gurn's character, which may point back to the combination into one of what were originally two distinct personalities, Batara Gurn and Kala. Thus the Malay Kala holds as his one definite influence the foresore, a strip intermediate between the land-sphere of Batara Gurn and the dominion of a third deity called 'Grand-Sire Long-Chaws' (Toh Punjung Kuku). This attempt to divide the spheres of land and sea must again be ascribed solely to the Malay, as Hindu mythology knows nothing of the sea. It is clear, therefore, that in the greater deities of the Malayan pantheon we may, after all, recognize Malayan deities simply renamed from the gods of the Hindus. The Batara Gurn of the sea is identified by some magicians with Si Raya, and occasionally with the god of mid-currents (Mambang Tahi Harus). Sickness is sometimes ascribed to him, but it is not usually so fatal as illness induced by the malejoy of the Demon Huntsman, and fishermen and seafarers, on the other hand, obtain from him many benefits. The only other deities of importance are the White Divinity, who dwells in the sun, the Black Divinity, who dwells in the moon, and the Yellow Divinity, who dwells in the sunset; the last is considered most dangerous to children, and Malayan parents always endeavour to keep their children within doors at sunset and during the twilight in order to avoid his influence.

(b) Pagan races.—In view of the still inadequate evidence of the beliefs of the pagan tribes in relation to a supreme deity, it is necessary to exercise some caution in making any statement as to their beliefs. On this subject there is at least safe to remark that any one who, as the result of mere worrying by questions, commits himself to the statement that any of these pagan races have no such beliefs whatever proves merely that his own methods of investigation are at fault in these matters.

It appears, moreover, clear that the Semang and Jakun, and possibly also the Sakai, are at present in the stage of development, common to most primitive peoples, in which the supreme deity belongs to the realm of mythology rather than of religious proper. Since he stands more or less aloof from the affairs of this world and the next, and possesses no cult, his claims to recognition are set aside in favour of the more powerful god of mundane affairs, whose powers for good and evil are constantly capable of exercise and who at every turn must be propitiated. Among the Semang there is clear evidence for a belief in the existence of such a being, and in such a dualism based upon natural phenomena.

According to one account, Ta' Ponn ('Granthfather Ponn') is a powerful but benevolent being described as the maker of the world. He was, in fact, described in the present writer by the Semang of Kadah as being 'like a Malay Raja; there was nobody above him.' He is the moon's husband and lives with Ag-Ag, the crew who is the sun's husband, in the eastern heavens. Ta' Ponn has four children, two male and two female. His mother Yik is the old Earth-mother, and lives underground in the middle of the earth. He has a great enemy, Kukah, who lives in the west. He is dangerous and very black. That is why the east is bright and the west dark. The heavens are in three tiers, the highest of which is called Kukah, and which are defended against unauthorized intrusion by a giant coco-nut monkey, who does away any one found trying to enter the heavens.

The naturalistic dualism of this account is obvious from his place of abode, and from his having the moon as his consort; we may perhaps conclude that Ta' Ponn is a spirit of the rising sun. In addition it has been maintained that the Semang recognized two other superior deities, Kari, a thunder-god, the supreme of the local Religion, and Batara, a related but subordinate divinity, who, under Kari, created earth and man. The evidence, however, is too slender for dogmatic statement, and the point still awaits the collection of further material.
The religion of the Sakai is more shamanistic in character than that of the Semang, and, if any corresponding belief exists among them, as has been maintained, it is overshadowed by the cults of demons, genii, and spirits. The Sakai affords more certain evidence of a belief in a supreme deity, although their conceptions at the best are vague and shadowy. The Mantri say that Tuhan Di-Rawab, lord of the under world, created the earth and dwells beneath it, supporting everything above him by his power. The Benun believe in one god, Pirman, who dwells above the sky and is invisible. He made the world and everything that is visible. The greater part of the Jakun of Johore, however, and acknowledge a supreme being whom they call by the Malay-Arabic name of Tuhan Allah; the grotesquely slight influence, however, that is really exercised by Muhammadanism on the wild races of the Malay jungles is best illustrated by the statement of those tribes who believe that Muhammad, the prophet of God, is the wife of the supreme deity.

6. Lesser gods, spirits, and ghosts.—(a) Malay. — The name of the great gods is lesser gods or spirits (Sangaja, avarna, and Malayan races.

7. The soul.—(a) Malay. — In Malay beliefs the semangat (‘human soul’) is a thin, unsubstantial mankind, temporarily absent from the body in sleep, trance, or disease, and permanently departed after death. It is about the size of the thumb and invisible, but is supposed to correspond in shape, proportion, and complexion to its embodiment; it can fly quickly from place to place, and it is often, perhaps metaphorically, addressed as a bird. In mental attributes it is quasi-human and may possess, independent of his body, a sense of consciousness and volition. It has been alleged that the semangat cannot be the ‘soul’ because it is believed to quit the body and wander about during sleep, and that it must therefore be a spirit of vitality. But this very same reasoning would show that it cannot be a spirit of vitality. What is actually meant here by ‘soul,’ however, is the native (and our own medieval) idea of the soul, which is something very different from the soul of our modern idealistic Christianity. The latter might indeed almost be described, in comparison with its medieval prototype, as a ‘super-soul,’ and it is only the more primitive idea of the soul in which we are here storm-die: hantu kubor are grave-deacons who, with the spirits of murdered men, prey upon the living whenever they see an opportunity: hantu masak, the ‘hungrily,’ and hantu laot are water and sea-spirits; hantu riwo, deep forest demons; hantu bero, the baboon-demon; hantu helim, the tiger-demon; and hantu songet, the ‘loosening’ demon, who interferes with rope-shades, tumpas, for wild animals. In addition there are giants and ‘tall’ demons (bota, gani-gani, and hantu tinggi) as well as ‘good people’ (bidadari or peri), who are of foreign origin; echo spirits (sebabagian), spirits of whom little is known except that they are good
the simangat is distinctly referred to as being seventhfold, and, as a similar multiple division is found elsewhere among savages (PCMI. i. 391 f.), this may be taken as original, although seven is a somewhat more primitive number to the Malay magi.

The belief in the existence of simangats does not confine them to human beings. Animal, vegetable, and mineral simangats are clearly recognized. While in the case of animals the simangat is a counterpart, on a reduced scale, of its counterpart, in the vegetable and mineral kingdoms the tree simangat or the ore simangat is usually an animal, whereas the rice simangat is treated as resembling a human infant. The simangat of the cogglewood tree is the Semangat bird, the iron-ore simangat that of a buffalo, the gold-ore simangat that of a deer, and so forth. A box or a treasure-jar may also have a simangat until chipped or broken, when the simangat escapes from it. An interesting variation has been said to occur on the east coast of the peninsula, where the simangat of a particular kind of boat is called by a special name, mayor, as opposed to the usual soul-name, simangat. But there is no trace of this form on the west coast or apparently in other parts of the peninsula.

This creed is no empty belief inoperative in daily life. It forms the basis of the Malay's mental attitude and practice in all dealings with the animal, vegetable, and mineral simangats.

Although Malay animism is consistent and complete in extending the belief in the simangat to all nature, animate and inanimate, side by side with the purely animistic belief there is abundant evidence of a special Ceri-like reverence for animals, birds, fishes, reptiles, and trees to an (accursed) human origin. The elephant, tiger, bear, deer, crocodile, solid-crested hornbill, and stick-insect are examples. Evidence of such anthropomorphizing of the wise proceed to a paradise in the west in which grow fruit-trees. To reach it they cross a bridge consisting of the trunk of a colossal tree. At the end of the bridge sits a hideous demon, and such of the Semang as are scared by him fall into a wide boiling lake beneath, in which they sink for three years until the Lord of the Paradise of Fruit-Trees lets down his great toe for them to clutch, and in this contemptuous fashion pulls them out. The old and wise men for this reason were buried in trees, so that they could fly over the demon's head. The western Semang believed that only the medicine-men went to the Land of Fruit; the lay members of the tribe crossed the sea to a land of screw-pines and thatch-palms, where the hole into which the sun fell at night. If they had committed any bad action, they started by the same road, but turned north to a land which had two months of day and one month of night. Among the Sakai it has been said that simangats proceed to a Hades (Niraka) where they are washed clean by one 'Granny Long-Boasts,' and made to walk across a boiling cauldron in the sharp edge of a chopper. Bad simangats fall in, good simangats eat, where they wait until a friend comes to show them the way to the 'Islands of the Clouds.'

The Matri possess peculiarly positive faith in the continued existence of the simangat after death. It leaves the holy are, is carried by Ilayang Lasa either to Ngangnari or to Fruit Island (Pulau Buah), far away in the region of the setting sun, where all simangats dwell in harmony, marry, and have children. Those who die a violent death go to Red Land (Bergaun), a desert place and barren, repairing thence to Fruit Island to get their nourishment. The Benua, on the other hand, believe that after death the simangat dissolves into nothingness again, having been fashioned from air by Pitman. Notwithstanding this, they hold that the simangats of medicine-men, while their animate bodies remain behind, are conveyed or carried to heaven in music.

3. Animism.—Although it would in any case be justifiable to regard the attitude of the Malays towards the kerdsuat, or holy place, as a survival from an earlier stage of religious belief on the analogy of similar ideas among more primitive peoples, there is, in addition, abundant evidence to support the assertion that it is not only an animism, but also the popular ideas traceable to a modified Hindunism, are superimposed upon a form of religion in which animism was the predominant factor. A belief in spirits pervades the whole of the everyday life of the Malay, and importance of the medicine-man or magician (posong and bonor), the language of the innumerable charms recited on any and every conceivable occasion, and the ceremonies which accompany any and every action or undertaking—indeed in many cases the most trivial—would in themselves point to this particular conclusion, even if we lacked the evidence supplied by the statements of the Malays themselves with regard to their object and meaning. Important proof of this connexion is furnished by the relations of the Malays with animals, with trees, and with the crops, and especially by their remarkable beliefs with regard to mining.

(a) Animals.—To nearly all animals, but especially to the larger, the Malays attribute anthropomorphic traits and, in some cases, superhuman powers. The elephant and tiger, e.g., are believed to possess cities or districts in which they assume human form and live in houses. According to a local legend which comes from Labu in Selangor, a man tracked an elephant to her home and married her in human form. She resumed her animal form when, on returning to his country against her express directions, he gave her food which included certain young tree-shoots. The tiger, which is an object of especial fear, is believed to be a demon in the form of a beast; in the legendary 'Tiger Village' the roofs of the houses are thatched with human hair, men's bones are the rafters, and men's skins the hut-walls. The original tiger was a boy found in the forest who changed into a tiger when beaten with many stripes by his schoolmaster. The latter placed a ban upon him to compel him to ask for the sun to set at night. He therefore used divination by leaves (of certain forest trees) to ascertain whether his petition for a victim has been granted. It may be added that he is also believed to doctor his wounds with leaf-poisonics. The belief in Leaking Tigers is shared to the mutual embarrassment of Malay superstitions, in the power to become such a being is believed to belong especially
to one tribe of Sumatrans, the Korinchi Malays, of whom there are a number living in the peninsula. In one case a dead wer-tiger was identified by his possessing a gold tooth derived from his human owner. The Sucinang (wild buffalo), the Semang and ghost-tigers are strongly believed in. They are distinguished by having one shrunken foot, are harmless, and are the tutelary spirits of certain regions of sacred localities. The most famous ghost-tiger of the peninsula dwelt on Mount Ophir (4000 ft.), near Malaca; in Selangor they were the guardians of a shrine on the summit of the Jaga Hill. The latter were formerly reputed to be the pets of the princess of Malaca; thus the two stories were connected. The princess is said by local report to have established herself on Mount Ophir at the time of the Portuguese invasion, and still visits the hill in Selangor, accompanied by a handsome tiger, though herself invisible. When a tiger was killed, a public reception was accorded to him in the nearest village, at which he was treated as a powerful war-chief or champion, and was entertained by an exhibition of dancing and fencing. Both clowns and whiskers of the tiger are regarded with great veneration, and the latter are sometimes twisted up with man's moustache, to strike terror into his enemies, and the former are imitated in the tiger's claw knives worn on their fingers by the men who pretend to be wer-tigers.

Equally strong are the beliefs and beliefs connected with the mouse-deer and cherrötian. This animal occupies the place of Brer Rabbit in Malay folklore; it figures in numberless proverbial sayings and romances, and is honoured by the title of Malayan forest-growth.

In the fire-getting ceremony it is said to ask for fire wherever it 'sings its mother-in-law's feathers' (a bird).

Hunting dogs are continually addressed as if they were human beings. It is, however, believed that it is unlucky to see them in the jungle, unless the person meeting them barks after the manner of a wild dog before they have time to do so. Cats, in imitation of possessing supernatural powers (e.g., in the rain-making ceremony), are lucky because they wish for the prosperity of their owners. On the other hand, cats-killers, when in purgatory, will be required to cut and curry coconut logs to the manner of the cat's body; therefore cats are not 'killed,' but only set adrift on rafts to perish of hunger.

The flesh of swine is now regarded as unclean by the modern (Muhammadan) Malay, but there are instances where it was not so. In a Malay recipe for turning brass into gold, the wild pig, moreover, is hunted and eaten with avidity by the wild jungle tribes, as is still the case in N. Borneo and other parts of the Malayan region. It may also be noted that the flesh of the buffalo is preferred to that of the ox, and the former is used, and not the latter, for sacrificial feasts—a fact which suggests an obscure survival of Hindu belief. The elephant is supported on the horn of a gigantic wild buffalo.

The attitude of the Malays towards wild animals and their belief in their magical powers are further indicated by the fact that in hunting and trapping no skill or skill unless it is itself supported by magic, by special charms supplied by the medicine-man, and by formula to be repeated in setting the traps and snares or when actually engaged in hunting operations, either to ensure success or to serve as a protection. Like the Siamese elephants-wizard, the Malay deer-wizard himself must first enter the toils before a hunt begins, in order to influence the deer magically to enter the deer-snares. If this were omitted, the ropes would fail to hold the deer, nor would the deer enter. The marks on the forelegs of the wild deer (which are due to ulcers on the legs of its human original).

Fish and other inhabitants of the water, like land animals, are regarded as having human or superhuman qualities, and, when catching them, the Malays have to perform ceremonies to overcome their spiritual nature and magical powers. The crocodile, e.g., is, according to one account, a boy who fell from his mother's arms into the water. The various species of fish also have their special origin; one kind is said to be originally another monkey, another human being drowned in the river, and so forth. The Norse myth of the rivers sprang from the tents of the cow Audhumla is recalled by a Perak story of a large specimen of toadfish, which, when eaten, produces many magical beliefs clinging round the crocodile. In many of the rivers certain crocodiles are regarded as the sacred embodiment of dead chiefs, and are free from molestation. When hunting these reptiles, the Malays repeat the exact words and take precautions to ensure capture by symbolic actions such as striking the water with the canoe-paddle in imitation of the crocodile's tail; or, when eating curry, by gulping down three lumps of rice successively in the way in which it is hoped the reptile will reject his food (by or without fear lest the wooden cross-piece buried in the bait will fail to hold the crocodile.

An elaborate ceremony precedes and accompanies a fishing expedition. It includes the repetition of magical words to frighten the land-spirits that offerings, consisting of rice, betel, parts of a goat sacrificed for the purpose, cigarettes, etc., hung up on a tree in a sacrificial tray, await their acceptance, and the offering of two similar trays, one in shallow water and one, containing the goat's head, at the seaward end of the fishing-ground. Miscellaneous offerings from a basket are scattered while the boat is rowed out to the stakes, and, when they are reached, snorron-coloured and parched rice is scattered on the water, while the 'neutralizing rice-paste' ceremony is performed on the stakes and the boats. A number of tigers, such as seven days' fasting from sexual indulgence, the avoidance of bathing without a bathing-cloth, or of taking an umbrella into the fishing-boats, or of cutting the fishing-stakes with boots on, are strictly enforced. The use of a tabu language by the fishermen is also de rigueur.

Among the wild tribes similar beliefs are entertained, but in particular they look upon animals as the embodiment of their illustrious dead. The elephant, the largest and most important of the animals, is the one into which the semangats of chiefs are supposed by the Besi to migrate is extended beyond beasts of prey, including deer and pigs as well as tigers and crocodiles. Among the Mantri the tigers are the slaves of the wizard, or popayang, and are supposed to be immortal, while the Jakun believe that, if a tiger meets them in their path, it is a man who has sold himself to the evil spirit in order that in such a form he may wreak vengeance on his enemy or give play to his malignity. The amount of natural history associated with animalistic names is quite remarkable for a race whose jungle knowledge is so complete as it is among real up-country Malays. The case of the large caterpillar which is believed to metamorphose into a squirrel is typical.

(b) Birds.—Ideas of various kinds of omniscience anthropomorphic in character, are very generally associated with birds by the Malays. As a rule, nocturnal birds are ill-omened. If one species of owl alights near a house and hoots, it is said that
there will soon be a 'tearing of cloth' for a shroud. If the beberd, a nocturnal bird which flies in flocks (a goat-sucker or night-jar), is heard, the peasant has to pluck out its nest with a knife and calls out, 'Great-grandfather, bring us their hearts,' in the hope of detaining the spirits into the belief that he forms one of the train of the Spectre Huntsman (hantu penburo) which these birds accompany, and must therefore not be attacked by them.

The argus pheasant (kuang) is said in Perak to have been metamorphosed from a woman; the female, moreover, is believed to reproduce its kind by allowing the male light to shine on her. In Selangor it is believed that a hornbill was transformed from the murderer of an old man, another variety (klapopel) to have been a man who slew his own mother-in-law. The toh ketumpi (a variety of horned owl) is believed to enter theowl-house and there live on the intestines of fowls, which it extracts during life by means of a charm. The luck-bird—a small white bird about the size of a canary—if caught and placed in a rice-bin, ensures a good harvest to its owner; a ground-dove, kept in a house, is a prophylactic against fire. If any one is fortunate enough to secure the nest of a kind of heron, or ruwek-ruwek, it confers upon him the power of invisibility. But the list of birds to which the old ideas have been recorded is endless. Various peculiar ideas and significations may be said to be limited only by the varieties indigenous to the peninsula.

In fowling, air-hunting, sympathetic magic plays a prominent part, while every bird has its particular charm for repetition. In catching wild pigeons, constant reference is made to their simangats, and the aid of the pawang is required to perform the 'neutralising rice-paste' ceremony in the space in front of the conjuror's bower, for the purpose, which is known as King Solomon's Court-yard, or to recite a charm over the long bamboo decoy-tube or pigeon-call. During the operation great care is taken that no part of the snarer's paraphernalia is called by its proper name (which might be under-blind by the pigeon); everything is called by some emendation—e.g., 'the Magic Prince' (for the name of the hut) and 'Prince Distraction' (instead of the word 'pigeon-call').

The metaphor in relation to trees and other forms of vegetation follow to a great degree, if not entirely, their concepts in relation to animals. It is not clear that they hold that all trees have a simangat, but it is certain that some trees, such as the durian, the cocoa-nut, palm, the trees producing eagle-wood, camphor, and gutta-percha, and others are supposed to possess simangats. This belief extends even to dead and seasonal wood, as is shown by the invocation addressed to the timbers used in the ceremony of fanning a boat—a ceremony which is frequently represented in Malay romances as taking place (as formerly in Fiji) over human rollers. In earlier days the men used to try to frighten the durian grove into bearing by torches addressed to them verbally. The medicine-man struck the trunk of an unfruitful tree seven times with a hatchet and threatened to fell it if it did not bear. The toddy collector said to the cocoa-nut palm: 'Thus I bend your neck and roll up your hair, and here is my ivory toddy-knife to help the washing of your face.' The maleca cane is regarded from the same animistic point of view, and it is believed that a cane with a long joint will protect the owner from snakes and nachims addressed to him verbally. The medicine-man struck the trunk of an unfruitful tree seven times with a hatchet and threatened to fell it if it did not bear. The toddy collector said to the cocoa-nut palm: 'Thus I bend your neck and roll up your hair, and here is my ivory toddy-knife to help the washing of your face.' The maleca cane is regarded from the same animistic point of view, and it is believed that a cane with a long joint will protect the owner from snakes and nachims addressed to him verbally. The toddy collector said to the cocoa-nut palm: 'Thus I bend your neck and roll up your hair, and here is my ivory toddy-knife to help the washing of your face.'
mother-sheat was treated as a young mother; i.e., young shoots of trees were pounded and scattered over it every evening, and on the evening of the third day coconut pulp and goat-down mixed with sugar were eaten and a little ejected from the mouth on to the sheaf—an analogue of the tebat adminis-tered to a mother by a woman, when clearing the court, must kiss the stalks, saying, 'Coane, cone, soul of my child,' as if it were the soul of her own infants. Ultimately the rice obtained from the, shanqat (representing the child) and from the sheaf (representing the mother) are mixed and placed in the receptacle of rice. If the rice is stored, covered with a wreath of straw the straw of the first ceremonial pounding of the padi, the ears first pounded being those cut immediately after the taking of the child to the mother; when next sowed, and some is used to make the topung saswar.

From all that has been said it will be clear that the Malay harvest ceremony consists in the attempt to simulate, on behalf of the vegetative rice-crop, a lucky birth as of a human infant, in the hopes that this mock-ceremony may stimulate the productive powers of the rice-plant for the current harvest.

(d) Mining.—In the western States of the peninsu-la tin-mining was, and still is, the most important industry. Although mining is now carried on chiefly by Chinese, the ceremonies in use at the opening of a mine are purely Malay. Formerly a lucrative and highly important post was that of mining wizard; some of these magicians were believed to possess the power of bringing ore to a place where it did not exist, and of turning inroads of sand, or of sterilizing, such ore as existed. The ore itself was regarded as endowed not only with vitality, but also with the power of functional increase. Sometimes it was said to resemble tin, gold, and possibly a little silver and galena, no metals are worked in the peninsula.

The natives, however, have a great reverence for iron. The Lump of Iron in the royal regalia, where placed in water, is the most solemn and binding oath known to those who use it, and it is referred to in the most terrible denunciations of the Malay wizard; a long iron nail guards the newborn child and the rice-soul; betel-nut seeds (also of iron) and a dagger protect a corpse from evil contact, and a Malay in the jungle often plants his knife-blade edgewise to the source in a stream before he drinks, in order to drive away any chance demons. Bezoar-stones and stone imple-ments are said to be endowed with magical properties and powers; a unique east-coast belief regards the latter as arising out of the ground, and not, as almost everywhere else in the world, as being buried down from the sky in the form of thunderbolts and small portions representative of each part being deposited in the audience chamber.' Other tabus are the wearing of a sarong, burying the skin of any beast in the mine, wearing shoes, and even carrying an umbrella; the last is particularly offensive to the spirits, since it is the insignia of Malay royalty. A special language has to be used in so far as certain words are concerned. No animal or thing not itself allowed by the presaging in performing the magical ceremonies, or in uttering the invocations, such as the attitude of standing with both hands on the hips or behind the back), nor may even the wizard himself assume them on any ordinary occasion.

(e) Water.—The Malays have been a seafaring race from time immemorial, and the rivers were also of great importance to them before the making of roads. It was by the rivers that they first penetrated the country; the rivers and streams are all on river-banks, and the streams are still the chief source of supply for irrigating the rice-fields. To both river and sea many superstitions and legends are attached. Their animistic notions include belief in what woman precations are taken for the protection of their boats. It was formerly the custom to fasten a bunch of sugar-palm twigs to the top of the mast to prevent the water-spirit from settling on the mast-head. The sea-spirits are invoked to point out shoals, etc., and sometimes in rapid or other difficult places offerings are made to the spirits of the rivers. The tidal wave (bore or eagre) on a river was formerly held to be caused by the passing of aeward monster, which ascends the river; one of these (on the bore ceasing) was described to the present writer as having been killed by being knocked on the head with a stick. Eredia (A.B. 1613) says that the Malays attribute such bores to souls of the dead who are passing the ocean in coplas from one region to another, i.e., from the Golden Chersonese to the river Ganges. Ordinary river-floods (which were distinguished as male and female) were thought to be caused by similar agency.

9. Cosmology and natural phenomena.—(a) Malay.—In Malay folklore the theory of creation is that light emanating from the supreme being becomes the ocean, from which the earth is raised by vapour. The earth and sea were then formed, each of seven tiers, the earth resting on the surface of the water from east to west, the mountains of the Cau-casus being regarded as a chain put round the earth to keep it stable on the face of the waters. Beyond them is spread a vast plain, the sand and earth of which are of gold and musk, the stones rubies and emeralds, the vegetation of odoriferous flowers. Besides the Caucasus, which are known to the Malays as Bukit Kot (Hills of Coral), there is immense importance in popular lore, there is a great central mountain called Maha Meru, which is sometimes identified by Malays with a hill in Sumatra. Another version of the Creation is that earth and water-spirits, apparently due to Muslim influence, describes how God, the oldest magician, pre-existing by Himself, created the pillar of the Kaba 1 of which the four branches form the four corners of the earth, and the world-snake, Sakutiunna, which was killed by Gabriel and broke another, the head and forepart shooting up to heaven, the tail part penetrating downwards beneath the earth. The description of this serpent (whose name suggests an Indian origin)

1 Lit, 'cube' (the cube-shaped sanctuary of the Black Stone at Mecca). For the Kaba see Mecca.
is remarkably anthropomorphish; in fact, it is a serpent in little more than name.

It was usually believed that the world was of oval shape and revolved on its axis four times in the year, and that the sun was a body of fire moving round the earth and presenting the alternation of day and night. Some at least imagined the-fashioned to consist of a perforated stone or rock, the stars being caused by the light which streams through these apertures. Further, the earth is declared to be carried by a colossal buffalo on a tip of its horns—an obvious Malay parallel to the world-elephant in the Rāmāyana and the boar-inarnation of Viṣṇu. When one horn gets tired, the buffalo tosses up the earth and catches it on the other horn, the concussion thus produced being the cause of earthquakes. This buffalo stands on an island in the nether ocean, or on a giant tortoise (according to some versions), or on the monstrous fish called Nun (Arab. ‘fish’). The universe is girl round by a huge serpent which feeds upon its own tail. Peculiarly Malay, on the other hand, is the idea of the tides, which, it is said, are caused by the movements of a colossal crab that twice a day leaves and re-enters its cave at the foot of the sea. A fish which eats giant coconut-yelms, which grows on a sunken rock or quicksand in the ‘Navel’ or Central Whirlpool of the Ocean (pusat tosek).

The sun’s name in Malay is Mata-hari, which means ‘eye of day,’ but on the east coast it is a horse which passes through the heavens by angels during the day and led back again at night-time to the point whence it started.

Eclipses of the sun and moon are considered to be due to the devotions of these bodies by a gigantic dragon (Rāhu), or, according to some, a god. Malays, like the Chinese and other more primitive races, endeavour to save the sun and moon by making a vigorous noise to drive away the destroyer. The spots on the moon represent an inverted banyan tree, under which sits an old horseback, plaiting strands of tree-bark, or, as some say, spinning cotton. As soon as his task is finished, he will angle for everything on the earth’s surface. The line has not yet been completed because a rat gnaws through it despite the vigilance of the old man’s cat, which is always watching. It should be added that the Malay phrase, bulat bunting pelandok (‘the moon is great with the mouse-deer’), is derived from the plaitable by any appearance of the moon is thought to a hare or antelope, which, being hard pressed by a hunter, appears to the moon for protection and was taken up by her into her arms; the phrase is often said when she is three-quarters full.

Landslides in the hills during the rains, being often accompanied by floods, are said to be due to dragons breaking forth from the hills, where they have been doing penance, on their way to the sea. Lifks and waterfalls of unusual appearance are believed to owe their origin to demons. A rainbow, if only a small portion of the end is visible, betokens the death of a Raja, if it appears in the west. The treasure which lies where the foot of the rainbow touches the earth has never yet been found, as ‘no one can ever arrive at the place’ where it touches. The rainbow itself is often taken to be a snake and is sometimes said to be seen drinking (lerar minum). On the east coast it is said to be the head of a horse or a bullock which comes down to earth to drink. There is a house on the east coast of the peninsula in which a water-jar (tamanjam) had been drained dry by a rainbow.

Rainbows are a time of danger, since then evil spirits have power, while the name applied to the yellow glow of the last rays of the sun (namanbong kuning, ‘the yellow deity’) is a term associated with terror. In Perak children are called in at sunset to save them from this danger, and women often chew and spit out at seven points, as they walk round the house at sunset, kunyet teras, an evil-smelling herb. The alternation of evening and dawn at Pulau Tionan, an island south-east of Pahang, is believed to be actually the body of a dragon, or neia. The Malay who told this to the present writer said that a long while ago an English Government vessel was passing this island, when her crew, catching sight of the then existing three points of the dragon’s crest on the summit of the island, fired, breaking them off, and that the vessel itself sank afterwards. There are now said to be a number of people living on it, none of whom is allowed to make the least use of vinegar; if any vinegar is spilt, an earthquake follows, because the island is in reality the monstrous body of an enormous dragon.

(b) Pagan races.—The Semang endow both sun and moon with human form, both being female. Like the Japanese, who have been credited by some authors with Malayan affinities, they associate the sun with a crow (Ag-Ag), whom they assert to be the husband of the moon. The husband of the moon is Ta Poom (see above, p. 354). When the sun sets, it falls into a cavern, which some Semang identify with a species of Hades. Eclipses are caused by a huge dragon, or serpent, which tries to break in upon the reception of the moon, the Semang assert that the serpent is the moon’s mother-in-law, who has assumed this form and is trying to embrace it—an act which is clearly regarded by the Semang with loathing and abhorrence. The rainbow is a huge python, or serpent, and the spots where it touches the earth are feverish and bad to live near. During a storm of thunder and lightning the Semang draw a few drops of blood in a bamboo internode and throw it skywards. As the ghosts of wicked tribesmen fly up to the heavens, this is intended to propitiate them and persuade them to return. Sometimes, however, it is believed that the spirits go downwards and become water-spirits. In this case part of the blood is thrown towards the sky and part underground (Pangan).

Thunderbolts are supposed to be hurled as the result of undue familiarity towards a mother-in-law. An unusual explanation of thunder and lightning from that in Semang mythology the spots on the moon are thought to be a hare or antelope, which, being hard pressed by a hunter, appealed to the moon for protection and was taken up by her into her arms; the phrase is often said when she is three-quarters full.

The Kedah Semang hold that heaven consists of three tiers or layers: the highest is filled with fruit-trees which bear luxuriantly all the year round, and is inhabited by the greater personages of Semang mythology; the second also contains fruit-trees, but is defended against unauthorized pilagers by a gigantic baboon who peels any such would-be assailants with ‘false durian-fruit’ (the produce of a wild fruit-tree); the third has nothing but low brooding clouds which bring sickness to humanity.

Of Sakai beliefs little that is typical has been recorded, as such information as is available witnessing to a close resemblance to Semang beliefs. Rā-ha1 (obviously the Indo-Malay Rāhu), a being resembling a dragon, tries to swallow the sun and moon, but is driven off by the sun and moon, which, however, is beyond the memory, whereas the hus-

1This fruit is sometimes called by Malays the ‘Ha-ba’ fruit, from the belief that demons, on living up to inspect it, see that it is not the real durian-fruit, and indulge in loud peals ofardonable laughter.
eagle, and from this pair all mankind are descended. The Sakai are said to indulge in ceremonialexorcism of the spirits of thunder, and it is believed that the forces of nature assist the souls of certain evil spirits or demons, which cause them to harm people, though the forces themselves are not demons. The earth is a thin crust resting on the nether ocean, and is said to possess all sorts, or demi-gods, the inhabitants of the uppermost are said to include a female deity who has to wash the sin-blackened souls in hot water.

The Blandas of Selangor say that the earth was originally the shape of a long bird-box (sodok-sodok), the nether ocean had the form of a globular tobacco-box (lepok-lepok), and the heavens were round and over-arching like an umbrella. The Blandas' account of paradise resembles that of the heaven by crossing a fallen tree-trunk which serves as a bridge, and from which the wicked fell into a lake or boiling cauldron. This happens only to those who allow themselves to be frightened by a dream, and who in the path of the ways by which the souls must go. The magicians of the tribe are reputed to be able to visit paradise and bring back fruit with them. Gafer Engkoh dwells in the moon, which he reached by a ladder now broken, and visits the nation from wild animals dead souls who visit the Island of Fruit-Trees.

The Mantri have not, to any extent, acquired Malay traditions as regards the form, character, and motion of the sun, moon, stars, etc. The dark spots on the moon they believe, however, to be a tree beneath which sits the moon-man Moyalng Bertang, an enemy of mankind, who is constantly making nooses with which to catch them—a task which is prevented from accomplishing by nice, who continually gnaw through the strings. Eclipses are not attributed to a snake or a dragon, but to a devouring evil spirit. The sky is a great inverted copper pot, suspended over the earth by a string, and the moon's edge is constantly sending up sprouts which would join the stars if an old man did not cut and eat them. In addition the Mantri have a version of the sun-robe belief, viz. an idea that the sun is a woman tied by a string to the moon, and that the stars are the moon's children. The sun once had as many children as the moon, but, having been tricked by the latter into eating them, now pursues the moon, and, when he succeeds in biting her, causes an eclipse to happen. This explains why the moon hides her children by day.

In the beliefs of the Benna Jakun the world is globular in shape and enclosed in the sky. Farthest north and south are the extremities of a great beast, in the moon being twenty days' journey from Boko, where there was a great hill from which the north winds issued. The sun and moon move round the earth, producing darkness and light alternately.

The usual account of the creation of man, from the four elements of earth, air, fire, and water, appears to be a Malayized version of the Mlahanadian story. Adam was formed from the heart of the earth by the angel Azrael, not without strenuous opposition and protests from the earth itself. A common feature of Malayan romances and legends, which also appears in Japanese folklore, and is probably to be attributed to an Indian origin, describes the supernatural origin of human beings in the interior of some vegetable product, as, e.g., in the story of a giant bamboo, which continually sent forth fresh shoots as it was cut down, and in which King Djasratha, according to the story in Sree Rama (the Malay version of the Ramayana), found the princess, or, again, in the tradition of the discovery of Tel Purba in the river-foam.

(b) Progeny races.—The Semang story of the origin of the human race is that the first children, was desires of having offspring of her own, but did not know how to obtain them. She and her husband took to carrying a brace of fire-logs under their arm-pits by way of a substitute. But one day the coconut monkey (Prono, on noticing what they were doing, gave them advice, as a result of which they had four children, two boys and two girls. These married and had children of their own, but the ring-dove (Telukor) warned the children of the first generation that they had united within the forbidden degrees, and advised them to separate and marry other peoples, in which case their children might intermarry without impropriety.

Among the Mantri the story of their origin was an incident in a group of myths connected with Mertang, the first medicine-man, and his younger brother, Blö, who came from a place called 'Rising Land' (Tanah Bangun) and returned there after a sojourn on earth. They were the children of two people called 'Drop of Water' (Ayer Sá-Titik) and 'Handful of Earth' (Tanah Sá-Képái), the latter being their mother. Mertang took his youngest sister to wife, and from this union children are descended. Blö married the other sister, but had no offspring. When men increased in numbers to an alarming extent, To Entah (or 'Lord-knows-who'), the first batun, a son of Mertang, drew his father's attention to the circumstance. The men wished things to remain as they were, but Blö suggested that 'men ought rather to die, after the fashion of the banana, which itself expires, although its young seons survive.' Thus it was decided, and so the old now die, although they leave their children behind them. According to another version, the Mantri are descended from two white apes (ungka punyih) who sent their young ones down into the plains, whereupon they developed so rapidly that they and their descendants became men. Yet another version says that men came down from heaven in a ship built by God, which floated upon the waters of the earth. The story of the princess found in the bamboo also occurs among the Mantri. She married the lord king, while the stars are the moon's children. The sun once had as many children as the moon, but, having been tricked by the latter into eating them, now pursues the moon, and, when he succeeds in biting her, causes an eclipse to happen. This explains why the moon hides her children by day.
without being guilty of a crime and without any inconvenient questions being asked him. Not only is his body sacred, but that sanctity extends to the royal regalia, which no one may touch, or even make models of, without incurring the risk of a great fine. Amongst the Malays there is a strong feeling that any one who infringes the royal tabus, offends the royal person, or wrongfully makes use of the royal insignia or privileges will be struck down by the divine (quasi-electric) discharge of the royal sanctity (elektruit). In the Malay emblems the kings are credited with all the attributes of inferior gods; they are usually invulnerable and gifted with miraculous powers, such as that of transforming themselves, returning to life, and resurrecting the lives of others. As a divine king he possesses a number of prerogatives which enter into almost every act of life and effectually set him apart from ordinary men. One of these is the sole use of white for the royal umbrella, and the use of yellow cloth (the white umbrella, once the royal emblem throughout India-China, has now been abandoned for yellow). Linguistic tabus are also employed with reference to the king, such words as sāliap, 'to eat,' hirāpu, 'to sleep,' gerāpu, 'to be,' and a number of similar Malay words when reference is made to the royal person. At the Malay king's death his name is dropped and he is called Marhun, the deceased, with the addition of a phrase descriptive of some prominent, and often of the solemnity or grotesque, event of his lifetime. One of the most important and significant beliefs connected with the king is that which attributes to him a personal influence over the works of nature, such as the growth of the crops and the bearing of fruit trees. This also, in a measure, applies to his delegates, and modern times has even been extended to European officials employed in the government of the country.

In a lesser degree the magical property upon which the royal sanctity is based is a quality of the ordinary individual, though usually inversely in the sense that it is susceptible to evil influence, or, in the case of parts of the body, capable of evoking evil to the owner. The head is still, to some extent, regarded as sacrosanct. In cases of assault greater penalty is exacted against the head than for that to any other part of the person. Great circumspection is employed in cutting the hair; sometimes it is never shorn; more often it is not cut during a special period — e.g., after the death of a grandparent. Often the head is shaved after birth with the exception of one lock in the centre of the head, which is allowed to grow until he begins to grow up, or even, in consequence of some parental vow, until he attains the period of puberty or marriage. These customs may be due to the sanctity of the head, or possibly to the idea that magic may be brought to bear upon the former owner of the hair by means of that which has been cut off. For this reason both hair-clippings and moustachios are carefully preserved and not substituted for, while they are invariably mentioned as part of the ingredients of the well-known wax mannikin still believed to be most effective in bringing about the illness or death of an enemy. To the same category belongs the practice of kneading up with the substance of a mannikin the eyebrows or saliva of the intended victim, or soil taken from his footprint.

12. Holy places. — Notwithstanding the existence of the mosque as the centre of religious life, in the Malay peninsula its role is still distanced by the belief in holy places, of which mention is made below. The highest holy places which the Malays themselves, when asked to interpret them, explain as being 'spirit places' (kāramah jin). For instance, the kāramah of Nakhoda ('ship-master') Usman on Bukit Nyaduk near the Johor frontier, consists of a group of rocks exhibiting no sign of any kind of burial. This (orthodox) jin presides over rain and streams and all kinds of water. Incense is burnt here to prevent floods and to get sufficient water for irrigation. It is probable that the name is a later accretion and the rite a relic of the worship of the spirit of streams of water. In another place the kāramah is a tree with a protuberance on the trunk. This swelling is closely connected with the harvest; it increases in good years and in bad decreases.

In Klang there is a famous wishing-rock, called Batu Tre, to which the Malay tribes have resorted from time immemorial. A similar rock is situated on the top of Gunong Beromun ('Beromun Crag'), another mountain, while other not unusual Malay words have been employed to indicate wishing-places, each possessing its good spirit. The supplicant who visits these places carries with him a couple of white owls and samples of various articles of food in a tray, which is suspended from a tree or placed on the highest seat of the kāramah. After his wishes have been silently addressed to the spirit of the mountain, the petitioner sets a meal prepared on the spot for the purpose.

It may be noted, however, that such sacred places were not recognized by the Semang, possibly owing to their nomadic habits. The Sakai and Jakun appear to have set apart certain sites for the purpose of burning incense and registering vows, and they had, in addition to these shrines, medicine-huts, either solitary cells in the depths of the forest, in which the medicine-man kept a selection of his charms and spells, or diminutive shelters which screened him and his patients during the ceremony of exorcism.

13. Rites: prayer and sacrifice. — In the case of both prayer and sacrifice, the Malay standpoint is entirely materialistic. The prayer is invariably a request for material advantage; its efficacy is increased by repetition. Sacrifice, as is shown by the language of the charm, is for the spiritual, or, was spiritual, reality of the gift. There is evidence, however, of the progression from this point of view to that of homage, and, finally, to that of self-abnegation. The spirit or deity is invited to eat or drink of the offerings placed before him. An intermediate stage between the gift and the idea of homage is marked by the use of substitutes and a sacrifice of parts for the whole. For instance, in the instruction of the magician, "if the deity demands a human sacrifice, a cock may be substituted." A statement which indicates, however, to the former prevalence of human sacrifices. In one case a more explicit declaration was made to the present writer, who was told that for a man a buffalo could be substituted, for a buffalo a goat, for a goat a cock, for a cock an egg — a statement which explains the frequent use of an egg in Malay sacrifices. The idea of abnegation among the Malays appears to be confined to votal ceremonies or vows in which the voluntary sacrifice is not regulated by a spirit, but there is often a tacit understanding that he will sacrifice something of value to himself.

The chief rites performed on various occasions, to which reference is made below in connection with special beliefs, are: (a) rites performed at
the fourteenth and fifteenth days of the lunar months; certain instruments are prescribed; in the interior a reaping-hook may not be used for cutting the padi, or at least the farm (a small instrument consisting of a piece of leaf set transversely in a dip of bamboo, which will cut only one or two heads of rice at a time) must be used to begin the reaping. By these prohibitions, it may be concluded, the paung preserves the traditional method of an older régime—e. g., in enforcing an adherence to the custom of the fixed maximum prices for the sale of rice and other articles within the village, inration of which entails a bad harvest.

The paung is sometimes supposed to keep a familiar spirit which is hereditary in the family, enabling him to deal summarily with wild spirits of a noxious character, and also to bewitch and thus to punish people who are bold enough to dispute his authority. Such punishment is usually inflicted by a 'sending,' or 'pointing,' one form of which consisted in pointing a kris in the direction of the intended victim, the point of the dagger beginning to drip blood as soon as the charm began to work. Another example is the Malay watch, in point of the cordiform top of a newly opened bunch of bananas growing on the tree; this causes excruciating agony; then the paung cuts off the top and the victim dies vomiting blood, his heart having been fallen out of its place. The Malay watch also commonly keeps a familiar, which may have as its embodiment a night-owl, a badger, etc.

In certain respects, it is important to note, the magician stands on the same footing as the divine man or king; e. g., he possesses certain powers called by the same name (tobeban) as the insignia of royalty, he may (at least in some cases) use the royal colour, and he may, like the king himself, enforce the ceremonial use and disuse of certain words and phrases. Probably both offices are held to be dangerous. Other powers and attributes of the medicine-man which may be mentioned are his ability to act as a spirit-medium and to give oracles in trances, and his practice of austerities and observation of chastity for the time being. His use of mesmerism is not yet recorded, but motor automatism certainly occurs.

Although the office of magician is hereditary, the power may be acquired by certain recognized methods. One of the accredited intermediaries between men and spirits, and, although he has no connexion with the Muhammadan religion, without him no village community would be complete. The office is often hereditary, or at least confined to the same family through certain properties, such as a peculiar kind of head-dress, are, as it were, the regalia or official insignia, and are handed down from one generation to another. The functions of the medicine-man are many and diverse. Few of the operations of life can be undertaken without his intervention. In fishing, trapping, and hunting, in the gathering of jungle produce, in agricultural matters, such as sowing, reaping, irrigation, and clearing the jungle, in procuring for minerals or arts in herding—of sickness, death, and burial, his aid is invoked to decide the propitious moment for action, to prescribe the ritual, and to carry out the rites. Not the least important of his powers in former days was that of controlling the weather—traces of which are still preserved in Malay weather charms. For his services in these matters he receives a small payment.

In a passage from the paung's instructions consist of prohibitions, or paung: e. g., it is paung in some places to work in the rice-fields on the nineteenth and twentieth days of the lunar months. The interior a reaping-hook may not be used for cutting the padi, or at least the farm (a small instrument consisting of a piece of leaf set transversely in a dip of bamboo, which will cut only one or two heads of rice at a time) must be used to begin the reaping. By these prohibitions, it may be concluded, the paung preserves the traditional method of an older régime—e. g., in enforcing an adherence to the custom of the fixed maximum prices for the sale of rice and other articles within the village, inration of which entails a bad harvest.

The paung is sometimes supposed to keep a familiar spirit which is hereditary in the family, enabling him to deal summarily with wild spirits of a noxious character, and also to bewitch and thus to punish people who are bold enough to dispute his authority. As an alternative method models of certain objects are placed upon the tray; the evil spirits are invited to enter them; in the tray they are then got rid of by being hung up in the jungle or left off on the sea. (2) Incantation ceremonies—the use of counter-charms to neutralize the active principle of poisons, extended by the medicine-men in all cases where an evil principle (either a familiar spirit or unclean form) is believed to have entered a sick person’s body. The ceremony of applying such charms usually consists in making a long wooden figure or cell with which the patient is drinking it after reciting the incantation.

(3) Incantation ceremonies—rites intended to expel from the patient’s body all kinds of evil influences or principles, such as may have entered him on his touching a dead animal or bird, or which he may have acquired from the ‘Wild Hunting’. The evil principle, known as badda attachments to everything that has life, including insect objects such as trees, and even stones and minerals, which, in the Malay Peninsula, are considered as magical by virtue of these evil principles or ‘mirchies’ are one hundred and ninety, or, according to the shaman, one hundred and ninety-three. ‘To cast out the mischief’, the patient is struck down with a brush (made of certain prescribed leaves and plant-spray) which has been dipped in water in which woods have been grated or pieces of scrap-iron allowed to soak, or else he is rubbed with lime, appropriate charms being recited in each case. In another form of broom-making is used from the brush, along a red thread, which the patient holds in his hand, until it reaches certain dough images of birds, beasts, and fishes, placed upon the ›nakeh‹. A ›disease-boat‹, sometimes a mere reed, is also used as a vehicle for the spirit and set aboil on sea or river. The evil may also be expelled by a long and elaborate ceremony in which a protective spirit, such as the tiger- or elephant-spirit, is simulated, often by a medicine-man, who, while in a state of possession, simulates the movements of the animal-spirit summoned, or, as it is termed, a ‘spirit-spirit ceremony’. (4) Restorative ceremonies—ceremonies to recall the sick person’s ›simangat‹. In one such rite dough is rolled into a human figure which is then cut into five cushions of white clay. Rice is scattered, incense burned, and a charm recited to induce the patient to enter the dough image and be transformed thence to the soul-cloth, and thence to the patient. Similar ceremonies are used to prevent the ›simangat‹ of a swooning person from escaping.

(b) Pagan races.—The ›bitian‹ (shaman), or medicine-man, is the most important member of the tribe among the Semang. In normal circumstances the chiefs or head-men are always ›bitian‹ of more or less authority. They object to no certain prohibitions which do not affect ordinary members of the tribe; they may not eat the flesh of domestic animals, like the goat or buffalo, and that of domestic fowls but rarely. They receive a special form of burial, traditionally regarded as specially honourable, consisting of a rude shelter built in a tree, in which are placed a medium of food and water, a jumble-knife, etc. It is believed that they are able to proceed to paradise in trances and to drive men mad. They alone interpret the ›incantations‹ that never fail, and can slay men by ‘sending’ at a distance of several days’ journey. They alone have the power to change themselves into women, and at their death their ›simangat‹ passes into that of an elephant, a tiger, or any other animal. When the latter dies, they proceed to paradise.

Not merely are diseases caused by demons, but they are demons, and have to be exorcized as such. They are abstracted sympathetically from the body by pulling up sapling stumps at or near the place where the disease is believed to have entered the patient. The affected part is rubbed with earth taken from the hole in which the root grew; chewed betel is ejected on the body (in imitation of the medicine-man’s unearthly habits). Dead saplings into the wood, so that the evil spirit may be cast out likewise, ends the ceremony. ‘Sendings’ or ‘pointings’ are achieved by a minute dart or splinter of bamboo about two inches long, which is thrust into the right palm and is ordered to fly forth and slay the victim. This dart is never taken back to the river flies through the air and, reaching the victim, pierces his heart and kills him. Sometimes a taper formed of wax from a deserted bees’ nest is burned at the skin. Such ‘sendings’ were said by the Semang to be effective at ‘a distance of probably two days’ journey.’ The Malan is believed that all diseases are caused either by the spells of bad men or by spirits.

Among the latter are the smallpox demon, which the Malan avoid even mentioning by name; the dropical demon (bantu kuant), which haunts the abodes of men and aflicts them with distemper in the stomach and head; the Demon Huntsman (the bantu si buku of Malayian origin), who dwells in lakes or pools, is black, and has three hands which he will cause to take up a man and pull him into the forest; if they catch him, they will drink his blood. In every stream, in the ground, in trees, and in caves and crevices of rocks dwell malignant demons who cause disease or mischief to men in various ways, as by sucking their blood and thus causing their death. When these islets are surrounded, the bantu person fastens on the lesion and causes the blood to flow by sucking. The Berembun tribes believe that diseases are inflicted by the spirits of the rivers (bantu sungit), which are evil and feed on the human ›simangat‹.

The Malan magician’s most noted form of ‘sending’ is the ›tijin‹, or pointing ceremony, which is achieved by the use of wax from an abandoned bees’ nest. When a wind blows in the direction of the victim, the maga-"
A ceremony of exorcism known as sóoi, or, more commonly, as sawoi, is employed by the Bésis in case of illness or when an answer is required to a question concerning the welfare of an individual.

The ceremony takes place in a hut in complete darkness. After incantations accompanied by the rhythmic drumming of bajang, the exorcist, the centre of the ceremony, lays on the floor, the spot on which he is laid depending upon one member of the company, who answers any questions put to him while he is in a state of trance or possession. In the inner part of the hut there creeps a small kitten. This is fed, or rather the chamber or cell (batul bambun) near the walls of the hut, in which he conceals himself while the ceremony progresses.

The Bésis employ spells and exorcisms to cast out demons and evil spirits, and the control of these is exercised by the use of a bottle, the contents of which are used for the purpose of taking the omens. She then chews some of the bottle's contents ascertains the child's horoscope. At the appointed hour she chooses the holy place in the house, in which she is to be born, by dropping an ash-blade, point downwards, on the floor of the room and then empowers the echoes of the places. She sometimes has been seen to be born in a rush, by dropping an ash- blade, point downwards, on the floor of the room.

In regard to the observances at and after child-birth, it is usual to engage the midwife (bida) in the seventh month by sending her a copper vessel containing three or four packets of betel-leaf, tobacco, and so forth, all of which the betel-charms and then employs it for the purpose of taking the omens. She then chews some of the bottle's contents ascertains the child's horoscope. At the appointed hour she chooses the holy place in the house, in which she is to be born, by dropping an ash- blade, point downwards, on the floor of the room and then empowers the echoes of the places. She sometimes has been seen to be born in a rush, by dropping an ash-blade, point downwards, on the floor of the room.

15. Birth ceremonies and beliefs. — (a) Malay.— There are four spirits, or, rather, demons, which are especially feared by the Malays in relation to child-birth. The languir, a demon which appears in the form of a civet-cat, is evoked by incantation over the grave of a still-born child. It may, however, be inherited, and its possessor can send illness, usually in the form of convulsions or delirium, to any of his relatives. Those who are sometimes made to wear a black silk string armblet as a protection against its attacks. The langsuir, a woman who has died in childbirth, becomes a flying demon, or bansee, who, through having the backs of her neck, sucks the blood of children. It is believed that these demons have occasion become wives and mothers, but, when allowed to dance at village merry-making, they will assume their original form and fly off again.

The pontunok is the still-born daughter of a langsuir. As a precaution intended to prevent the dead mother or still-born child from originating these mischief, the langsuir and pontunok are buried with glass beads in the mouth (to prevent them from shrieking), an egg under each armpit (to prevent them from waving their arms in flight), and needles in the palm of each hand (to prevent them from opening and shutting their hands in flying). The pontunok approaches the form of a rat. The penanggalan, a colossal flying head with hair matted by clots of blood, a species of monstrous vampire or bansee which sucks the blood of children, sits on the roof-tree, or endeavours to force its way into the house. The vehicle is born, it attack the infant. In addition to these four spirits specifically connected with child-birth, there are the familiar two, called polong and pelést, which also give rise to anxiety at this time, though they do not confuse their activities to new-born children. The polong originates from the blood of a murdered man which has been placed in a bottle and over which certain incantations have been recited. It is described as a diminutive female figure about as large as the top joint of the little finger, and is usually preceded by the pelést, its pet or favourite, which, in the form of a cricket, searches for a victim and enters his body, when found, tail foremost. The pelést is obtained by exhuming the body of a first-born child, a first-born mother's off-pring, which has been dead for less than forty days, and burying the child's tongue, with incantations, in a spot where three cross-roads meet. It has been noticed that these demons belong to the family of the small cord, which is used to attack their victims by an owner, and, as such, are sharply distinguished from the more primitive animistic ideas relating to disease, etc., which are held by the Bésis.
and scratched over by the claws of a fowl held tightly by a group of the elder. At about the same period, of the fortieth day, the child (in Perak) is presented to the river-spirits, being made to stand with one foot on a couple of coco-nuts and the other on a fowl (both of which have been driven into the river). When the child has, if the infant is a boy, is sent upstream to catch a fish with a casting-net; if a girl, a girl acts as the fisher. In Upper Perak the baby himself, with a number of other young children, is caught in the net; he will then never want for fish to feed on.1

During the forty-four days' period there are many food prohibitions—e.g., any foods which, from the Malay point of view, are lowering, such as certain vegetable foods, things which irritate the skin or cause faintness, sugar (except coco-nut sugar), coco-nuts themselves, and chilies are prohibited.

Both before and after birth child-birth many prohibitions are laid not only on the wife, but also on her husband. The latter may not shave his head or cut his hair until after the child's birth, he may not sit in or obstruct the doorway. Any un-toward act may cause deformity: a child was born with only a thumb, forefinger, and little finger on the left hand owing to the father having, just preceding the birth, fed the child's flesh to a crab with an outcast. In fact, it was at one time prohibited for him to cut the throat of a buffalo or a fowl preparatory to cooking it, or even to take any life whatever. In Perak any log marked by, or distorted in growth by, a parasite, if used in building the house, would cause deformity, protract delivery, and endanger the life of both mother and infant. (b) Pagan races.—Superstitions and practices connected with birth, so far as known among the pagans, rather, among those pagan tribes for whom Malayan racial affinities are here claimed, strongly confirm the view that the popular beliefs of the more highly civilized natives of the peninsula are essentially primitive in character. The practice of roasting the mother, e.g., of course on a quite minor scale, is found among the Jakun, Bési, and Mantri, while among the Blandus the charms used at birth are directed against the demons, the *longha (*Malay *longguris), *po1ong, and pérang. In the latter instance, particularly of the Malais. Another incantation is repeated at the moment of removing the caul as a charm against the caul-demon, which licks up the blood of the sufferer. The Sakai bury the umbilicus and their hands in human habitations so that the rain may not beat upon them and turn them into birth-demons.

It must be stated, however, that our knowledge of the birth customs of the pagan tribes is by no means adequate, and the whole subject awaits further investigation. In one account of the Semang, for instance, it was alleged that their birth customs were based upon a belief in a bird-soul which was carried by the expectant mother in a bamboo receptacle; but, although the conception of the *semangat as a bird is certainly familiar to the Malays, this statement still awaits confirmation among the wild tribesmen. Both Sakai and Jakun make use of the services of a *sage-femme, who among the former has a special but used by the women of the tribe for purposes of confinement. The Bési decorate the mother's mosquito-curtains with the leaf-hangings used on all important ceremonial occasions, while among the Mon of water is boiled during birth, thrown on the feet, and administered to the mother. The sap of certain leaves is given to the child, and a charm is repeated. A name, which is retained until marriage, is given to the child at the moment when the umbilical cord is severed. The Bénsu Jakun fastened a knot to the child at birth, which had a string to which pieces of turmeric, and so forth, were attached. The Jakun also observed a number of food prohibitions: while the children were unable to walk, the parents abstained from certain foods, and the cutting of the first locks of hair—the latter, of course, only when, owing to some vow of the parents, the 'first head-shaving' operation has been postponed until marriage.

Tooth-filing is done by a professional tooth-wizard (*pesang gigi). Neutralizing rice-paste, charms, and the scattering of the several kinds of sacrificial rice and rings of precious metal are employed by the *pesang in order to assert the 'subtlest' (bodi) from his instrument, as well as from the teeth of the patient. The mid-woman's eyes are considered to be especially endangered by the bad emanating from the teeth of the patient. Any unskilled performer may cause much pain to the patient if he does not know thoroughly how to 'neutralize' the evil.

The rings of precious metal which are pressed against the patient's teeth as part of the rite of sacrifice are often used in the hair-cutting ceremony. The bride's hair is arranged in seven long tresses hanging down her back below the veil which, on this occasion, is carried over her head and is attached a ring of precious metal, and then each tress of hair, on being cut, is allowed to fall with a coco-nut vessel (ornamented for the purpose with a chiron edge), which is half full of fresh coco-nut milk. For this ceremony also the proceedings are opened with the bride's drinking the rice-water, some of it being also sprinkled on the palm of her left hand, by those who take part in the ceremony.

The ear-boring ceremony appears to have fallen into abeyance, though in some of the Malay States a special kind of large, round, ornamental ear-ring, or ear-stud, is still the mark of virginity. Significantly, the ear-studs, as a general custom, are confined to the ear-lobes of a widow who remarries, the latter being regarded, so to speak, as a sort of 'merry widow,' and being, in fact, actually called jeringly 'the widow adorned' (*sanda ber-hiag). Ear-boring is now usually performed when the child is quite an infant.

Circumcision is practised, the instrument being traditionally a knife of bamboo, but in all the more accessible of the places it would be entirely a non-Mohammedan rite. Especially in the Northern States it is accompanied by such a wealth of irrelevant detail as to suggest that it has been granted upon an ancient festival (probably the tonsure ceremony) belonging to an older faith than that of Islam.1

It is accompanied by the usual purificatory rites, and the ceremony is made the occasion for a banquet, at which the boy is dressed like a pilgrim and stained with henna like a bride-groom, after which the customary gifts are offered. In Perak he is then taken nude and robed in rich raiment, his mouth filled with the sacrificial saffron-stained rice, and his body sprinkled with the purifying rice-dust. After this, two coco-nuts and two small packets of rice are solemnly rolled over him, from head to foot. A hen is then placed on his chest to pick up grains of the yellow rice from his mouth. This is done to drive away *Blitik.2 The boy's teeth are next tapped with a stone by the operator, and, after feasting a procession to the river follows, the object of which is to propitiate the water-spirit. The boy then has his top-knot shorn off and returns to the house for the actual circumcision, during which he takes his seat either on a bank of rice or on his back. In some cases the procession the youths are sometimes carried on men's shoulders, sometimes walking (infants most) in a litter shaped like some strange bird or mythical animal.

The girl's ceremony is much simpler, much more private; it was formerly accompanied by ear-boring and tooth-filing, by shaving the teeth 'black as a borer's bee's wing,' Large round ear-studs were also formerly given by the girls at this period, as embellishments, but, in the east coast, girls sometimes worn on the east coast, they are now worn, on the west coast, only at the wedding ceremony. The preparation for the rite of discarding them a few days later.

In the same part of the peninsula (east coast) the ceremony is not called, as on the west coast, 'entering into Islam,' but, most significantly, 'entering into 
which means literally 'admission into the body of the Malay people'—the most usual meaning of jawi being the vernacular, or 'Malay,' language. Yet another term for the ceremony in these parts was 'purification' (cawat tiadik, literally 'cleaning of the person')—a phrase which is also applied in the same parts of the country to marriage.

(b) Pagas races.—Of the various operations with which it is usual among primitive peoples to mark the attainment of majority, whether marriage or circumcision is practised by the wild tribes except, in the case of the former, among the Sembrong and Jakun of the Batu Palat in Johor, and the Benun, and, in the case of the latter, as elements in the performance of office. It may, in fact, be said that the rite is virtually synonymous with conversion to Islam, and that it may be taken as the broad dividing-line between Muhammadanism and more pagan notions. Neither of these, however, is found among both Semang and Jakub, but not among the Jakun, and, judging both from distribution and frequency of use, to believe that the custom originated among the Sakai, and was introduced, though only to a limited degree, among the Semang. The scarification consists of continuous lines from the nose towards the eye, produced by the scarabaeus of a thorn or edge of a sugar-cane leaf, charcoal being rubbed into these scratches by way of pigment. Body-painting is of wider distribution, and is to be seen among Semang, Sakai, and Jakun, but more especially among the Sakai. The colours used are black, white, red, and occasionally yellow. The designs are decorative and magical rather than tribal. Perforation of the nasal septum with the wearing of a nose-bar or porcupine's quill also appears to be more especially a Sakai practice. Boring the ears, however, is, as a ceremony, practically universal, whilst the ceremonial filing and blackening of the teeth may belong rather to the Malay stock of ideas. It occurs among the Semang of Kedah and Kelantan, but is there undoubtedly borrowed from the Malays of the neighbouring country.

The shaving of the head, with the exception of a tuft of hair at the nape of the neck, is a custom found among all races. Among the Semang, however, it is found with differences among the Malayans, is most likely a native custom of the wild Negritos, as it is also found among their Andamanese kindred.

Negotiations for marriage and the ceremony of betrothal are carried out by representatives of the families implicated. The betrothal is a simple affair, consisting chiefly of the offering of betel-leaf by the representatives of the prospective bridegroom and its acceptance by the bride's parents, the two parties meeting in a 'family circle,' at which the offer used originally to be made, and the reply given, in ryming stanzas. The term of the engagement is thus settled. The amount of the marriage settlement is fixed by custom at a bharas of dollars (§22, about £2, 6s.) in Selangor, or £3-25 (about £3, 6s.) in Perak, etc. The sum is not usually mentioned unless a modification of this arrangement is to be made. A breach on the part of the bride's parents involves forfeiture of double the marriage portion. The affinity pair avoid one another, but there is a regular system of exchange of presents, those given by the girl being deposited in a basket hung from a branch or pole, and those given by the boy's side in a basket placed in the shape of birds or fishes. It should be added that the Malay name of the ceremony in the peninsula, berpinaung, is an interesting parallel to the splitting of the betelnut (pinang), which is the symbolical act of betrothal to this day among the Dayaks of Borneo.

The actual marriage ceremonies cover a period of four days, beginning with the work of decorating the houses, and ending the following day, with two standard candelsticks, often 6 ft. high, before the door of the bride's chamber. The arrangement of the dais (pilamin) is of extreme importance, since the number of big white (or in some cases of a Baja, yellow) pillows used indicates, according to a rigid code of etiquette, the rank of the contracting parties. The whole of the dais is covered with a mosquito-curtain, and the walls of the chamber are adorned with striped or 'rainbow' hangings (Bintang Bintang), by which the ceiling is decked with an awning or 'heaven' (Bintang-Bintang).

The basic forms of the rite, which were those of a royal wedding, include the so-called 'bride-price,' the food-sharing ceremony, and the approximation of the dress of the bride (who on this occasion wears trousers) to that of her husband (who wears a skirt). It is this fact that, as A. E. Crawley 1 has explained, helps to account for the apparent resemblance to royal cere– 2 monies, which may be noticed in so many instances and forms, which seems partly to disguise the subjects of the ceremony in order to avert the possible danger attaching to what is certainly regarded as a critical occasion, and partly to promote a more perfect union between the parties by means of the passing between them (i.e. the 'bride-price') as well as by (2) the sharing of a meal together, and (3) the obliteration (so far as may be practicable) of the distinctions of sex. The pretence of king–ship by which the bridegroom is made to wear bracelets, chain, neck-ornament (and, if we may go by the analogy of Malay funeral custom, even the kris) is simply, therefore, an attempt to secure a really effective dignity for the party in danger. The shaving of the bride's forehead may be similarly explained, since the bridegroom is also shaved. Although these are all likewise usages of royalty, it is wrong to regard them merely as a species of social self-adulation; they are really the paraphernalia worn by all persons of the Malay race on certain critical occasions, 2 in order to banish the spirits of evil and thus to avert mischief and danger. Till recent years the cere– monies of the marriage of the bride were also carried out by the bridegroom's kin, and was performed in the home of the bride. They included, in the earlier times, a highly marked ceremony of the 'bride-price,' the sum of money paid is often a very large one, and of almost entirely non-Malayman, and often took place in country districts without the intervention of any mosque official whatever. Lustrations followed, and on the second day toasts were drunk.

In certain details the wedding ceremonial has now become Muhammadanized in character; among these is to be included, most probably, the smoking of the fingers of the bride and bridegroom with henna. The henna-staining at first is done in succession ('by stealths'), the initial public appearance of the married couple at their respective dwellings occurring on the second night, when ceremonial rice-water is sprinkled, offerings of rice made to each of the parties, and the 'henna dance' (teri biso) performed; on the fourth day the procession of the bridegroom to the house of the bride's parents takes place. Here, on his arrival, his progress was in former days occasionally opposed by 'marriage contentions,' which was terminated only on his payment of a small fine or ransom to these (for the sake) self-appointed authorities. This part of the ceremony, which used to be explained as an example of the so-called 'marriage by capture,' is now taken to be merely an expression of the antagonism between the two races, whereas a rope or piece of red cloth barred the way, and a stout resistance was offered until the bridegroom had paid the fine demanded. Even then admission to the home was only gained by the resistance of women of the bride's party. The simple marriage service—a mere bade and blessing of the children—omitted the custom by which the bride's parents took place on the day before the procession. The groom

1 The Mystic Rose, London, 1902, p. 236, quoting the Malay ceremony.
2 Not specially in connexion with kingship.
is then taken to the bride, and both are seated ceremonially with the bridegroom on one side and the bride on the other, the bride feeling the other from a specially-prepared receptacle (nasi setaka—shr. agala, 'octagonal')—an octagonal ejection of the rice-bowl, the 'ridge of the rice-bowl' (nasi adap), coloured egg (yolk form), etc., and stands before the panchon. The egg, which is coloured streamers, and represents a fruit, with its corn and leaf, are given to the guests as wedding favours. On the third day of the festivities which follow the marriage, the ceremony of baffing for good fortune is placed in the evening. Later, at night, a bonfire was formerly lit outside the house and the groom 'stolen', i.e. carried off to his parents. This ceremony was performed in the house next day, after the water-right with yoyings (called 'water-bow') took place (another custom in the same direction) between the bride and the groom. After this the bride and bridegroom each pulled one of the ends of a slip-knot made of a young cocoνo leaf, and the bridal girdle and white threads wound seven times round himself and the bride; in some cases (Patanis) the threads were severed by burning. Seven days after the concluding feast-day the rite of the 'discharging of the ear-rings'—the emblems of the bride's maiden-hood—takes place. For two years the bridegroom may be expected to remain under the roof of his mother-in-law. It has been remarked that in the 'bridal rice' (nasi ber-adakum), in the 'bridal thread' (balingan panical), and in the 'bathing pavilion' (balai pancha—prenisa) we have not only Indian customs, but Indian names. 

In addition to this regular form of marriage with the consent of the girls' parents, the Malays recognized another form of marriage when the parents were notoriously unwilling, the essential feature being that the would-be bridegroom, fully armed, must force his way to the women's apartment and seize upon his bride to prevent her from escaping. If the parents should then give their consent, the customary payments were doubled. This procedure was known as the panjat anghara.

In a second and more peaceful form, the panjat anghara is frequently employed by Malayian Rajas, the groom did not break into the house himself, but sent his kris, accompanied by a message that he was ready with the dowery, doubled in accordance with custom. If the kris was returned (e.g. he sent it back) the dower was doubled and the parents must send back with it a double dowery.

W. E. Maxwell gave both these forms of marriage as being recognized by Malay custom, but, however, as assenting to the second, regards the first as a mere crime passioné. 

The marriage ceremony is called in most parts of the peninsula by terms which are obviously of Arabic or Persian origin; on the east coast, however, where Muslim influence is less strong, it is often called, by a Malay word denoting 'purification'. Like their Polynesian colleagues, certain Malays (e.g., Negri Semilan) forbid the marriage of two brothers' or sisters' son and daughter, but not that of a brother's son and a sister's daughter.

(b) Pagan races—Among the pagan tribes the essential feature in the marriage ceremony is a ritual purchase and a repast shared between bride and bridegroom. Among the Semangs the price consisted of the blade of a chopper (pangang), presented by the bridegroom to the bride's parents, and a coiled girdle of great length, said to be manufactured from the rootlets of the sugar-palm, given to the bride. This act of purchase, so long as performed by young men, was itself binding. The Semang, as a rule, were mono-

ganists, and conjugal infidelity was strongly disdained, the immemorial penalty being death, which would now be very uncommon for a heavy fine. Among the Dyaks the body is not generally preserved, as among the Semangs, a knife or yam-tubers.

According to one account, the bride and bridegroom attended at the house of the chief, who, after an inquiry as to their prospects, declared partake of rice, each feeling the other from a specially-prepared receptacle (nasi setaka, agala, 'octagonal'), an octagonal ejection of the rice-bowl, the 'ridge of the rice-bowl' (nasi adap), coloured egg (yolk form), etc., and stands before the panchon. The egg, which is coloured streamers, and represents a fruit, with its corn and leaf, are given to the guests as wedding favours. 7 Wherever the old Palahang (Sumatra) tradition exists—in Pahang, Johor, Riau, Malacca, Selangor, and Perak—the mother-in-law sits in the front seat, and rests her hands on the knees. But, if the bride leaves the Palahang area and crosses into Patani, the ceremony is different, the recital are different. We are not able to give the customs in these other parts of the Malay Peninsula.

9 See the maps of the Malay Peninsula by Professor A. J. W. Hill (School of Oriental Studies, 1910), especially Plate 79.

12 P. W. 29.
burial customs exhibit considerable variation, but they are especially significant as revealing the attitude of the various groups towards death, and particularly towards the spirits of the departed. The Semang appear to pay no serious attention to their dead, although they do exhort their deceased friends to think of the spirits of their departed ancestors and not to trouble the living. The Sakai, on the other hand, appear to have great terror of the spiritual world, and they believe that if they do not bury the dead properly, the spirits will not allow them not merely to desert the house in which any one has died, but to abandon the whole clearing, even if the crops are standing. The Jakun are distinguished from both the Semang and the Sakai by the tender care which they show for their dead relatives.

The Semang method of interment is simple. Among the Kelah Semang the grave is usually surrounded by a low fence of palm-leaves, and the two branches upon which the body was carried to the grave are laid upon it. The corpse is placed on its side, with the head and knees to the right, on a mat or rough platform of twigs, and a screen of sticks, driven diagonally into the side of the grave and rooted with palm-leaves, prevents any earth from falling on it. The legs are drawn up, probably, as the grave is only 5 ft. long, for the sake of more convenience. Three coconut shells are placed in the grave, the head and sides, and a cocoanut shell at the foot holding water.

It is probable that at one time the Negritos (Semang) practised tree-burials, for some of their medicine-men may still occasionally be exposed in trees in the forest—this being a more honourable form of burial. Among the Malays a tradition is current that the Semang used once upon a time to devour their dead. It is unnecessary to place any curse in this statement; its importance lies in the fact that it probably alludes to the existence at one time of a custom analogous to that of the Andaman Islanders, who disinter and dismember their dead after a ceremonial. Of Sakai methods of burial little is known with certainty, the reason being apparently the fact that they throw the bodies of the dead into the jungle, or simply left them to rot away in their primitive hut-shelters. It is certain that they have always shown the utmost abhorrence and terror of the dead, abandoning their huts—and even clearings with growing crops—when a death had happened in their encampment. A modified form or survival of platform-burial is the so-called Sakai of Selangor (Ulm Langat), by whom the body was exposed on a platform in front of the house for twenty-four hours.

Jakun (or Malayan) ritual and practice is more elaborate than those of the Semang and in the solicitude shown for the welfare of the departed imply an entirely different mental attitude towards death from that of the Sakai and the Semang. In many respects there is close affinity with Malay customs.

The body is carefully washed and prepared for the grave. It is covered with white cloth, and laid on a mat, which, in turn, is placed upon a tree-bark wrapper. This tree-bark wrapper is lashed round the body and used for carrying it to the grave-site. Frequently the blade of a chopper (parang) is laid on the breast of the dead. The Orang Dukht cut a hole in the side of the clothes in order that the corpse may 'breathe' more fully. It is customary also for them to make crosses on the palms of the hand and soles of the feet with a yellowish root, which, on being bruised, leaves a stain behind it. By these marks the deceased person recognizes, on waking up in the next life, be or she is really lifeless. At the grave the tree-bark wrapper is removed, and the body is laid on its back, or sometimes facing east, if an adult, west if a child (Malut). A cable-bag covering, in accordance with the Malay custom, is formed from pickets covered with tree-bark and a large mouth (or also a Malay musap) to keep the earth from striking the body. The Orang Dukht (Hill Men) place a dish of boiled rice at the feet for the spirits, and one at the middle for the departed. The custom is commonly the last to be observed in the grave and all of the superstitious and the decency of the dead are exhibited in the most distinctive of the daily duties of the sexes. An extremely interesting practice among the Bajau consists in their erecting a yard or two or three lems from the feet of the grave, a small triangle, with a big fan palm-leaf made to lean against it, fitted with a stick-halter by which the ghost may climb up. In the lot are
placed models of domestic and other animals and implements, and distinctively sexed, of ebony, tortoise-shell, and fish, and fruits, water, and sugar. When the grave has been filled in, the second offering is made on the grave itself in order to provide for the ghost, when the grain has grown up and ripened, with suitable nourishment. Among these people it was usual for two men to stand one on each side of the grave and simultaneously to let fall two choppers, horizontally crossing, upon the mound at about the spot where the breast would have done the work. The ghosts of the deceased scattered the fragments on the grave-mound. At each end of the mound the Jakam commonly placed wooden tombs—posts bound with white cloths similar to those used by the Malay and, again like the Malays, they enclosed the grave, when made up, with a framework of wooden planks.

The feeling for the welfare of the dead which is expressed among the Hindis by the seed rice sown over the grave is also rivalled by a ritual ceremony of a number of offerings at or near the place of internment. The Hindis themselves plant yams, sweet potatoes, etc., near by, while on the grave of a jokir (ritual chief) described by D. F. A. Hervey (JRAS, Straits Branch, no. 8 [1883], p. 119), were sticks to serve as ladders for the spirits up into the sky in a cooking-pan, as well as the basket in which firewood is usually carried. This grave was also provided with a trench in which the dead man could paddle his canoe—apparently a link with boat-burial. Among the Beremban a bamboo was placed upright near the face of a child, with one end projecting from the ground and another buried in the sand. A square mould is likewise placed over the grave for three days, while the Sabahu visited the grave on the third and seventh days and one month after internment. These are the offerings of rice, tobacco, etc., to the house and clearing after a death; usually, however, this took place after a month's interval.

19. Omens, divination, and oracles. — Astrological calculations based upon the supposed values of the numbers and the properties of numerals are largely employed in divinatory ritual. Exhaustive tables of unlucky and lucky times and seasons have been compiled by the Malay, but are proved to have been largely translated from Indian or Persian works. The oldest and best known of the 'magic squares' founded upon these systems is that known as the 'five times' (batika lima), in which the day is divided into five parts, while five days form a cycle, the name of a Hindu divinity being assigned to each division. Mystic values are also attached to certain colours in connexion with these divisions. Another scheme is based upon the seven heavenly bodies, the divisions being, correspondingly, seven in number. Malay astrological knowledge largely depends upon the signs of the zodiac, and the various systems are founded upon these bodies. As has been remarked, the names of five of the greater Hindu deities are attached to the Arts, and the Malays are especially partial to the magic square, which generally takes the form of the square once used in Europe, but sometimes works conversely—the latter being, no doubt, the older native form proper to the Malays. It has been remarked that the Malays introduce both coloured squares and the names of five of the greater Hindu deities. Besides these squares, many other magical figures—pentacles, compass-figures, and the like—are much used by Malay diviners.

In interpreting omens from dreams the method usually employed is that the initial letter of the thing dreamed of determines the character of the omen. T is very unlucky, X indicates sorrow, while the initial letter of the word or phrase gives the essence of the dream. In a divinatory system an almost entirely arbitrary interpretation is put upon the subject-matter of the dream, or, at most, it is interpreted by analogy. In a third method, however, the nature of the thing dreamed does actually suggest its interpretation, with the proviso that so-called 'direct' dreams come only on the eve of a great wish, whereas on other days the dream works backward.

It may be added that the doctrine of luck plays a most important part in what may be called Malay 'natural religion.' By certain signs and indications not only human affairs, but also birds and animals, are either credited or condemned as the possession of luck or believed to be invested with the power of bringing it to others; in a fine passage the Malay deer-wizard chants as follows:

'From the valleys of the rich, / Comes the intense barking of my Hounds. / My Hounds are Hounds of Luck, / Not Luck that is adventurous, / But Luck incarnate with their bodies.'

Even inanimate objects, such as trusses and other weapons, may be brinatful of luck, or otherwise.

(a) Malay. — Omens and divinations play a part of paramount importance in every department of life's activities in Malaya. Equal significance is attached to signs derived from the acts of men and those we have the rite of divination properly so-called (tilak—Skr. tilaka, 'mark').

One form of divination is effected by means of a lemon which, after offerings have been made to its spirits, is then sliced open, suspended with incantations over a brazier by seven strands of coloured silk thread, the fruit being itself thrust through by a needle. The nodule is divided, and the result interpreted. The same is done with other drugs in answer questions in the negative or affirmative, and will discover a thief by indicating which of a number of names written on paper is that of the guilty man. A piece of paper is covered by water held in the palm of the hand, or saliva, or a bowl filled with water and covered with a cloth upon which the names of suspected persons are successively placed is employed to discover those who may have been guilty of stealing. In the last-named case, two men each place a finger in the bowl, which begins to turn when the name of the culprit is placed upon the cloth above it. Another method is the use by the medicine-man of a divinatory composed of one, three, or more rattan-stems, inscribed with magical devices, and connected at the base or butt-end, which vibrate when the third approaches; these rods may also be used for treasure or water-finding, as by our own flower," and also for excorizing demons.

It is noteworthy that the Malays attribute the arts of the diviner to animals as well as to men; thus the tiger is said to employ divination when it wishes to secure a human victim, just as tigers are believed to palliate themselves with short tiluk (the medicament applied to the newly circumcised) when wounded.

An important and solemn ordinance was that by diving. This required the consent of the Sultan, and could be conducted only in the presence of the four great (watu) sages. In the case of a dispute, each of the adversaries in defence of his own case writes a solemn statement. After certain formal preliminaries, this document is enclosed in a bamboo containing water. One of these bamboo receptacles is given to each of the two

3 Skeat, Malay Magic, p. 182.
adversaries, who are escorted to the river and placed up to their necks in the water. A bamboo pole is then made to rest upon their heads and, at a given signal, they are both pressed downwards. Each remains under the water as long as he can, but the longer of the two is released and, appearing above the surface, his tube is snatched from him. The winner is led back, his bamboo opened, and the result declared to the bystanders.

These savage Malays of Malacca also paid much attention to omens when a new clearing was to be made, and charms were used to expel the jungle spirits. The Mantri, in choosing a new locality for a clearing, paid strict attention to the offerings of the spirits towards his undertaking as signified by the dreams of the party. To dream of being chased by a dog or an enemy, entering water, or being flooded out, was an evil omen: to dream of felling or climbing trees, of ascending trees, or of growing plants was of good import.

Divination among the Sakai, so far as records go, is practically non-existent. Among the Jakun it is employed as a part of their medical diagnosis, but whether as a part of a tribal or group ceremony or by the medicine-man alone, it falls more properly under the category of exorcism.

20. Charms, amulets, and talismans. — (a) Malay. — Not only does the Malay attempt to forestall the coming of evil, but he endeavours to ward it off by charms and talismans. Charms in the shape of invocations are extremely numerous, and are addressed to every conceivable form of spirit on every conceivable occasion. But, in addition, the Malay uses a kind of charms made of charms of a more material character. Examples of this class include a length of the *séwambu* (Malacca cane) with a joint equal to the height of the owner, which protects him from snakes and animals; so, too, the ‘tabassheer’ (apparently a form of ‘tabassheer’), the ‘eyeless coco-nut’ (which confers invulnerability by ‘sympathy’), the ‘dragon’s blood’ ‘rattan or cane, the tiger’s whiskers and claws, and many others are all, for various reasons, much sought after by warriors. Some of these are directly effective, others work only by influencing the volition of another mind, as in the case of love-charms, charms for securing conjugal fidelity, and so forth. In most cases the charm consists of a short Arabic or Malay and Arabic prayer or a few magical letters or figures inscribed on paper or cloth and worn on the person. One important use of a charm is to enable the devotee of this magic art to witness the *séwongat* of a person from his (or her) body, for the purpose either of benefiting the operator or of harming the intended victim. There is a variety of methods of attaining these objects. In some the charm works without contact with the others and contact is necessary. Although there is considerable variety, the principles in all cases is the same, and is based upon the Malay theory of the *séwongat*. Thus, e.g., soil is taken from the intended victim’s footprint and treated ceremonially by wrapping in red, black, and yellow cloth; and this, when suspended from the centre of the magician’s mosquito-curtain, becomes the embodiment of his victim’s *séwongat*. As such it is switched with seven strokes three times a day for three days and then is buried in the middle of the path where the victim is bound to pass; on doing so, he becomes distracted. Wood scraped from the floor where he has been sitting, pairings of his nails, and clippings of his hair are utilized in various ways; sometimes they are knotted into a wax figure, which is either transfixed with a thorn in the member that the enchanter desires to injure or burned to ensure the victim’s complete destruction.

Of the various methods of abducting the *séwongat* without contact, the simplest is to go out when the sun clears or when the newly-risen moon glows red, and, standing with the big toe of the right foot resting on the big toe of the left, make a trumpet of the right hand, and recite the appropriate charm thrice over. At the end of each recital, blow through the hollowed out end of a hollow bamboo, or, in the unlikelihood of the bamboo being present, into the hollowed-out part of a mosquito-net on three successive nights, to wave the end of the victim’s head-cloth in the direction of the wind, twice for three successive nights, and so forth, the appropriate charm in each instance being, of course, recited.

With their customary logical thoroughness, the Malays attribute the use of charms and amulets in some cases to wild animals, and even to the trees. The wild boar, e.g., is believed to possess a talisman of extraordinary power called *ranti baro,* ‘the wild boar’s chain,’ which is hung up on a neighbouring bush by the animal whilst he is occupied in wallowing, and which can therefore sometimes be stolen by a lucky native. Another talisman carried by the boar for defensive purposes is the *kulan baro,* ‘boar’s sucking stone’; the two together made a wild boar invulnerable. A similar ‘lucky stone’ was sometimes worn by the Malay, and, apparently, by the dog also.

Any magically potent object is called *ber-buah.*

(b) Pagan races. — Amulets and talismans are common among the wild tribes. Coins are strung on necklaces to serve as ‘medicine’ or to protect the motif of tufts of squirrels’ tails, teeth of apes, wild pigs, monkeys, and bones of birds and animals, as well as the bristles, teeth, and claws of tigers, which, were first worn, as among the Malays, quite as much for magical purposes as for ornament. To the Mantri strung pieces of turmeric on strings of *artocarpus* bark, and these were worn round the neck, wrists, or waist as prophylactics against demons, bad winds, and, generally, all kinds of evil. They also placed great reliance on the efficacy of spells to render them invulnerable.

Semang women wear amulets of *pala* (*Licinula petiata*) leaf, and men wear similar ornaments of the *rock-vein* (*arut batu*) fungus. It appears that among these tribes, as also in Madagascar and many other parts of the world, the personal adornment was intended to protect them against evil from the spirits by which they were on all sides surrounded. The elaborate patterns of the comb of the Semang and half-breed Sakai-Semang women are similarly designed to ward off accidents and disease, and the copper bracelets, rings, and other objects worn by the Sakai were in effect talismans which preserved the wearer from ill-health and misfortune. The Semang, when wearing these ornaments, frequently still retain underneath it the primitive string girdle of ‘rock-vein’ fungus, possibly from habit, but more probably for magical reasons.

The most important class of charms or talismans employed by the wild tribes is that of the ornamental geometrical patterns with which they adorn various objects of common use. These designs are intricate and have as yet been adequately studied and elucidated only to a small extent. So far as much, however, is clear: the pattern is symbolic of the use to which the object on which it appears is to be put, and its aim is to secure the successful attainment of that object. Exception to this rule may be made in the case of the women’s combs and other articles, the patterns on which are intended to ward off disease, the attacks of reptiles, animals, and noxious insects, and other accidents. The difficulty of comprehending and interpreting these designs is increased by the fact that, in the usual fashion of primitive artists, the wild tribes make a part stand for the whole. The slots of deer on a bamboo quiver, e.g., represent the whole animals, which, it is hoped, will be induced, by being represented as such, to fly away towards certain wild jungle-fruits beloved of the deer, to visit a particular feeding-ground, when they can be more easily marked down and captured. The articles decorated in this manner
MALIK IBN ANAS—MALTHUSIANISM

with magical intent include, in addition to the Semang combs, large bamboo tubes used as quivers for darts and arrows, the last being covered with patterns intended to secure success in hunting. Other articles similarly adorned are 'stampers' (i.e., hammers used in tattooing), amulets against disease, insect pests, drought, etc.). Besides these they decorate bamboo rice-dippers, poison receptacles, tobacco receptacles, blowpipes, arrows, no-sticks, etc., mats and wallets (Sakai and Jakun), batik cloth (with painting only), and the human body, the last not only with painting, but also with tattooing and scarification (likewise especially among the Sakai).

LITERATURE.—This is cited throughout the article. Special use has been made of W. W. Skeat, Malay Magic, London, 1913, for the elements of the Malay Peninsula, do. 1906 (with full bibliography).

MALE PRINCIPLE.—See PHALALISM, SEX.

MALIK IBN ANAS.—Malik ibn Anas, the founder of the Malikite school, was born in the month of Rabi’ al-Awwal A.H. 55 (A.D. Nov. 715). He was of pure Arabic stock, being descended from the tribe of the Kharijites, who are traced to one of the tribes of Yemen. When still a youth, he had already acquired a full knowledge of the Qur’an, the hadith (tradition), and other Muslim sciences, and soon he was held in reverence as a great authority in these matters.

During his long career Malik ibn Anas resided in his birthplace Medina as a mujtahid and teacher of Muslim law. Like many men who have spent their lives in study, he has not left much for his biographers to record. His chief work was the so-called Murottal (lit. 'The Beaten Path'), the basis of the whole Malikite system of Muslim law. This book is not a mere collection of traditions. It deals not only with the sayings of the Prophet but also with the opinions of several famous fuqaha in Medina and with Malik’s personal views on various matters of canon law. It is often alleged that Malik rejected every kind of reasoning by means of argument and kept exclusively to the literal sense of the sacred text. But the contents of the Murottal prove the contrary. According to his later biographers, Malik repeated of this in his old age. It is told that, when he sat down in his last illness and wept, he was asked: 'What were you weeping about?' His reply was: 'I have no reason to weep than I? By Allah, I should wish that I had been left and released for every question of law on which I pronounced an opinion founded on my own fallible judgment!'

The text of the Murottal is handed on by Malik’s disciples in different versions. The best known is the text of Yahya al-Mas‘umi, which was printed with the commentary of Muhammad al-Zarqani in 4 vols. at Cairo (1863). Another version is that of Mu‘izz al-Din, al-Shaf‘i, the famous disciple of Abu Hanifa, who studied three years in Medina (printed at Lucknow, 1879).

It seems that the opinions of Malik ibn Anas were not always in agreement with the views of the government. In the year A.H. 145 (A.D. 763), as some persons had accused him of declaring that he did not consider the oath of allegiance to the ‘Abbasid khalif as binding, he was even flogged and treated in a most scandalous manner. After this treatment, however, he rose still higher in public estimation in Medina, where he died on the 10th of the month Rabi’ al-Awwal, A.H. 179 (A.D. 563 June 765).

Malik ibn Anas enjoys the reputation throughout the Muslim world of being one of the greatest fuqaha and traditionalists of Islam. At the present day his school is still dominant in the west of the Muslim territory, in the French and Italian possessions (Morocco, Algiers, Tunis, Tripoli), and in many other parts of Africa.

MALTHUSIANISM.—Some economic and social investigations seem to have been haunted by an evil fate. The subject with which they are concerned seized popular attention for a time, and the results of the inquiry come to be represented in a form which is little more than a travesty of the original meaning and intentions. One of the most remarkable instances of this tendency is to be found in the reception accorded to the work of Thomas Robert Malthus (1768-1834) on Population. Popular interest in his work grew much more rapidly than the criticism of it was assimilating it, and he was criticized by many who had not read his books. He was accused in his own day of being an enemy of the human species, and of being guilty not merely of heterodoxy but also of atheism. It was said that the theory of Malthus levels at God, and the injuries it mediates inflicting upon man, will be ended by neither’ (M. T. Sadler, Law of Population, i. 13). Further, the principles of population enunciated by Malthus have been developed in several directions by subsequent writers; and all these views are described roughly by the vague and comprehensive term 'Malthusianism', which means little more than the consideration of the relation between increase of population and the available food supply. Malthusianism, in fact, has no more definite meaning than 'Smithianism' in Germany.

It would be a mistake to consider that Malthus was the first to draw attention to the population problem. The Mercantilists had explicitly advocated 'population' as an important condition of national wealth, and their views had influenced social legislation and poor-law administration in England during the 17th century. Malthus had mentioned that ‘every species of animals naturally multiplies in proportion to the means of their subsistence, and no species can ever multiply beyond it’ (Wealth of Nations, bk. i. ch. viii. (ed. J. E. T. Rogers, Oxford, 1869, i. 84)), but it was not till almost the end of the century that Malthus selected the subject of population for separate treatment. It is true that more than a century earlier William Petty had published several essays relating to the numbers of the people, but his point of view was entirely statistical, whereas that of Malthus was directly related to the conditions of progress. In a sense the work of Malthus was begun to oppose the theories of William Godwin, who had published his book on Political Justice in 1793 and his Enquiry in 1797. Godwin had been influenced by Condorcet and other writers of the era of the French Revolution, and he advocated human perfectibility by means of a gross expansion of freedom which condition there would be a sufficiency for the reasonable wants of all. In time the peaceful influence of truth would render force and even government unnecessary, so that a state of human beings would exist in which the means of every happiness would be formed a common topic of discussion among those who were interested in political science.
MALTHUSIANISM

373

conversation was destined to have important results. It took place between Malthus and his father. The latter, Daniel Malthus—a friend of Voltaire and the literary executor of Rousseau—was favorably disposed towards the views with which the son had doubts, which he afterwards placed in writing. The treatise which resulted was his *Essay on Population*, published anonymously in 1798.

Malthus believed that a fatal objection to the thesis of Godwin and other writers who maintained the same view was to be found in the relation of population to the means of subsistence. Popula-

tion, when unchecked, doubles itself every twenty-five years; the reverse process is never so rapid. In fact, under circumstances the most favourable to human industry, could not possibly be made to increase faster than in an arithmetical ratio; i.e., the progression for population, if unchecked, would be 1, 2, 4, 8, 16, 32, 64, 128, 256, while that of subsistence could not exceed 1, 2, 3, 4, 5, 6, 7, 8, 9. Population had not increased in a geometrical ratio, owing to the checks imposed upon it by misery and vice, the former being certain and the latter probable. Malthus makes 'a constant effort towards an increase of population,' with the result that there is a constant tendency towards distress among the lower classes (*Essay*, 1798, p. 29). As against Godwin, Malthus pointed to 'the multitude of human and evilliving as the necessary limitations to the natural increase of mankind—either positively by reducing a redundant population, or negatively by the dread of these evils. The first edition of the *Essay* can be understood only by remembering the controversial purpose out of which it arose. In opposition to the optimism of Godwin and his sympathizers it overestimates the darkness of the situation. An attempt was made to correct this in the second edition (1803), which is practically a new book. The *treatise* of 1798 was in the main the critique of a Utopia from the point of view of the support of a growing population; that of 1803 was a scientific examination of the principle of population, as far as possible in isolation from other phenomena. There was, however, a greater change than that of external form; the two progressions remain, but the exposition of the checks to increase of numbers is worded differently. Malthus 'values,' to what Malthus terms 'moral restraint.' This new characteristic anticipates, and so prevents, a pressure on the means of subsistence; and, where it is observed, actual misery, as a result of population, need not arise. Moral restraint is, strictly speaking, 'moral' only in so far as it is exclusive of 'irregular gratifications'; its main characteristic is rather that of rational prudence, based on man's 'reasoning faculties which enable him to calculate distant consequences' (*Essay*, 1803, p. 9, 11), such as his capacity to support a large family without lowering a suitable standard of life. Hence moral restraint operates in the direction of postponing early marriages as well as irregular connexions. It means, in fact, as J. Bonar puts it, simply continence (*Malthus and his Work*, p. 53).

Much of the popularity of the principles of Malthus may have been due to his summing up the foundations of his theory in a formula which is capable of being apprehended easily and remembered, especially as the geometrical and arithmetical ratios seem to provide the certainty of a mathematical demonstration. But the formula should not be understood only by reason of the sim-}

ephatic objection is that Malthus founds his argument upon two alleged necessities which he claims as co-ordinate, but it is clear that a supply of food

is much the more urgent need. The celibate must be fed if he is to live. It follows that the tendency towards increase of population is a conditional one, and hence any ratio which is established at a given time is subject to a variable consequent on the proportion of changes in the quantity of food. Malthus often speaks as if population must increase up to the limits of the means of subsistence; but since his day there have been cases of countries where increased resources have been followed, not by an increase in population, but by an improvement in the general standard of living. The arithmetical ratio, as the maximum possible increase in the production of food, was never formally and fully proved by Malthus; indeed, his point of view is that of the state of population in America (*Essay*, 1798, p. 20) partially contradict his view of the ratio. Moreover, not only the production of food but its consumption must also be taken into account. Economies in consumption would not enable a larger population to be maintained by the same supply. The whole statement of Malthus regarding agriculture in his earlier edition is embarrassed by his ignorance of the work of Mr. J. S. Mill, who had learned that the increase of population drove agriculturists to cultivate more and more inferior soils, so that a larger and larger proportion of the world's labour would be required for providing the necessities of life. J. S. Mill stated this point of view concisely when he wrote: 'It is in vain to say, that all months which the increase of mankind calls into existence, bring with them hands. The new mouths require as much food as the old ones, and the hands do not produce as much' (*Principles*, bk. i. ch. xii. § 2). Mill, like the rest of the Classical School, regarded Diminishing Returns as a 'law' which could be suspended only temporarily by the disturbing influence of improvements. The present discussion considers Diminishing Returns as a tendency which is subject to frequent counteraction. The difference of outlook removes some of the gloom which settled on the population question during the 'dismal' era of the first half of the 19th century. The real influence of Malthus—survives in a much modified form, on the one side in the responsibilities of parents in being able to provide for their offspring, on the other in a ceaseless effort to effect improvements in the productive arts, particularly in those connected with the provision of the world's food supply.

It is scarcely necessary to add that the doctrines and practices of 'Neo-Malthusianism,' or the voluntary restriction of the birth-rate, form no part of Malthus's own teachings and would doubtless have been indignantly repudiated by him.

transliteration of the Gr. μαμωνάς, a form which, with μμα, appears in TR, with Latin Vulgate, six Old Latin, and a few Greek manuscripts. The correct Greek, however, is μμα, which is found in RV, with all the English versions, as well as in the Complutensian and the first two editions of Erasmus; but the influence of the Vulgate led to the appearance of μμ in the later editions of Erasmus and in AV (for further details as to spelling see E. Nestle, in EB).

The word is not Greek, nor is it found in the Hebrew Bible. It is a hallowed form of the Aram. ΜΑΜΩΝ, which means 'money,' 'riches,' 'worldly goods.' Wyclif and Purvey translated the word as 'riches,' and to hold Tindal followed the Vulgate in transliterating the word, and so did all earlier English versions, except Geneva.

1. Derivation.—The Aramaic form ממון (stat. emph. ממון) follows a well-recognized form of nominal inf. ממון, but scholars are divided as to what is the verbal root.

(1) J. Drusius (quoted in J. Buxtorf, Lexicon Chaldaeum, Basel, 1640, x.), and Dalman (in PRE XII. 135) derive the word from מון, i.e. ממון, i.e. 'the store' or 'that which a man trusts,' or, as Dalman prefers, 'that which brings man into safety.' (2) Jastrow (Talmud Dictionary, p. 794) derives it from מון; and thus ממון itself that which one accumulates. (3) Levy (Naucratis and chaldaicum Worterbuch, in 138) considers ממון to 'distribute,' to be the root, and thus our word means 'that which is distributed.' (4) W. Gesenius (Thesaurus Linguae Hebraeae et Chaldaicae, Leipzig, 1829, ii. 552), as if ממון were the true form, derives it from מון, and says that ממון 'that which one hides or treasures' (Gen 43, Job 33, Prov 24). Hence much of the learned may now differ as to the derivation, it seems certain to the present writer that the Syriac versions all derived the word from ממון, and that they assumed a paronomasia to exist between our word כּוֹן and ממון (pass. part. of ממון), which means 'faithful' or 'trustworthy,' thus: 'He that is trustworthy in little is trustworthy also in much; and he that is not trustworthy in little is not trustworthy in much. If ye have not been trustworthy (כּוֹני) in the unrighteous mammon (ממון), who will entrust (ממון) to you the true?' But, since the word ממון is as common in Gallican Aramaic as in Syriac, many verses are probably meant by the word ממון, and say that the paronomasia was probably intended by our Lord in the original Aramaic.

2. Useage.—The trade of the world, before the time of Alexander, had long been in the hands of the Phenicians and Arameans; and we have evidence that in both languages ממון was the word for 'money.' As to the former, it occurs on Phenician inscriptions on tombs at Jaffa, and Augustine, in two passages (de Serv. in Monte, xii. 47, and Quast. Evang. ii. 34), states that the Punic word for lucrum ('wealth') is mammona. Its Aramaic usage is also abundantly attested. Jerome (Ep. exx. 6) affirms: "Non Hebraeorum sed Syrorum lingua, mammona divinitis ministerium."

In roads (iii. viii. 1) attests its use "secundum Indicam loquem, qua et Samaritana utuntur."

The Aramaic Targums often contain the word, e.g., Pr 30, 'Honour the Lord with thy ממון,' and elsewhere, 'O ye that wish to learn wisdom, without price and without ממון;' Jer 5, 'They accepted no ממון of silver;' in Ex 18 the ideal judges are those 'that hate the receiving of ממון.' In the Aramaic sections of the Peshitta Talmud, the same story is told twice (Bab. y. 3; Prakhkahk, vii. 2) of 300 poor Nazarites who came for purification. R. Simeon asked King Jannaeus to give half the cost, but it turned out that the king paid all
the money (μανάς) and the Rabbis half was his knowledge of Tora. [h. 36] 610 says:

'There are men whose money (μανάς) is dearer to them than their own body.'

There is also a classification in lawsuits between those who concern money (πωλεῖν ἔργα) and those which concern the person (πώλησαι ἑαυτόν). This is found often in the Talmud and also in Jevus. Targ. to Dt 15. The pre-Christian usage of our word even in Hebrew is shown from Sir 31, 'Blessed is he . . . who goes among men and among money.' The glossators of LXX show themselves acquainted with the word, for in Ps 36 (EV 37) they misread τὰς μανᾶς as μάνας. 'Thou shalt dwell in the land and be in wealth'; and in Pirqe Abodah (ii. 16) we have a 'saying' of R. Jose: 'Let the property (μανᾶς) of thy friend be as precious to thee as thy own.'

The very phrase 'mammon of unrighteousness' is quite common in Jewish literature; in the pre-Christian Book of Enoch the wicked say:

'Our soul is satiated with unrighteous mammon, but this does not prevent our descending into the flame of the pains of Sheol' (10).

The phrase μανᾶς φρονεῖ is a well recognized phrase in the Targums for 'money earned through deceit or fraud.' The crime of Samuel's son was that 'they turned after mammon of fraud' (1 S 8); cf. also Pr 15, Is 33, Ezk 33, Hos 5.

(1) In Lk 16: 'Make to yourselves friends by means of the mammon of unrighteousness,' the difficulty is: to whom was Christ speaking? Lightfoot (Horae Hebraicae, i. 159 ff.), A. B. Bruce (Expositions' Greek Testament, i. (1887); 388 f.), and Merx (Die Evangelien Marcus und Lucas, p. 328 f.) hold that He was speaking to the Pharisees and publicans to whom ch. 15 was spoken (156), and who were still in the crowd (16). It was certainly more suitable for them than for the Twelve, who had not much 'mammon' of any kind; and, if so, the phrase has the same meaning here as in Jewish literature,—'money ill gotten,' 'money gained by fraud.' Thus the advice which Jesus gives to the Pharisees is that they should make restitution to God by deeds of benevolence. Christ's advice is, says Merx (p. 328), 'Ye who have acquired money unrighteously and cannot refund it, use this wealth in making friends for yourselves,' as Zadchias, when converted, voluntarily did ('goose his goods to the poor').

'The counsel is to use wealth in doing kindness to the poor, . . . only care must be taken not to continue to get money by unrighteousness in order to have wherewith to do charitable deeds' (Bruce, loc. cit.).

The alternative view, that the words are said to the Twelve, and that μανᾶς φρονεῖ is the evil spirit seeking all wealth, because great wealth is seldom gained or employed without injustice, is forcefully presented by Moffatt, in DCG ii. 106 f.

(2) In Lk 16:1 we have a contrast between θανάτῳ μανᾶς and ἀθάνατος μανᾶς, which seems to turn on a second meaning of μανᾶς. In the original Aramaic, μαμон means (a) 'deceit,' (b) 'fraud,' and (b) 'nothingness,' 'illusion,' 'vanity.' We believe that ἀθανάτωσι means 'to be unrighteous,' (b) 'permanent,' belonging to the spiritual world, in contrast with the present life of illusion and vanity, where 'the things that are seen are ephemeral' (2 Co 4). We surmise, then, that μανᾶς μαμον would, in the original Aramaic, appear in both v. and 1; but in v. μανᾶς means 'deceit,' 'fraud,' while in 1 it means 'illusion,' 'vanity,' and thus presents a contrast to the 'true,' the 'real,' 'spiritual' riches. Our Greek translation, of course, obliterates or ignores the distinction between the two meanings of μανᾶς.

(3) In Lk 16:3, 'Ye cannot serve God and mammon,' the emphasis is on 'serve' (δουλεύετε). No man can at the same time be the δούλος of God and of worldly wealth. Theordinate pursuit of wealth is not condemned. It is the undivided concentration of mind—the surrender of body and soul to money-getting—that is censured, as being incompatible with whole-hearted devotion to God and to His service. Mammon is personified as the object of undivided attention and service which concern the person (δουλεύετε).

We have, perhaps, not so much the flight of the poet's imagination as an indication of his familiarity with apocryphal lore. The phrase 'mammon of unrighteousness' has been made familiar by Carlyle (Past and Present, bk. iii. 2, bk. iv. 4, 8, etc.), and is, no doubt, useful in emphasizing strenuously the warning of Jesus, 'Ye cannot serve God and mammon.'

MAN.—See ANTHROPOLOGY, ETHNOLOGY, EVOLUTION, PSYCHOLOGY, SOCIOLOGY, etc.

MAN, ISLE OF.—See CELTS.

MANA.—Mana is a native term belonging to the Pacific region, but for the purposes of the science of comparative religion, serves likewise as a category of world-wide application. The usual sense will be found to stand in close relation to the scientific, despite the fact that the latter represents but the generalized content of various concepts prevailing in different ethnic areas and presumably of more or less independent origin.

1. Local meaning of mana.—The word, says R. H. Codrington (The Melanesians, p. 119 n.), 'is common I believe to the whole Pacific, and people have tried very hard to describe what it is in different regions. I think I know what our people mean by it, and that meaning seems to me to cover all that I hear about it elsewhere.' For the two-fold reason that Codrington's account has in no respect been improved by later observations, because that it is the classical source from which the scientific use of the term mana is derived, it will mainly be followed here, though one must bear in mind that it deals primarily with the Melanesian usage, whereas there is reason to suppose that the actual word is an importation from Polynesia. It will be convenient to consider the mana of the Pacific region under two aspects: (a) theoretical, comprising the native view of what it is, how it is used; and (b) practical, the attention of the present writer to a passing in the 'Pasific Societies Bartholomaei Apollonis in Asia Apocatoles Apocrypha,' ed. R. A. Lipsius and M. Dunlop, Leipzig, 1891-1905, vol. ii, ed. 1, p. 99, that the Mana of Polynesia was confounded with the illusion, 'Mano, as it were, was as sae se exculsum, est alienum sibi angelum apostolicum, qui Mammon dictor, sociavit, et protulit immensa pondrae sui argenti, sesonum et omnis gloriam quae est in auge excelso et dixit et: Hae omnis tibi dabo si adoraveris me.'
manifested, where it resides, and whence it comes; and (b) practical, involving the methods by which it is sought to turn the supposed fact of its existence to human advantage.

Theoretical Aspect.—Mana is defined by Codrington thus:

"It is a power or influence, not physical, and in a way supernatural; but it shews itself in physical force, or in any kind of power or excellence where a man possesses. Thus mana is not fixed in anything, and can be conveyed in almost anything; but symbolized better by endowed natural or supernatural beings, being it and can impart it; and it essentially belongs to personal beings to originate it, though it may act through the medium of a stone or a bone" (p. 119 n.). Or, again, it is described as "a force altogether distinct from physical power, which acts in all kinds of ways for good and evil, and which is derived from the mana of the gods and of the world beyond man." (p. 118)

In this account three points are specially to be noted: (1) that the power or excellence for which mana stands is "in a way supernatural," namely, in so far as it is "what works, to effect everything with the ordinary power of men, outside the common processes of nature" (p. 118); (2) that, even if it be in itself impersonal, resembling a contagion, or such a force as electricity, in that it can have a material object for its vehicle, "it essentially belongs to personal beings to originate it"; (3) that it "acts in all kinds of ways for good and evil," or, in other words, may be used "to benefit or to afflict friends and enemies" (p. 200), and is thus indiscriminately at the service of religion and witchcraft.

So much for the nature attributed to mana—which, be it noted, is nonn, adjective, or verb, since it is equally a property, quality, or state. It may next be shown how such an attribution is a result of experience and sometimes of experiment.

"If a man has been successful in fighting, it has not been his natural strength of arm, quickness of eye, or readiness of resource that has brought him success; he has certainly got the success through a spirit or of some deceased warrior to empower him, conveyed in an amulet of a stone round his neck, or a tuff of leaves in his belt, in a tooth hung upon a finger of his hand, or in the form of words with which he bears supernatural assistance to his side. If a man's pigs multiply, and his garden is productive, it is not because he is industrious and looks after his property, but because of the stones full of mana for pigs and yams that he possesses: on game he will score a natural grow when planted, that is well known, but it will not be very large unless mana comes into play; a canoe will not be swift unless mana be thrown upon it, a net will not catch many fish, nor an arrow inflict a mortal wound" (p. 120).

Moreover, in this matter the native mind proceeds logically enough by the method of hypothesis and veriety.

"A man comes by chance upon a stone which takes his fancy; its shape is singular, it is like something, it is certainly not a common stone, but mana abounds in it. So he argues with himself and he puts it to the proof; he lays it at the root of a tree to the fruit of which it has a certain resemblance, or he puts it on the ground when he plants his garden; an abundant crop on the tree or in the garden shews that he is right, the stone is mana, has that power in it" (p. 119).

Hypothesis and verification even lurk behind the forms of prayer.

Thus at Florida, one of the Solomon Islands, a fisherman addresses Baula, a tikiala, or ghost, connected with the frigate-bird, in these words: "If thou art powerful, mana, O Baula, put a fish or two into this net and let them die there." If he makes a good catch, he thereupon exclaims, "Powerful, mana, is the tikiala of the net" (p. 140).

Again, the heir of a famous chief must live up to the reputation of his predecessor, or society decides that the mana has departed (p. 32).

For instance, a man claimed to have received from the ghost of a late chief, a very great man, a stone for producing pigs together with the mana chant for working the stone; the people were ready enough to believe this, but the stone proved unmanageable piece of black earth, and so the departed chief's like spiritual successor (p. 57).

To pass on to the question who or what may act as a host or vehicle of mana, it is plain from the foregoing example that it is an ideal couple (though it may be always conditionally and, as it were, by favour) either in a man or in a thing. For a man to have mana and to be great are convertible terms.

"To rise from step to step [in the Suge, i.e. secret society or chief] money is wanted, and food and pigs; no one can get these unless he has mana for it; therefore an ascent vigour and more mana on in the Suge, so every one high in the Suge is certainly a man with mana, and a man of authority, a great spirit, one who is called a chiefly" (p. 105; cf. p. 110). In the after-life, too, the 'ghost who is to be worshipped is the spirit of a man who in his earthly lifetime had mana in him; the souls of common and common herd of ghosts, nobodies alike before and after death. The supernatural power abiding in the powerful living man resides in his ghost; the supernatural power which exists in the man is, therefore, the same as the supernatural power which exists in the ghost. Hence, the mana of the living man and the mana of the dead body are the same" (p. 125).

As for the narrative associated with inanimate things, the following example will show how it may come to be attributed.

"If a man came upon a large stone with a number of small stones beneath it, lying like a saw among her litter, he was sure that the greater supernatural spirit of the stone would be thought to have mana (pp. 121, 122).

Moreover, the mana (herein, as has been said, resembling a contagion, or such a force as electricity) may be transmitted by one thing to another.

Thus, to make sunshine, certain leaves are held over a fire, and a man who means to give mana to the fire, or to the fire and sunshine may result (p. 201.)

In other cases, the mana is seen to lend itself not only to transmission, but likewise to a sort of accumulation.

To make rain, leaves that are mana for this purpose are caused to ferment so that a steam charged with mana may rise up to make clouds, and at the same time a stone that is mana for rain is placed there to point to the rain. The mana, accordingly, comes first. When it arrives by the wind from the sea, and is communicated to the air, it becomes this by the process of 'enchantment' or 'transmutation.' This it is which thus effects the supernormal. It is, however, somewhat doubtful, inasmuch as, if a man has mana, it resides in his 'spiritual parts,' which after death becomes manifest on the earth, for the rest, it is permissible only to say that a man has mana, not that he is mana, as can be said of a ghost or spirit (p. 191). In short, the native theorist would seem to have arrived at the view that mana is, being supernatural (to use Codrington's own term), must ultimately come from pre-eminently supernatural personalities such as ghosts or spirits. The existence of such a view, however, need not blind us to the fact that it is the man who inducts great things in the world that is after death supposed to bring mana with man, a fighting man's ghost, for instance, being known specifically as a keramo, or ghost of killing, and hence much prized as a spiritual ally who can give mana (p. 125). Similarly, if because of the mana with little stones round it is like a saw among her litter that it is credited with mana; and the doctrine that it belongs to spirits (p. 183) is, clearly, but an explanatory after-thought. Thus neither animism (in Tylor's sense of the belief in spiritual beings) nor even animatism (the attribution of life and personality) would seem to be essentially involved in the naive experience of the wonder-working thing, whatever be the last word of native theory on the subject. It must be allowed, however, that, if mana does not necessarily imply personality in the easy of the thing with mana, it is none the less perfectly capable of co-existing with it, as in the case of the living man with mana and, being itself something indwelling, comes to be intimately associated with in a holy indwelling 'spiritual part.' In this way mana and its derivatives have come in various Polynesian dialects to supply all that is needed in the way of a psychological vocabulary, standing not merely for 'heart' or 'soul,' but for 'spirit' and all therein comprised, namely, 'desire,' 'love,' 'wish,' and 'feelings,' generally, as also 'thought' and 'belief,' and even in some sense 'conscience'
and 'soul' (see E. Tregear, *Maori-Polynesian Comparative Dictionary, i.e. 'Mana'). Even if, however, mana thus in certain contexts almost amounts to what we term 'personality,' it must be remembered that, according to the native view, such personality is the primitive sequel to mana, and hence it is not a disposition or idea—say, an artist's—personality as attaching to his work), so that the mana as the realized personality of a powerful individual may be operative through the medium of what he makes or owns or leaves behind him at death.

(b) Practical aspect.—Coloington roundly declares that 'all Melanesian religion' consists in getting mana for oneself or getting it used for one's benefit—all religion, that is, so far as religious practices go (p. 199 n.). As he shows by numerous examples, to obtain mana is the object to which all prayers and sacrifices are directed.

Or, again, as can be gathered from Tregear's *Dictionary, mana may be used to express the performance of miracles, the exertion of a gift of healing, the interpretation of omens, an act of prophecy, in short, all the manifestations of a wonder-working beneficence which a religious man may aspire to set in motion. 'On the other hand, mana is a two-edged weapon and may just as readily be employed in the service of maleficence. Those who have the mana to produce wind or calm, sunshine or rain, are wont to turn it either way as it is made worth their while to turn it' (Codrington, p. 200). Healing on occasion is positive, pain or at least the approach of pain is negative. Where mana is a two-edged weapon, the same is true of orenda. As Tregear's citation of phrases shows, accident and misfortune, cursing and intimidation, involve the exercise of mana no less than does any and every form of blessing. In short, all traffic in mana may be just as readily be employed in the service of maleficence, or just as readily be employed in the service of beneficence, according to whether the user of mana is or is not guilty, invoke mana; and, just as electrical energy may be exploited alike in the public service and with criminal intent, so mana lends itself to the manipulation of the expert, be his motive moral or the reverse. Further, whatever is mana is likewise, in a complementary aspect, 'not to be lightly approached,' or, as we find it convenient for comparative purposes to say, 'tabu,' though, in Melanesia at all events, the word tRNA (t 66 56 u, tраУ 61 23 8) has a rather different sense, implying human sanction and prohibition, the sacredness involving a supernatural sanction being rendered rather by rango, or, where it is held to be especially severe, by bido (ib. p. 215; cf. pp. 190, 31), as When one has mana to which mana is attached. Whatever his own degree in any degree is treated with more or less of awe, not to say fear, because in a corresponding degree it has supernatural power which it is liable to exercise on the unwary with such effects as usually attend the careless handling of something extremely potent. In sheer self-protection, then, the proiane, that is to say, ordinary folk in their ordinary manner of life, observe a number of tabus towards the person or thing that is mana. Meanwhile, conversely, such tabu may be looked upon as helping to keep the holy person or thing inviolate, or guarding the mana from desecrating influences that will somehow spoil its efficacy.

2. Scientific meaning of mana.—It remains to determine what mana may appropriately mean when used as a class-name of world-wide application. Just as tabu has been turned into a general category standing for any prohibition resting on a magico-religious sanction, so mana in Melanesia another shade of meaning apparently attaches to the term, so mana has of late obtained a wide currency as a general name for the power attributed to sacred persons and things, and is so used without reference to the particular associations which may have gathered round the word in this or that part of the Pacific region. Thus, even if it be true, as Codrington's somewhat guarded account leads one to suspect, that in Melanesia mana has been more or less successfully incorporated in an animistic system, so that its ultimate source is usually supposed to be a ghost or spirit, that is no reason why, for the general purposes of scientific classification, mana should not cover all cases of magico-religious efficacy, whether the efficacy be conceived as automatic or derived, i.e., as proceeding immediately from the nature of the sacred person or thing, or mediately because a ghost or spirit has power into the person or thing in question. Meanwhile, the simplest way of ascertaining what modifications, if any, need to be imported into the local meaning of mana in order that the term may be employed generically, so as to cover analogous ideas arising from a variety of other cultural areas, will be to review sundry examples of such kindred notions.

(1) Orenda.—This word is Iroquoian, belonging more especially to the Huron dialect, and apparently has the literal sense of 'whether' or, 'whence it comes to stand for the mystic power put forth by means of a magic song or in any other magico-religious way. Thus we are near the original meaning when we find 'one who exerts an orenda' as the term for the soothsayer, or hear of the orenda of the cicadas, which is known as the 'maize-riper' because, if it sings in the early morning, a hot day follows. Not only the soothsayer, however, but the mighty hunter likewise, or, he who has mana, is credited with great orenda, though, if the hunter fails, or the gambler is worsted, then his orenda has been thwarted by the greater orenda of the game or of the rival player (N. B. Tregear, *American Folk-Lore, 1902, p. 38 f.). Indeed, everybody and everything would seem to have orenda in some degree, the world being regarded as a sort of battle-ground where unequal forces are matched in a great struggle, or, the strongest obtains his desire (he is arrayed in his orenda) is the regular way of expressing 'he hopes' (ib. p. 39), while the weaker must submit (he lays down his orenda is equivalent to 'he prays' (ib. p. 40). Sometimes one may come near to what we should term will-power, and doubtless such will-power is freely attributed to what we consider to be inanimate objects, as when 'it is making its orenda' is said indifferently of an animal in a rage or of a storm brewing. But sometimes the orenda would seem to act automatically and independently of the wills of those who seek to bring it into action, as when the condolence ceremony, whereby a sort of figurative resurrection is accorded to a dead chief, has to be performed in winter lest its association with death should exert an evil orenda on the crops (ib. p. 34). For the rest, orenda may work either for good or for evil, though a separate word abjon may be used to denote the specifically bad kind of orenda, and is actually displacing the more general term, as if the malign aspect of its manifestations made the more lasting impression on the tribal mind (ib. p. 37 n.). See, further, art. ORENDA.

(2) Wakan.—This Siouan word is strictly parallel to orenda, and stands for all 'power which makes or brings to pass.' It may come near to the idea of will-power, as in the Omaha act of
I plant something in my field, I put it into some of my hasina. Another man will therefore respect it, unless he feels his hasina to be greater, in which case he can receive the multi-pledged charm described by H. R. Schoolcraft, Indian Tribes, Philadelphia, 1853-57, v. 70 [see A. C. Fletcher, Proc. Amer. Assn. for Adv. of Science, 1897, p. 326]. In short, the term may be applied indiscriminately to stone or mirror charms, to amulets, to animals and trees, to fetishes and ceremonial objects of all sorts, and, in fact, to anything that exhibits wonder-working power (cf. W. J. McGee, in REDIV [1897] 182).

Therefore once more we have an Algonquian word that is generically identical in meaning with orewa or wakan. It is primarily an impersonal substantive; for in the Algonquian dialect a rigid distinction of gender is made between things with life and things without life; and, while manitou stands for a virtue or property, the form expressive of inanimate gender is used, though, 'when the property becomes identified with objects in nature, the gender becomes obscure and confused' (W. L. Jones, A. E. F., xvii. [1807-1831]). The following account by an Indian of the Fox tribe of the benedict effects of the sweat-lodge brings out very clearly the non-personal nature of the force set in motion by a man for his personal property, a concept he might almost as well be describing an electric bath.

*Often one will cut oneself over the arms and legs ... it is done open up many passages for the manitou to pass into the body. The manitou comes from the place of abode in the stone. It becomes armed by the heat of the fire ... proceeds out of the stone when the water is sprinkled upon it ... and will enter the body of the person whose residence it is. Nature of the body. That is why one feels so well after having been in the sweat-lodge* (ib. p. 183).

---

See, further, art. MANITU.

---

This word is used in Madagascar to express the power or virtue which makes a thing unusually good and effective, such as the efficacy of a remedy, the power of a prophecy to come true, the virtue residing in an amulet or in a spell, the sanctity of bodily persons and things, and so on. Hasina belongs in a high degree to the king, seeing that he is born in a family which has it, and is strengthened by the ceremonies of people having it, such as sorcerers and his own relatives. Hence his conduct, being highly conspicuous, is apt to cause his subjects to fall ill and to oppress himself. He dare not even speak to them, save through an intermediary. Meanwhile it is his duty to guard his hasina intact for the public good, so that Aman Gengey is probably right in regarding such a taus as that which prohibits the subject from entering the court of the palace with his hat on his head as a fady (= tabu) de conservation (Tabou et totémisme a Madagascar, p. 17). Indeed, the native theory of kingship turns entirely on this notion of hasina. Thus, at the king’s enthronement, the monarch-elect stands on a sacred stone charged with hasina and cries aloud to the people, 'Have I, have I, have I the power?*, to which they reply, 'The power is thine' (ib. p. 82). Taxes paid to the king are called hasina, being derived from firstfruits and hence inherently sacred, in fact, a tithe. Even when the king is dead, his body transmits its hasina to the place of the grave, which is henceforward sacred (ib. p. 104). It may even be shown (as van Heemstra proves) that the royal practice of strict endogamy, which was carried as far as sister-marriage, was due to the desire to keep the hasina in the family (ib. p. 162). Hasina, however, by no means means the exclusive property of the king. Hasina has it too, but in less degree. Even common men have some, and the very animals, trees, and stones have their share likewise. Hasina, in short, is relative. If
a more or less independent being of its own the power whereby a holy person or thing proves or its holiness by means of action supremely efficacious, whether for good or for evil. Modern anthropology lays great stress on this notion of the mana which is said to be intrinsic to any person or thing. Thus, for instance, the first place, mana is usually confined to the element which magic and religion have in common. Among savages my religion corresponds roughly to whatever system of rites is resorted to by the community in general for supernatural objects. In the face of all the dangers, real or imaginary, that beset them. If you are a member of another tribe in perpetual strife with mine, I am not interested enough to attribute to you any religion worth speaking of, even if your rites bear the closest resemblance to mine; but rather incline to pay you the compliment of supposing you to wield a most malignant magic, in proportion as I feel respect for your power of getting the better of me. It is a case of me and my gods against you and your devils. Gods or devils, however, they have power alike, and to the stronger power, whichever it be, the victory goes. Similarly, within the tribe a particular individual may have recourse to mystic rites to help a public cause or to help himself in a way of which the public approves, or contrariwise in order to wreak his private spite on his neighbour. In the former case he is behaving piously, in the latter he shows himself a wizard and deserves to die the death; both the lines of duty are indistinguishable, and power is set in motion. Mana, then, as representing what may be broadly described as the element of the miraculous, enables theory to treat the magico-religious as a unity in difference, the unity consisting in wonder-working power and the difference in the social or anti-social use to which it is put by the rival systems. In the second place, mana, taken together with tabu, provides a minimum definition of the magico-religious, such a delimitation as is distinctly with the distinction which the savage both in theory and in practice draws between the world of the supernatural and the world of the workaday and ordinary. Whatever else it may be, mana and however diverse the characters it may otherwise have, the magico-religious in all its manifestations is always hedged round with respect because of the potency inherent in it. Tabu and mana always imply each other, so that either can stand by itself for both two words (=tabu) was 'a general name for the system of religion' in Hawaii (Tregear, s.v. 'Tabu'). Conversely, manoa, a word of the mana type, is translated by McGee 'mystery', because the notions of "powerful, secret, 'grandeur', 'animist', 'immortal' all fall alike within the wide circle of its implications (15 RESE, p. 183). Mana, however, taken by itself offers the more adequate characterization of the nature of the magico-religious, since it reveals the positive ground of the negative attitude of fear and the shrinking which tabu involves. It only remains to add that, having by means of these two general classes of the class of objects to which magic and religion relate, the anthropologist is merely on the threshold of his task, and must go on to distinguish by means of fresh terms of narrower connotation the specific types in which the class abounds. Thirdly, mana is well suited to express that aspect of the magico-religious or sacred in which it appears as a transmissible force or influence. Thus van Gennep shows the notion of taboo, which is of the mana type, to be closely bound up with that of tabou, contagion (Tabou et tolémine, p. 17). The idea of spirit, on the other hand, does not lend itself so readily to the representation of such transmissibility or infectiousness on the part of what is sacred, except where some sort of dual personality is manifested, as in the case of what is known as 'inspiration.' Meanwhile the passing on of sacredness between one person and another, one thing to another, or a thing in another direction, is a constant feature of primitive belief, corresponding as it does to that play of association to which the uncritical mind is prone, more especially when rendered suggestive by emotional excitement. Thus, in the Melanesian, for sunshine, the operator's desire, as expressed in his song, starts a train of actions—the lighting of a fire, then the placing of leaves therein to warm them, then the hanging of the leaves upon a tree to impart the warmth to the sun and the whole process is interpreted in terms of the transmissibility of mana, from the song to the fire, the fire to the leaves, the leaves to the wind, the wind to the sun, in strict accordance with the associative flow of the interest (cf. Codrington, Melanesians, p. 201). Lastly, mana is the term best suited to express magico-religious value as realized in and through ritual; and ritual, as Robertson Smith has shown once for all, comes before belief in order of importance for the peoples of the lower culture. If mana is, regarded in itself, an impersonal and quasi-mechanical force operating on its own account, even though personal beings may have set it in motion, this is largely because a more or less automatic ritual is connected with such. Whereas the reason and conscious design that are inherent in the ritual are at most but dimly apprehended, the rite itself, on the other hand, stands out clearly as something that can be seen and enacted, and thus acquires independent value. Whatever it may exactly mean, at all events it works. Thus the ideas of mana and of ritualistic control go very closely together, the former being little else than a projection of the latter into the world of objects which are thought of as so many foci in a system of partly co-operating and partly conflicting controls. And so it is also with the civilized man's notion of luck, which is a genuine, though degraded, member of the mana group of conceptions. Those who still hold to a belief in luck are precisely those who likewise believe in the possibility of controlling it.

LITERATURE.—For the local use of the word mana the locus classicus is R. H. Codrington, The Melanesians, Oxford, 1891. Cf. also E. Tregear, Thus and So (=tabu) was 'a general name for the system of religion' in Hawaii (Tregear, s.v. 'Tabu'). Conversely, manoa, a word of the mana type, is translated by McGee 'mystery', because the notions of power, secret, 'grandeur', 'animist', 'immortal' all fall alike within the wide circle of its implications (15 RESE, p. 183). Mana, however, always implies each other, so that either can stand by itself for both two words (=tabu) was 'a general name for the system of religion' in Hawaii (Tregear, s.v. 'Tabu'). Conversely, manoa, a word of the mana type, is translated by McGee 'mystery', because the notions of power, secret, 'grandeur', 'animist', 'immortal' all fall alike within the wide circle of its implications (15 RESE, p. 183).
MANDÆANS.—See SHIAMANISM.

MANDÆANS.—1. Introduction.—The Mandæans claim our interest not only as being a separate surviving branch of the Semitic stock, but also on account of their religion, their language, and their sacred literature. Besides the records of their religious teaching and their religious poetry, that literature includes fragmentary remains and revisions of ancient Gnostic speculation and myth. Adherents of the Mandæan faith, either as larger communities or as distinct family groups, are believed to be found to this day, and may perhaps still be found—in cities and smaller market-towns on the lower Euphrates, the lower Tigris, and the rivers which water the eastern Tigris al-Mulh—which the adjacent Persian province of Huzurstan (Arabian). It is, indeed, necessary for them to live in the neighbourhood of rivers, since immersion in flowing water is an essential, and certainly the most characteristic, feature of their religious practice.

As far as our records carry us, we find their subsisting in very humble conditions, earning their living as tradesmen—carpenters, smiths, locksmiths, goldsmiths—or as shopkeepers. Upon their priests rested the duty of preparing and directing the public religious ceremonies, which were few and by no means sumptuous, as well as that of performing certain rites on behalf of individual members of the community. At these functions it was their regular task to recite a number of extracts from the sacred books. In their conduct, as in others, such recitations take the place of the incantations which are no longer permitted, and in conjunction with the religious rites they serve to effect or to ensure the salvation of the soul.

When the Mandæans began the serious collection of their religious texts—their mythological and legendary documents may also be regarded as revelations—the transcribing of their sacred books, and even a monetary contribution to the expense of such labour, ranked among them as a work which could purge from sin; hence not merely priests, but also a considerable number of laymen, possessed copies. Some of these were obtained by Christian missionaries who, in the result that since the middle of the 17th cent. not a few Mandæan MSS have found their way into European libraries. The books are composed in a distinct Semitic idiom, and written in a special script.

2. Mandæan writings.—The most valuable, from the historical point of view, and—at least in the main—the most ancient portions of Mandæan literature are collected in the voluminous Siūrû rabû (‘Great Book’) or Gezûr (‘Writings’), which is divided into a right and a left part. This consists largely of theological, mythological, ethical, and historical treatises, which are interspersed with prayers, resolutions, and hymns. All these components, so varied in their matter, may be called ‘tractates,’ though only by way of having a uniform term by which they may be enumerated and cited. From the introductory ‘blessings,’ which occur some twenty times, and from postscripts, we may infer that the sixty-four pieces, with three collections of hymns, were gradually incorporated in the ‘Writings,’ now singly, now in groups. Originally each tractate was independent, though in the very first three or four separate writings have been brought together. The last tractate of the Right is the ‘King’s book,’ which contains a survey of cosmic events as they appeared to a Mandæan who expected the end of the world to take place one hundred and fifty years after the foundation of the Arabian sovereignty, and assigned to that sovereignty a duration of only seventy-one years; hence the tractate must have been composed in the early years of the 8th cent. A.D. The short tractate, xiv., B, speaks of Mahomet the Arab (Muhammad) as one who had lived at least from two to three generations in the past. To the much more important i. and ii. B, however, notices referring to Muhammad are attached only at the end. The predecessors of these tractates evidently thinking that they must fill out the historical sketch; no other tractate exhibits any knowledge of Muhammad or any trace of his teaching. As regards the narrative tractates, we can distinguish between those of more and those of less importance, the latter having taken their materials or their themes from the former. In some we find fragments interpolated from older works not now extant, while not a few are mere patchwork of remnants of works long since lost.

When all has been said, it cannot be doubted that these documents of the Gezûr which speak authoritatively of Mandæan thought and sentiment were composed prior to Muhammad’s day, and such later reduction—often far from competent—as they have undergone was the work of Mandæan priests who were concerned to transmit in some form to future generations the greatest possible amount of their ancestral literature. The actual nucleus or focus of the tractates is a manifesto of the Mandæan priesthood to the community (xxvii. R; cf. M, supplement A). Like the Gezûr, the Sīdūr d’Yahû (‘The Book of John’), or Diwâd d’abdî (‘Recitations of the Fishers of Souls’), or ‘Recitations of the Writings’), or Gezûr (‘Writings’), which is divided into a right and a left part. This consists largely of theological, mythological, ethical, and historical treatises, which are interspersed with prayers, resolutions, and hymns. All these components, so varied in their matter, may be called ‘tractates,’ though only by way of having a uniform term by which they may be enumerated and cited. From the introductory ‘blessings,’ which occur some twenty times, and from postscripts, we may infer that the sixty-four pieces, with three collections of hymns, were gradually incorporated in the ‘Writings,’ now singly, now in groups. Originally each tractate was independent, though in the very first three or four separate writings have been brought together. The last tractate of the Right is the ‘King’s book,’ which contains a survey of cosmic events as they appeared to a Mandæan who expected the end of the world to take place one hundred and fifty years after the foundation of the Arabian sovereignty, and assigned to that sovereignty a duration of only seventy-one years; hence the tractate must have been composed in the early years of the 8th cent. A.D. The short tractate, xiv., B, speaks of Mahomet the Arab (Muhammad) as one who had lived at least from two to three generations in the past. To the much more important i. and ii. B, however, notices referring to Muhammad are attached only at the end. The predecessors of these tractates evidently thinking that they must fill out the historical sketch; no other tractate exhibits any knowledge of Muhammad or any trace of his teaching. As regards the narrative tractates, we can distinguish between those of more and those of less importance, the latter having taken their materials or their themes from the former. In some we find fragments interpolated from older works not now extant, while not a few are mere patchwork of remnants of works long since lost. When all has been said, it cannot be doubted that these documents of the Gezûr which speak authoritatively of Mandæan thought and sentiment were composed prior to Muhammad’s day, and such later reduction—often far from competent—as they have undergone was the work of Mandæan priests who were concerned to transmit in some form to future generations the greatest possible amount of their ancestral literature. The actual nucleus or focus of the tractates is a manifesto of the Mandæan priesthood to the community (xxvii. R; cf. M, supplement A).
MANDEANS

for the dead (maweseyth). Its poetical sections, which are intended to be recited as hymns or prayers, are worthy to stand beside the songs in the Genesis, though they are possibly not so ancient. They are certainly of much later origin, being the work of writers who were not familiar with the pure form of the Mandean language. The same statement holds good of the two sections of the Marriage Ritual, which has not yet been printed, though there are MSS of it in Oxford.

To the liturgical rubrics of the two works just mentioned corresponds the Diesir preserved in the Bibliothèque Nationale in Paris. The name diesir is given by the Mandaeans to a work written on a single long strip of paper. The Paris example is 130 x 6 cm., and gives the procedure for the expiation of ceremonial offences (cf. T. Noldeke, Mandaische Grammatik, p. xxiv). Another Diesir, now in the Vatican Library, is 76 metres in length, and consists of a series of sketches representing the halting-places through which the soul of a deceased Mandean must pass in its ascent (cf. § 28), and, at its destination, the scales and the throne of God. The text has been drawn mainly with ruler and compass, and might be the work of a child’s hand, while some parts of the text found between or at the side of the figures have been rendered illegible by stains and dilapidation. It would appear that Ignatius a Jesu to explain the figures sometimes do not agree at all with the original text, and at certain points there is convincing evidence that the missionary could not read a word of the Mandean text. It would appear that he had the work explained to him by one of his converts, but that he frequently failed to understand his informant, and made fresh errors in writing his notes.

Another Mandean work, one main division of which bears the title Astar malakheh (‘Book of the zodiacal Constellations’), is found in the Royal Library of Berlin. According to the Notice (loc. cit.), it is a compilation, containing all sorts of astrological material of very diverse date, and translated in part from Arabic and Persian; portions of it are of Jewish origin.

Mention should also be made of the recently discovered earthenware bowls with Mandean inscriptions intended to avert a curse or an evil spell. They furnish melancholy evidence of the completeness of Mandean theology.

3. The Mandean language. —The idiom in which this literature is composed is recognized by Noldeke as of importance for the study of the Semitic languages; it is the form of Aramaic which developed in Upper Babylonia, and its nearest congener is the special dialect of the Talmud Babli (i.e. the Aramaic of Upper Babylonia). The script (see below, § 19) has the advantage of expressing the vowel-sounds by letters, and does not require disjunctive signs. A correct interpretation of the texts—at least so far as they are accurately written and in good preservation—has been made possible by the grammar which Noldeke has drawn up from them (Mandaicae Grammatica).

4. Translations. —Ignatius a Jesu, who, as a missionary in Bagh in the 17th cent., was in close contact with Mandaeans for nearly thirty years, simply says that he had some knowledge of their language, while his successor, Angelus S. Joseph, thought himself able to furnish the key to their writings. The most striking of two translations is that of Maronite, Abraham Echellisi, from three Mandean books, and given to the public in a work printed in 1690 at Rome, that scholar had doubtless succeeded in reading with the assistance of Mandaeans conversant resident in Rome (cf. J. L. p. 5 ff.). From the same period come three renderings of the supposed Mandean baptismal formula, but these show how utterly bewildered the translators were even with the first line of the Mandean books, for it is its title, not its introductory formula. Later essays in translation, the most notable of which were the arbitrarily conjectural version by M. Norberg and the more careful but still very erroneous studies of G. W. Lorschel, are considered in some detail in M. S. pp. xiv-xv. In the latter half of the 19th cent., it also transpired that there was no such traditional interpretation as scholars had expected to find in the hands of the Mandean priests (cf. M. E. F. pp. 7-20). The specimens of translation offered by it have been subjected to the scrutiny of the experts, of the errors of Norberg (ib. pp. 99, 186, 214, 234).

Even with Noldeke’s Grammatik at our disposal, there are still serious obstacles to a complete translation of the Mandean writings. These contain a large number of words added by Ignatius a Jesu to explain the figures sometimes do not agree at all with the original text, and at certain points there is convincing evidence that the missionary could not read a word of the Mandean text. It would appear that he had the work explained to him by one of his converts, but that he frequently failed to understand his informant, and made fresh errors in writing his notes.

5. Interest of the Mandean texts. —The largest and most interesting portion of the Mandean writings is liturgical and mythological in character. The myths relate to the origin and nature of the world of the gods and of men, and also to the religious history of mankind. They are derived from conceptions of nature, nor did they originate in the popular mind, but were constructed in accordance with theological views. The scientific gains which this vein of liturgy and myth seems to promise—and it is the prospect of such gains that draws us to the study of the Mandean texts—are in the main as follows: (a) enlightenment regarding the meaning of the Mandean rites; (b) a tenable view of the origin and early history of the Mandean religion; and (c) an advancement of our knowledge regarding the character of Oriental Gnosis and its religious bearings.

6. General contents of the Sidrat rabbah, or Genza. —In seeking to solve the riddles which are involved by the Mandaeans and their writings, we must begin with a critical examination of the oldest portions of their literature. We shall, therefore, first direct our attention to the matter found in the Genza. There we find a seeming world fabricated by religious and theological fancy. Gods and demons, or beings of like nature, come before us with actions and utterances which, almost without exception, relate to the creation of the world, the
founding of religions, and the destiny of the human soul. Not infrequently it seems as if one and the same being stood before us under different names, while in other texts the bearers of these names are found in company with one another; sometimes, again, this very act is ascribed to beings altogether diverse character, or, as the action of one and the same being, it is described and characterized with much variation in different texts. It would be impossible here to set forth or unravel all this, and we shall only give a conspectus of the survey of the most important trains of thought and imagination to which the vast variety of the materials may be reduced.

7. Ancient Gnostic elements in the Genzê. — The texts that first claim our interest, as being probably the oldest, are those which exhibit polytheistic beliefs, or are at least ultimately based upon polytheistic views. Some of these open with speculations regarding the origin of all things, including the world of the gods, and to this group belong the sections in which emanaclonic doctrines are set forth (cf. MR, p. 24 ff.). Here 'the Great Fruit,' from which immemorable other fruits have sprung, and—as a person divine being—the Great Mánâ of whom, for example, other Great Mánâs have arisen, are spoken of as primal entitites. Beside the Great Mánâ we frequently find 'his counterpart,' the radiant ether (agyar zêvî), or 'the great ether of life' (agyar rabbî d'hâyyya), whose movement sometimes as one of the first emanations; and the same holds good of 'the First Life,' also called 'the Great Life,' and of 'the Great Hidden First Nituffa' (i.e. 'drop,' perhaps thought of as a sperm-drop). In the course of the legend of the great Jordan, which is always represented as a river of white water, as 'the living water,' 'the gleaming and luminous water.' It encircles the realm of the agyar, the world inhabited by the higher beings, and in its descent it is joined by innumerable other Jordans which water the agyar-realm; or, again, it traverses that realm as 'the great artery of life.' So unorganized is the system, however, that as early as the middle period of the Genzê we find the personified figure of Wisdom making request for revelations as to the graduation of the higher beings according to their period and dignity (MS, p. 262 f.). Nor do the texts in question present us merely with diverse elaborations of a single series of theophagy, attempting to reconstruct an imperfectly conceived system; on the contrary, they contain originally divergent conceptions of the origin of things—conceptions either fabricated or gathered from foreign sources by the Mandaean scholars themselves at a period before the transmitted texts were written. Of the authors of the Genzê it is only the polytheistic group that have made use of these conceptions.

Of the narratives describing the creation of the terrestrial world, some still bear a relation to the theogonies, the relation being peculiarly close in the long and important tractate vi. I, which we may call the Mandaean Genesis. In this text the 'Life' calls 'the Second Life' into existence by a 'request to itself.' Then this 'Second Life' creates for itself a second celestial world, and among the spirits of this higher realm of second rank (the ìṭārat of the Second Life) arises the idea of creating a third world, viz., our earth, with inhabitants who should have the Second Life, not the First. Then the Great Mánâ of Glory, in order to frustrate this design, calls into existence the Manda d'hâyyya, who was to see that the First Life was worshipped also upon the earth.

In the Mandaean dialect mânâd is a by-form of mânad or middâ, a noun from the root 3îî, (cf. Nebelung, Manda. Grammat., p. 75), and Mânad d'hâyyya is equivalent to yònàr yàn tî ìgu, (the knowledge of life)—such a knowledge is a portion in life. The term 'Mândâ' is a rendering of mânadêy, yourself.

3. The polytheistic strain in Mandaean theology. — While the Mandaean writers esteem the theological speculations of their books as mysteries and ancient revelations, in their own religious thinking they retain only the belief in 'the Great Life'—or simply 'the Life'—what they regard as the deity of the world of light. They use the word pîrû as the most part as equivalent to 'fruit' in the ordinary sense, and the term ayge (ultimately derived from Gr. ἀγας) as denoting the air of the celestial world and the north wind associated with it. The word mânâd (usually as 'vessel,' 'instrument') is still found in a group of hymns (L 38-74) in which the soul of the Mandaean asserts its heritage in the higher world, declaring, 'I am a mânâd of the Great Life,' while occasionally an exalted celestial being is distinguished by the epithet 'pure mânâd.' At first the deity referred to as 'the Life' is still regarded as a plurality, being designated 'the Fathers,' and is thus conceived as a council or body, distinguished by its small and always unambiguous. Very soon, however, 'the Life' comes to be spoken of in the singular. In the polytheistic writers a number of other gods appear besides 'the Life'—not, indeed, as its subordinate being, sometimes as an entity of itself, and at other times as the ultimate pre-existent beings with the greatest and highest power and prestige. These are not called 'gods'—among the Mandaeans, in fact, that term was long restricted entirely to the false foreign deities (MB, supplement C)—but are referred to each by his proper name. The locus of their purpose are called ùtrás (lit. 'wealth'), as are also the countless angels who play a more ornamental part.

Far below the realm of ayge lies a world of darkness—the black water (yengud ayyarî). We are nowhere told that the black water is merely a portion of the under world, or that it bounds or covers it, and yet the idea that the under world is in a liquid condition is quite irreconcilable with a large number of its features as presented in the narratives.

The creation of the earth which lies solid in the black water, and of the firmament expanded over it, is ascribed by the writers of this school to Pthalî (as the writers of the other schools attempt to reconstruct an imperfectly conceived system); on the contrary, they contain originally divergent conceptions of the origin of things—conceptions either fabricated or gathered from foreign sources by the Mandaean scholars themselves at a period before the transmitted texts were written. Of the authors of the Genzê it is only the polytheistic group that have made use of these conceptions.

Of the narratives describing the creation of the terrestrial world, some still bear a relation to the theogonies, the relation being peculiarly close in the long and important tractate vi. I, which we may call the Mandaean Genesis. In this text the 'Life' calls 'the Second Life' into existence by a 'request to itself.' Then this 'Second Life' creates for itself a second celestial world, and among the spirits of this higher realm of second rank (the ìṭārat of the Second Life) arises the idea of creating a third world, viz., our earth, with inhabitants who should have the Second Life, not the First. Then the Great Mánâ of Glory, in order to frustrate this design, calls into existence the Manda d'hâyyya, who was to see that the First Life was worshipped also upon the earth.

1 According to Hippolytus, Ref. (in Philosophoumenon) v. 9.
2 The meaning of the Naasæan, Valuations, and the Iransists had a similar idea (cf. MR, p. 35 ff.).
Second Life nothing is said even in the 6th tractate — do not at once accept defeat. By magic they create all manner of monstrous things—poison and corruption, predatory animals and serpents, devouring fire and earthquake, etc., as well as evil passions—and mingle with the good creation. According to vi. R, the first to be delineated by the word of God is the personification of the first man (adam had ašer adam); and Mandā d'hayyē, or his representatives (Hitil, Sitil, Enōs), must once more appear to fortify and maintain mankind in the true faith. These evil spirits are the Rūhā (Jud.-Aram. ṣerō), and her children viz. the spirits of the seven planets and of the twelve zodiacal signs. Prior to the creation of the earth her abode was the region overlying the black water, and from her and her sons all evil things have come into the world—demons, from the false teachers of heresy, and men of violence. The Rūhā, who also bears the epithet of 'world-mother' or 'mother of the world,' bore these children to Ur, the Mandān devil, who was himself her son. He is a most vilified character, as he had to be under restraint before the earth and the firmament were created, the reason evidently being that the 'solidification' of the land in the black water would otherwise have been impossible. According to vi. R, it was Mandā d'hayyē herself, according to viii. R, it was his wife Hitil ṣerō, who cast Ur to the ground, loaded him with chains, and set warders over him — or, on another view, immured him in Ur's own dark realm. Detailed accounts of how these miracles were carried out—mainly by magic and trickery—are found in the tractates cited; and viii. (one of the later portions of the Genēz) relates further, with reminiscences of Bab. myths, how the 'fathers' of Ur, the lord of India, and three deeper regions of the under world, were rendered harmless (complete tr. in JS, pp. 137-191).

9. Biblical matter in the tractates of the polytheistic earlier school.—The Rūhā and her son Ur, dwelling in the vast abyss of waters and the abode of all living creature, were created before the creation of the solid land, and in some way interested in that work of creation, since their names are not Mandānean, but of Heb. origin, can be none other than the female ṣerō who, according to the opening words of the Heb. Genesis, 'breathed upon the face of the waters;' and the light (םי), which is said in the same passage to have been the first work of the creation. The Gnostic writer here adopts a theory according to which the female spirit ( strapon, or of God), as well as subsequently, the lights of the heavens. The word ṣerō, 'call,' as used for 'call into being,' can be traced to the Biblical Genesis, as well as the names of Ašān and his wife Hašāwā, and, consequently, also that of their son Sitil (i.e. rendered, in Mandā, to ṣerō) and the names of the other two geni Hitil and Enōs. The exaltation of Abel (Sarah), slain in his innocence, as Hitil ṣerō seems to the present writer to be of later origin (cf. § 14). The Heb. narrative of the Fall, in which knowledge is described as a forbidden fruit, is one that the Gnostic author could not use at all, since he must have regarded it as directly in conflict with the view that the knowledge of good and evil, of truth and error, was revealed to the first man immediately after he had received a soul from the higher worlds, and that revelation marked the founding of the true religion.

In connexion with the account of the origin of the worlds and the true revelation, the higher worlds, and that revelation marked the founding of the true religion.

The Mandānean Genesis refers to the false religions. It states that all of them, as well as the peoples who profess

1 The pronunciation of the word the Mandāeans may quite well have made the mistake of substituting 4 for 6, just as they said 4dhdh instead of Yōḥānān. On the middle cf. Noldeke, Mandā. Gram. p. 2.

2 One is the lofty king of light in his kingdom — lord of all heavenly beings, source of all good, creator of all forms, of infinite greatness and goodness, of highest excellency, and 'angels' who stand before him and inhabit his paradise. Of distinctly Mandānean character are the features noted in 2. 11 ('he sits in the lofty north') and 6. 17 ('victims are not sacrificed before him'), and the description given in 9. 8: 'The Jordans of the worlds of light are white waters, full of light, and leadable. . . . And the utāni and kings who drink not taste of death; their garments and crowns are things of splen- doncer's, gazing to all things, full of beauty, without semblance of darkness, with their black waters, and with a king who, like the Mandān devil, has the head of a serpent, and the wings of an eagle; he is hideous and of terrific proportions; . . . iron soles in the exhalations of his mouth; the stone is burnt up by his breath; when he lifts his eyes the mountains tremble; the plains quake at the whisper of his lips.' With all this he once projected an assault against the realm of light, but, coming to the border of his kingdom, he
found no gate, no way, no means of ascending to the celestial height. Then the holy king of light called the agitated world by proclaiming that 'All the projects of the Daywa [ demons ] come to naught, and his works have no continuance' (cf. M, p. 457, MS, p. 231 f.)

According to the theology which finds expression here, the earth and the firmament, with all that they contain, natural and human beings—were created by command of the king of light through the agency of an 'ôtrâ named Gabriel the Ambassador.

The account given to Gabriel the Mandean redactor has interpolated a passage referring to the subjugation of the world of darkness (R 12: 8-12), but nothing is said of this subjugation; and in the account of the actual creation, the creation of man is briefly recorded as follows (13: 9): 'And the man Adam and his wife Hawawd were fashioned, and the soul fell into the body.' Then (R 13: 15) the fire-angels came; they made submission to Adam; they were worshipped by him, and afterwards fasted, and the soul went from the body, and the man fasted one year, by which he created a world.

The account given to Gabriel the Mandean redactor has interpolated a passage referring to the subjugation of the world of darkness (R 12: 8-12), but nothing is said of this subjugation; and in the account of the actual creation, the creation of man is briefly recorded as follows (13: 9): 'And the man Adam and his wife Hawawd were fashioned, and the soul fell into the body.' Then (R 13: 15) the fire-angels came; they made submission to Adam; they were worshipped by him, and afterwards fasted, and the soul went from the body, and the man fasted one year, by which he created a world.

13. The moral code.---With this theological exposition in mind, and also in the parallel ii. R is associated a code of practice, which seems to be of original and unique, and which, at all events, has been transmitted (R 13-26; cf. MS, pp. 24-48) as a record of the doctrine of the king of light. Here, too, 'a soul':

'1 said unto you, all who give heed to the name of God: In your standing and your sitting, in your going, coming, eating, drinking, all your doings name and glorify the name of the lofty king of light.'

That the record in question is derived from a Mandean source appears from the use of the term ahdăh, 'God,' and also from its repeated mention of 'the Satàn,' and of 'Satâns.' The laws relating to food are of special significance; they forbid the faithful to partake of the flesh of animals that have died otherwise than by slaughter, or to taste of blood, and of meats and drinks that have been prepared by heterodox hands. This portion of knowledge (madēta, R 13: 26), however, has likewise been moulded into conformity with the Mandean code, and distinctively Mandean commandments have been inserted in it—those enjoining white clothing with girdle, immersion in a river, the Mandean communion, the masquéqiy for the dead, and the washing of all foods, as well as those prohibiting libation for the dead and condemning fasting.

14. Judeo-Christian Gnosis in the doctrine of the king of light.---The monotheistic concept of the king of light, as set forth, with marked Parsi colouring, in the Genâz or Gnosis, must be originally Jewish or Judeo-Christian. The present writer is of opinion that it reveals a Judeo-Christian Gnosis. From what was said above (§ 10), the mention of the 'Jordans' of the world of light must not be regarded as derogative evidence; but in the moral code (R 26, 20, 48, 9) we find the injunction:

'Arm yourselves with the weapon that is not of iron; let your weapon be Nazareean (nâzâreat) and the direct utterance of the place of light.'

In the Genâz the terms Nazaréy and Mandâlyâ are used synonymously; according to the Mandean, both terms apply, or, at least, should properly apply, to themselves alone. We know, however, that down to the end of the 4th cent. the former designation was specially used of the Jews who believed in Jesus, and that it is applied in the Qurân (iii. 50, 165, 107, 117, 124, 83, ii. 69, v. 17, 21, 56, 73, S. ix. 50, xxii. 17) to the Christians generally. The injunction just quoted permits us to hazard the conjecture that the doctrine of the king of light was the source from which the Mandean redactor got the standing of the word-light, while the word-light is actually described as a leader among the wicked spirits who make the human race abandon the true religion. These sections, however, retain only the scantiest elements of the original doctrine of the king of light. Such residual elements might with most likelihood be found in the figures of Hûlû zîwâ, who (like Manâl d'haiyê in the Gnosis) instructs the mandraë, and of Rûshâ, and of all that is necessary for salvation, and 'Endôs'ôtrâ, who in the course of the world's history comes forth to rehearse that instruction (R 29; cf. MS, p. 48).

15. Endôs and the cloud; Mandâlyâ kushâ.---The Mandean Enôs (esp. true, which appears upon an identification or fusion (due, possibly, to the author of the Judeo-Christian doctrine of the king of light) of the OT 'Endôs (Gen 4:17) with the Son of Man (bar-Enôs) of Dn 7:13, 14). The redactor of this text, or the redactor of a tractate in the Mandean form, has united Enôs, three 'ôtrâs' are associated with Adam as messengers of the true religion and as his auxiliaries. Enôs, however, comes forth again, appearing in Jerusalem at the same time as 'Išûmishî (Jesus Messiah), who poses as a wonder-worker, and whom he un-
that Râhâ is Venus, and that Adam, the god of the Jews, is Sâmes, the sun (on the Mandean names of the planets cf. MS, p. 45). The observance of Sunday was not as yet a Mandean practice, though it later became obligatory (R 56.12; cf. MH, p. 56, and §23).

An account of the baptism of Jesus in the Jordan is given in the Sîdârâ d’Yahyâ, which, however, narrates the incident in the following way: the Baptist is at first unwilling to perform the ceremony, and does so only after he has received a vision in heaven (Abâtûr) the written mandate: ‘Yahyâ, baptize the liar in the Jordan.’

17. The relation of the Mandæan religion to Judaism.—Besides the OT characters already mentioned, several scribes are named in certain sections of the Gënsû, but are of no importance in Mandæan theology. Virtually all of them are enumerated below.

It is curious to note that in one passage (L 18 f.) they declare Jesus to be Adam, that, ‘on the great Day of Resurrection’ he and all his race will rise again and be transported to his own land, while in the same tractate, immediately before, the soul of Adam is said, quite in keeping with the Mandæan view, and does so originate from the sun (cf. Gal.)—that he be transported to heaven (Abâtûr) the written mandate, ‘Yahyâ, baptize the liar in the Jordan.’

Besides the above-named, the Mandæans were also of the Jewish-Christian sect (Hilgenfeld, Wellhausen) seems to be at variance with the following facts. Their knowledge of the most eminent names associated with the teachings of Jesus is, in many cases, astonishing; on the contrary, they found the names in written documents—found them, moreover, as foreign words, for they read them incorrectly. Thus they render the name of Moses as Mâdâ, Miriam as Mîhràm, Abram as Alûram, Isaac as Usîrak, Jacob as Yaqîf; Sabbath appears as Sofûtâ, modikûhê, ‘angels,’ as ‘înûllâ, ‘kings,’ and Benjamin actually as ‘înh ‘Amin, ‘the sons of Amin.’ The inevitable inference is that the Mandæans had been thoroughly acquainted with the religious tradition of Judaism. The same may be said of Jewish religious life. In the entire Mandæan literature there is no evidence to show that the Mandæans ever observed the Sabbath, or practised circumcision, or turned towards Jerusalem in the prayer, or observed the forty days’ fast, or read the Scripturés. In the Essenes (q.v.), they rejected animal sacrifices, and believed that the soul was liberated from the body at death; but marriage—in the form of the monogamy, though with a succession of wives—and the procreation of children were enjoined upon them as a religious duty; they had nothing like the organized communal life characteristic of the Essenes, while their views regarding the planets are quite inconsistent with such a practice as that of according an adoring salutation to the rising sun. A further point of importance is that in their prayers the Mandæans turned towards the north, where the exalted king of light sits upon the throne, while the common Jewish view (held also by Elkesâni) is that the evil spirits and their chief, Satan (from smû’d, ‘the left,’ i.e. the northern one) have their abode in that very region of the heavens.

18. Conjectures regarding the origin of the Mandæan religion.—The relation between the Mandæan teachings and Mandæan epic is not yet fully discussed here. The parallels have been collected by the present writer in MS, pp. 222–228 (cf. Echelasi, p. 142 f.), and to that list should be added the correspondence between a passage in the Mandæan narrative regarding the awakening of the first man to life (as quoted by Pogson, Inscr. Mand., p. 130 f., from Theodore bar-Khôn’s Book of Scholar), and one in L 405. In the veritable parallels the Mandæan versions seem to be secondary, and we must infer that both sects are indebted to the same group of sources. A large proportion of the material common to both is explained by the mass of Pahra ideas in the Judaico-Christian groundwork of the doctrine of the king of light and the Mandæan sect to which Mânî belongs. Doubtless, too, the Mandæan redactors introduced into their tractates a number of fragments from Manichæan documents unknown to us (cf. MH, p. 198 f.). The religious teachings of the two faiths, here, are essentially similar in character; the fundamental duality of the Manichæan system—a doctrine that finds a soteriological design even in the creation of the world, and involves an ascetic mode of life—is far removed from the Mandæan prophet of the same name. Râhâ; King Solomon, like King Jôsamîd in the Mandæan legend, held the demons in subjection until he ceased to give thanks to his Lord, and let himself be adored; and the world-configuration which had once annulled the human race before the Deluge was kindled by ‘the angel Daniel, to whom was given power over fire,’ at the order of El-mabdâ and Râhâ (MR, pp. 129 f., 123 f.).

We remain convinced that the Mandæans were originally a Jewish or Judaico-Christian sect (Hilgenfeld, Wellhausen) seems to be at variance with the following facts. Their knowledge of the most eminent names associated with the teachings of Jesus is, in many cases, astonishing; on the contrary, they found the names in written documents—found them, moreover, as foreign words, for they read them incorrectly. Thus they render the name of Moses as Mâdâ, Miriam as Mîhràm, Abram as Alûram, Isaac as Usîrak, Jacob as Yaqîf; Sabbath appears as Sofûtâ, modikûhê, ‘angels,’ as ‘înûllâ, ‘kings,’ and Benjamin actually as ‘înh ‘Amin, ‘the sons of Amin.’ The inevitable inference is that the Mandæans had been thoroughly acquainted with the religious tradition of Judaism. The same may be said of Jewish religious life. In the entire Mandæan literature there is no evidence to show that the Mandæans ever observed the Sabbath, or practised circumcision, or turned towards Jerusalem in the prayer, or observed the forty days’ fast, or read the Scripturés. In the Essenes (q.v.), they rejected animal sacrifices, and believed that the soul was liberated from the body at death; but marriage—in the form of the monogamy, though with a succession of wives—and the procreation of children were enjoined upon them as a religious duty; they had nothing like the organized communal life characteristic of the Essenes, while their views regarding the planets are quite inconsistent with such a practice as that of according an adoring salutation to the rising sun. A further point of importance is that in their prayers the Mandæans turned towards the north, where the exalted king of light sits upon the throne, while the common Jewish view (held also by Elkesâni) is that the evil spirits and their chief, Satan (from smû’d, ‘the left,’ i.e. the northern one) have their abode in that very region of the heavens.

1 On bar-Khôn’s designation of the Mandæans as Pûdæans see especially EB, xii., 167, 169 f.
MANDAEANS

approximate more closely to those found in the inscriptions of El-Hairj, written in the 1st cent. A.D. A more decisive test will be provided when we can disregard the hair-strokes due to the cursive mode of writing. In particular, the circle by which the Mandaeans represent Σ is closely matched by the corresponding characters in col. 58 of Euting's Tabula, and the Θ of an inscription at Borsa, dated 17 B.C., is similar in form to the Greek minuscule e.

Thus, as the Mandean written character dates from about the beginning of the Christian era, and as there is no ground for supposing that the Mandaeans had previously used a different alphabet, the rise of the Mandean literature cannot well be dated earlier than the 1st cent. A.D.

20. The baptistic nature-religion,—The idea that the rivers descended from the celestial world by way of the mountains in the distant north and that their waters impart fresh energies to the pious who bathe in them—a naturistic element of belief retained by the Mandaeans amid all the thoughts and fancies subsequently acquired—is probably inherited from their ancestors. In explanation of that belief we would advance the conjecture that this Semitic people had not always lived among the lower courses of the rivers, but at an earlier period had dwelt in a locality much further north, and nearer the sources—in a district from which they could see, upon their northern horizon, huge mountains towering to the sky (cf. MH, pp. 69-72; MS, pp. 218-217). We scarcely need to dwell on how the belief in a higher world—the belief in a better and a more perfect world, in which all should be restored to a condition of innocence and bliss—was connected with the practice of the Mandaeans of plunging into the sacred waters, the essential significance of which is the appreciation of the territory which the river brought from the higher world to the low-lying plains. We do not claim, of course, that this is more than a surmise, yet we would draw attention to the fact that there are linguistic phenomena which might be adduced in its support. Thus the Syriac idiom used in Kurdistan and on Lake Urmia is found to agree with the Mandean dialect in the formation of the inflected, in not a few cases, as in Aramaic—a fact which Noldeke (p. xxvii) recognizes as "of great importance." If, however, we set aside the theory of a homogeneous Semitic language, in which the Mandaeans, if we should estimate, a period of at least two hundred years) treated all the texts in their possession—as far as the contents comprised in them, and that the essence of this craft was revealed in the translation of the documents from the first meant for them and their people, that the contents had been revealed to them in the course of time, and that the texts which they wrote were composed of the same materials, and that the contents were preserved by the Mandaeans at a very early period, we are left with the idea that the Mandaeans had a literature.

21. The adoption of Gnostic tracts.—The Mandaeans, then—though not yet bearing that name—practising their religious ablutions, and sharing the general Semitic belief in demons, were living in Southern Babylonia at a time when the interweaving of religions had proceeded so far in the districts in which the Aramaic and Persian languages were spoken that it had at length evolved those creations of theological fancy commonly called Gnostic, with which, however, we must here combine the Mandehuan teachings and, in great part, the substance of the Pahlavi books (Panditbana, etc.). The priests of this baptistic tribe were not, intellectually, sufficiently advanced to share in the reflective activity which strives to interpret the objects of home religion as cosmic entities and occurrences; nor had they much appreciation for explanations of the world-process by pre-suppositions which purported to harmonize with the contents of the documents. The Gnostic tracts of the second and third centuries A.D. were written in accordance with them, although this salvation itself and its mythological elements, the ideas of the gods and all their imaginative embroidery, were quite of a kind to make a powerful impression upon them. In reality it was into the hands of a class whose learning was confined to a little reading and writing that "Gnostic" tracts fell, and these texts, written in a foreign language, and, therefore, to be read only with difficulty—documents coming from a remote past, and unveling the world of the gods—wrought upon them with the force of oracles, revelations from above, records of a superhuman wisdom. Accordingly, the priests adopted the tracts as their own, translating them, of course—at first orally, no doubt—into their own dialect. Conceivably, indeed, it was the desire of having these precious revelations in their own language that prompted them to draw up an alphabet of their own; and it is also possible that it was the translators themselves, and not their descendants, in a later generation, who came to believe that the documents were from the first meant for them and their people, that the contents had been revealed to them in the course of time, and that the texts which they wrote were composed of the same materials, and that the contents were preserved by the Mandaeans at a very early period, we are left with the idea that the Mandaeans had a literature.

22. The rise of Mandean theology.—It seems beyond question that the earlier generations of Mandaeans who held, at least in the main, the same views, practised ablutions (whether in the course of a rite of purification, or should be estimated, a period of at least two hundred years) treated all the texts in their possession—as far as the contents comprised in them, and that the essence of this craft was revealed in the translation of the documents from the first meant for them and their people, that the contents had been revealed to them in the course of time, and that the texts which they wrote were composed of the same materials, and that the contents were preserved by the Mandaeans at a very early period, we are left with the idea that the Mandaeans had a literature.

The Mandaeans never had an orthodox system of theology. They had rather cut themselves with the motley materials that had accumulated in their minds only with a view to reproducing the narrative of the creation of the world and of the human race in a fresh and improved form; and the one central thought that guides all their efforts is the necessity of explaining the harsh lot of the devout Mandean in his earthly circumstances, and of giving him the strongest possible assurance that his soul will return again to the bright and joyful realm in which he influences the fate of his kin. If, therefore, we set aside the theory of a homogeneous Semitic language, in which the Mandaeans, if we should estimate, a period of at least two hundred years) treated all the texts in their possession—as far as the contents comprised in them, and that the essence of this craft was revealed in the translation of the documents from the first meant for them and their people, that the contents had been revealed to them in the course of time, and that the texts which they wrote were composed of the same materials, and that the contents were preserved by the Mandaeans at a very early period, we are left with the idea that the Mandaeans had a literature.

23. The religious beliefs of the Mandean writers.

—Amid all the conceptions and the varied views with which the Mandean writers became familiar, and notwithstanding all the reverent interest with which they received the new materials, they never
surrendered the traditional religious practice of their people, although their ideas of the benefits to be derived from the bath of immersion under went a process of refinement in conformity with the development of their theology.

From the heterogeneous Gnostic trains of thought by which these theologians were influenced there arose, in course of time, a distinctively Mandean religion, which is well known both by its splendor in the religious practice, the grandeur of its language, and the sanctity in most sections of the Gnostic writings. The main features of that belief are as follows. Far above, beyond the heaven of the planets, there is a world full of light and splendor. There, where dwell the Life-giving Being, as the supreme deity, and other divine beings, or where, according to another phase of doctrine, the 'exalted king of light,' surrounded by hosts of angels, sits enthroned. From that realm the soul of man derives its origin—the soul of Adam and the souls of his descendants in the Mandean community. Far beneath, again, is the world of darkness and its black waters. Part of it has been 'thickened,' brought into a solid state; this is the earth inhabited by mankind. The earth has now the black water upon the south; upon the north it stretches over lofty mountains to the world of light; from that world the rivers descend by way of the mountains; and thus the Mandaeans, by baptism (of the spirit of water) may retain their connexion with the higher realm. The souls of the devout dwell upon this earth as in a foreign land. Here, meanwhile, evil spirits reign, akin to the powers of darkness now immured—the deities of other peoples and other religions—and it is they and their creatures or servants who make life a torment for the Mandaeans. Hence the believer waits with earnest longing for his salvation, i.e. his deliverance from this earthly existence. At the hour of death a divine being descends from the world of light, and, as the 'liberator,' takes the soul from the body, and bears it upwards through the celestial spheres to the world of light and of the Great Life.

24. The Mandean typology.—The soul of the Mandean, until the hour of its deliverance, is sustained by the symbolism of the ritual elaborated by the priests. Confessors of the true faith are plants of the world of light or of Mandá d‘hayyé (R 94, p. 79 f.; R 202, p. 163, note). What is implied here is that the water streams from the world of darkness into the world of light, and that it may be said to spring from the river like plants. They were also required, however, to mark their brow with the living water, and likewise drink of it (the draught is called 'gushing'), partake of a loaf (the loaf is termed pekiti, 'opening', 'unlocking'), etc., and those who take part in these ceremonies have a share in the beni fountain of the better world—in the great baptism in the heavenly Jordan, in the gushing of rivers, in that treasure of the Light which is to be opened. The liturgical recitations (drdšé) were meant to represent the beams (drdšé) of splendor which would flow from the house of the Life to meet and to unstop it as it sped upwards from the earth (JÉS, p. 49), etc. The ultimate ground of trust, however, was always the ceremony of immersion; thus in R 18. 13 we read:

1. Your token is the token of the living water, by which you ascend to the place of the Light.

2. At the ceremony of immersion—originally this itself was the sign—it was the practice, as early as the days of the Mandaeans, to utter names, viz. those of the Great First Life (R 196. 8; or of the king of light, R 171.) and Mandá d‘hayyé (MR, p. 104 f.).

To their own rite of immersion, whether performed, as was usually the case, by the individual himself, or, as on feast-days, with the co-operation of a priest, or administered to children, the Mandaeans applied the term migbdí (šemen, presumably for šmené; the old pronunciation given by Sioufi, Mandaean, is incorrect only for the plural form of the noun), a word which certainly comes from the Sem. verb ṣaḥa (the sound of ẓ is lost in Mand.), which the Mandaeans use exclusively in connexion with the religious practice in question (cf. § 38). For Christian baptism, on the other hand, the writers of the Gnostic persistently employ the term used in the Syrian Church, mwhdúth (šamen= [šimenu] and the Atf forms of šaše. They concern and viliy the Christian ceremony because it is performed not in ‘living,’ but in (or with) ‘cut-off’ water.

25. Kustá.—In the ethical and religious sections of the Mandean literature much is said about kustá, ‘straightness,’ ‘rectitude,’ ‘vivacity.’ In the ritual the ceremony of immersion included a gesture called ‘putting forth kustá,’ this being identical with washing the hands with water as a stretching of the hand from the bath of immersion, or (after the performance of some other religious duty) ‘before Mandá d‘hayyé.’ The gesture was made with the right hand, and it corresponds to the clasping of hands with which the soul would be welcomed by the Life and other great celestial beings when it reached the world of light. It was an outward manifestation of the upright mind and of loyal devotion. Further particulars regarding the religious ceremonies, which were constantly being increased and rendered more complex by the priests, will be found in § 33 below, and more fully in MR, pp. 96-120, 221-256.

26. Ceremonial purity.—In this period the idea of purity was recognized in the sense of a relation to the world of light so intimate that it carried with it exclusion from every object and condition antipathetic to it (‘Hilil zivá, pure Māna’: L 116. 17, ‘the Jordan of the Life, from which I have taken purity’). Ceremonial cleanliness was perhaps regarded as food came to the Mandaeans through the medium of the ethical code in the doctrine of the king of light, as did also the injunction that husbands and wives should ‘wash themselves with water’ after cohabitation (the institution. It was only later that the commandment of abstinence was extended to many other occasions of life (Sioufi, cited in MR, p. 301 f.).

27. Prayers.—Among the Mandaeans prayer was known as ‘compassion,’ or ‘petition and praise.’ According to the ethical code just mentioned, believers must rise to pray thrice in the day-time, and twice during the night, but in other texts, apparently of Judaeo-Christian origin, the only prayers enjoined are one in the morning, one at the seventh hour of the day, and one before sunset, while in one passage (R 300) prayer in the night-time is actually forbidden. We read also of a ‘man’ who (like the described in several texts as the Jew) receives the prayers, and stores or preserves them in the treasure-house of the Life (R 221 f., 300).

In the later redaction of a regulation in the ethical code the believer is commanded to ask a blessing upon flesh-food before eating (R 68; cf. MR, p. 94). The priests drew up short forms of prayer for these ordinances; but for protection against distress and danger they regarded prayer in the proper sense as less effective than a long series of recitations from the ancient book.

28. The masseqá.—The ceremony termed mas-
scyth., 'mounting up,' 'ascent,' consists exclusively of such recitations, and is designed to help the souls of those who are saved, or who might escape to the better world they should be stopped by evil-disposed spirits or because of their own sins. The imagination of the Mandaeans gave itself with zest to descriptions of this ascension and of the stations through which the soul must pass. Each station is pictured as a place where the adherents of a false religion, or various classes of sinful men, are kept in ward and punished, the term applied to such a place being andrē, or matnātē, i.e. 'ward,' 'place of custody.' Some of the descriptions contain features taken from Gersi-Gnostic sources, as, e.g., the 'gates' of the planets situated one above the other (mentioned as Mithraile in Origin, c. Cb. vi. 22, c. 58, p. xiv.), or the guardian spirits who come to meet the soul, and in the latest Gersi texts—the tree of life, the balance in which the soul is weighed, the judge of the dead, etc. (Mc. p. 1951; so, in the Vatican Diviæ, beasts of prey lie in the soul's trail. The souls of the devouts pass all the wards without molestation, because, according to the tracts of the Gersi which describe the ascension (x. 22 and iv. 2), they give the name and sign that they have taken from the waves of the water, i.e., because they profess the name of Gersi and thus show that they belong to the world of light. In place of this name and sign, however, the hymns of the Gersi (about 120 pieces), all of which limit their themes in the destiny of the soul, its imprisonment in the body, its release, and its going to be somewhere in the world of light, insist rather upon the necessity of good works; with these there was probably associated a devoted spirit (cf., e.g., l. 101, 3: 'I loved the Life, and Manda d'hayye dwelt in my heart'). It is by devotion, however, that we find in these hymns a few words referring to the religious practice of the Mandaeans or to the 'Jordan.' The explanation of this curious fact we take to be as follows. The mæsegeta for the dead is in reality a Mandean imitation of a corresponding ceremony in the Parsi religion. According to Parsi doctrine, the soul, after leaving the body, is received by its own good thoughts, words and works—which assume the form of a beautiful maiden—and by those is led across the mæsegeta, or meander, guarded against other objects of fear. Now the hymns in the Gersi are simply mæsegeta hymns, i.e., they were composed for use in the Mandean ceremony. They are the work of Mandean writers, as cannot be doubted, who were the authors incorporated in them, but in composing them the writers must have let their thoughts be guided by the example of the Parsi ceremony and the Parsi texts.

29. Mandean poetry.—Although the majority of the Mandean hymns can lay little claim to real poetic merit, they show at least that the Mandaeans did not deal with their religious knowledge on purely intellectual lines, but found in it a source of true emotion, and the spirit that inspires them secures one of sincere and genuine emotion. As a specimen of the mæsegeta hymns we give here one of the most pleasing (l. 89f.). It should be premised that the use of the expression 'my conflict' rests upon the idea that the soul is entangled in the body and in its earthly conditions generally—an entanglement that is dissolved at death.

1. How I rejoice! How my heart doth rejoice! How I rejoice on the day when my conflict is dissolved, and I go to the place of the Life.

2. I fly and go. At the ward of Sánē (the sun) I arrived. I utter a call: Who taketh me past the ward of Sánē?

3. Where is the work, and mine adoration, and my adoration, I lead thee past the ward of Sánē.

4. And the ward of Sánē, and Sánē, and the ward of Sánē, and the ward of Sánē, and the ward of Sánē; and the ward of Sánē, and the ward of Sánē.

5. How I rejoice! How my heart doth rejoice! How I rejoice on the day when my conflict is dissolved, and I go to the place of the Life.

30. The Mandaeans under Sassanian rule.—The Mandaeans never played a part in the field of politics. As long as they were allowed to go about their daily tasks without interference, the mind was one of entire content. They were in no sense a warlike people, and their whole history, as well as their literature, shows that they were able to offer only a weak resistance to persecution and attacks upon their religion.

Babylonia, in the period preceding its conquest by the Arabs, belonged to the empire of the Sassanians. We cannot say whether the Mandean hatred of the Jews was kindled by documents embodying an anti-Djewish Gersi, or was occasioned by the first half-century of our era, when a number of rapacious Jewish satraps, as related by Josephus (Ant. xviii. ix. 1 2; 9 310 f. ed. Nieuw), provoked the whole population to an outbreak against themselves and their conquerors.

The Mandaeans persecuted the Manicheans and the Christians who adhered to Rome, but they spared the Nestorian Church, which was subject to the State, and the peaceable Mandaeans. The latter, however, to the work of Christian monks who went to them as missionaries. In the Gersi (xvi. 11) we find an account of the Roman Catholic clergy and worship, and (1. and ii.) we are told that the attempts to convert the Mandaeans were not always carried out 'with sweetness—without discourse or promises—but were also supported by force. In that satrapy, doubtless, the Nestorian Church had at one time sufficient influence to have the soldiery employed on its behalf; and, accordingly, we read (R. 28. 16): 'When the bishop Simeon [compel you, say, 'We are thine' but in your heart acknowledge Him not, and deny not the word of your lord, the exalted king of light; for hidden things are not manifest to the lying Messiah.'

31. In the period of the Arabian invasion: migration.—Then (c. A.D. 636) came the invasion of the Muslim Arabs, and the collapse of the Sassanian empire. Certain late portions of the Gersi make reference to the gate and the demons of the planet Mars, 'Nirig [Nergal] who is called the Arab 'Abdah.'

The whole earth is made subject to his throne; to his followers all things fall a prey; day after day they make war and shed blood, and are ever an esplanade to the tribes of the south, and to the great family of the Life; and there are also many souls of the great family of the Life who go over to him, and deny the name of the Life. In their distress the devout Mandaeans comforted themselves with the thought that the wicked 'Abdah had fallen into one of the eternal prisons, where his followers take him to task, asking why they now suffer torments in the realm of darkness while the servants of the sun (i.e. the Mandaeans) inspire the world with the light, amount up to the world of light (Mc. R. 102).

It must have been about this period, in the 7th or 8th cent. A.D., that most of the Mandaeans, having reached the limits of endurance, gave way before the Muslim Arabs, and migrated from Babylonia to the adjacent districts of Persia. It is possible that the minority, as found later on the Euphrates and the Tigri, had been for some time essentially adopted Islam, or that they concealed themselves among the adjoining marshes.

32. Restoration of the cultus.—Tractate xxvii. R. may be interpreted as a summons to a meeting of the Mandean communities in the places of their assembly. The text itself has been restored in their old home; it is a manifesto in which 'we, the Farmida,' turn with prayer and
adjudication to the Manicheans of both sexes to urge them to fulfill their religious duties. The people are to come on Sundays to the temple (lit. 'dwelling'; down to modern times it was nothing more than a small house with a holy fire), where, in the absence of the priest, they are to stand praying behind the Tarnidās, to take part in the communion, etc. This tractate is unmistakably one of the very latest compositions in the Genzā, and is a documentary witness to the use of an alien cult ritual organization among the Manicheans. In earlier texts the term *termidā* (for *termis*), like the corresponding word *mabχprāi* in the NT, means simply 'believers' but by this time it was the name which the priests applied to themselves. The institution of Sunday, as is shown by its designation as *khwedēh* (кеиєд; cf. Peshitta of Mt 28:20), was adopted by the Manicheans from Syro-Christian usage, though, of course, through the agency of an alien mixture was added, and to which origin they were ignorant. The manifest urge the due observance of the day (MH, pp. 88, 90). The religious ceremonies enjoined are those of old; immersion, performed by individuals himself or assisted by those to children the stretching forth of the right hand, and the partaking of communion-bread. Everything is as yet quite primitive, in harmony with the fact that the *termidā, 'priests,' are still hardly distinguishable from the *mabχprāi, 'believers,' reverence for whom had been enjoined in the moral code (cf. § 13).

33. Introduction of new ceremonies by the priests.—In the period that immediately followed the priests formed themselves into an organized body and gradually amplified the religious ceremonials with rites requiring the cooperation of an official celebrant, or, at least, elaborated such rites from the traditional usages, and conferred them with the simple ceremonies of beatific times. Even towards the close of the period of the Genzā as attested in the latest sections of that work (cf. MH, p. 101), we find, beside the rite of marking the forehead with water from the river, a sign made with gold a certain mixture was prescribed, and was to be prepared and applied by the priests. The draught of 'living' water was duplicated, being taken once from the individual's own hand and once from the priest's bowl (qarāt). The priesthood also received even to children the ordinary communion-bread, a host of higher order, the 'superior pekštā, which was reserved for themselves and the Salmānsās (see below). They also instituted a sacrament for the dying (cf. MH, p. 102), in addition to the already one for the living. The latter was an eight days' ceremony, and conferred upon the person concerned the title of *salmānīd tārīd, 'blessed perfect one,' as well as priestly rank; he was thenceforward regarded as dead to the world, and had to abstain from sexual intercourse. The ordinary immersion performed by the individual Manichaeans as time and opportunity permitted—every day, morning and evening (Le-Gonz, *Voyages et observations*, p. 301), or only on Sundays and feast days, and the days preceding them (Siouli, *La Religion des Stambles*, p. 83)—could still be regularly performed without priestly assistance. About this time, however, an annual festival was introduced at which all the members of a community assembled upon the bank of a river. This celebration, conducted by a priest, included, in its first part, all the ceremonies requiring to be performed in the river and with river water; but here the priest, using his right hand, submerging the laymen three times into the river, made the sign upon the recipient's forehead, and thrice, with his own hand, gave him water to drink (Qobštāt, fol. 9. 32 ff.). Further, the first immersion of children now assumed the form of a baptism administered by a priest with one or two assistants (for texts and references bearing upon these baptisms cf. MH, pp. 221-224).

34. Ceremonies wrongly interpreted by Europeans.—The circumstances that the Manicheans worship the cross rests upon references in the *Narratio* of Ignatius a Juse (p. 38), and is due to misapprehension. What actually takes place is that at great festivals a priest of higher rank sticks a few cane rods into the ground side by side and crosswise, and that he renders homage to this symbol. The structure is termed 'beams of splendor,' and may thus be regarded as symbolizing the world of light.

Reports dating from the 17th cent. agree in stating that it was the practice of the Manicheans in Basra to sacrifice a fowl once a year, and Jean Thévenot writes that he himself had witnessed 'la sacrifice de la poule' on the 2nd of November 1665. According to Siouli, the 'superior pekštā' or bird was made once a year, and was in the form of baked wheaten cakes, each of which was sprinkled on both sides with four drops of sesame oil and four drops of the blood of a newly-killed pigeon. The dead bird was afterwards buried in a small dish, ceremonially with a view to ratiifying its slaughter as a sacred act. The act was thus in no sense a sacrifice, and it is so little in keeping with the fabric of the Manichean cult that its institution can be characterized only as a gross blunder on the part of the priests.

35. The priestly hierarchy; an order of confession in the Persian settlement.—The priestly system included the following grades: pupils, who were in training if over a certain age; ordinary assistants employed in the sacred ceremonies; priests, who had to pass an examination and be ordained; and high priests, chosen by the ordinary priests from their own number. The name applied to an assistant (and perhaps also to a pupil) was *spradu or shoenda* (cf. MH, p. 169), and to a priest, *termidā, while a high priest bore the Persian title of *gumoād, 'treasurer.' Each priest had his own dishes and table, and partook of food and drink prepared for him by his wife. In the case of the ordination and consecration, might sit with him at meals. There are numerous data which seem to indicate that the clericalizing of the Manichean cult was carried out or in the Persian settlement. Besides the title of the high priest, the names of the main articles of priestly attire (caftā) are Persian words —tagā, karačtā, rōmačtā. The priest's seal-ring (Siouli, 'le chaminavār') bears the device, 'Name of Yawar zīwā'; had the inscription originated in Babylon, it would have been 'Name of Mandā Khwāy'. Again, while the *Narratio* of Ignatius (p. 23) shows distinctly that the Manicheans of Basra knew nothing of the practice of confessing to a priest, Siouli, his informant, who appears to have studied in Persia, tells of a form of confession according to which the sinner, upon making a penitent acknowledgment of his sins, three times receives absolution for the same sin, i.e., he is absolved of the repetition of this sin, but after the third time further transgression can be expiated only by certain good works. The passage of the Genzā to which appeal is made in support of this ordinance simply enjoins that the devout shall thrice 're-erect' apostates or transgressors before casting them out of the community.

36. Final redaction of the Genzā writings.—Persian loan-words are found even in the oldest Manichean texts, but names like Yawar (friend, 'helper'), Sām, and Bahrām (Verethragna) could
300 MANDAEANS

hardly have come into vogue among the Mandaeans except on Persian soil. When, accordingly, in no way is said to have taken the place of the undoubtedly more ancient Mandāna d'Anaye, and when we observe that in others, in passages where the bearer of that epithet is mentioned, it is added that he is also called Son, Yāwar, etc., it seems highly probable that most of the tractates in the Genzā underwent their final reduction, i.e. attained their present form, in the Persian province.

37. Religious decadence, obsolescence of the language. By the time when the 'Abbaḏād Khafsī had established peace and order throughout their domains, the Mandean religion had passed its zenith. The desire for knowledge and the spirit of enthusiasm were quenched; the theological activities that had been earnestly directed towards a solution of life's enigmas had spent themselves, and had given place as in the writers of the Brīdāt d'Amīthī and the Sabīrāt d'Alayyī—to placid dialectics and fable-making. The soul which knew that it had come forth from a better world and would again behold its primal abode was no longer a well-spring of sacred lyric; the Mandean had, in fact, become familiarized with his faith, and was now anxious simply to bring his store of ancient lore into order and let it be used properly. It was in this period that the Mandaeans gathered their writings into collections, and composed the liturgical directions or regulations comprised in the Qubāṭah, the Marriage Pacts, etc., the Curāt, Brīdāt, as they now did, in isolated groups among peoples of other faiths, they gradually lost the use of their semi-trad dialect, and Arabic, which had made its way into these districts, became their vernacular. Thus, although Mandaeans were thus excluded from religious worship. In the process of organizing the ritual every ceremony came to be introduced and concluded with recitations from the sacred books; in the māsāgāt, indeed, the recitations constituted the main element, and, according to Sīnūfī, this ceremonial, designed to succour the departed, lasted for seven days. Since, however, the teachings of the Genzā required all believers to engage in such recitations, the priests came to be instructed by instruction, to come by, upon the laity the ability to read and, as far as possible, to understand the texts, although their own learning was doubtless almost wholly confined to a knowledge of the hyneg and a traditional manner of their sonification of the sentences of the māsāgāt.

38. The Sabians of the Qurān; Muhctasīl and Mandaeans. In the Qurān we find three passages (ii. 59, v. 73; cf. xxii. 17) in which the Jews, the Nasaraeans (Christians), and the Sabians are assured of religious toleration. The famous Muslim scholar al-Masūdī, writing in the 10th cent., speaks of Chaldean or Babylonian Sabians whose remnants live to-day in villages among the swamps between Wāsiṭ and Basra, states that in their prayers they turn to the Caspian and Caspian, and describes them as 'those who wear girdles' (S. de Sacy, Notices et extraits, viii. i. [1810] 132 ff.). The Mandaeans turned towards the north, and wore the girdle. Moreover, the Kitāb al-Fihrist (p. 310, l. 20) states that the Sabians of the marshes are the Muhctasīl, a word meaning 'those who wash themselves,' and it also declares that they wash all their food—a practice which, so far at least, as flesh-food is concerned, is also enjoined in the Genzā. To these Muhctasīl, however, the same writer ascribes a doctrine of dualism—a thing quite unknown in the Mandean documents; and he also states that many of them still worship the stars, while, on the other hand, the guarantee of toleration in the Qurān assumes that the Sabian believe in One God (and in the Last Judgment). To account for these references to the Mandaeans, taking the hypotheses as stated above; we may suppose either that the Sabians of the marshes were descendants of that group of originally heathen baptismists of Babylonia which did not share the religious development of the Mandaeans, or that some of the Mandaeans had taken refuge from the Arabs in the swamps (§ 31), and there, while adhering to their own teaching of bathing and washing, had adopted new and alien doctrines. For further particulars regarding the Muhctasīl cf. art. ELKESAITES, v. p. 298.

The passages in the Qurān and the name 'Sabians' would apply most approximately to the Mandaeans. The Mandaeans, in speaking of their practice of immersion, always employ names of the verbal root μπαπ, as, e.g., in R 286: i. παποιωμ мастер, 'who immerse their sons and their daughters'; by their Arab neighbours they were termed Sabīn down even to recent times, and in European accounts dating from the 17th cent. they were called 'Sabbī,' 'Sabbī,' 'Sabbī,' 'Saharī'—the termination being that of the It. or Lat. plural. The name may formerly have covered the Muhctasīl as well, and the latter possibly also referred to the Caspian Sabians, who are regarded as Christians. As, however, besides the name of 'Mandāyā,' they had also adopted that by which the Christians were known, viz. 'Nāsūrāyā'—in the Genzā the latter is actually used more frequently than the former—it would demand no great effort on their part to say that they were Christians. If, e.g., they no longer wished to be regarded as akin to the Sabians dwelling in the marshes, or if they hoped to evade a tax imposed specifically on chritians, to escape, if possible, under the laity, their learning, they might, for the sake of their kinsmen, assume the Christian name without misgiving. According to Ignatius a Jes. (Novatio, l., a chapter written by himself), the Mandaeans of Basra believed that Muhammad had granted them a dispensation; but it can hardly be supposed that his successors had not respected it. Ignatius also states that the Mandaeans were formerly united with the Chaldaean Christians, but that, about one hundred and seventy years before his time, they had renounced the authority of the Babylonian patriarch and abandoned the name of 'Christians.' If we qualify this statement by saying that the Mandean communities had at one time joined hands with the Church—though only for a while—it may yet be used to signify that the Mandaeans, by reason of their baptismic practices, as belonging to the Christian body.

40. The Mandaeans as 'Christians of St. John.' The Portuguese monks through whose reports the existence of the Mandaeans was first made known in Europe asserted that they were descended from the disciples of John the Baptist (cf. a letter from Pietro della Valle, dated June 1629); and
from that time, in treatises and text-books of Church History, they have been referred to and regarded (on the ground of Ac 18:3 19:12) as Christian.

It was not without some support from their own side that the designation was persisted in. A number of Mandéans who had transferred their allegiance to the Roman Catholic Church visited Rome in the period between 1632 and 1660, and Abraham Eschelensis, who cultivated the most friendly intercourse with them in order to gain the fullest possible information regarding their characteristics and doctrine, was told by them that their people called themselves "Nasraéens of Yahyá"—though in Arabic only the qualifying phrase perhaps meaning that they did not call themselves so in their own religious language, or among themselves, but that they adopted the name only in their intercourse with people of a different faith; at all events the phrase implies that they did not speak of themselves as 'kriştianl'. (R 55. 14, 282. 12.)

John the Baptist is mentioned in a single tractate only (cf. § 11), which long lay almost unnoticed by the Mandéans, but at length, when the final addition and a number of titles to the writings of the Gneoé came to be formulated (R 57. 23, 188, 26. 213. 10, 218. 23), a period opened in which the Mandéans turned to the figure of the Baptist with interest similar to that of their old name Yohanná (which they pronounce Yáhánah) was now expanded to Yahyá-Yohanná, or was sometimes simply superseded by Yahyá. Yahyá is the Arabic form of the name—the term by which the Baptist is mentioned and highly extolled in the Qurán (iii. 34. vi. 85. xix. 13-15). May we not, therefore, venture to suppose that the reason why the writers of this period bring John into such prominence and make him a hero of their people? That they had already begun to refer him, in the presence of the Muslim authorities, as the prophet of their religion? Henceforth they could claim, whenever and wherever they thought fit, to rank as 'Nášoryé d'Yáháyah—a name which, to all except themselves, could mean nothing else but 'Christians of John.'

Finally, they are said actually to have introduced the name of Yahyá-Yáhánah into their baptismal formula, and to have done so, in fact, by speaking of themselves as 'Christians of the Baptist.' This has been adopted by Mandá d'haryé, and by John (cf. MII. p. 225, on Sionelli's authority). This innovation would seem to be best explained as a result of the lesson constantly impressed upon the Mandéans by Rome and Constantinople during the 17th century, viz., that their baptism was only the baptism of John mentioned in Ac 18:2 19, and as a counter-stroke to the attempts to bring them within the Roman Catholic fold.

41. In the period of the Portuguese ascendency in the Persian Gulf.—In the 16th cent. the Portuguese dominated the Indian Ocean, establishing themselves securely at Goa on the Indian and at Muscat on the Arabian coast, and in the harbours of Ceylon. They forced their way into the Persian Gulf, and on the coast of Persia made the island of Hormuz the base of their military forces; and with the pasha of the district of Basra they reached an agreement by which, in return for annual gifts, they permitted them to have a trading-station in Basra, and promised to protect it. The Portuguese soldiers and traders were everywhere followed by the Jesuits, who founded missions, and secured the government of such settlements as 'Christian territories' according to the regulations of the Inquisition. Thus Portuguese monks came to Basra, where they obtained a house and made one of its rooms into a church, their hope being to win for the Roman faith more particularly the schismatic (Nestorian and Armenian) Christians living in the district. Their attention, however, would soon be attracted by the Mandéans, for the number of the latter in Basra and its neighbouhood in the 17th cent. was still estimated at 14,000-15,000, while in the city itself they are said to have formed the majority of the population (Le-Goz). Decades may have elapsed, however, before the monks learned that the 'Sahib' held John the Baptist in honour and baptised their children, and so came to believe that this baptistic people were already semi-Christians, and needed only a little instruction in order to become good Catholics. The Discursus which is annexed as a supplement to the Norma provides the arguments to be employed in persuading the Mandéan priests; but the latter were not to be won over by such simple means. Thereupon the missionaries, bent upon gaining their end, induced the pasha to order the Sahib, under threat of fines or bodily penalties, to attend the Roman Catholic place of worship and observe Sunday according to the Christian practice of resting from servile work on that day. In this way the work of conversion was set on foot, supported, however, by doles of food and clothing to the children of the poorer Mandéans.

About this time the Mandéan communities suffered a considerable loss from another cause. In the early years of the 17th cent. the Mandéans, who had already embraced the commercial monopoly on the Persian coast was challenged, and by way of strengthening their powers of defence they resorted to the employment of mercenaries. To the Portuguese missionaries this provided an opportunity of winning into the Christian faith and receiving Christian baptism (Le-Goz, della Valle). The fortified inshore island of Hormuz, which commanded the entrance to the Persian Gulf, was invested by British merchants and the military forces of the 'Duke' of Shérza in 1622, and surrendered on the 1st of May of that year. The prestige of the Portuguese was at an end; their missionaries withdrew from Basra, and the Mandéans once more enjoyed freedom in their religious services. Of the period Gov. Le-Goz makes no mention. Islam, while the rest reverted to their ancestral faith—'et ne s'en conserva pas quatre Christens' (Le-Goz).

42. In Basra in the time of Ignatius a Jean.—The place of the Portuguese Jesuits was taken by an Italian mission of Disclosed Carmelites under the leadership of Ignatius a Jean. Within a few years Ignatius came to realize that great or lasting results would never be secured among the Mandéans while they lived in Persia, and he devised the plan of persuading them to emigrate to Christian territories. From the Portuguese vicerey in the Indian Ocean he obtained a guarantee that Mandéans who so desired would receive grants of land in the colonies under the viceroy's authority, on condition that they would give their allegiance to the Roman Catholic Church. The offer of settlements in Ceylon was accepted by many who were eventually received into the Catholic fold upon being allowed to take their priests with them and to remain loyal to their faith; but, notwithstanding this, a number of Mandéans were sent forth, such migrations having taken place, as has been ascertained by Assemani from documents of the Congregatio de propaganda fide, in the years 1629, 1633, 1646, and 1650. The whole affair, however, came to very little, and all that Ignatius himself says of it is that he had once sent to the
viceroy of Goa a number of men who were to act as the spokesmen of their people, and also to look for suitable residences in Ceylon, and that at length on the 27th June 1668 the Mandaeans, so-called, wives and children, had set out for Muscat. It may be remarked that between 1638 and 1668 the Portuguese were gradually expelled from Ceylon by the Dutch.

43. Numerical strength of the Mandean communities in the 17th century.—Information regarding the numerical strength of the Mandaeans and their distribution in the contiguous provinces of Turkey and Persia has, so far as we know, been published only through the labours of J. Petermann, who has stated that in 1651, when 2000 families were located in Persia, and 500 families in Basra, the total number of Mandaeans was 2500. In 1665, when the said number had been increased to 3000 families, and 500 families were located in Euphrates, the total number of Mandaeans was 3500. This information, which, unfortunately, bears no date, comprises the area through which the Mandean communities were scattered, and gives on its lower margin a list of the towns in which they were located and the number of families in each community. We find an aggregate of 3279 families living in 31 settlements. By far the largest figure, exactly 2000, is conjunct with Huwaiz, in Persia, and next comes Timn with 500 families and Basra with 400, then one place with 50, two with 30, and others with numbers ranging from 2 to 20, while to four place-names a dotted line is attached, and to several others only a stroke. We shall therefore only err in assuming a total of some 3000 families.

44. Reports of European travellers since 1650.—Ignatius a Jesu left Basra in 1650 or 1651, and the Christians no longer endeavoured to win the Mandaeans, one of whom had to be as speedily as possible anointed as priest, nor was there any attempt to water the mission-house was abandoned, and that the banner of the Cross continued to wave from its roof, while the pasha still received his annual gift; but, when Jean Thévenot lodged there in 1665, he found the church to be tenanted only by a single Italian monk, and that the church stood open for prayer not only to Europeans, but to Nestorian and Armenian Christians. Shortly afterwards, when the station had once more been brought into working order, its director, the Carmelite Archdeacon a S. Theresia, was obliged to expend a considerable sum of money to procure Mandean MSS for Robert Huntington, who lived in Aleppo from 1671 to 1673. The vendors were a couple of Mandaeans, one of whom had to be as speedily as possible anointed as priest, while the other had become a convert to Islam.

A long period elapsed during which little or nothing was known regarding the Mandaeans reached Europe. Paragraphs devoted to them (and often referred to in encyclopaedias in J. Chartin, Logiques, etc. (Paris, 1806, ii.), and F. KNAEMPFER, Annali d'Island, etc., fasc. v. (Leipzig, 1712), simply repeat accounts previously published. In 1765 Carsten Niebuhr visited Basra and found that only a few 'Sabians' lived there; he had their alphabet transcribed for him by a naval lieutenant of whom, of J. R. Wellsted, who, in the spring of 1654, spent three months in Susi es-Siyukh on the Euphrates, learned the Mandean language from the priest Yibo (Manda' an), and in the latter's company was permitted to be present at a number of ceremonies, including the five days' baptismal festival. At length, however, a much greater addition to our knowledge was contributed by the information given to him by a mandean, who had been brought before a judge. The judge translated for the traveller the words of Yahya, who exhibited to his curiosity the manuscript, French vice-consul at Bagdad, in 1875. The fullness and accuracy of the communications are explained by the fact that the informant, before embracing Christianity when about twenty-five, had received an education qualifying him to become a Mandean priest, but it was necessary to state that his knowledge of the Mandean doctrines and legends was wholly dependent upon a late version, from which every difficulty had been expunged (cf. JHE, pp. 17, 19), and that he could describe the methods and customs of his people only in their most recent phases of development.

45. The Mandaeans in the 19th century.—The books of Petermann and Siouti contain observations from which we may learn how the Mandaeans had fared in the long interval from the 17th cent., and it would seem that in this period, too, the vicissitudes of their ordinary life were due to suffering; and, lastly, about the year 1850 30 families in Shushter alone are said to have seceded to Islam, and 'many Mandaeans' are reported to have done so about 1825. The great pestilence which ravaged Persia and Mesopotamia in 1831 carried off the entire population of Shushter; in except of two Ignatii, and at some unspecified date the Mandaeans forsok Basra owing to its deadly climate. In the vicinity of Huwaizn only 25 families remained, all the rest having removed because the river had dried up almost entirely. The second great disturbance which caused the Mandaeans to leave Shushter was the war of 1841, when the district, however, was ruled by a Bedawin sheikh, who so afflicted the village with chicanery and extortion that about 290 of the 260 families composing the local Mandean community abandoned it in 1852 and removed to Annahra on the Tigris, where the second largest community (about 100 families) had enjoyed a more favourable lot under Turkish rule. Petermann also mentions Qurna, at the confluence of the Euphrates and the Shatt el-Arab, to be inhabited by 1000 families, all of which had long since completely dried up. Sitq es-Siyukh (which does not appear in the list subjoined to Thévenot's map), or rather the village of Subbye on the other side of the river, had become one of the main domiciles of the Mandean community. Shortly afterwards, the Shatt el-Arab, with 4, as well as the Persian towns of Dizful with 80, and Shushter with 31. He makes an aggregate of about 500 families, with 10 Mandaeans in a large number of families, with 10 Mandaeans in 6 in Turkish and 5 in Persian territory, and his estimate of the total number of Mandaeans is 4000, of whom 1500 were males. These two enumerations bring us to the years 1854 and 1875 respectively. Whether any Mandean communities still exist the present writer is not in a position to say.

On the Mandaeans in the 16th and 17th centuries: V. GIustin di Pietro della Valle and Pellegrino, La Persia, Rome, 1658, pp. 410-414; P. F. IGNAZIUS a Jesu and others, Narratio originis, Rituinum, et Errorum Christianorum Natiov Joviantis, Cui additurus Discursus per vanum Dianon in quo consu- tantiur XXIII Errores et judex Natis, Rome, 1658 (the title of the text consists of an earlier account which, with the Discursus, had probably been written during the time of the Portuguese mission). Yahya, who exhibited to his curiosity the manuscript, French vice-consul at Bagdad, in 1875. The fullness and accuracy of the communications are explained by the fact that the informant, before embracing Christianity when about twenty-five, had received an education qualifying him to become a Mandean priest, but it was necessary to state that his knowledge of the Mandean doctrines and legends was wholly dependent upon a late version, from which every difficulty had been expunged (cf. JHE, pp. 17, 19), and that he could describe the methods and customs of his people only in their most recent phases of development.

1 According to a statement of Pietro della Valle, dating from 1622, the Mandaeans in Persia lived principally in the district of Ramaul na, not far from Huwaiz.
MANETHO.—This historian of Egypt was born at Sebennytos, the Thoth-Noferet of the hieroglyphic inscriptions, and lived during the reigns of Ptolemy Lagi and Ptolemy Philadelphus. His work comprised nearly the Gr. form of Anet en Tebuti, 'Gift of Thoth'—equivalent to the Gr. Ἰησοῦν Εἰγύπτου. The following works have been attributed to him, some of them on doubtful authority:

1. (η) Εὐσεβεία, (δ) Βιβλίον Σεβένη, (ε) Περὶ Βίβλου, (ζ) Συμπέρασμα, (η) Περὶ Εὐσεβείας, (ζη) Περὶ καταστροφῆς κυρίων. Its reputation rests upon the Εὐσεβεία, a history of Egypt which he compiled at the request of Ptolemy Philadelphus. The first part of his work dealt with the mythical era in the history of Egypt, and the first eleven of the thirty historical dynasties; the second began with the XIth dynasty, and ended with the XIXth; the third comprised dynasties XX.-XXX. The work was written in a style unusual and perished, with the exception of the list of kings, which has been preserved in corrupt and incomplete forms by Julius Africanus, Eusebius, and George the Syncellus.

An examination of these king lists shows that in many particulars Julius Africanus and Eusebius do not agree in their rendering,—i.e. in arrangement of the dynasties, in the lengths of the reigns, and in the total number of kings assigned to the various dynasties and to the Africanus and Eusebius; 536 kings reigned in about 5524 years, while, according to Eusebius, only about 361 kings reigned in 4480 or 4780 years. The version of Africanus is clearly the more accurate of the two, agreeing best with the monuments. Authentic dates are found, and it is beyond a doubt that Africanus had access to the actual work of Manetho. The version of Eusebius was based on that of Africanus, and shows carelessness in the copying of both names and figures. It will thus be seen that the work of Manetho must be received with some caution, for his king lists have become very corrupt; and it is probable that the Christian writers who transmitted his system, being unable to refer to the accepted Biblical chronology, have curtailed his lists to some extent. Nevertheless Manetho's work remains the standard authority on Egyptian chronology, and upon it all attempts to restore that chronology must be based.

The chief original authorities with which his work may be compared are: (1) the Tarin Royal Papyrus,—lamentably mutilated, and badly restored; (2) the Tablet of Abydos, containing a list of 73 kings, dynasties L-XIX; (3) the Tablet of Saqqarah,—47 royal names in practically the same order as (2); and (4) the Tablet of Karnak, containing a list of 61 kings—the cartouches are not arranged chronologically. The lists of Manetho are much more complete than any of these; and it is to him that we owe the accepted distribution into dynasties.

Opinions differ widely as to the value of his historical work. A period in which he was regarded as a mere fabricator was succeeded by its recognition, and his authority was considered practically unimpeachable. Thus Lenormant says:

"He is now the first of all authorities for the reconstruction of the ancient history of Egypt." (Hist. of the East, i. 283.)

More modern authorities are sharply divided. Adverse opinion may be represented by Breasted's sweeping dictum:

"A late, careless and uncritical compilation, which may be given wrong from the contemporary monuments in the vast majority of cases where such monuments have survived. Its dynastic totals are so absurdly high throughout that they are not worthy of a moment's credence, being often nearly or quite double the maximum drawn from contemporary monuments, and they will not stand the slightest criticism. Their accuracy is now maintained only by a small and constantly decreasing number of modern scholars." (Hist. of Egypt, p. 28.)

This is so sweeping as to suggest bias at once; and, when it is remembered that an exactly opposite judgment is pronounced by authorities of such standing as Maspero and Flinders Petrie, its oracular tone becomes merely ridiculous. Maspero's verdict is as follows:

"The system of Manethe, in the state in which it has been handed down to us by epigraphists, has rendered, and continues to render, service to science; if it is not the actual history of Egypt, it is sufficient to help to elucidate the true history of the period, and defective, but it is better and more manageable. And it is necessary, when we wish to understand and reconstruct the link between events, to give it the benefit of the doubt, to choose the more reasonable way for each event and correcting the evidence. This does not mean that Maspero's work is chronologically correct, but only that it is the only way of working out the events and revolutions of which the monuments have preserved a record." (D'Urville, p. 71.)

Still more emphatically favourable is Petrie's judgment:

"An authority of the highest order. . . . The internal evidence is strong for the care given to his work by his editors. . . . Manetho has been often accused of double reckoning, by stating two contemporary dynasties or kings separately. . . . But Maspero has been often accused of double reckoning, by stating two contemporary dynasties or kings separately. . . . So Maspero's work is chronologically correct, but only that it is the only way of working out the events and revolutions of which the monuments have preserved a record." (Deutsche, p. 71.)

Possibly the truth may lie somewhere between the two extreme opinions, and Manetho may be neither so careless as Breasted alleges nor so immaculate as Petrie affirms. In any case, even his detractors cannot afford to do without him; for every reconstruction of the history of Egypt is based, and will continue to be based, on the historical framework which he has provided.

What system of dating we are to derive from his dynastic scheme and other sources is another question. Here also there is fundamental disagreement. As far as is known, the only work that has been made is the literature of H.I. Bibby. It is practically no difference between the various schemes of dating, and Egyptian chronology may be looked upon as settled with only a few years' margin of error up to that period. Beyond that lies chaos. The Berlin school, represented by Meyer and Breasted, dates the beginning of the Ist dyn. at 3100 B.C., and that of the XIth, fixed by astronomical data, at 2500 B.C. This school is still clinging to the accepted Biblical chronology, and the so-called 'ela media' seems to lead nowhere. The massive gap between Petrie's dates and those of the Berlin school is due to the fact that Petrie holds that the advocates of the shorter system have dropped a whole Sothic period of 1400 years out of their reckoning. If the astronomical foundation be sound, the truth must lie either with the shorter or with the longer system, and only further
research can bear the problem. Meanwhile the tendency has been somewhat in the direction of the Berlin system, which, according to Petrie, "deals all the history and the collateral facts which support it." Yet, as Overbeck, 24, p. 37; and Duhg wire, credit remains unsolved.

In addition to his service to chronology, Manetho has contributed, though only at second-hand, two interesting traditions of Egyptian history. These are preserved by Josephus (c. Apion, i. 26 i.), and give a somewhat nebulous account of the Hyksos-invasion, and the narrative of the expulsion of a race of lepers and uncivilized peoples, which may conceivably represent the Egyptian tradition of the Hebrew Exodus.

Manetho's chronological scheme is too long to be given in detail, but will be found, in part or in whole, in most of the Egyptian Histories—e.g., completely in Judge, Hist. of Egypt, i. 130-140.

JAMES BAIRIE.

MANICHÆISM.—1. Sources.—Manichæism, the religion of Mani or Manes, is one of those systems which are usually classed together under the name of Gnosticism. The Manichæan religion arose in Babylonia about the middle of the 3rd century B.C., and during many generations exercised great influence both in the East and in the West. Of the literature of the Manichæans very little has survived. The fragments of Manichean MSS which have lately been discovered in Central Asia present great difficulties of interpretation, so that, while they confirm much that was previously known, they do not enable us to form a connected idea of the subject. The attempts which have been made in modern times to prove that some well-known books, in which there are allusions to the Apocryphal Gospels and Acts, are of Manichean origin must be pronounced wholly unsatisfactory. Hence our information respecting this religion is derived almost entirely from non-Manichean authors, most of whom wrote with very hasty and partial views. As our conclusions must depend largely on the relative importance which we attach to the various sources, it is necessary first to give some account of them. They fall into four main groups: (1) Oriental Christian sources; (2) Zoroastric sources; (3) Western sources; (4) Muhammadan sources.

(1) Oriental Christian sources.—These have, in some respects, the greatest claim to consideration. The Aramaic-speaking Christians of Syria and Mesopotamia were the race, in language, and in general culture nearly akin to the primitive Manicheans, and had every opportunity of becoming well acquainted with the new religion. Unfortunately very little of their testimony has come down to us. Aphraates, in the first half of the 4th century, the earliest Syriac author whose works have been preserved in any considerable quantity, briefly alludes to Manichæism as a dangerous heresy:

"The children of darkness, the doctrine of the wicked Mani, who, as the time has shown, has spread his absurdities, has been banished from the spiritual world (i.e. astrology), the doctrine of Babel." More information may be gathered from the works of a younger contemporary of Aphraates, the well-known Epiphanius of Nisibis, commonly called Epiphanius Syrus. References to Manichæism are found in several of his writings, especially in a series of five discourses, entitled Lettres à Hypatios. The treatise against Manichæism composed by Gabriel, bishop of Hormizdshir, in the 6th century, seems now to be lost. Later Syriac writers, such as Theodore bar-Khônî and Barhebrus, do not supply much that is of importance.

Among Oriental Christian authorities we must also reckon the Armenian writer Enzik of Kolb, who lived in the 6th century, and Sa'id ibn al-Bitriq, generally called Eutychius, who was Patriarch of Alexandria from A.D. 933 to 938.

(2) Zoroastric sources.—The evidence contained in Zoroastrian literature is, if anything, scantier than that which may be collected from the works of Oriental Christians; moreover, it is much more difficult to interpret, owing partly to the unsatisfactory condition of the text and partly to our imperfect acquaintance with the language. The vehement denunciations of Manichæism which are found in Zoroastrian books bear witness at least to the dread with which the Persian priesthood regarded the rival faith.

(3) Western sources.—Accounts by Greek and Latin authors exist in far greater quantity, but they are, from the nature of the case, much less trustworthy. Manichæism was so essentially Oriental (i.e. non-Hellenic) in its character that the Christians of the West would probably have had considerable difficulty in understanding it, even if they had been wholly impartial. That this was out of the question hardly needs to be stated. The strangeness of the system was doubtless an attraction to some, but those who are attracted by mere novelty are usually uncritical, while the attitude of uncom-

1 On Aphraates see W. Wright, Short History of Syriac Literature, London, 1893, p. 52. The Homilies of Ephraim have been re-edited, with a Latin tr., by L. Parisot (Paris, 1894).

2 Hom. iii. Why the Manicheans were accused of astrology will appear later on.

3 The first of these discourses and part of the second were published by H. Poggio in his Inscriptiones undantiae duos episcopos (Avignon, 1897-99). It is borrowed in part from Epiphanius; and hence cannot be regarded as purely Oriental. Cf. also F. Comont, La Composition manichéenne, d'apres Theodore bar Khôni (Recherches sur le Manichéisme, 1), Brussels, 1915.

4 The testimony of the Manichæan Church is derived partly from his Syr. Ecclesiastical History, partly from his Arab. Compendium of the Dynasties, ed. 1899, p. 1292 ff.

7 Perhaps the most important passage on this subject is that which W. E. West has translated in his Peshab Texts, ii. 216 ff. (SCE xxvi. (1919), 58-62). Eutychios' treatise manicha. (Prag. 1915, re-edited by H. E. B.)
MANICHÆISM

promising hostility, which was adopted by the great majority of Christian theologians, naturally proved even less favourable to accurate comprehension. The foreign origin of Manichæism is duly emphasized. The work by which this notice, which the

librarians, in the several times, and the present work, was translated into a Latin translation, made

from a Greek text of which we possess some long fragments. According to Jerome, the book was originally composed by Arethas himself in Syriac ('Syro sermones') and afterwards translated into Greek. But it object from the study clearly proved that Arethas is not the author, and that the narrative is to a large extent, if not entirely, fictitious.

Nevertheless, some modern writers have endeavored to show that, through the work, in ascribing the Acts to Arethas, he was right at least in believing them to be composed in Syriac. The arguments which Kessler has advanced in support of this theory have been shown by T. Noldeke to be worthless. The author of the Acts, whoever he was, evidently possessed no accurate information about the country in which he placed the scene of his story. For example, he represents the river Stranghas as the Western boundary of the Persian Empire—a notion which is derived from the Greek Romance of Alexander the Great (pseudo-Callisthenes), as Noldeke points out. A writer who was capable of falling into such mistakes can scarcely be supposed to have had any definite knowledge and must be therefore the work of someone else, by one of his followers.16 He afterwards mentions a Manichaean work entitled The Treasure, but whether this is identical with the book cited previously cannot be determined. In either case it is important to observe that, according to Titus, the Manichaens made every effort to conceal from outsiders the writings of their founder, apparently in obedience to his express orders. Another fact, not less significant, is that Titus professed to have softened down the expressions which he found in his source: ‘these are not the words used by him, but this is what he meant to say, translated into more decent language.’17 In estimating the evidence supplied by the Book of the Treasures, this tendency must be constantly borne in mind.

A more popular but a much less respectable authority is the Acts Archenlhi, a work which professes to record a dispute between Manes and Arethas, bishop of Persia.

17. Titus, p. 21; and cf. the passage (bk. 1, l. 23) quoted above in the Account of the Manichaean ceremonies (bk. 1, l. 22). The muttering use of mine, mine, etc., in allusion to the name Manes, is extremely common. 18 Syr. viii. 60, etc. 19 See bk. viii. 60, etc. 20 Syr. i and ii. 63, etc. 21 The name is doubtless. Possibly the author, or a later writer, may have confused the two places, Karkha and Karkshar; the latter form agrees with that given by Ephraem in his version of the story.

Here for the first time we meet with the remarkable theory that Manichæism originated, not with its reputed founder, but with a certain Sycyannus, from whom the system was passed on to Manes. These two are extant in a Latin translation, made from a Greek text of which we possess some long fragments. According to Jerome, the book was originally composed by Arethas himself in Syriac ('Syro sermones') and afterwards translated into Greek. But it object from the study clearly proved that Arethas is not the author, and that the narrative is to a large extent, if not entirely, fictitious.

Nevertheless, some modern writers have endeavored to show that, through the work, in ascribing the Acts to Arethas, he was right at least in believing them to be composed in Syriac. The arguments which Kessler has advanced in support of this theory have been shown by T. Noldeke to be worthless. The author of the Acts, whoever he was, evidently possessed no accurate information about the country in which he placed the scene of his story. For example, he represents the river Stranghas as the Western boundary of the Persian Empire—a notion which is derived from the Greek Romance of Alexander the Great (pseudo-Callisthenes), as Noldeke points out. A writer who was capable of falling into such mistakes can scarcely be supposed to have had any definite knowledge and must be therefore the work of someone else, by one of his followers. He afterwards mentions a Manichaean work entitled The Treasure, but whether this is identical with the book cited previously cannot be determined. In either case it is important to observe that, according to Titus, the Manichaens made every effort to conceal from outsiders the writings of their founder, apparently in obedience to his express orders. Another fact, not less significant, is that Titus professed to have softened down the expressions which he found in his source: ‘these are not the words used by him, but this is what he meant to say, translated into more decent language.’ In estimating the evidence supplied by the Book of the Treasures, this tendency must be constantly borne in mind.

A more popular but a much less respectable authority is the Acts Archenlhi, a work which professes to record a dispute between Manes and Arethas, bishop of Persia.

1. I. xi. 31. 2 ed. A. Brinkmann, Leipzig, 1895. 3 Of the four books into which this work is divided only the first two and the beginning of the third have been preserved in the original Syriac; but all four are extant in a Syr., which must have been made very early, as it is contained in a Brit. Mus. MS written in a.v. 644. 4 By Brinkmann, p. 578. 5 The best edition is that of P. A. de Lagarde (Berlin, 1859), who also edited the Syr. version. It is to be noted that the br. text has a long insertion (printed as an Appendix by Lagarde, pp. 60-103) which is absent in the Syr. 6 In Sylloge P. 1884, p. 470, August Brinkmann has endeavored to prove that this piece is a fragment of a book against the Manichaens by Severus of Tammis, a friend of Athanasius. 7 'Ακτο τους εν ξεια τους εν άλλος εν έλθες (bk. 1, l. 21); ἆλλος δε σαμινα τ' έν άλλος εν άλλος εν έλθες (bk. 1, l. 22). 8 These states that the source used by Titus was the work of a certain Addeus: εν έπει τους και Λαπροτος γραμμες, αλλα σαμινα τνα τνα τνα τνα ακτα (bk. 1, l. 40). 9 Explanations in the Notes: the name of the Manichaean writer is the same as that of the author of the De utilitate, and his name is borne in the Manichaean ceremonies (bk. 1, l. 21). 10 The name is doubtless. Possibly the author, or a later writer, may have confused the two places, Karkha and Karkshar; the latter form agrees with that given by Ephraem in his version of the story.
union of the *Ezatike* Church. In its present shape this document cannot be older than the 9th century. It consists of a series of anathemas, directed partly against doctrines and partly against persons, put together without any definite plan. Several of them are undoubtedly Manichaean, but some emanate from other sects, and some appear to be gross misrepresentations. Yet, in spite of the unscrupulous manner in which it is compiled, the *Formula of Abjuration* contains a certain number of interesting facts and will be of interest to Oriental Christians and less misleading than those by Western writers.

For this several causes may be assigned. In the first place, the Manichaean scholars to whom we owe these descriptions wrote from a historical, rather than from a controversial, point of view. Moreover, some of them at least had access to very ancient and trustworthy sources of information; for Babylonia, the political centre of the Manichaean Empire, was also the ecclesiastical centre of Manichaeism, and accordingly, in that country the text and the traditional interpretation of the Manichaean Scriptures were most likely to survive. It is true that after the Manichaean conquest the Aramaic language gradually declined and became so obscure that the knowledge of it never wholly died out, as we see in the case of the Christians and the Mandaeans, who have retained their sacred books, in their respective Aramaic dialects, down to the present day.

Almost all Manichaean historians, who treat of pre-Manichaean or early Manichaean times take some notice of Manichaeism, but the authors from whom we learn most on this subject are the following: (a) Ibn Waddh, also called al-Yaqubi, who in A.D. 891 composed a *History of the World*; (b) Muhammad ibn Ishao, who probably lived at the end of the 10th cent. of our era, and is known as the author of the *Fihrist*, i.e. *Catalogue*, a great storehouse of information respecting literary works of various kinds; (c) al-Hariri, who died A.D. 1018, of the most learned men that the East ever produced, the author of a book on *Chronology* and other important treatises; (d) al-Shahraustari, who died A.D. 1153, the author of a work on the history of the Nestorian and Manichaean sects. All these authors write in Arabic, although the last two were of Persian nationality.

The story of Mani in the *Sixth-century Firdausi*, the well-known Persian epic poet, is almost entirely legendary, and the same may be said of nearly all the popular Manichaean accounts, whether written in Persian or in Arabic.

2. The founder of Manichaeism.—With regard to the history of the founder we are mainly dependent on Manichaean writers, and the Western authorities either tell us nothing definite or else repeat, more or less faithfully, the legends contained in the *Acta Archelii*. The story there related is briefly as follows:

In the time of the Apostles there lived a man named Sychassus, who is described as coming from *Sycia*, and also as being a *Saramos* by race (vex *genere Saramocho*).

2. Col. publican published under his death by J. Buerger and A. Muller, Leipzig, 1871-72. The section relating to Manichaeism was published separately by Flugel, with a Germ. tr. and introduction by J. C. M. Weber under the name of *The Martyrium, seine Lehre und seine Schriften*, Leipzig, 1892. The author of the *Fihrist* is sometimes called al-Nabi, but it is doubtful whether this name, or rather nickname, belonged to him or to one of his ancestors.

He settled in Egypt, where he became acquainted with the *wisdom of the Egyptians*, and invented the religious system which was afterwards known as Manichaeism. Finally he emigrated to Palestine, and, when he died, was buried in the hands of his sole disciple, a certain Terebinthus. The latter betook himself to Babylonia, Nevertheless, the *Manichaean*...
Before he was twenty-five years old he had privately gained a few disciples, but he began his public propaganda on the day when Shapur, who was the king of Persia, had already captured the town of Ardashir, was crowned king (March 20, A.D. 242); he succeeded in securing the patronage of the king's brother Peroz, and through him obtained access to the royal library. In the course of his travels he may have visited Central Asia, India, and China, but it does not appear that he ever penetrated evil, or death, but that he held the kingship, and was able to think and to deliberate of thought and volition; in other words, his dualism was of the imaginative, or poetical, not of the philosophical kind. The following is an abstraction of the account given in P. We. 1900. Originally the light and the darkness bordered on one another, but were mingled, the light being limitless above and the darkness limitless below. The Preserver, who is called the King of the Paradies of Light, but the realm of light includes also an atmosphere and an earth which are co-eternal with the heavens. The unseen and the seen, the earth and water, the wind, the light, the fire, the sun, the moon, and the stars, are all animal and vegetable organisms, but even objects which we regard as wholly inanimate, such as metals, contain portions of divine light. Hence the distinction was made between the elements of light and the elements of darkness. Out of this confusion the heavenly powers fashioned the actual world which, as is known, consists of all animal and vegetable organisms, but even objects which we regard as wholly inanimate, such as metals, contain portions of divine light. Hence the distinction was made between the elements of light and the elements of darkness. Out of this confusion the heavenly powers fashioned the actual world which, as is known, consists of all animal and vegetable organisms, but even objects which we regard as wholly inanimate, such as metals, contain portions of divine light. Hence the distinction was made between the elements of light and the elements of darkness.

1. Wisdom and deeds have always from time to time been brought forward by the Manichees as evidence of this in one age they have been brought by the messenger called Bihdha to India, and again by Sabour (Shdpara'jdn, Susa, in another by Zarathushtra (Zoroaster) to Persia, in another by Jesus (brinkmann, he saw very clearly that these conclusions had been reached by abstract logic or by any kind of scientific induction; on the contrary, they claimed, no less than the primitive Christians, to be in possession of a direct revelation from God. Thus Mani himself says, in a passage which al-Biruni quotes from the Shdpdragn (see above):

2. The fullest list of Mani's writings is to be found in the P. We. 1900. The works of the Arian titles are done away, and even those which are certain seldom give us any clue as to the nature of the contents.

3. That king Shapur was ever connected with Manichaeism, as al-Biruni states, is very improbable.

4. The fullest list of Mani's writings is to be found in the P. We. 1900. The works of the Arian titles are done away, and even those which are certain seldom give us any clue as to the nature of the contents.

5. According to al-Shahristani, some Manichaeans held that the mingling of the darkness with the light had taken place blindly and by accident (khu), while others regarded the Manichaean akh as 'motion without order' (aswara) as 'motion without order'.

6. It is inexact to compare this narrative with the parallel passage in Turkestan, bk. i. ch. 17. For 'the Primal Devil' Prima substitutes 6., for 'the Devil' 6.

7. The nature of these gods is not clearly defined; they are regarded as the offspring of the gods, and are called 'the first man' (ed. Brinkmann, p. 6.).

8. The moon, as it waxes and wanes, is compared to a bucket which alternately fills and empties itself.

9. It is to be observed that Adam, the first man (in Arabic 'al-khawil al-anwar'), is wholly distinct from 'the Primal Man' (al-khawan al-adn).
As we learn from the passage of the Shāhānāgōja quoted above, Mani held that a series of divine revelations had been promulgated in the world by Buddha, Zoroaster, Jesus, and finally Mani himself.1 Al-Biruni adds that Mani, in another of his books, speaks of being the mediator of the final revelation announced by Christ,2 and this we learn from other sources also, both Christian3 and Muhammadan.4 As the Muhammadan authorities use the Greek word, it may be assumed that it was used by the Manichaean writers themselves, but we are not to conclude that Mani knew Greek, still less that he had read the NT in the original. The term Paraclite was in common use among Aramaic-speaking Christians, from whom Mani doubtless borrowed it. Precisely what meaning he attached to it is a question not easy to answer. From the statements in the Fibhist as to his parentage and birth we may infer with certainty that, though he laid claim to a divine commission, he did not profess to be more than a human being in the ordinary acceptance of the term.5 And it is to be observed that in the Shāhānāgōja the earlier prophets, including Jesus, are placed on a level with Mani. This would seem to imply that they also were regarded as mere men. Nothing, therefore, can be found that Christian authors, such as Titus of Bостa and Augustine, frequently represent Mani as holding a Doceitic theory with regard to Jesus, namely, that He was not born of a woman and that therefore Christ was a phantasm. This is a phenomenon of a-certaining what was really the Manichean doctrine on this point is still further increased by the statement in the Fibhist that Mani pronounced Jesus to be a devil (ab)ās.6 The Fibhist informs us (p. 336, line 16 ff.) that one of Mani's works, The Book of Secrets, contained a chapter on 'the son of the widow, that is to say, according to Mani, the crucified Messiah, whom the Jews crucified. How the strange phrase 'the son of the widow' is to be explained, and how this passage is reconciled with that in which Jesus is said to have been called a devil, we have no means of determining. But, whatever the Manicheans may have believed as to the origin of the historical Jesus, the nature of his body, etc., it would seem certain that these men, who had denied the fact of his crucifixion, hence, according to Augustine,7 they were in the habit of contrasting the unreal sufferings of Christ with the real sufferings of Mani, which they solemnly commemorated by an annual festival at which they placed in a reliquary the Manichaean writers say very little on this Christological question may be due to the fact that here their own views happened to resemble those of the Manicheans.6 The teaching of Mani as to the duties and ultimate destiny of individuals was in accordance with his theory of the universe as a whole. Since the visible world has as its aim the separation of the light from the darkness, practical religion must consist mainly in the furthering of this process. The divine element in man must be freed from its fetters in order that it may return to its heavenly source. With regard to this part of the Manichean system much misconception has prevailed in the West, from the time of Augustine to the present day. The divine element in man is not to be identified absolutely with the soul, though the Manicheans sometimes used language which admitted of such an interpretation. Yet, if we examine the following passage, it will be clear that, when they spoke of the soul as divine, they meant only that it contained something divine; and even this was not asserted with respect to the soul of every individual.8 Another misapprehension, initiated by the Manicheans themselves, is: Duabus Animabus, that man was represented as having two souls, one good and the other evil.9 In reality the passages which are cited as proofs of this theory allium only the existence of two opposite 'teaching' Sula, the one 'righteous man' the other 'unrighteous man'; but the soul itself is not wholly good, the soul is not wholly evil; for, according to the Fibhist (p. 335, line 16 ff.), the Manicheans held that after the death of the righteous man the 'power' contained in his body, namely, the water, the fire, the breeze, have to be extracted by 'the sun, the moon, and the shining gods,' and then 'the rest of his body which is altogether darkness is cast into hell.'

But, although it was the duty of all Manicheans to take part in the liberation of the light from the darkness, their share in the great work naturally varied according to their several capacities. First of all, a broad distinction was made between the ordinary Manicheans, who were known as 'the Hearers' or 'the Combatants,' and the inner circle of teachers or necties, whom Western writers call 'the Elect' (e.g. Eusebius, Electi) and Muslimahans al-Nabijun. The Elect again were subdivided

1 Cum kepse a voso querere olim temporum, qui vos suadens, qui causa causa, quod facta Domini perperaque nulls interdum a pancia temporis celebrati frequentat... mulis vigili, nullo proferens innumer discebentaribus, nullo denique fisipes apparente... cum vestrum hanc, id est, diem quo Manichaeanus occisus est, quinque gradibus instructus tribunali... nec prefato litiges adhuc nunc in promptu posit et objecto adarboribus, magnae honorium postquemata... hoc ergo cum quererem, respondente ille diem passionis celebrans... tibi vero posses sustinebamus... si Manichaeanus adorabat... qui non poenae retributionis... magne verum sed nimium carmen humani orinis ostendentes... non punctualiter, sed fore resurrectionem (Augustin., E. Epistola, Fundamentum, viii.)

2 It is well known that, according to the Qur'an (iv, 157), Christ was never crucified; but, when His enemies sought to say Him, He was removed from the earth and a likeness was made to appear to them. Futhera more, the Qur'an clearly states that Christ does not imply any denial of the reality of Christ's body. That Muhammad borrowed the conception from the Manicheans is very improbable, both because of the absence of any allusion in the Quran, and because the Manicheans were considered an abundant mine of divine light and wisdom, whereas the other 'proselytes not' were considered by Islam as being understood in the sense of its etymological equivalent in Syri...
into several grades and formed an elaborate hierarchy, at the head of which stood the representative of Mani himself. But the position of the Ecclesiastics, or priests of the Christian clergy, inasmuch as the Elect exercised no sacerdotal functions properly so called. Whether Mani instituted anything of the nature of a sacrament is doubtful: in any case, if there were Manichean sacraments, they cannot have occupied an important place in the system, since the Oriental authorities make no mention of them, unless, indeed, we apply the term 'sacrament' to such practices as prayer and fasting. Hence the main characteristic of the religious life of the Manichæans, that Manichæans 'the three seals,' which Augustine more definitely characterizes as signaenum avis, signaenum mamuth, and signaenum sine. The first 'seal' imposed restrictions with respect to food and speech. The second, with respect to outward acts, the third with respect to thoughts and desires. Thus the Manichean asceticism implied no thought of expiation; the idea that self-inflicted suffering atones for sin—an idea which has exercised so dominant an influence in some sections of the Christian Church—was quite foreign to the religion of Mani. The prohibitions which he issued are based upon the belief that certain acts, such as the destruction of life and the intercourse of the sexes, are diabolical, and therefore retard the liberation of the light. In matters of detail the Manichean code naturally appears arbitrary to us; it is evident that in drawing the list of prohibited foods, which is the 'Satanic' and what is now Mani was guided much more by his fancy and by various casual associations than by any abstract logical principle. Thus, for instance, all Manichæans were forbidden to eat leeks. The Elect abstained from both flesh and wine; they were also forbidden to pluck fruit or vegetables, so that the food on which they subsisted had to be supplied by the Hearers. Similarly the Hearers were allowed to marry and to engage in worldly avocations, whereas the Elect might neither marry nor acquire property, 'except for one day and clothing for one year.' It is remarkable that among the things most strictly prohibited by the Manicheans, fasting and magic. As in nearly all Oriental religions, fasting played an important part. Sunday was observed as a fast-day by ordinary Manichæans, Monday by the Elect; viz. Zaddik, 'the righteous,' which we may assume to have been the form employed by the Manicheans themselves in C. W. Mitchell, op. cit. I. 50: 'A Manichean who is called a *Zad- dick,' p. 127 n. 3: These idle women of the party of Mani, those whom they call Zaddikoth.' Neither Kessler nor any previous writer seems to have noticed that from the same Syr. word is derived zaddik, or zaddik, 'herein,' a term which was applied especially to the disciples of Mani by the Persians of the Sassanian period, and afterwards by the Manichæans. Various other interpretations of this word have been proposed, but none that is at all plausible. The substitution of nd for dd is a phonetic change for which there are many analogies. That a term which was originally used as a title of honour should afterwards have acquired an opprobrious sense is likewise quite natural: cf. the term, Keter, from, *sopher, the Persian term for the 'Heaven' and the 'Elect' respectively are Niyoshah and Vildghosh. According to Augustine (c. Faustianum, 1.), the Elect were supposed to celebrate a kind of Eucharist in their secret meeting, and the Manichean Eucharist, at least as described by him, was thought to be the same as the Eucharist of the Christian Church. The prohibition of idolatry is the first of the ten commandments which, according to the *Fihrist (p. 333, line 140), all Manicheans were required to observe.

there were also monthly and annual fasts. Of the prayers, which were recited several times in the day, the following specimens are given by the author of the *Fihrist (p. 333, line 140):—

(1) Blessed is our Guide, the Paraverte, the Ambassador of Light, blessed are his guardian angels and adored are his shining hosts.

(2) Adored art thou, O shining one, Mani our Guide, source of brightness, branch of life, thou great tree which art wholly medicinal.

(3) Io prostrate myself and adore, with a pure heart and a truth-speaking tongue, the good god, the Father of Lights, the Essence of Lights, adored and blessed art Thou, all Thy majesty and Thy blessed words which Thou hast called, 'I adore' a man who adores Thy hosts, Thy majesty, and that which seemeth good to Thee, because Thou art the God who art alone, the Lord and holiness who art concealed.

(4) I adore and prostrate myself before all the gods, all the shining angels, all the lights, and all the hosts, who proceed from the great God.

(5) I prostrate myself and adore the great hosts and the shining gods who by their wisdom have pierced, expelled, and overcome the darkness.

(6) I prostrate myself and adore the Father of majesty, the Great, the Luminous:—

It will be noticed that these utterances contain not a single petition, no confession of sin, and no reference to the need of pardon. But we should not be justified in arguing that such conceptions were alien to the Manichean system, since their stress seems to have been laid on repentance and the forgiveness of sin. Therefore, since the Manicheans did not admit the idea of a propitiatory sacrifice, their theory of the forgiveness of sin necessarily differed from that which is accepted by the great majority of Christians. Precisely what Mani himself taught on this subject we cannot hope to determine; but the view which appears to have been current among the Manicheans, at least as early as the 4th cent., was that repentance naturally leads to forgiveness, 'since man is not punished for sinning, but for failing to grieve over sin.'

With respect to Mani's doctrine of the future life we have somewhat fuller information. The division of mankind into three classes, the Elect, the Hearers, and the Wicked, is here specially emphasized. The Elect, immediately after death, ascend by means of 'the pillar of glory,' to the moon, and thence are conveyed to paradise: the Hearers must pass through a long process of purification and of wandering to and fro, before they join the Elect; while the souls of the wicked roam about the world, in a condition of hopeless misery, until the final condemnation, and are then consigned for ever to the realm of darkness. 

4. The relation of Manicheism to other religions.—When we consider the complex nature of Mani's teaching, it will not surprise us to find that very different opinions have been expressed as to its general character and its connexion with other religious systems. Until comparatively recent times it was the fashion to represent Manicheism, and Gnosticism generally, as a mere fantastic perversion of Christianity. When Zoroastrianism and Buddhism began to attract serious attention in Europe, the real or apparent resemblances between these religions and Manicheism naturally gave rise to theories that Manichæism is a combination of Christian with Zoroastrian or

1 For 'holy,' 'blessfulness,' we should no doubt read *eusebèia,* as Socleæ has suggested.

2 That is, apparently to use the above passage— the Arab, verb dâ'a seems here to be a rendering of the Arab. gâru, on the use of which see E. Förstemann, Inscriptions budéennes, p. 43, and note 1. Here follows a short clause which is unintelligible.

3 See Baur, p. 262, and the *Khaemustafi,* ed. A. van Le Coq (JELES, 1901).

4 Non enim puritrit quae pecavit sed quae de pecato eum dedit' are the words of the Manichean Secundinus, cited by Augustine (c. Secundinum, 1.).

5 Fihrist, p. 333. In this passage we find nothing which distinctly confirms the statement of Augustine, and it seems more likely that the Hearers and of the Wicked were believed to pass into plants and animals (c. Faust. bib. v. 10, de Hær. xlvii). At the same time the idea of notopsychia is not definitely excluded.
Buddhist elements, but whether Christianity, Zoroastrianism, or Buddhism formed the basis of the system was a disputed point. During the last twenty years the prevalent tendency has been to explain everything in the ancient world as due to Babylonian influence; hence Zoroastrianism and all other forms of Mysticism are simply modifications of the old Babylonian beliefs.

But to those who impartially examine the sources none of these hypotheses will appear satisfactory. Whatever elements Mani may have borrowed from Oriental religions, it is clear that the fundamental principles of his system are neither Zoroastrian, Buddhist, nor Babylonian. The relation in which Manicheism stood to Christianity was undoubtedly closer, but to call Manicheism a Christian heresy would be misleading. The characteristic feature of the system share with primitive Christianity are not necessarily derived from any Christian source; they are, for the most part, products of a general movement which, as mankind outgrew the older religious systems, rearranged and assumed various forms, according to the special circumstances of each case. The general movement in question has been well described by H. Odenberg as a shifting of the centre of gravity, in religious milieus, without reference to the actually existing religions, for the sake of the primitive Christianity.

The ancient conception of religion, as a sort of offensive and defensive alliance between man and God, a mutual agreement whereby the worshipper secured for himself prosperity, success, and victory over his enemies, gradually faded away, or sometimes was violently shattered, and in its place there arose a new form of belief, which held much more of earthly enjoyment, triumph, and dominion, but rather of rest, peace, and redemption (Buddhism, Berlin, 1897, p. 3).

In the time of Mani the old heathenism was a no-man's land, and Judaism, the Zoroastrianism had become the religion of the State. Moreover, large Jewish colonies had long been established in the country. Of the early history of the Christian Church in those regions next to nothing is known, but it is certain that the time was ripe for the beginning of the 3rd century. Christianity had taken root among the Aramaic-speaking population which occupied the Western provinces of the Parthian Empire. It is also tolerably certain that the Christians of Babylon were divided into various parties, and that their beliefs sometimes diverged widely from the ordinary orthodox type. In particular the sect founded by the Syrian Christian Bar-ajáin (Barjesanes), who died in A.D. 222, seems to have had great influence. Ephraim Syriac was the teacher of Mani; this is not meant to imply that Mani was born a Barjesanes, but merely that he adopted certain Barjesanist doctrines. In any case it is essential to realize that Manicheism arose in a country where several religions were competing with one another, and where, in consequence of this, various hybrid sects had been formed. Of such sects we have already had an example in the Mithraic-sce, the community to which Mani's father attached himself.

The hostility of Mani to popular paganism is sufficiently shown by his strict prohibition of idolatry. That he clearly distinguished between orthodox paganism and Zoroastrianism appears from his inclusion of Zoroastrians among the messengers of God. He must, therefore, have regarded the Zoroastrianism of his own age as corrupt rather than as radically false; but how much he actually believed in the theory that Zoroastrianism as a separate religion, till after the overthrow of the Parthian dynasty (about A.D. 224) rests on trustworthy evidence.

The Hodie, and oriental Christianity (London, 1894), relates chiefly to the Christianity of Edessa and its immediate neighborhood; but much of what he says probably applies also to Babylonia.

The view that Zoroastrianism did not become the State religion till after the overthrow of the Parthian dynasty (about A.D. 224) rests on trustworthy evidence.

1 See, for instance, the beginning of the account of Manicheanism in al-Shahristâni (i. 150). The statement in the Firdaus (p. 326, line 8, ff.), that Mani rejected the prophets generally, is an exaggeration based mainly on his treatment of Moses.

2 In this respect, of course, Mani did not differ from some of the early Christians. Thus the Epistle to Diocletian, which is usually regarded as a product of orthodox Christianity, speaks of animal sacrifices in terms of contempt for them, and even in Rabbinical literature a tendency to disparage sacrifice occasionally shows itself.

3 Mani's dualism was due mainly to Zoroastrian influence would be an unwarranted inference of a very vague kind. It is manifest, however, that in matters of detail he appropriated freely elements derived from very different quarters. Thus we can attach no great importance to his adoption of certain ancient Babylonian myths, e.g., such as relate to the nature and movement of the heavenly bodies. In like manner he borrowed narratives, directly or indirectly, from the OT, although his general attitude towards Judaism was one of decided opposition. That he refused to recognize Moses as a prophet is abundantly proved by his influence in Christian writings directed against Manicheism the defence of the OT generally occupies a prominent place. It is probable that Mani's aver- sion to Judaism was largely due to his horror of a practice which Judaism noted, more than any other with popular paganism, namely, the sacrificing of animals.

Towards Christianity he was much more favourably disposed. Whence he derived his information on this subject and his view of history of Christ, can only be but that the great part of the NT had been translated into Syriac some time before Mani was born, we cannot safely assume that he had access to it, Much of his peculiar teaching as to the person and history of Christ, which is not found in the NT, seems to have been derived from a later source, and may have been made ab above, may be due in some measure not to perversion of the gospel narrative on his own part, but to the beliefs of his Christian informants. In any case it is clear that some of the more essential features of primitive Christianity, in particular the ascetic view of the present world, were thoroughly congenial to Mani. But he had one great advantage over the Christians, namely, that he provided a much more secure dogmatic basis for asceticism than any other teacher.

The Christian ascetics, in conducting natural feelings and appetites, were constantly hampered by their theory of God as the creator of the universe in general and of man in particular; belief in the distinction which they were taught to make between human nature and as such and human nature in its present corrupt state gave rise to endless difficulties. On the other hand, the Manichean dogma that humanity is of Satanic origin, however shocking it may be to modern sentiment, greatly simplified the problem. In this, as in some other points, Mani displayed a boldness and originality of conception which entitile him to be regarded as a genius of the first order. To represent his system as a mere patchwork of older beliefs is therefore a total perversion of the facts.
sect, scattered over a great part of the Persian Empire and drawn from the ranks of various older religions. Some of them belonged to the Persian aristocracy; hence the bitterness with which the Zoroastrians accused their see. If al-Walid, Mani's immediate successor, as head of the community, was a certain Sia (Gr. Σαίος). For many centuries Babylonia continued to be the headquarters of the Manichean organization, in spite of repeated persecutions on the part of the Persian government. Now and then there was a king sufficiently powerful and intelligent to restrain the intolerance of the priests, but as a rule the Manicheans were treated even worse than the Christians. For this no political party could be held, since the Manicheans were politically offensive, whereas the Christians not infrequently brought persecution upon themselves by an ostentations display of their philo-Byzantine sentiments. The principal result of these attempts to suppress Manicheism in Babylonia and Persia was that large numbers of Manicheans took refuge in Central Asia, where they carried on a successful propaganda among the Turkish tribes.

The precise date at which Manicheism began to spread in the Roman Empire is not certain, but it was undoubtedly well known there early in the 4th century. With respect to its prevalence in N. Africa, two or three generations later, Augustine furnishes the densest evidence. Though as we might have expected, showed themselves no less intolerant towards Manicheism than the kings of Persia. In the persecution of the Manicheans Pope Leo I. played a specially prominent part. As to the extent to which the charge of Manicheism was brought against the Byzantine Empire and the Albigenses (p. r.) in Provence, but how little these accusations prove may be gathered from the fact that even at the present day the religion of the Russian Molokanye has been described as a modified form of Manicheism.

On the overthrow of the Persian Empire by the Muhammadan Arabs, about the middle of the 7th cent., the followers of Mani in the East enjoyed a period of comparative repose. Strictly speaking, they were not quite driven into hiding by the new religion which was being propagated. The Qur'an, which expressly recognizes Jews, Christians, and Sabians as capable of deserving the favour of God (q. 59. v. 73), does not mention Manicheism. Nevertheless, it would appear that in the early days of the Muhammadan empire no penalties were inflicted upon the Manicheans. The extreme simplicity of their cult, and in particular their abhorrence of idolatry, may for a while have served to protect them from molestation under Muhammadan rule. At length it began to be rumoured that some Muhammadans in high positions had secretly adopted Manicheism. In many cases these reports were certainly false; thus, for instance, the Khaib al-Walid II. (A.D. 749-754), whom Muhammadan historians depict as a monster of iniquity, is accused of having Mani's name inscribed on his episcopal throne. In other cases, however, no shadows were left. Thus in 840., 1 a Persian official, in dealing with persons suspected of Manicheism, describes the curious method of requiring the accused to 'kill ants,' just as Christians. In the Roman Empire, were required to throw incense upon a heathen altar (see E. Rodiger. Christenheims Schweigen, B Stettin, 1838, p. 94). The Sabians (a name which, of course, has no connection with that of the ancient Sabines) seem to have been a sect, possibly a group of sects, who existed in Arabia at the time of Muhammad. The disciples of Muhammad were at first called Sabians by the Persians, and in later ages the title of Sabian was falsely assumed by several religious communities, as a means of protection—e.g., by the pagans of Harran, in Mesopotamia, and by the Manicheans of Samarqand, as we learn from al-Biruni.

1 See the very interesting paper by I. Goldscheider, "Son der Bibel" (Abel-al-Kudus und das Zodiakum während der Regierung der Chalifen al-Malik), in Trans. of the Ninth Intern. Congress of Orientalists, London, 1903, II. 294 f. Goldscheider is of opinion that the Manicheans propagated under the early Abbasids was somehow connected with the anti-Manichean movement of the Persian nationalists (so-called Shabaked). Whether there is any truth in this view may be doubted, for Manicheism had nothing to do with political parties. At the same time it is not surprising that Muhammadans should oftentimes have confused these widely different tendencies.

2 See p. 3059, note 2.1

3 Thus from the statement in Ibn Qutliba, Kitab al-Ma’rif (ed. F. Westenfeld, Gotha, 1850, p. 545) to conclude, with O. Jacob (Arabisches Rechtsbuchlein, Berlin, 1857, p. 107), that there were Manicheans at Mecca in the time of Muhammad.

4 Al-Tahari, III. 588.

6 Pfister, p. 357; Flügel, Mani, p. 106.
of its long history was not altogether free from internal dissensions might have been safely assumed. But the positive information which we possess on this subject is very scanty. We learn from the Fihrist (p. 334, line 4ff.) that at a date which is not specified, but in any case some time before the 4th century, the Manicheans severed their connexion with the central authority established in Babylonia and set up an independent organization; whether this schism was due to dogmatic differences or to other causes it is impossible to say. A second division took place about the beginning of the 8th century, when a branch-sect was formed and became known as the Migliasa, after the name of their leader Miglias. The majority of the Manicheans, who remained faithful to the head of the community, a certain Milhr, were henceforth called the Mihriya. The points in dispute between these parties seem to have been matters of discipline rather than of religious belief.

Laihaobns.—In modern times, the first serious attempt to investigate the subject was made by the French Protestant theologian I. de Beausobre in his colonial work, Historie crée de la religion du maichiane, Amsterdam, 1739. Dealing with the sources he shows considerable acumen, but his book is ill-arranged and contains many irrelevant digressions. An admirable survey and examination of the evidence, so far as it was then available, will be found in The Theology of the Manichees, the translation of J. C. Baur, Das mauchische Religionssystem nach den Quellen neu untersucht, and entwickeh, Tubingen, 1853. Perhaps the best general account is F. Speiser's Erklärung der alten Religionslehre der Manichäer, Stuttgart, 1871-78, 6 vols.

The works of K. Krass—Mani, Forschenage über die mauchische Religion, Berlin, 1809, art. 'Mani, Manichâcher,' in Préf et Pré2—supply much valuable information, but they should be used with extreme caution; the author's speculations are often fantastic and his linguistic knowledge is very superficial. A. Harnack, art. 'Manichäismus,' in Ehr (revished by F. Courtenay in Ehr 1891), is largely based upon Krass's works, and he quotes an essay of E. Rechab, Essai sur Mani et sa doctrine, Geneva, 1897. Very important contributions to the study of the subject are contained in a series of monographs by F. Cumont and A. Kugener, entitled Recherches sur le Manichâisme, Brussels, 1896-1912.

MANIPURIS.—Officially the Manipuris are Vaishnavite Hindus. They cremate the dead, they receive the mantra from a recognized Hindu guru in many but not in all cases, they recognize Hindu festivals (but observe them a day late), they revere the sacred groves, they are kamakari (under the influence of alcohol); but, on the other hand, they do not practice child-marriage, they do not seclude their women, they permit divorce, they permit the remarriage of widows, they do not allow the supremacy of the Brahmin. It is one of the exercises of devout worship to observe a fast which applies to their social order. Knowledge of the Vaishnavite doctrines is spreading with the spread of education, but they are still the most backward of all Hindu groups in Assam. With them Hinduism, adopted as the State religion by royal edict (c. A.D. 1709), is of social and political value in that it separates them from the ruder tribes inhabiting the hills and from the subordinate peoples of the valley. It provides the rites and ceremonies which are the daily bread of the ordinary life.

The historical records of Manipur, Ningthouja, are valid documents for at least five centuries. It is a settled State far removed from savagery. At the present time the population consists of two main divisions—the Meitheis and the Lois. The Meitheis consist of seven clans, each divided into numerous families, the principal clan being that known as the Ningthouja, or royal clan. The name Meithei so borne by all the clans is thought to have been the name of the Ningthouja clan before its hegemony was completely established. The Lois, or the conquered people, are not admitted into the Meithei among the rest. The principal order of divine beings is the simang lai. There were originally, as recent research has shown, nine simang lai, or forest gods, with whom were associated seven latremus, or goddesses. These are now 264 such deities. The gods married with mortals, and their issue were promoted to divine rank. The deities have different names in different places, and there are cases where Rajas have been deified after death. The creator deity is identified both with the chief of the gods and with the snake ancestor of the royal family. Other gods are identified with the clan deities of clans still existing. Yet others are members of a special group, whose function is to guard certain states and who are therefore known either as coolies, watchers over or guardians of direction, or lamalai, gods of definite areas. Here there is obviously a combination of ideas dating back to the time when definite areas were occupied by local groups each possessing a god deity. Then among the simang lai is the rain-god, and last is the god of the household (Sena-meih), who is occasionally said to be the son of one of the seven goddesses. The function of the maniekongkim deities was to keep sickness from entering the house. Each family has a special deity, male or female, who is obviously in origin a deified ancestor, but the worship of some at least of these group deities is not now confined to members of the group. The seven goddesses bear titles describing their functions. From each of them is sprung one of the clans composing the Meithei confederacy. The earth, water, grass, rice, iron, fish, gold and silver, salt, cotton, fire, and the winds are sprung from these goddesses, either directly as the leader of the group or as the group deity has a laiphorn, or god's place, specially sacred to him or her. Some reside on hill-tops, but for the convenience of their worshippers have abodes in more accessible spots. Such laiphorn abound, notably on hill-tops or at the site of a sacred grove, and are marked by heaps of stones and leaves. In the sacred groves near the villages of their special worshippers are houses for the deities, and these groves are sanctuaries for bird and beast. The gods play the national game of polo, and a stick and ball are kept for their use. In some cases they are represented by images or material objects. They also reside in the chief official of the group, village, or family which forms their special clientele. The principal deity is, so far as external features are concerned, the religion of the Meitheis. It exists side by side with the earlier faith to which in the hour of trial and trouble, be they Raja or ryot, they turn unhesitatingly. The continued existence of this earlier faith in such vigour is a notable fact which enables the student of religions development in India to study at close quarters the process by which in Hindum animism is tempered by metaphysic, and magic transformed into spiritual exercises.

The state of the world is depicted as a state of social stress, as is shown by the grief and derangement caused by death. The gods benefit directly by the rites, which give him strength so that he becomes thereby more potent to aid his worshippers. The process of enticing the deity varies somewhat according to the deity, and is accompanied by numerous subsidiary acts in order to avert all evil influence. Special precautions have to be taken—e.g., clean fire must be manufactured by means of a bamboo and a cane in cross friction. Dancing is a necessary accomplishment of the rite, which often includes the use of foul abuse—a feature which gives the god great
pleasure. While the ceremony is in progress, social and sexual tabus, immediately paralleled by the customs of the hill-tribes, are strictly enforced, thus indicating that the purpose of the rite is to maintain the solidarity of social life and to produce in the worshippers a sense of religious efficacy. The social divisions, resting on age and other lines of social cleavage, function separately on these interesting occasions. The offerings are in some cases such as render the active participation or professing Hindus a matter of some difficulty, but the difficulty is surmounted by substituting a Lol, a member, i.e., of the non-Hindu section of the community, for the Hindu believer and by whom and on whose behalf the rites is performed. The Hindu may save his conscience by merely sniffing the savour of the sacrifice, unmindful of the fate of the Pit Alis of Bengal, who fell from orthodoxy by mischance in that manner. In general, the tendency would seem to be to substitute offerings of fruit and flowers for animal flesh. Human sacrifice was undoubtedly practised, probably at no very distant date.

The priests of the ancient order are designated maibis and were, and by the admission of those who become possessed by the deity at one of the high religious festivals. Insanely as sickness and di-sease are attributed to spiritual beings, the maibis is also the doctor of the community, and his practical knowledge of the maibis is far from despicable. The wide-spread belief in possession as a token and source of abnormal power and religious authority is beyond a doubt at the root of many of the customs found in Manipur. There is no evidence forthcoming as yet from Manipur to show that the priesthood is hereditary or that the members of the order, like bhakats and jogis, are regarded as jinnmokta (g.v.), or that their funeral rites differ from those of ordinary people. On its practical side the religion ministers to the simple needs of an agricultural community dependent on the regularity, adequacy, and seasonability of the rainfall for their subsistence. There are rites to secure rain and rites to stop excessive rain. Not the least interesting of the numerous rites to secure good fortune for the State is the annual selection of the chahibtib, the person who gives his name to the year. Various means of divination are employed to the selection of the man who shall bring the good luck that is dependent on his personality.

Beliefs in evil spirits, who accompany animals and fish, and are ever hurtful to mankind, in beautiful stirs who lure young men and make them insane, in vampires, in witchcraft, in the power of trees and of tree-spirits to cure as to cause sickness, and in the maleficent activity of the ghosts of those who die by force of war or who die in childbirth are also notable features of their organized religious system. The rites which are performed for the purpose of protection and exorcism in these cases are full of interesting detail, but in general outline resemble the rites performed elsewhere on a similar level of culture for similar purposes.

T. C. Hodson.

MANITU.—Manitu, a word originally applied by the Eastern Algonquins to a spirit, is properly okei spirit, with the sign m, meaning any spirit or god or being in Hindu, and in a hill of Hinduism, and also any genius loci without the implication of evil. In consequence of the teaching of the missionaries, the conception of one Great Spirit became current among the Indians, and this was expressed by the word ot or keht prefixed to anit; thus Keht-anit, or Kintanit (Kittanit), to which was again added the syllable wot, meaning a mode of existence; hence Kittanitowit, 'the existence (known as) the Great Anito,' the phrase of God as taught by the missionaries. That the Indians themselves had evolved no such conception is abundantly manifested by the absence from any American language of a word capable of expressing the idea of God, the words used in John Eliot's Bible (Cambridge, Mass., 1663) and employed by the Penobscot Indians, Keitawan, Keitanitowit, being merely variants of this artificial compound. As no conception was introduced in opposition to a spirit variously called Hoh, the Evil Spirit, or Maltsun, 'the Wolf.' Another form of the latter appears to have been evolved in antithesis to a contracted form of Keitawan, namely, Tanutau, as opposed to Squantum, the Devil ('angry god'). Manitu is, therefore, the proper word for any sort of a demonium, good or bad, and it has reached a higher significance by purely artificial means.

Nevertheless, the missionaries did not invent the idea of a good spirit, or of an evil spirit, or of a spirit-creator. What they did was to seize upon ideas already current in another form, fuse them, and present to the Indians the fusion (really confusion) as the embodiment, and the explanation, of one another. The Indians believed that a spirit might be a good or a good-natured power, and that he might be an inimical power, and they also believed that a certain ancestral spirit had always been favourably disposed towards his children, but it was far from the thought of the Algonquins that there was an ever good and supreme Great Spirit, creator and benefactor, opposed to a Great Spirit of Evil. Wherever such ideas are found, they reflect the thought inherited from forefathers who had been under Christian influence. Thus the Mandans painted upon one side of the tent a figure representing the Good Spirit and on the other side a figure representing the Evil Spirit, that they might be under the protection of both these powerful spirits; but this is merely the degradation of teaching originally strange to them. They recognized certain spirits who aided and certain spirits who opposed them, but not as in any case Great Spirits. They believed this one great man could control all spirits. Similarly, when the 'epic' of Kuloskap describes this god of the Passamaquoddies as the son of a divine unknown mother and antithetical to a twin evil spirit, as the principle of goodness opposed to a sort of Ahri, it must be remembered that the Passamaquoddies have long been under higher religions guidance than that of their medicine-men. Even the 'vague faith in a Supreme Spirit,' ascribed to them, is derived from the same source. What is original is the conception of a superior being, who is father of the special tribe or race that revere him as leader and helper. In general it may be said that worship is not paid to any evil spirit as such, but also that worship is not paid to any good spirit as such. The manitu is often confused with the wakan of western tribes. But the latter is only less a spirit than a power, like the mana (g.v.) of the Polynesians, which lies inherent in certain objects as well as in certain men. Its possession gives power, not, to the Indian's thought, a supernatural power, but a perfectly natural, although unusual, power. Between the two conceptions lies that of the ordinary okei, which at bottom is one with wakan, but is conceived as containing but a certain number of times a spiritual power. There is some corresponding word to be found in most of the languages of the American Indians, and every one of them con-
notes a power which may be called spiritual. Sometimes it is the purely shamanistic power contained in the medicine-bag at all, but a collection of objects of fetishistic nature, and sometimes it is a spirit, embodied or disembodied, such as the spirit of a waterfall, the spirit of thunder, the spirit of animals, etc. It is a power which may be present in any one, though nowhere otherwise ascribed as inherent in matter or may make itself felt as an expression of spirit. The powers of nature have it, generally winds, storms, productive earth, and animals all have it, though some in larger amount than others. Finally man may have it in certain cases.

But there is no sharp distinction between this power and that found in spirits proper, where it becomes individualized. It is this very power that is the 'medicine' of the conjurer and nature-subduing priest. Whether it be called manitu, oke (oko), waken, or even ku (in Maya form), it is always the same thing under a shifting terminology, except that among certain tribes it is more apt to be conceived as impersonal and among others as personal. Manitu is generally personal, waken is generally impersonated, but the alternate use of either is not unusual. Waken has been defined by Brinton (Myths of the New World, p. 45) as 'supernatural in its etymological sense,' in that it means forms of life among the Iroquois, Hurons, and Dakotas, namely, oke and oke respectively, something 'above,' and Brinton interprets this as super in the sense of supernatural. But it is more probable that the word means super in the sense of superior. These Iroquois and Dakota forms etymologically allied, and a possible connexion with Sioux oke is possible; but it would be unprofitable to attempt, with Brinton, to connect these terms with the above-mentioned ku of the Mayas. The Quaker of the Powhatans is another form of the same word. It is a word, however, not the higher but the lesser spirits.

This word, like Tan'tun and Squantum above, is an adaptation from approximately corresponding Indian sounds (Quaker is qyi-oki, 'small spirits') and contains the oke of the Iroquois and Algonquins, but it is not probable that it is one with the southern kucon, ku, etc. The Algonquin oke means a spirit of any sort—e.g., the spirit of a body of water, the spirit of winter—and expresses also the idea of an essentially dynamic wind, but not in a devilish manner; for, especially among the Hurons, the oke gives good fortune and regulates the winds for the benefit of the good Indian. It also implies a ghost, and in this respect differs from the English concept; in other respects it is difficult to perceive any distinction between the anim (manitu) and the oke; perhaps, as appears from the geographical distribution of the two words, the anim was confined to the East, while the oke penetrated from the West to the Eastern tribes.

The manitu of greatest authority among the Algonquins was Michabo, and an analysis of this peculiar being shows that he was far from being a supreme spirit. Like many of the Indian spirits, he was a very superior animal, Michabo meaning 'great hare' (originally manibocho). This manitu was revered from the Northern line of the States to Virginia and from the East as far West as the Mississippi. He was represented as the creator of all the system of conjuring and exorcising which makes the real science of the medicine-man; he ruled the winds and guarded his people, but was as often tricked and deceived as he in turn tricked and deceived; he was the terror of the buckoon, whose exploits amused the Indians, as those of Brer Rabbit amused the Negroes. On the other hand, he is referred to as 'the hare that made the moon,' and he is even said to have created the earth. But as creator he is not dignified, nor even serious. It is more natural to him to hunt, steal, and carry off the fruit of the earth, and when not thus engaged he is very often seen with his pipe before turning in to sleep through the winter. It is the smoke of his last pipe that makes the haze in the air of autumn. That he originally came from the East, and, according to the earlier accounts, somewhere near the Mississippi, is now known as Michabo, which appears as Missibizi and Messou as well as Nanibozho and Manibozho, apparently because the name was sometimes rendered michi ('great') and sometimes manitu ('spirit'), with wabos, 'hare.' That is, Michabo was thought of as the 'spirit-hare' or as the 'great hare,' and this 'hare,' according to Brinton, is a later Indian mistake for 'light.' Although the words are alike, and wabos means 'white' (tepeo means the eastern light), yet nothing is more apt to lead one astray than reliance on such etymological chances.

We are, then, far from agreeing with Brinton when he says that 'beyond a doubt this is the compound in the names Michabo and Manibozho which is therefore meant by Great Light, the Dawn' (ibid., p. 160). Michabo has done more for American studies, he wrote under the dawn-myth influence of his day and probably laid more stress upon etymology than upon etymology. The truth is that the 'great hare' is the interpretation best justified in accordance with Indian belief and tradition. Michabo was a demoniac animal of kindly disposition and endowed with a great magician's knowledge and cunning, which, however, could not keep him out of illustrous difficulties; the tiger gods being good; but, as has been said of similar Indian spirits, a spirit of good-nature. He is the son of the wind, one of four brothers born at a birth, but he took command of them. As they were born North, South, East, and West, it seems as if he represented one of the four winds. Yet the early missionaries declared that he and the four winds were the chief Algonquin gods. As expressed in the account of the year 1616, Michabo and the four winds were the power ruling the winds at that time. Further, it must be remembered that Michabo is sometimes portrayed (as among the New Jersey Indians) as a devil, while at others he is represented as the 'ancestor'—a term which has often led to the great conclusion that believe in an ancestor spirit must necessarily believe in a creator-god. Other tribes also have ancestral or at least specially revered animals, such as the bear, deer, and wolf of the Mohicans. None of the Western or Southern American Indians had the conception of a Creator-God, but many of them derived their stock from certain animals. To this class of animal-gods Michabo, the greatest manitu of the East, appears to belong. The history of the brothers is told in various forms in various tribes, and has been interpreted as additional evidence that, when there is a good and a bad brother, we have a fundamental dualism, which, however, is unsubstantiated by any close analysis even of the tales as handed down. In the Iroquois version there are two brothers, the Beautiful Spirit and the Ugly Spirit or Good Mind and Bad Mind, as interpreted by the missionaries. But these are in reality the two brothers, 'White' and 'Dark,' Ioskela and Toseka, who met in the woods and were another till White Spirit conquers and rules from the East. Both are grandchildren of the moon, but Ioskela becomes 'father of mankind'—an expression which means that he is the ancestor of
the Iroquois. He destroyed the frog, which had made earth a desert by swallowing all the water, and he learned the wisdom of the tortoise which supports the world, namely, how to make fire. In the knowledge of this, and often of the power, the brother is not represented as an animal; it is a simple conflict of white and dark, or light and darkness, a culture-myth which the Algonquins kept in animal-form, while the Iroquois preserved or invented it without losing the myth upon anything save the natural antithesis of light and darkness (cf. art. DUALISM [American]). It is this myth that caused the belief in American Indian dualism to receive wide, acceptance, as it was thus essentially interpreted by Brant in 1626.

As the word manitu has been widely used by ethnologists, it has naturally lost somewhat its original signification and at the same time has gained a new connotation, so that it has come to mean special forms of spirit-power more or less unknown to the Algonquins. Thus it has come to denote the personal guardian-spirit of certain Western tribes which has occasionally arisen out of the personal guardian of an individual. The myth that is that of a god who in his life retires into solitude, and after fasting and prayer is rewarded with the vision of a certain animal, which then becomes his totem. This is adopted by his clan and, when the clan becomes powerful, is organized for ceremonial purposes as the guardian of the clan, though with a marked tendency to become simply a totem-crest. The tutelary guardian-manitu thus becomes a mere symbol. Sometimes such crests become merely the property of the guardian of the ancestors who received the totem-manitu received with it the powers or privileges still retained by the protectés of the spirits, who continue to appear to the young men of the tribe, and the possession of these secrets forms the basis for the secret societies widely spread among the Indians of the Northwest. This is the 'individual totem' acquired by every youth at puberty, which, when the organization of the clan is in a decayed state, is no longer identical with that of the ancestor and is no longer inherited. The youth at this period wanders from his father's lodge and in a secluded spot fasts and cries to the spirits, inviting any one of them to become his spiritual patron (cf. art. COMMUNICATION WITH SPIRITS). If he survives, when he falls asleep, the first animal, bird, or reptile of which he dreams he considers to be the one designated by the Great Spirit of the tribe for his mysterious protector during life. He then returns home with such an animal as he has seen in his dream, and preserves its skin in his mystery-bag ('medicine-bag'). It is possible that the individual manitu, though in some cases a later development than the clan-totem, is in other cases notably among the Eastern tribes, of independent origin and as antique as the totem-manitu. Even among the Eastern Algonquins the acquisition of a special manitu-spirit in animal form by the youth who fasts is not unknown.

E. WASHBURN HOPKINS, M.A.

MANJUSRI. —Like the majority of Buddhist 'gods,' Manjusri is represented under various aspects: (1) in the Great Vehicle, or Mahayana (q.v.), properly so-called, he is a bodhisattva, an entirely Buddhist personage in definition if not in origin (his origin is obscure; cf. AVAROKITESVARA); (2) in the 'Tantric Vehicle,' which is of very early date and is not always distinguished from the Great Vehicle proper, Manjusri becomes one of the names, and often the principal, of a world-vehicle, for example: (1) the cult of Manjusri, originating in India, took a peculiar development in China: it probably spread from China into Nepal, where Manjusri is the mythical giver of civilization.

1. As Bodhisattva. —The most famous of his numerous names is perhaps Manjushreya, 'pleasant voice.' Its usual epithet is kuumbra, or kuumrabhuta, 'young man.' 'royal prince'; this title, whatever its origin, means technically a bodhisattva at the stage where having received consecration (abhihek) as a prince, he is associated with the power of a Buddha and becomes his right arm (see BODHISATTTVA, vol. II, p. 748). He is named in the first rank of bodhisattvas, before Avalokiteshvara, as the beginning of the List of the True Law (translated into Chinese a.d. 147-190), where he is represented (cf. xi.) as a great converter. The 'scholastic' sitras and devotional works give him as a type of bodhisattva, a holy vow, attribute to him moral qualities peculiar to true believers of the Great Vehicle, and celebrate his power. Legend associates him with the revelation of the body of the Prajnaparamitā.3 Revealer of the Prayit, god of the Word, he is the patron of the 'Madrid' and becomes the god of wisdom, a personage of high importance. According to Fa-Hian (see J. Legge, Fa-Hien, A Record of Buddhist Kingdoms, Oxford, 1886, p. 46), the 'followers of the Manjushri' killed the Yakshas, the gods of the earth, and Manjushri became a god of the universe.

We have many images of Manjushri; the most ancient, with two arms, are those which make his characteristic mark the Prayit carried upon a lotus.

2. As Tantric god. —It is in the Tantric section of the Tibetan scriptures (Royog, Konjug, and especially Tanjur) that Manjushri takes an extraordinary development. Half a dozen Tantras (Konjug) bear his name; among them is 'The List of the true Names of Manjushri.' A name is: (1) Essence-of-knowledge (?),3 is opposed to the name bodhisattva, and is more dignified. We find it again in one of the numerous magic rituals devoted

1. On this expression see H. Kern, in SEP. xxii. (1884) 4; cf. Suddhamapunyatara, ed. H. Kern and B. Nanjo, Petrograd, 1890, p. 16: 'a certain period of live twelve cosmic ages, not counting the time he is kumara.'

2. Various legends are told of his former human lives, but they are not so developed as the legends relating to Manjushri's relations to Buddha

3. "Ch. Chayana, 'Le Sutra de la paroi occidentale de l'inscription de Kiu-yong Kean,' in Manjushri, vol. vii. 225 (this sutra is a dharmas, sacred to Vairocana, 'the Brilliant,' the Buddha to whom Manjushri is sometimes subordinated); (2) the Manjushrisukakarstara (translated into Chinese a.d. 390), where Manjushri tells how he took this bodhisattva vow; (3) the Mahāprajñāpāramitā (translated into Chinese in 312), a book patronized by the Mahayana, giving the story of the conversion of a light woman by Manjushri in the guise of a handsome young man; the only real sin of the bodhisattva is the sin of lusted (asakṣa-mćchchaya, p. 140). Manjushri's works are scholastic, as in the Bodhipaksa-śāstra, an account by Manjushri of the 'wings' (pokt) of illumination. The devotion to Manjushri, the virtue of his name, which protects against all female birth, and his glorification as the hero (bhadra) are to be noted. Manjushri is one of the 'Stambas of Good Practice' (Bhadragāraṇīṣṭha), one of the classical texts used every day by the Bhikṣus of the Great Vehicle (Nāyākārama-śāstra, pp. 267, 268; Boddhitātvanasūtra, [introd. à la pratique des futurs Bouddhas, Paris, 1907, p. 87]).

Taranujav, Fotos, des Bodhisattva, tr. A. Scheiner, Petrograd, 1895, p. 22.

6. Probably this term has been invented on the model of bodhisattva for the purpose of implying sovereignty; it is less ancient and yet more mysterious, than the word bodhisattva. This heaping up of terms is characteristic.
by the Tanjur to Manjusri: 1 spell (sādhana) of the Adinatha, the Essence-of-knowledge Manjusri, 2 which begins thus as follows:

"Hymn to the Buddhas of the beginning, the middle, and the end, free from every stain of sin, a body immaculate by nature, primordial Buddha.

Sādhana (spells) are magical operations by means of which the worshipper brings a deity into his presence in order to identify himself with the deity. But it is not difficult to accomplish, since every man is essentially nothing but deity, though particularized and stained. These operations include "diagrams" (māndalas), geometrically drawn and inscribed within each other, upon which is ranged an endless succession of deities, represented by magic syllables. 3 Manjusri often occupies the centre of these māndalas.

Tantric gods have two aspects, a 'right-hand' aspect and a 'left-hand' (or erotic) aspect. Under the former Manjusri is called 'Lord of speech of the ontological Universe' (Dharmadhātu-Vajravāra); under the latter he is "Diamond-Love," 4 'Thunder-bolt-Love' (Vajra-phāna). 5 His right-hand aspect is represented from the following:

"Oh sūntātha the Dharmadhātu-Vajravāra, who has a body complete, four faces, four arms, half black... the five kinds of knowledge of which Manjusri is the synthesis orms his crown of joyous... the two malas (or globes) are the source of the prostration... the three others are the gale, the face, the hache; the three others of gauche, the le vel de la Prājñā."

Here, Foucher goes on to say: the book, the four arms (the eight is simply a multiple), and especially the four faces, suggest representations of Brahmā. Grünwedel remarks that Manjusri and Brahma share the favours of a common sakti (divine energy, feminine aspect, of a god). Sarvatvā 6 is noteworthy, and shows that the Nāma-mantrājñāti (viii. 19) gives Brahma among the names of Manjusri. As soon as the Buddhists and bodhisattvas became 'gods,' they inevitably became gods after Hindu fashion; Avalokita has more likeness to Siva, and Manjusri to Brahma. Manjusri always occupies an important, and often the chief, place in Buddhist polytheism.

3. As developed in China. — E. Huber was the first to observe that the canon of one of the Buddhist schools of the Little Vehicle, the Hinayana (g.r.), contained traditions foreign to India—c.g., the legend of a town of Khotan—and he wondered, therefore, whether this canon had not been considerably augmented and modified in Turkestan itself. He has shown correctly that "SemiSia" 7 and later, China itself collaborated in the development of Buddhism. The story of Manjusri, who, according to the Chinese pilgrim, 8 now dwells in China, who is represented in the miniatures of the Nepalese MSS as a god worshipped in China, 9 and who, according to the Nepalese tradition, came from China to Nepal, is interesting from this point of view. 10

MĀRA. — It seems that during the so-called late Vedic period, new gods, gods of a new style, were created. They wear, on the one hand, an aspect which is popular and mythological, and, on the other, one which is sacral and cosmic; they are the expression of a pantheistic and pessimistic philosophy; but they, nevertheless, appeal to devotion and worship. Brahmā-brahman is the most eminent among them. Kāla, 'Time,' creator and destroyer, Kāma, 'Desire,' a cosmic entity, and many others may be embodied in the figures of the popular pantheon. Our Brahmanic information on these gods is, as a rule, scanty, and, in many cases, we are largely indebted to Buddhist or epic sources.

This is the case with Māra, who is not unknown in the Atharvaveda, that aristocratic compendium of demonology; he is an important figure in Buddhism, and the Upaniṣads show the elaboration of the ideas which constitute his frame in Buddhism. The Atharvaveda joins together Yama, the old Aryan king of the dead, Mṛtyu, Death, Agha, Māra, the evil slayer or hateful murderer, Nīthā, the destroyer, and Sarva, the prototype of Siva (vi. xxii, i). Elsewhere (xi. viii. 19) it mentions the 'deities called Misfortune, or Ill, or Evil' (pāpānta, pāpam, or pāpa), and the "deprecatory invocations (vi. xxv. i-2, xxvi. 2, xvii. 29) to Misfortune (pāp- man). Māra, or Mṛtyu, is Death personified, the god who kills, and he has already acquired his Bud- dhist qualification pāpam, 'the evil one' (Pali, pāpapāpa). With this dark figure may be identified Yama or Sarva, also a mythological god.

That is what we know of Māra from the oldest literature. He quickly acquired a metaphysical and moral significance. For the thinkers of the Brahmanas and of the Upaniṣads, who admit transmigration and are anxious to find the path to the other shore of transmigration, Māra, or Death, may be regarded as the sovereign of this subsolar universe; whoever obtained a certain number of lives before he reaches the goal of immortality.

For the common people, the recurrence of birth and death is the rule; the sun is Death. The legend of Nachiketas in the Rāthasaka Upaniṣad is of importance for the history of Death: a young Brahman descends to Hades, and, un- moved by all promises of transient pleasures, wrings from Yama, the god of death, the secret of that which lies beyond death and the means of liberation from death, this only means being the knowledge of Brahman which confers immortality.

H. Oldenberg rightly compares this Nachiketas-Yama legend with the Buddha-Māra legend. Buddha also rejects the offers of Māra in order to obtain the sāmanāh bhumon; but, whereas Yama is the tempter, 1 in the Buddhist scriptures all these promises are fully developed. Māra actually assumes the role of the sovereign of the world, both of men and of gods; god of death, he is also the god of the living, who are only the food of death; he is the god of re-birth. Māra is Kāma, 'Desire,' since desire is the root of Ehe and birth. Kāma, Desire, Re-birth, Death, and Māra, because 1 Oldenberg, Buddha, tr. Hoyt, p. 64.
MARCIONISM

Buddha is the deliverer from death and birth, Māra is the personal enemy of Buddha and Buddhism, the evil one, the tempter of Buddha and Buddha's disciples.

The dogmatic position of Māra is clear in all our texts: Māra embodies desire, the universal fetterer, the sensual life both here and in the other world.

In scholasticism three Māras—devaputra māra, the deity Māra, muraṇāmāra, Māra as death, and klesomāra, Māra as vices and passions—are distinguished. In ancient times these Māras were confused; Māra is not an allegory in the Pali stories of temptations; he is a demon; he is spoken of as Nānuchi, a Vedic demon killed by Indra.

It follows that mythological features are not wanting, even in the oldest tales of the Pali canon. They are not, however, predominant. We are actually confronted with the temptation of Buddha by Māra's daughters; but these daughters are Desire, Unrest, Pleasure (Tān̄hā, Arati, and Rati).

It has been said that these stories—the intervention of Māra in order to make the future Buddha abandon his austerities (a common topic in the Mahābhārata: gods grow jealous of the power acquired by penitents, and dispatch fair damsels to trouble their meditation), or in order to make Buddha abandon the realized beings are only poetical descriptions of the crise de conscience of Sākyamuni. This view is by far too rationalistic. Such stories, it may be, were looked upon in this light by some philosophers or 'modernists,' but it is safer to admit that the Buddhists believed in a divine enemy of the eternal welfare of men, and embodied this enemy in the traditional god of death. Mythical and folk-lore accretions, as well as scholastic conceptions, naturally follow from this belief. The Akan man, and more, when living in the 'hermitages,' knew that Māra could appear to them under any form, and ensnare them into philosophical discussions.

The Sanskrit sources, fate when compared with the Pali ones, but not insignificant even for the restitution of the passages which they have in common with Pali, indulge in much more dramatic and would-be poetical descriptions of Māra's attacks upon Sākyamuni. Some episodes are entirely unknown in the Tipitaka, viz. the battle for the bodhi-tree, the possession of which, for the compilers of the Lalita-vistara, seems to be almost identified with the possession of the bodhi, the Enlightenment itself.

It has been pointed out that even in the Pali canon the Māra-stories show a gradual development, and that the inventions to be found in the more modern biographies of Sākyamuni, the Lalitavistara and the Buddhakatha, mark a further point in this development. There is truth in this statement—the multiplication of Māra's daughters and their counter-attacks, a large part of the mise en scène of the Lalitavistara, are not archaic—but the course of the development is not necessarily a chronologically progressive. Less or more mythological versions may be productions of the same age in different circles.

It appears that the Māra folklore has been more luxuriant than can be judged from the Pali canon. Some bits of popular folklore which have found their way into the authorized literature may be regarded as fragments of a larger cycle. It is only by a mere chance that we know that Māra roams everywhere, 'in the visible shape of murky smoki nalike ghosts, in the invisible souls of the dyning.'

It is worth while mentioning that Māra, who is often associated with Brahma ('the world of men and gods with Brahma and Māra'), has no fixed abode, no heaven of his own, in the official cosmology of the Sarvastivādin (see art. Cosmogony and Cosmology [Buddhist]).

See art. Temptation (Buddhist) for the comparison between the Buddhist stories of temptation and the Gospels.

Original sources, Vedic, Pali, and Sanskrit, have been studied by Senart and Wüschke.

1. DE LA VALLÉE POSSESS, MARCIONISM.—I. The Founder.—According to the earliest and most reliable accounts, Marcion was a shipwaster (nauclerus, or ναὺκρης) of Pontus, and may have been a native of Sinope. The story 1 which makes him the son of a Christian bishop in that region, and declares that he was excommunicated by his father for corrupting a virgin, is, on the whole, improbable, and may have been based on a misunderstanding of some phrase about his corrupting the doctrinal purity of the Church. It is possible that he was born and bred a pagan, and was converted to Christianity about the time of his journey to Rome. But the fact that his system of teaching and doctrine is by-nature and Christian Scriptures makes it, on the whole, more probable that he spent his youth in a Christian atmosphere.

Marcion arrived in Rome in or near a.d. 140—after the death of Hyginus, 1 according to Hippolytus (see Epiph. Hær. xii.). Whether or not a recent convert, he at first became a zealous member of the Roman Church, to which, according to Tertullian (de Exorc. 30), he presented the sum of 200,000 sesterces, a sum to which long trouble arose through his falling under the influence of the Syrian teacher Cerdo, who had a certain connexion with the Gnostics, and whose distinctive doctrine was that 'the God proclaimed by the law and the prophets was not the father of our Lord Jesus Christ. For the former was known, but the latter unknown; while the one also was righteous, but the other benevolent' (Trem. Hær. i. xvii.).

It is easy to see how Cerdo's teaching would lead Marcion into uncomfortable relations with the orthodox Church; and it is not surprising to learn that his gift of money was returned to him, and that he was placed outside the public place about the year 144, and from that date the Marcionite propaganda must have been active, since Justin Martyr tells us in his First Apology (c. 150) that Marcion 'by the help of devils has caused many of every nation to speak blasphemies, and to deny that God is the maker of this universe, and to assert that some other being greater than He has done greater works' (viii.).

2. The doctrine.—The teaching of Marcion may be reviewed under five heads; (a) theology proper, or the doctrine of God, (b) Christology, (c) criticism
and exegesis of the Scriptures, (d) the application of religion to practical life, and (e) the ritual of worship.

(c) Theology.—In theology Marcion's main assertion was that the just God of the law and of the OT generated another, less perfect God revealed in Jesus Christ, the chief attribute of the latter being goodness or loving-kindness. The idea of a dual godhead seems to have come from the Gnostics through Cerdo, and this fact may be connected with the (otherwise doubtful) statement by Clement of Alexandria (Strom. vii. xvii. 107) that Marcion, 'being contemporary with' Basilides and Valentinus, 'compounded with them as an elder with younger men.' At all events, Marcion's theology differed from the Gnostic in excluding any doctrine of avatars, and, indeed, any element which could not be derived from his interpretation of the Jewish and Christian Scriptures.  

Of the OT side by side with opposed statements by Jesus and Paul about God in the NT, he further differed from the Gnostics by abstaining from any attempt at a completed speculative system. The contrasts which he drew out were final, and he did not seek to harmonize them in a higher principle; for him the two δυσκολία were and remained completely separate, in spite of the moral superiority of the God of the NT. The logical weakness of the position is well shown by Tertullian. On the one hand, the introduction of number or plurality was inconsistent with the essence of true godhead; and, on the other, the interposition of the son of God — the Stranger — of a world which had been created by and belonged to another was an obvious stumbling-block.

(b) Christology.—The mode of self-revelation employed by the good God was, according to Marcion, that in the 15th year of the reign of Tiberius Cesar (i.e. Jesus Christ) came down to the Galilean city of Capernaum1—to which Tertullian adds the explanation, 'of course meaning from the heaven of the Creator, to which He had previously descended in the days of His own life.' The relation of Christ to the good God His Father does not seem to have been otherwise defined than by the idea of sonship. Of the human experience and suffering of Christ Marcion took a wholly Doctic view, and ascribed the powers of a human birth, he represented the supposed sudden appearance of Christ in the year 29 as an entirely new phenomenon, without any root in the past history either of the people or of the human race. And, while he regarded the life of Christ on earth and His crucifixion as the means of salvation for men, he nevertheless believed that our Lord suffered only in appearance. On the other hand, he did accept the historical facts narrated in those portions of the Gospel which he followed. Thus he believed to be genuine, and shared the belief of his time in other elements of the Christian creed; thus he laid great stress on our Lord's descent into Hades and His preaching to the men of former generations who were there confined.

Again, as he believed in two Gods, he also recognized two Christs. According to him, the Messianic prophecies of the OT were true predictions, referring, however, not to Jesus Christ but to a yet higher Messiah whom even he as the messenger of the just God of the OT. But his exposition of the work of this Messiah does not seem to have proceeded beyond applying to him the language of OT prophecy.

(c) Criticism and exegesis of the Scriptures.—In his dealing with the Scriptures Marcion combined a high estimate of the objective truth of the OT as a historical document with a startling and audacious subjective criticism of the NT. His mode of handling each was largely dictated by the necessities of his position. Convinced of the fundamental discrepancy between the theologies of the OT and of that which he regarded as the genuine kernel of the NT, he naturally laid stress on every narrative, discourse, or even verse in the Jewish Scriptures which seemed to him to set forth the Jewish as opposed to the Christian view. His treatment of the OT has at least one great merit—he rejected allegorical explanations such as were current among the Gnostics; he took the history literally, and laid full stress on its distinctive characteristics. In the NT, on the other hand, while he similarly preferred the literal to the allegorical explanation, he proceeded ruthlessly in the way of cutting out such books or portions of books as did not fit in with his view of the facts, and in re-editing the text to any extent on subjective grounds. As the Third Gospel, whole he was the only one to adopt this, though in a mutilated and much altered state, as the only reliable portion of the historical writings contained in the NT. To him Paul was the only true apostle of the Man, and he believed the Third Gospel—which he did not call Luke's,—had been written under Paul's supervision and expressed Paul's view of the life of Christ. The other Evangelists he regarded as having written on a false Judaic tradition which had been grown up among the Twelve, and he therefore rejected their works in toto. In the rest of the NT he accepted only ten Pauline Epistles, rejecting the Acts, the Pastoral Epistles of Paul, and the rest of the NT writings so far as known to him. And in the ten Epistles he used considerable freedom in rejecting or altering passages which conflicted with his views. An understanding of his detailed treatment of the NT can be best obtained by reading the fourth and fifth books of Tertullian's adv. Her. xiv. 7.

(d) The application of religion to practical life.—It is easy to see that, however arbitrary and subjective was Marcion's attitude in relation to the Christian tradition and its literature, his main interest lay in the practical aspects of his creed. Marcion was a retiring, but religious and practical. This is shown by the fact that he attempted no higher synthesis, but allowed what seemed to him the irreconcilable opposition between the Creator and the NT God to continue until the end of time. To him the means of salvation was faith in Jesus Christ and in His Father. This faith was to issue in an ascetic life which despised and rejected the works of the Creator, so far as the conditions of human life made them necessary. The condition of asceticism was baptism. A further consequence of this attitude was that Marcion denied the resurrection of the body; the salvation through Christ was for the soul and spirit only. The moral earnestness of the Marcionite community was proved both by the zeal of its propaganda and by the large number of its martyrs.

(e) The ritual of worship.—The aim of Marcion was to found not a school, but a church. Accordingly, in point of order he followed the usage of the orthodox Church, but admitted ecclesiastical to the same privileges in Church worship as baptized persons, and forbade the use of wine in the eucharistic service. Some

1 There is no definite evidence as to whether Marcion knew the Fourth Gospel.
of the peculiarities of usage in the Eastern branch of the Marcionite church may be gathered from the few passages (below) which have come down to us.

He allows not one baptism only, but three after (successive) transgressions, and in place of catechumens who have died he recognizes women to administer baptism—which no one from the other sects has taken upon himself to do—but not to administer a second or third baptism, nor (does he venture) to admit women to be priests, etc.

Marcion's followers seem to have elevated him (at least virtually) to the rank of bishop, and in the constitution of the sect was probably nicely epochal, though on this point we have not much information.

3. Later developments.—Among the followers of Marcion some, like Ptolema and Basilius, were followed their master in recognizing two principles or divine beings; but some, like Apelles, held only one ultimate principle, the God of the NT, while others accepted three independent principles—the Good, the Just, and the Evil. Of these different teachers Apelles is the most interesting. Starting from the Marcionite opposition between the Creator and the NT God, he seems to have regarded the former as 'an opposing spirit' who owed his existence to the supreme God. The materialistic doctrine of Apelles of Marcion, was created by this 'opposing spirit,' and so Apelles also attained an ascetic view of life. On the other hand, he rejected Marcion's Doceism, and held that Christ really felt and suffered in His earthly experience, although He was saved by his nature in the orthodox sense. But he maintained that in the Crucifixion lay the hope of man's salvation.

The doctrines of Marcion were for a time widely spread both in the East—Armenia, Syria, Armenia, Cyprus, Egypt, and perhaps even Persia. After sharing in the persecutions inflicted on the Church, particularly under Diocletian, the Marcionites seem to have enjoyed a period of toleration early in the 4th cent., to judge from an inscription of A.D. 318-319 discovered a few miles south of Damascus, which records the existence of a village community of Marcionites. But their worship was soon prohibited by Constantine. In the West they seem early to have succumbed to the more powerful propaganda of Manicheism (q.v.), but in the East they may have been found to exert a stronger and more enduring influence. We infer from the attention given to Marcion in his personal works, the Ephraim, and from the careful account of their doctrines left us by Eznik, an Armenian writer of the 6th cent., that they counted for much in Eastern Christendom. So late as the 12th cent. the writers of the Divina institutione of Aristotle display an active regard for Marcion.

As the best illustration of the nature of Eastern Marcionism, we subjoin a literal translation of Eznik's Armenian account:

Marcion wrongly introduces a strange element (lit. strange- ness) in opposition to the God of the Law, placing with him also Hyle, by way of essence, and three heavens. In the one (they say) the stranger, and in the second the God of the Law, and in the third his armies; and in the earth Hyle, and they call him the Power of the Earth.

He also orders the world and the creatures, as the law says. But he adds that in union with Hyle he made all that he made, and that out of a woman a wedded wife. And after making the world, he went up together with his armies into heaven; and Hyle and her sons remained in the earth, and they each held authority—Hyle holding the world, and the God of the Law heaven.

And the God of the Law, seeing that the world was beautiful, thought to make it a man. And going down to Hyle in the earth, he said, "Give me thy clay, and from myself I will give a spirit to breathe upon it for a license." Hyle giving him of her earth, he moulded it and breathed into it a spirit, and Adam became a living soul, and therefore was called Adam because he was made from clay. And moulding him and his wife, and putting them in the garden (as the law says), he gave them commandments, and reposed in him as in a common son.

And (he says) the God of the Law, who was lord of the world, seeing that Adam is noble and worthy of ministration, pondered how he could steal him from Hyle and appropriate him to himself.

Taking him nude, he said, "Adam, I am God, and there is no other, and beside me thou shalt have no other god. But if thou takest any other god beside me, I will smite thee, and I will destroy thee in the end." And when he said this to him and mentioned the name of death, Adam, struck with fear, began by degrees to separate himself from Hyle.

And Hyle, coming to give him commandments according to custom, saw that Adam was not obeying her, but was perversely holding to women to administer baptism—which no one from the other sects has taken upon himself to do—but not to administer a second or third baptism, nor (does he venture) to admit women to be priests, etc.

Marcion's followers seem to have elevated him (at least virtually) to the rank of bishop, and in the constitution of the sect was probably epochal, though on this point we have not much information.
round of absorbing and consummating etiquettes which, in the reign of Hadrian, made up the official life of the capital. Through his uncle Antoninus, whom Hadrian appointed Quaestor c. for the administration of Italy, he was brought from childhood into personal touch with the Emperor, and the work attributed to him by Hadrian re-appears even in the formal address of the Christian apologist.

Another influence, which he himself attributes to his mother's fostering care, sank deep into the fabric of his being. In the antiques, the cult of the divinity of Roman religion, dependence upon God, pervaded every turn and act; and from the simpler life of the home and farm the ancient piety and rituals had never died away. Under Augustus the historic festivals and shrines, the ancient brotherhoods and colleges and guilds, of Salian priests, of Arval Brothers, of Vestal Virgins, and others were revived, and a profusion of new cults was introduced. Priesthoods became the dress of leadership and rank, and patriotism found articulate expression in the worship of the Emperor and in countless forms of mystery worship. To this religious complex Marcus was acclimatized from youth. At eight years old he was enrolled among the Salii, the most exclusive and antiques continuity colleges at Rome, and "got all the forms and liturgies by heart." At sixteen, as Profectus feriarum Luti Arum, he solemnized the feast on the Alban Mount; and besides the formal dignities of Pont. Maxim. XF. c. Sacr. Pont., and VII. c. Epul., he wore the cowl of Master among the Arval Brotherhood. The prayer of the college is still extant which besought blessing for him and L. Verus in their conflict with the Marcomanni. At the outset of captivating her people with the solemn ritual of the Lactametria; at Athens he was himself initiated in the Eleusinian mysteries; on the Danube he approved the casting of lions into the stream at the bidding of the Eastern magi. His Stoic monotheism lent itself to sympathy with cults of every kind, as witnesses to the divine power.

2. Life.—His boyhood was given to wholesome and studious disciplines. At Rome he fenced, played the cithara, and extolled the mischievous excitement of the circus and the theatre; at Locrum he rode, hunted, walked, and shared the glee of rural industries and festivals. The correspondence with Fronto, his master in rhetoric, shows the diversity of type. Boyish experiments in philosophy ended in complete conversion under the pen-name of Ariston, the influence of Rutilius, and the charm of Epicurus.

His life falls into three sections: A.D. 121-138, boyhood, ending with his adoption in 128; 138-161, apprenticeship rule, as Caesar and lieutenant to his adoptive father, Antoninus; 161-180, Imperial rule, shared nominally in 161-169 with L. Verus, and from 177 with his son, Commodus.

Till 167, when the Danian campaigns begin, the years are filled with untrivial administrative activities. The Edictum perpetuum of Salvis Julianus furnished the basis of the Pandects of Justinian; Gaius and Papinian immortalize the era, as master-builders among those who reared the great fabric of Roman law. Under the direction of Stoic principles the rigours of the patriarch potestas, the slave-owner, and the creditor were brought within control; protection was accorded to women, children, wards, minors, freedmen, slaves, debtors, and all charitable endowments were multiplied; professorships were established at Universities; and medical service was organized for communities. Commerce, industries, and communications were liberaly fostered by pro-

vision of roads, aqueducts, bridges, and havens, while in special crises, as of famine, war, or inundation, State aid was ungrudgingly extended. The collection and distribution of taxation were vigilantly supervised, and vast extension given to the forms and activities of local and municipal government. Verissimus, according to the remarkable authority of the Christian apologist, in the formal address of the Christian apologist.

Another influence, which he himself attributes to his mother's fostering care, sank deep into the fabric of his being. In the antiques, the cult of the divinity of Roman religion, dependence upon God, pervaded every turn and act; and from the simpler life of the home and farm the ancient piety and rituals had never died away. Under Augustus the historic festivals and shrines, the ancient brotherhoods and colleges and guilds, of Salian priests, of Arval Brothers, of Vestal Virgins, and others were revived, and a profusion of new cults was introduced. Priesthoods became the dress of leadership and rank, and patriotism found articulate expression in the worship of the Emperor and in countless forms of mystery worship. To this religious complex Marcus was acclimatized from youth. At eight years old he was enrolled among the Salii, the most exclusive and antiques continuity colleges at Rome, and "got all the forms and liturgies by heart." At sixteen, as Profectus feriarum Luti Arum, he solemnized the feast on the Alban Mount; and besides the formal dignities of Pont. Maxim. XF. c. Sacr. Pont., and VII. c. Epul., he wore the cowl of Master among the Arval Brotherhood. The prayer of the college is still extant which besought blessing for him and L. Verus in their conflict with the Marcomanni. At the outset of captivating her people with the solemn ritual of the Lactametria; at Athens he was himself initiated in the Eleusinian mysteries; on the Danube he approved the casting of lions into the stream at the bidding of the Eastern magi. His Stoic monotheism lent itself to sympathy with cults of every kind, as witnesses to the divine power.

2. Life.—His boyhood was given to wholesome and studious disciplines. At Rome he fenced, played the cithara, and extolled the mischievous excitement of the circus and the theatre; at Locrum he rode, hunted, walked, and shared the glee of rural industries and festivals. The correspondence with Fronto, his master in rhetoric, shows the diversity of type. Boyish experiments in philosophy ended in complete conversion under the pen-name of Ariston, the influence of Rutilius, and the char
in point of fact the penal provisions—deportation for those of higher rank, and death for humbler offenders—would mitigate, not enhance, the penalty to which all avowed Christians stood liable. In their social organization the Christians remained as frontiers other sects. In Rome itself Church-membership and jurisdiction, episcopal authority, and literary activity advanced aspace. Apologists, such as Justin, Melito, Athenagoras, one after the other addressed their pleas to the Emperor in person; Tertullian and Hermas return scorn and ineffect on their antagonists. Christians served in the Imperial households and, as the story of the Thundert Legion proved, were numerous among the legionaries.

None the less, illogical as was the situation, the profession of Christianity remained under the Imperial ban, and Christians as such were judicially liable to death. In two of the most famous instances when the penalty was enforced, responsibility devolves directly on the Emperor. The first concerns Justin, apologist and martyr, who with six associates was brought before the bar of Rusticus, prefect of the city, on the charge of atheism—barely sufficient for conviction adverse to the Christian confession, and, on refusing to abjure or to offer sacrifice, was ordered to execution. Marcus was at the time resident in Rome, and, on no doubt, endorsed the sentence passed by the Stoic's friends and six preceptors. Still more famous is the persecution recorded in that masterpiece of Christian martyrlogies, the letter of the Christians of Lyons and Vienne to the sister churches in Asia and Phrygia. 1 The outbreak, rooted in the life and death of these religious associations, was fanned to fever heat by the frenzies of the amphitheatre, where the Christians were subjected by the mob to hideous and revolting tortures and indignities. When order was attempted, the true believers, rescued from the fury of the mob, were remanded to prison, their sentence was referred to the Emperor himself, whose ruling was that, if they still persisted in recalcitrance, the law must take its course. The incident was fresh in his mind when he wrote down his reflection on Christian perversity and bravado. 2 In Asia too, and in Africa, sporadic acts of persecution took place, and martyrdoms were judicially inflicted, though for the most part Christians were put to death by the inquisitorial agents of the Empire, from outbreaks of popular fanaticism or dislike. Of systematized persecution there was none, and, to the Church historians and apologists of the next generation the era of the Antonines was an age of peace and toleration.

Marcus's latter years were clouded with calamities, public and personal. In 166 Italy was desolated by plague, from which it never recovered; in its track came famine, earthquakes, and inundations of unusual severity. Marcus, in turn, was terrorized instead of barbarians, streaming across the Alps, and knocking at the gates of Aquileia. From that date onwards the regions of the West were locked in a life-and-death struggle with Marcomanni, Quadi, Jazgges, and other trans-Danubian hordes, sustained and carried to a triumphant conclusion only by the dogged and intrepid leadership of Marcus himself.

3. The 'Thoughts.'—From these oracles the Thoughts emerge. They are not the exposition of a system, but a criticism of life; reflexions confided 'To Hmself' in the hours of loneliness and interstices of strain; a retrospect and record of experience; a manual of duty and endurance. In them, the soul, self-examined, motives, probes illusions, corrects or re-forms conclusions, emits the sigh of weariness or the ejaculation of disgust, but perpetually resolves, unalterably clinging to the noblest hypothesis with which it was familiar. Beginning in almost random reminiscence, composition gave relief from strain, returns a satisfaction for company, and a pleasure for its own sake; and for Marcus Stoic principles so interpenetrated the whole fabric of conduct and creed that these self-communings shed clearer light upon the actualities of Roman Stoicism and the beneficence of Seneca or the Memorabilia of Epictetus.

(1) Logic.—In his theory of knowledge and sensation he adheres closely to the terms of Epictetus. The σωφρασίαι are in part sense-impressions of the proper, derived from things, in part impressions of aims, qualities, or attributes, moral or aesthetic, belonging to things, and conveyed to the reason. It is for reason to sit in judgment on them, determine their true content and value, and firmly maintain its own prepotency. In the one passage in which he formally discusses the doctrine of assent (σεισασώστεν, v. 10) he drops the Stoic claim to final certitude—τα ἐπιστήμου ἀκάδημα. But there remains a tenacity of moral assurance which underlies the proposition of the divine immanence attains a coherence, a consistency, and strength which give the indissoluble assurance of truth.

(2) Theory of being.—In Stoic monism matter, form, and force are an inseparable unity. The life-power, self-determined from within, is embodied in the various forms of phenomenal and spiritual being. The variety of being is explained physically by the doctrine of ὅνωμ, that is, of tension within the more than religious associations, the sovereignty, the divinity which the divine immanence attains a coherence, a consistency, and strength which give the indissoluble assurance of truth.

Each type finds its guarantee of individuality and perpetuity in the seminal or generative principle, the σεισασώστεν ἅμα, which becomes and reproduces the type. Yet it survives immutably, and its final re-absorption into the 'seminal principle' of the universe, the primal reservoir of life (iv. 14, 21, vi. 24). That of the universe at large contains and is likewise immanent in the countless individualized σεισασώστεν ἅμα, which determine, conserve, and reproduce life in all the several orders of being, through their productive capacities of realization, change, and phenomenal succession (iv. 14, ix. 1).

(3) Soul.—Man, the microcosm, within his individual range, is the counterpart of the macrocosm, in which he dwells, and with which he reciprocates currents of sensation (ἀισθήσεως), impulse (ἐναρμόνεια), emotion (ἐνέργεια), and reason (ὁρισμα, νοῦς). All these are activities and reactions of the soul, the counterpart and product of that cosmic soul which permeates and moves the universe. Soul is self-moving, within the range of those seminal principles.
from which it originated. As, in the individual, soul actualizes itself in physical energies, such as life, growth, sensation, and all bodily functions and appetites, in moral, such as impulse (φόρα), inclination (σάρκιζε), aversion (ἕξιολογία), will (προσφάρεια), or in intellectual, such as perception (σαφωσία), reason (ἀφιξία), mind (νοῦς), or reason (διάλογος), so, too, the world-soul operates in energies no less diverse in operation, now as the natural forces that actuate all inorganic or organic life, e.g. heat, moisture, breath, contraction, expansion, or the like; now as the moral forces which we know as fate, destiny, necessity, the 'laws' of nature or of God, and now, again, as those persuasive or reasoning powers which, as design, providence, Zeus, God, direct the plastic movement of the whole.

For Marcus these conclusions are the key which unlocks all problems of life and thought. No Stoic thinker applies this key more resolutely and consistently to the whole field of ethics, personal and social. Every action, every relation, is referred to the cosmic test: by it he construes all the accepted formulas of the school, and resolves their ambiguities.

(4) Cosmic unity.—Cosmic unity stands at the centre of Stoicism, the whole of which its moral compass continually turns. In its contemporary phase of microcosmic self-expression the unity of the cosmos was realized and reflected in that world-Empire of Rome whose vital activities centred in and radiated from Marcus himself. The Emperor was the indwelling god of the State, as earth was of the universe.

Unity is written large upon the face and in the heart of things. The idea that the world-order can result from chance, from the confused clash and collision of atoms, is simply to be dismissed. It would imply permanent confusion, moral and intellectual—a universe as unintelligible as intolerable. Beyond all possibility of mistake, materially and spiritually, the cosmos is a perfectly co-ordinated unity, 'one order made of all things, one god through all, one being, one law, one reason common to all things intelligent and live' (vii. 9), as is shown by the ramifying bond of ubiquitous design (οὐσίαν τοιοῦτον, iv. 45) and that unfailing rapport between the constituent parts (παραλληλαμορφωμένα, v. 26, ix. 9) which results from perfect interpenetration (καθάρσις τοῦ θεοῦ), and makes the whole inseparably one.

Design is everywhere apparent, in small and great things, in all the processes of nature, in the adjustment of means to ends, in the social life of animals, in economy of materials, in the entire 'concatenation of the web.' Nature is a vast laboratory, in which there is no destruction and no waste, but processes of cyclic transmutation and repair. Divination, oracles, dreams, add their corroborative testimony to the providential plan that runs through all.

Without reserve Marcus embraces the Stoic explanation of things, whether in the world, accounting for its unity, its order, and its constitution. The most general term employed for this pervading and directive reason is the unifying Logos, which the Stoic school derived from Heracleitus, 'the reason and the ordinance of the city and commonwealth most high' (ii. 16), the all-pervading, all-directing, all-perfecting principle and power which animates and operates in all that is. Less frequently it is called nature, or 'the nature of the whole' (vii. 9), x. 8, 7. But the preference is for terms which associate it with those analogies in human consciousness on which the whole conception is based. Marcus speaks not only of the world-mind and thought (νοῦς, διάλογος), world-soul and moral sense (ψυχή, συνε
dέση), but also of world-impulse and world-sensation. The world, as a living whole and being (τὸς, iv. 40, x. 1), throbs to one master purpose as truly as all the energies of man respond to the direction of the unitary sovereign self.

(5) Unity of things.—The unifying power, a common gravity, κοινός ἐπίκεφαλις, reveals itself in man as truth, beauty, and love, combines, constrains, and co-ordinates all to a common end (xii. 30). It finds its type or organ in the central sun.

'I am the eye with which the Universe Beholds itself, knows, itself divine.'

(Shelley, Hymn of Apollo, vi. 44.)

But the splendid harmony invests common things and processes with an appeal and beauty of its own; they contribute to the advantage of the universe; they are notes, or discord, which swell the great accord. Not only the heavenly bodies in their orbits, sun and stars, rain and air, the living beings, the social forms of things, all adjustment, all perfection, all growth, all fulfilment, reveal themselves in themselves—the cracks and crevices in bread-crust, the foam that flecks the wild bear's mouth—appeal to him who is in unison with nature, and touches hidden springs of answering admiration and desire.

'Earth is in love with rain, and holy other loves—Yes, the world-order is in love with fashioning what is to be. To the world-order I profess Thy love is mine.'

(Shelley, Hymn of Apollo, vi. 45.)

(6) World-soul.—The unity of the indwelling mind corresponding to personality in the individual man is commensurate with the scale of the universe, beneficent and rational in aim. Degrees of goodness and of value are part of the great scheme, but everywhere 'things lower are for the sake of things higher' (v. 16, 30, vii. 53, xi. 10, 18, etc.), and all is for the best.

(7) Evil.—The oneness of the cosmos is utilized to explain the theory of evil. Seeming evil is good misapprehended or disguised. The course of nature is all good. 'It contains no evil, does no evil, and inflicts no hurt on anything.' Analyze the facts, suppress the hasty, ill-formed inference, and the evil seems to exist, or changes its complexion (vi. 30, vii. 26). It is the discord that prepares and shapes the harmony; the coarse jest (as Chrysippus said) that gives the comedy its point (vi. 2). 'Nothing is hurtful to the part which helps the whole.'

(8) Providence.—The mind of the universe is social, 'civic' (τεκνικός) in all its aims. Fate, destiny, necessity (μάρτυς, τοῦτον, τοῦξαμάντερ, οὐάγατος), overrule all things for good; man's freedom is in accord with the movements of the universal Providence, the object of his reverence, trust, regard.

(9) The round of being.—Everywhere there is the recurrent transformation of elements, pursuing their continuous round. Change is nature's joy (ix. 35, iv. 56), the life of individuals, of nations, and of the universe at large. The 'passage up and down' repeats itself in history, upon the small scale and the great; always 'the same dramas, the self-same scenes are repeated': the life of Hadrian, the court of Antoninus, the court of Philip, Alexander, Creusus; the same stock roles, only with change of actors (x. 27; cf. vi. 46). This is the depressing side of the Emperor's philosophy, the resignation from which he would not deign to extricate himself by self-deception.

(10) Man a part of cosmos.—Man is by nature an inherent part, a living and organic member—φύς, not μέρος merely—of the whole. He draws from its organic life as vitally as the branch draws up from the parent tree. His 'nature' is the nature of the universe: self-realization of that nature is an instinct and a call as primary as that of self-preservation, attained by deliberate co-operation with its designs and ends, by loyal following.
of law and reason, by active citizenship in the world-commonwealth.

(11) Virtue.—Moral obligation is fulfilled in freedom and privilege, and achievement of reciprocal relation to the whole. And this alone is able to minister interior content, 'life with the gods,' 'citizenship in heaven.' The soul—a particle of Zeus (v. 27), the good genius or the God within (iii. 4, 9, 16), the lord and law-giver (iv. 1, 36), the pilot reason (vii. 64), the fellow-citizen, the priest and minister of God—is the power within which makes for righteousness. The indwelling presence becomes almost that of the Holy Spirit in the Christian believer, a bubble that bursts and vanishes (iii. 7, ill. 10, iv. 3, 19, viii. 20, etc.); gratitude is precarious and belated; virtue is its own and sole reward; it consists in mastery of the will, ability to uphold and satisfy the instincts of reason. In howship within, the nature and God. If ever that is forbidden or deserted, then indeed God sounds the signal for retreat. Unnumbrating and displeased, we quit the rank. The exodus is quick and easy—a 'bare bodkin' is enough. The play is over; the glory rings. Death is the natural end of man's ephemeral endeavour. Whatever be its physical analysis, extinction, dispersion, or transmutation (xi. 3)—alternatives which are dispensationally considered—the dissolution of the material elements end the present resistent; they take their place in other compounds, while the 'sensual principles,' or life-seeds, will either integrate new forms and activities of being or themselves be resumed into the central reservoir of the world-life.

(13) Ethics.—In ethics the eye is fixed upon the inner self, upon the duties, disciplines, and obligations proper to his own experience. But the imperial position assumed gives him a different view, and the fixed sincerity of the writer atones for lack of form, or method, or variety. The commonplaces and paradoxes of Stoicism—the inseparateness of virtue, or the indefectibility of the wise—are not disputed by the material element. The motive—dependent causality of later Stoicism, with its scheme of conditional duties (officia, or πράσεος), its belief in 'proficiency' (πράσεος), or progressive growth in philosophic grace, is everywhere assumed, though seldom in scholastic phraseology. The philosopher is on the throne, and passion is outlawed. Duties of inferiors, sins of the flesh, all that marres of the tyrant's profligate, even the licence and the luxuries of city life, are not in view. The whole attitude is one of strained, insistent obligation, wrought out in patience inexhaustible; men are the recipients, himself the dispenser of benefits; in realization of the social relationship, duties to equals and duties to inferiors monopolize the field. Against ingratitude nature has provided forbearance as an antidote. Of the four cardinal virtues courage seldom receives mention; truth is not praised or rewarded, but that singularity of word and act, that quiet undeviating 'pursuit of the straight course,' which power and place make doubly difficult; justice comes urging, not the rights of the oppressor, but the obligations of the strong; as regards wisdom or self-control, it may be said that the whole book is an enlargement upon that theme. The moral perturbations which it dreads are those which beset power and place, such as ingratitude, discourtesy, distrust, obnubilation, or such more delicate defequencies as self-absorption in the press of current duties, the want of moral nerve or fixity of aim, or the indulgence which, rushing to hasty conclusions, admits unwarranted impressions or desires. And beside the solid virtues and charities incumbent on the ruler are set the social graces which adorn the official and the gentleman—consideration, tenderness, modesty, tact, continuous perception. Prudence is not merely communion with the inner self, but a true intercourse with God; the self-communings which the sage has left us are but part and sample of his habitual practice of the presence of God.

(12) Littleness of men.—Man is indeed part of the universe, but how immeasurably small a part—a morsel in the mighty sum, a moment between two infinities. Fame is as transient as it is brittle and precarious—a short-lived rattle of tongues, a bubble that bursts and vanishes (iii. 7, ill. 10, iv. 3, 19, viii. 20, etc.); gratitude is precarious and belated; virtue is its own and sole reward; it consists in mastery of the will, ability to uphold and satisfy the instincts of reason. In howship within, the nature and God. If ever that is forbidden or deserted, then indeed God sounds the signal for retreat. Unnumbrating and displeased, we quit the rank. The exodus is quick and easy—a 'bare bodkin' is enough. The play is over; the glory rings. Death is the natural end of man's ephemeral endeavour. Whatever be its physical analysis, extinction, dispersion, or transmutation (xi. 3)—alternatives which are dispensationally considered—the dissolution of the material elements end the present resistent; they take their place in other compounds, while the 'sensual principles,' or life-seeds, will either integrate new forms and activities of being or themselves be resumed into the central reservoir of the world-life.
2. Geographical distribution of the market.

The institution of the market is not universal; in many parts of the world it is either altogether unknown or known only in its most rudimentary forms.\(^1\) It has been pointed out that certain geographical conditions and certain racial characteristics are more favorable toward the establishment and development. Thus, the markets of insular regions, especially those which are situated on the coast, are, in general, of little importance, perhaps because the necessity for an exchange of articles of diet hardly arises, or because, whose economic status is the same, and whose daily needs are supplied by the bounty of nature seconded by their own exertions. In such regions the occasion for a market arises only where different economic conditions come into touch—e.g., a tribe of fishermen have a tribe of agriculturists for neighbors.\(^2\)

According to J. G. F. Riedel,\(^3\) there are no market-places in Ceram and, while we may call the markets in Java and Borneo,\(^4\) we are reminded by a high authority that, in many of the islands inhabited by Malay peoples, the institution does not exist, or, if it does exist, it is to be regarded as imported rather than as indigenous.

In New Guinea, markets are to be found in the German\(^5\) as well as in the British portion of the island.\(^6\) W. Ellis\(^7\) supplies an account of those in Madagascar; and we have a few notices of Polynesians and Melanesians or Micronesians who live in distant parts.

The market thrives best where, in addition to favourable geographical conditions, the natural bent of the population is towards commercial pursuits, just as in the case of the Negro and Bantu races.\(^8\)

In New Guinea we find only few and scattered indications of the existence of the market;\(^9\) but to the hunting tribes of the eastern part of America it is practically unknown, the peoples of Central America,\(^10\) and especially in the old thrives.

7 We, the inhabitants of the island of the sea, are often invited to games at a religious festival, a popular assembly, the formation of a camp, the temporary sojourn of a court at a royal residence, the stay of a caravan at one of its customary halting-places, the contest at a sport's tournament, the race, the combat, the battle-place of a hero, or the temporary cessation of hostilities between besieger and besieged.\(^1^1\)
market spread from Massilia, from the north of the Balkan Peninsula, and from the onward march and market spread to the countries of the neighbouring barbarians. In Latin the terms were of great antiquity. In Rome and in Egypt they were associated with religious festivals and popular gatherings of Norway and Sweden and, in ancient Germany, the tribes assembled at so-called market days (Markttag) and places of the holding of markets.

So, too, in the past, the great markets of France, Germany, and England showed their close connection with the observances of the Church.

A. Origin of the market.—We have seen 6 that one of the earliest, if not the earliest, of the forms of commerce that has been called the 'silent trade,' Those who engage in it are strangers to one another and are consequently enemies. But, so long as it lasts, they observe a truce, which is safeguarded by a supernatural sanction.

This sanction derives its force primarily from the sacredness of the relation between the traders, which the trade creates, and—in very many cases—in a degree hardly less considerable, from the sanctity of the place where the trade is carried on. This spot lies often within a border-land—a locality which is very generally regarded by primitive peoples as holy ground—and such a situation is frequently chosen by traders for their gatherings. Its sanctity, characteristic, but because it is easily accessible. Goods set out on the seashore, on a river bank, or at a meeting of ways are likely to catch the eye of the passing trader; and, if he is satisfied with his exchange, he returns and visits the same spot, again and again, to the known place at the known time. In this strange custom is to be seen, in our opinion at least, the germ of the market. 7 Richard Lasch, however, in his admirable essay on the 8 Primitive Market, 8 argues two objectives of the market. He contends that, in its beginnings, the market is to a large extent, a provision market, mainly in the hands of women. He admits that, in certain cases, an exchange of articles of food may be transacted by the means of the silent trade. A tribe of bushmen, e.g., which has a tribe of agriculturists for neighbours may employ these methods in bartering game for bananas. In such a case the traders are men, not women. But to infer from such evidence that the market is derived directly

from the silent trade seems to Lasch to be wholly unwarranted. His second objection rests on the nature of the goods brought to market, which are, he says, for the most part perishable. They are produced constantly and they are in constant demand. Accordingly, market must follow market at the time of harvest, the buyers being driven by the convenience of the traders. But the existence of such arrangements presupposes an exchange of views between those interested; and such an exchange involves a complete breach with the principle of dealing by barter, the best way of dealing with arguments such as these is to turn to what evidence we have regarding the market in its beginnings. We shall find that it is attended by men only, and that, in some instances, it exhibits features which recall us to those of the silent trade.

8. Passage, e.g., describes a market on the Benue to which a riv. r tribe resorted for the purpose of exchanging fish and crops for the cotton and hides which were brought in by a tribe of bushmen. The former left a man in each canoe to hold it in readiness in case of a quarrel. On the men were present, and each man stood, weapons in hand, in two lines, a long distance from the bank. An alarm the bushmen sprang into the jungle, and the river-men took up their positions and, and arrows began to fly; and, in the end, after a few men had been killed on either side, each party returned home, satisfied with the day's work. The market is supposed to be held at any fair or market held in the island of Hawaii on the banks of the Waikiki River, inhabited by the recent inhabitants of the island on which the island was parcelled out, although frequently at an inconvenient time, frequently this meeting-place for the purpose of exchange of the island. The market consisted of mats, native cloth, dried fish, hogs, and tobacco.

9. From bank to bank the traders shotted to each other and arranged the boundaries of the country. From these the articles were taken down to a large square rock which stood in the middle of the stream. Here they were examined by the parties immediately concerned in the presence of the king's collectors, who stood on each side of the rock, and were the general arbiters in the event of any dispute arising. To them also was committed the preservation of good order during the fair; and they, of course, received a suitable remuneration for their services. Again, we are told that at Sonou-Sonou, in the Fiji group, the market is held on a certain day in the square, where each deposit in a large heap what goods and wares he may have. Any one may then go and select what he wishes, and carry it away to his own home; the other then has the privilege of going to the heap of the former and selecting what he considers to be his equivalent. This is all conducted without noise or confusion. If any disagreement takes place, the chief is there to settle it; but this is said rarely to happen. It is reported of the Ekimo of Point Barrow that, in their intercourse with those of the Tschukchi, they "seem to be very wary, as if they constantly keep in mind that they are the weaker party and in the country of strangers; they watch, taking up a position opposite the place of barter on a small island to which they can return if the goods could not be brought; and from it making signs of friendship. They say that great distrust was formerly manifested by both sides by the way in which goods were sold at Point Barrow when a large deposit was made; but in later years women go, and they have dainties and amusements, though they never remain long enough to sleep there."

10. As a supplementary instance, in which women were the traders, and in which the method employed recalls that example of the silent trade mentioned by K. and J. Landor, is recorded by Torquemada in his account of the Mexican markets. He tells us that the Indian women made exchanges without a word being spoken: one held out the article of which she wished to dispose to another, who herself had something to barter. The latter took what was offered in her hand, and indicated by signs that it was worth very little in comparison with the value of her own article, and that something must be given in exchange which was commensurate to the exchange. If the addition required was made, the bargain was complete; if not, each retained her own property.

11. In some instances we have the mutual distrust, and, in some of them, traces of the strange methods, which marked the silent trade. Further, the evidence shows that, so long as the market may at any moment become a battle-field, it is, even in business is exiled to the exchange of provisions, entirely in the hands of men. So soon, however, as women can visit it in secret, they assume the entire conduct of its traffic in articles of food, and the men attend only as guardians of its peace, or confine themselves to dealing with the objects of their special concern, such as cattle. In this way the market is made secure. Two further observations may be made in reference to Lasch's arguments. In the first place, there are many instances in which perishable articles, such as fresh fruit and fresh meat, are articles of barter, but not of trade. Two. In the second place, many cases can be cited in which the places where the silent trade is to be found in operation are matters of common knowledge.

4. Situation of the market. — The primitive market was held, just as the silent trade was practised, at spots so situated as to secure the safety of the trader.

Thus, a river separated those who resorted to the market on the Wairuku, the articles to be bartered being laid on a flat rock in mid-stream. In many instances the market is held within a borderland, as in the Bahuma country, in the east of the Congo, and in New Guinea. We have already mentioned the border markets of Greece and Rome; and we are told that the frontiers of the Roman world formed a kind of 'last zone of markt.' The same is true of the market held in British New Guinea; the markets are held on the borders of different districts and of the districts, in the wild forest and those of Angola are generally equidistant from the nearest villages. Among the Abikiki the site chosen for the market is an open field; several districts can conveniently attend, in the Congo countries the market-places are often situated in an open country. In both cases a hilltop is chosen, the Gallar of the Western Abyssinian country markets are usually held on the top of a hill, near some big tree; in the Casazel Peninsula, on plateaux, about an hour's journey from the coast; and, among the Lapps, sometimes in open fields, and sometimes in the forest. See above.

Mogelo, at Andshira, and among the Kabyles markets are situated in uninhabited places, while in Benin the two great markets were held in large clearings, with only small villages around. In Dahomey, the market is generally held at some distance from the town, and a like practice is frequently to be found elsewhere. In some cases, the entire population of a township, as in Madagascar, or in an open space near a village, as in German New Guinea, or of a large portion of the western Mandingoes, lies between the town-wall and a river, as at the chief town of the Wymar country. Markets are not infrequently held on islands. This is the case among the Komandare islands an exchange takes place between natives of Asia, America, and Asia; and a fair, attended by the Chotokos and other nomad tribes, takes place annually on a hill, some three miles from the town of the Samuru. Markets are held on river banks, as on the Niger, and on the Benue, at points equidistant from the neighboring villages, as on the Congo, or at cross-roads, as on the Congo and in Dahomey, at spots easy of access by visitors from several districts, as in Sonnalland, on the seashore, as in New Caledonia, and among the ancient Northmen, on the banks of great lakes, such as the Victoria Nyanza, and, at Guntz, on a plains between mountains.

Many of these situations point to a time when the fear of attack was prevalent; and Schurtz suggests that the arrangement in the Mabes country by which the weekly markets were held outside the walls, so that strangers might not enter the towns, while the daily markets attended by the inhabitants were held within it, is a survival of the old state of things. Where an established order exists, however, the market is generally held within the town.

In Dahomey the market-place is within the walls; and at Kanó it is situated on a neck of sand stretching across a marsh, which nearly intersects the city. The markets at Hāng-Ch'üan and in the city of Mexico were held in great squares within the town. Timbuctu may be cited as an instance of a town which had its markets in a temporary market, in Java the markets are held under large trees on spots dedicated to the purpose from time immemorial. In Sililango the market-places are generally at the foot of the hills, and are marked by old fig-trees. In the Sherbro and its Hinterland the markets are always by the side of large trees; and in the upper Lualaba frequently take place on grassy mounds under the shade of groundnut trees. In Uganda, at Losage, at Paweens and Soka in the Mazech country, among the Kabyles, and in the Mekeo district of British New Guinea the markets are held under the shelter of large trees; and a somewhat similar account is given of markets on the Congo.

5. Day of the market.—In the Shan States and in Korea the market is held on every fifth day in all the chief villages. This practice prevails throughout western Yunnan, and is found in Java and Abeokuta, at Igbekele and Onitsha, at Kong, and at Bolo, in the Mekeo district of British New Guinea, in ancient Mexico, and in many other places. At Ikorodu, on the lower Ogun, the market between the town and the bush folk takes place every eight days, and in the Bayangye country markets are generally held with an eight days' interval. In regard to the markets on the caravan routes between Matadi and Leopoldville, a distinction must be kept in view between those held daily by the neighboring tribes, and those that constitute the caravans' supply and the weekly market. The Fioti week is one of four days; but frequency the market is held every eighth day. In order to mark the week when there is no market, it is called couduka, 'little,' 'unsignificant.' On the Lower Congo each market bears the name of one of the days of the Fioti week, followed by the name of the village where it is held. The Khisis of Assam, the Battaks of Sumatra, the tribes of the Lower Niger, and the Alikyus, hold a market every four days. On the Lualaba the

market is held every fourth day, other markets being frequented in the interval. At Ambala Bay the market takes place the third day; and there are daily markets at Louango, at Kan6,2 and at Mogogo.3 The Bini have now eight days in their week; but formerly they had four only. On each day a market is in or near Benin city. Three markets a week are held at Kassouo, Kan6, and two a week at Mararkee, at Koolin,9 and at Banjaribuan.10 Weekly markets are held in Morocco,11 at Poppalahum in the Sherbro,12 in Lega-land, among the Orom6,13 among the Kabylia,14 and at Passamali in the southern part of Sumatra.15 In the Kuantan districts of Central Sumatra each market has its own special day of the week allotted to it. In Sillimong there is a daily market, but the place where it is held varies from day to day. In this last instance, and in many other cases, the market takes place here to-day, there to-morrow, and in a different locality on each of the days following, until the round is completed. The order is fixed, and so the inhabitants of each district know where the market is to be held each day.

6. Hour of the market. —In Kukwana, Maseni, Kan6, Sokoto, and Tihoutu, the market is held in the hottest hours of the day. In the northern districts the market at Kan6 is crowded from sunrise to sunset. The Yo (Bororo) market begins about 9 a.m. and ends about 3 p.m.16 and the Congo markets commence towards 10 or 11 a.m. and cease at 3 or 4 p.m.17 In the neighborhood of Marrar the markets begin about noon; and at Gire in Adamana they are in full activity by that hour.18 At Sarra the busiest time of the market is from 2.30 p.m. to 5.30 p.m.19 and at Kukila in Bororo a market is held in the late afternoon,20 and at Coosoo21 in Yoruba in the evening. It takes place at Aden two hours after sunset,22 and at Bida and Ilorin23 and in some parts of Malacca24 in the night. On the upper Ubangi it is held from 8 to 10 in the morning.25 On the Livingstonia it is deserted after noon.26 In the Padang district of Sumatra it is little frequented in the early morning, but by 10 o'clock it is full.27 Markets in the early morning are less frequent, for the obvious reason that they interrupt the day's work of those who resort to them more than do markets held closer to the day, and because those at a distance cannot attend them.28

7. Frequencers of the market; market-women. —H. II. Johnston29 observes that both men and women make long journeys to sell their goods, the men always travelling further. Among the Bondet, if the market be near, the woman goes and her husband supplies the goods. If it be at a distance, the husband generally goes alone.30 And among the Batak of Sumatra, traffic in slaves was confined to the men. Among the Bakulu the men bring goods and palmwine to market, and in the Mandingue markets they trade in cloth.31 At Woodie the women sell milk and honey, bowls and herbs, while the men sell oxen, sheep, and slaves.32 At the Horar markets the freqencers are grouped by sexes, i.e., according to the articles which they sell.33

In many instances the business of the market is entirely in the hands of women. Thus, in the districts near Kilimanjaro,34 to the women do all the trading, have regular markets, and will, on no account, allow a man to enter the market place.35 At Kokulo, the principal town of Sipe, nine out of ten of those who resort to the daily market are women;36 and the Foulahs or Falatlas have the market in their hands.37 A similar state of things is reported in other districts.38 It is of interest to observe in this connexion that, in the Congo area, when a thief is caught, his punishment is placed upon his people.39 In Nicaragua no male above puberty might enter the market-place of his own village to buy or sell. He might not set out, even on the distance. But men and women from other friendly or allied villages might go to it.40 The women selling at the market of Brasil in Borneo are generally old slaves,41 and the principal slaves are generally the traders, while their masters look after, speak in their behalf.42 The Portuguese market people form a caste by themselves; they attend all the larger markets in person, and send their servants to the smaller ones.43

8. Religion and the market; the market peace. —The market peace is provided for, and this religious duty may be due to one cause or to a concurrence of

MARKET

several causes. It may be due to the nature of the relation between traders which the act of execution inflicted on the place, where the trading takes place, to the consecration of the market at the time of its foundation, or to the fact that the market is under the protection of a god, or is associated with a religious festival.

Large fairs, held at different points on the Niger, are properly regarded as sacred ground, whatever wars there may be between the tribes. If the laws of 1807 were not irreparably violated, still the traders return with remarkable promptness. The Shilluk enacted the Khatarr traders to their camp, dispensed with market taxes, and even furnished them with arms and ivory; at the close of a Babakau market the chief had to give his guarantee to his bodyguard, and Livingstone speaks of a massacre of Manmanwa market-women by Arab traders. "But," he observes, "they have great tenacity and hopefulness. An old established custom has great charms for them: and the market will again be attended, if no fresh contract is committed.

Sometimes such violence kills the market. "To "revive" a "dead" market, there must be an assemblage of the local magnates; a pig or pigs must be furnished by the town to which the market belongs, and slaughtered, and divided up among the towns represented. Whenever possible, the culprit who caused the disturbance, or his substitute, if he is a wealthy man, is burned or buried alive; if other ways of killing are resorted to, his skull is fixed upon a post in the market-place to "strengthen the law."

The Congo markets, held at points equidistant from several villages, are neutral spots; and the market at Msogo, held within an enclosed space, is neutral. Market-places on the banks of the Luvua and Lualaba, where the bodyguard is not represented, are resorted to by the aborigines of either bank, and are regarded as neutral ground, as a sort of privilege attaches to a fair held on the Lualaba, in the territory of the Kololo, and to a trading-place which lies deep in the forest at a point where the countries of the Babakau and the Bambuti touch. Dennett says of the "silent" markets of the Kavall that he has never known of their being abused; and in many great places, especially in Minambo, commerce is carried on at regular intervals on neutral ground by the method of the silent trade.

During the last two months of one year and the first seven months of the following year, war was suspended throughout Arabia, and fairs were held; at Gunzala there was a complete trade three days a week, when the markets were held, and for two months during the annual fair. Again, at the great fair at Praire du Chien hostile trade was resumed from all unfriendly acts; and during the fair the markets, the bodyguard of the Babakau, and the Bambuti, following the example of the director or manager of the fair, discharges his leading into a mummers' fair, in which, before his departure, he searches for his ball. Among the Babakau the market is a neutral ground placed under the aegis of its owners; and, whatever it be, either the whole or all who frequent it are under their protection. By the Kika, the market, with the ruling leading to it, is regarded as sacred, and is free from the exercise of private vengeance.

Women from different districts, even when these districts are engaged in actual hostilities, pass to and from the Lualaba markets unmolested; and a like immunity is secured to the women of the Maani and Wachoga, by agreement, although those tribes are mortal enemies. A compact to the same effect is good to the Maass and Wa-Kikuyu; and at Nyangwe and among the Somali fees are summoned during the market, and their markets to and from market. This protection is afforded by the tribes where the form of society is tribal, by the king where it is monarchical, and by the lord or feudal lord where it is feudal.

The history of the boundary-stone and of the market-cross is of great interest in this connexion. It has been pointed out that the intimate relation of the market, the border-land, and the supernaturals is illustrated by the characteristics of Hermes-Mercurius. His symbol was an upright stone; and, as boundaries were marked by such a stone,

3. H. Kingsley ('African Religious and Law,' in National Review, xxviii. (1897) 134) tells us of a W. African market-ghost who takes the cheat and the thief; and among the Efe-speaking peoples Amin is the protector of markets and public places, performing the functions of the omniscient gods of the bronze peoples. (See M. Coquilhat's Le Peuple de la Cote de l'Ouest Afrique, London, 1888, p. 52.)

See below, § 4. When the market has been "killed," all law is suspended, and crimes may be committed, the responsibility for which falls upon the traders; the traders are not held liable for anything they may deliver up (M. de Saenger, Les Comptes des indigènes de l'état indépendant du Congo, Bulletin de la société d'études coloniales, Brussels, 1894, p. 81).

21. Hagenauer, "The Indian's market statement ("Among the Indians of Malaya, London, 1885, pp. 214, 271) that in British Guiana the trading Indians, who bring up specialties of their own, are not allowed to pass unhindered through the country of their countrymen, by whom they are for the time being treated as fellow-travellers."

stones, he came to be regarded as the god of boundaries. In many cases the border-line consisted of tracts of neutral territory whither merchants repaired to exchange their wares; and thus the god of boundaries became the god of traders. 1

Now it was said that the ancient Germans used to raise poles at their public meetings, which were consecrated to the god of the public assembly. 2 These poles were, in all probability, erected upon a stone; 3 and it has been suggested that this 'pole upon a liquid pedestal, replanted in a stone column, is the prototype of Ermin- sulen, Rolandsäulen, perrons, 4 and many of the market-crosses of Scotland 5 are later forms. In view of the facts, it is tempting to conjecture that the stone which formed the base of the column, and which seems to have served as a seat of justice, was, in many cases at all events, a boundary-stone. 6

In the Middle Ages the market-cross was not always fixed, but was raised at the commencement of the fair. It became fixed only when the temporary market became a permanent market, when the temporary market became a permanent market.

China an official notified the beginning and end of the market peace by hoisting and lowering a flag; 7 in British New Guinea a drum is beaten at the opening and closing of the market. 8 In case between the people of the Bofi and the Spanish garrison whom they were besieging ceased on the ringing of a bell. 9

Many instances might be cited of trading during a truce, followed by a resumption of hostilities as soon as the trading was over. 10

2 Willem H. van Overveld, The Migration of Symbols, Westminster, 1834, p. 116. This god was probably Thunmus, the Germanic equivalent of Zeus Agoraios (see note below); see, however, Munich Texte (Teutonic), comp. vol. vii. p. 849. According to Cesar (de Bell. Gall. vi. 17), the Gauls worshipped a deity whom he identified with Mercury.
3 D'Alivi, p. 117.
4 D'Alivi, Les Perrons de la Wallonie et les Marchés-Crosses de l'Estaque, Brussels, 1914, pp. 37, 42. The Migration of Symbols, p. 103 f. 5) indicates his agreement with the views of E. Monceur (Supplément litteraire de l'indépendance belge, 3rd May 1833). He observes that, before the diffusion of Christianity, the poles, to which we have referred, were at once the symbol of the god of assemblies (Thunmus, the equivalent of Zeus Agoraios) and of the autonomy of these associations. It is not improbable that, for the purpose of ornament, a representation of the avenger, the avenger of the collective injury, was attached to them or carried upon them; and that, when the meaning of these representations came to be forgotten, the popular imagination gave to them the name of the Paladins most popular at the time, and the Erminsulen became Rolandisulen. When the last Paladins established in the baronies passed on, the old columns continued in many places to serve as the rallying points of collective life. Sometimes they bore the emblem of the avenger; sometimes they were altered or transformed so as to symbolize something new or additional; and sometimes they were replaced by the crosses planted by the Church in signs of possession.
6 The resemblance which many of the market-crosses of Scotland bear to the person has been pointed out by W. G. Black (Glasgow Cross, with a Suggestion as to the Origin of Scottish Market-Crosses, Glasgow and Edinburgh, 1833), and his suggestion as to the origin has been approved by d'Alivi, in the latter of his two works cited above. At p. 29 of this work d'Alivi figures certain of the Scottish crosses, and it is curious to observe how closely the similarity of some of them with the image of Hermes figured by him on p. 194 of The Migration of Symbols.

g. The Law of the market and its enforcement. We have already seen 1 that acts of violence perpetrated upon the frequenter of a market may and probably will "kill" it—for a time, at all events. The recognition of this fact appears to produce two effects: (1) The Drury committed within the market are punished with exceptional severity, as imperilling its peace. In the second place, since offences committed outside of the market are not regarded as a danger to its peace, but in later days by a stone column, is the prototype of Ermin-sulen, Rolandsäulen, perrons, and many of the market-crosses of Scotland are later forms. In view of the facts, it is tempting to conjecture that the stone which formed the base of the column, and which seems to have served as a seat of justice, was, in many cases at all events, a boundary-stone.

In the Middle Ages the market-cross was not always fixed, but was raised at the commencement of the fair. It became fixed only when the temporary market became a permanent market, when the temporary market became a permanent market.

In China an official notified the beginning and end of the market peace by hoisting and lowering a flag; in British New Guinea a drum is beaten at the opening and closing of the market.

Many instances might be cited of trading during a truce, followed by a resumption of hostilities as soon as the trading was over.

Among the Khyles every offence committed in the market is punishable with death without trial. He who kills the market-winner and stone him without mercy. It is the strangers that execute the law. The tribesmen try to avoid these executions as they discredit the market.

At Athens both the interior or the coast who by his conduct does serious injury to trade must pay the death penalty. Still, such as an execution occasionally occurs, it is avoided as far as possible. The fairs of ancient Ireland were regulated by strict rules, any breach of which was punished with death.

In ancient Greece, in ancient Norwegian and Danish law, 8 and in the France and Germany of the Middle Ages a breach of the special peace of the market was dealt with more severely than was a breach of the common law.

In Mexico he who stole in the market was punished with death; 10 and he who was suspected of having stolen goods, if he could not tell from whom he had received them, was condemned to death. 11

As we have already indicated, there is evidence to show that, in many instances, those who had committed deeds of violence or contracted debt before coming to the market were safe from pursuit or arrest so long as it lasted and they remained within it.

Thus, among the Khyles the avenger of blood who kills a man in the market suffers the same penalty as a common murderer; 12 and the same rule seems to have been observed at Berlin. 13 They are not held to have made stolen goods to the market could not be proceeded against. 14 Those who recurred to the armed man was attached to them or carried upon them; and that, when the meaning of these representations came to be forgotten, the popular imagination gave to them the name of the Paladins most popular at the time, and the Erminsulen became Rolandisulen. When the last Paladins established in the baronies passed on, the old columns continued in many places to serve as the rallying points of collective life. Sometimes they bore the emblem of the avenger; sometimes they were altered or transformed so as to symbolize something new or additional; and sometimes they were replaced by the crosses planted by the Church in signs of possession.

The resemblance which many of the market-crosses of Scotland bear to the person has been pointed out by W. G. Black (Glasgow Cross, with a Suggestion as to the Origin of Scottish Market-Crosses, Glasgow and Edinburgh, 1833), and his suggestion as to their origin has been approved by d'Alivi, in the latter of his two works cited above. At p. 29 of this work d'Alivi figures certain of the Scottish crosses, and it is curious to observe how closely the similarity of some of them with the image of Hermes figured by him on p. 194 of The Migration of Symbols.

of the common law which attracted not only the merchant but those in search of pleasure.

10. Administration and execution of the law of the market.—It has been observed that, where the land is divided into districts, the law of the district is administered and executed in part by those who reside within the territory of a tribe, its commerce, and the like. This is the case in the Kabyre markets, e.g., where the chief of the market is the leading family of the tribe which owns it, and it is the responsibility of the chief and other members of the family to see that the laws of the district are observed. If these laws are broken, the chief is responsible for the disruption of the market. In the same way, the law of the market is administered and executed in the hands of the market chief. An assembly of those belonging to the district, or the trading-officials, enter into the matter of the law of the market. Its execution is in the hands of the market chief. An assembly of those belonging to the district, or the trading-officials, enter into the matter of the law of the market and the duties of the officials of the market are confined to the preservation of the peace, to the exclusion of the various tribes. At Kano the judge of the market sits all day to try disputes arising in the course of trade, and in the Lomango market an official is charged with seeing that no deceits are practised in the trade between natives and Europeans.

The quality of articles brought to the market is, in general, a matter of consideration only when disputes arise.

The milk brought to the market of Jakohe, however, is daily subjected to examination, and it is the duty of the officer appointed to inspect the provisions offered for sale. He must constantly attend the markets and see that purchases are not overcharged; and, in view of the fact that many of the commodities exposed, he must fix the prices. At Kanu the shahk of the market fixes the prices, and among the Skyapa the price is fixed by the chief with reference to a standard. At Meda and Jekka a public officer fixes a maximum price to all trading-traders. In some cases the market-regulators regulated the prices, and in ancient Mexico they were fixed by the superintendents of the market. In all these places, however, there is a public officer placed over the market who is charged not only with the maintenance of order, but with the supervision of weights and measures, and with the administration of justice in more important cases. 1 The Greek apólogetes appear to have similar functions both in regard to the preservation of peace and the use of weights and measures. They also fixed the hours of the market, and regulated its conduct generally.

The Roman adules preserved order by means of his officers, and imposed fines upon the peace-breaker. He collected his fines, and brought them to the treasury. He also supervised the market, and saw to the accuracy of weights and measures. To assure the good faith of transactions, the market was his special care, but a penalty for frauds and by rejecting articles which were unfit for sale. In the market of Tenextitan ten or twelve judges sat in a house on the market-place to deal with cases as they arose and to see to the punishment of delinquents. The president of the market-regulator could arrest the people, saw what was bought and sold, and broke any false measures which they found in use. It was the duty of these officers to see that the market was open to the public, and that it was free from frauds of one kind or another.

11. Market dues and their collection.—In some markets e.g., at Silindong—dues are not exacted. 16 Among the Hausa, while dues are levied, entrance into the town is free under the market regulation. 17 Each man who enters the market and trades without charge, but every woman must pay ten cowries to the government.

When trade took place in the temple of the sun, the priest collected dues on behalf of the divinity. At a fair on the Lukalla, in Kasunba's country, the king himself had a market with whose representatives were present must make a gift to the queen, Kasunba, who performed a series of dances in the market, after each dance received their contributions from the market-women, who danced as they paid. 20 In the Boma a market grants its protection and collects the dues; 19 and in the horse-market of Kivu, 22 and at the market of Rached, 24 an officer levies a small percentage on behalf of the government. At Adamana 25 and in Humbe, 26 king's collectors are present in the markets; and in those of Usambara the superintendent (nem) takes a double handful of the market-women's produce.

2 Proshort, p. 224. Between the natives themselves fraud is not unknown. A native collector is apt to do as he pleases, and that he will not be cheated. All the articles for sale are divided into parcels of the standard weight of equal value. There is no advantage in comparing those of one kind with another, the contents of each parcel being the same in quantity and quality (ib. p. 160).

visions for the king, and levies a contribution for himself. Among the Caddo, a chief appointed by the king collects duties upon every sale; and at Quapawas the people pay a tax on every article sold except for food. In the Luseno market, the chief of police sees to the payment of the dues; and at Kano the chief of the market lets the stalls at so much a month for forming a part of the governor's revenue. In China there are special markets, in which are collected by a special officer. In ancient Greece the Askapanids collected dues; and it is mentioned in the first instance to the needs of the market; and in the markets of imperial Rome, and especially in those of the Decennalia, a fully-developed system of taxation was obtained. In the Mexican markets a fixed tribute was paid to the emperor, in return for which he granted his protection against the Indians.

In ancient India the king was entitled to market dues, which varied, according to circumstances, from a twentieth to a tenth of the value of the goods. The freemasons of the Balba market at Kuban must pay three crowns to the chief, whatever the value of his goods may be; and in the Insam market every person who brought articles for sale had to hand over one of each kind. In the Azeroi district, the dues amount to one-twelfth. Sometimes the king and chief themselves sell goods; as Nyangwé to a tenth or a sixth. Those who expose goods in the Whydah market pay very heavy dues to the king of Dahomey; while in the Hawaiian markets two-thirds of the proceeds of whatever the natives sold was demanded by the chief.

12. The arrangements of the market-place.— Among the Yaga-Gallas the markets are held only if the weather permits; for the climate is variable, and the market-places are wholly without shelter. In the markets of M'Bong, on the borders of the Gold Coast, shops or booths, the articles for sale being set out upon mats. The markets on the Luallaba are held at uninhabited places, except at Nyangwé, where there are houses for traders and huts for slaves and porters. When the caravans arrive at Berbera from the interior, booths and dwellings are erected; and, within a week, on what was previously a desert spot several hundred huts are ready for the strangers coming thither over sea. At Semara the slaves trade their business protected by temporary erections of boughs and mats; and at Gazulga the wares are exposed in tents and shelters of boughs, where stranger merchants are entertained and housed, while in some of the Sumatran markets the stalls assigned to the different traders depends on the nature of their wares, the result being that, where these wares are traded in by only one of the sexes, a specific portion of the market is allotted to each sex.

In the markets of ancient Mexico each class of merchandise had its appointed place. At the markets of the Incas, commerce was confined to the neighbouring streets, or in floating on the canals; and in those of the Middle Ages, the goods were displayed only in the street, and not only the character of his goods, but his nationality; and, in some cases, the latter was the sole determinant.

13. Modes of bargaining in the market.—Of the most characteristic practices in the primitive trader is that of transacting business by means of a third person. Dall¹ tells us that the Abents never trade with one another directly; and we have suggested that some light on the origin of this method is given by the instance of the exercise of the silent trade reported by Lander.² It is said that, among the natives of Australia, children are made agin-aginagme in order that they may act as the agents of their respective tribes in the business of barter; and many cases may be cited in which the man who takes a stranger under his protection not only acts as his host, but assists him in buying and selling, and is generally responsible for his conduct.

At Berbera each stranger must choose a protector (abbah). He dare not trade without him, and must pay him one cent on the value of every article which he brings into the market. The abban is his broker; he protects him against the extortions of the natives, and settles all disputes in which he may have become involved. A similar protection is given the merchant by the shopkeeper who acts as the party held out the article of which she wished to dispose; and the other, taking it in her hand, makes signs that it was not a fair equivalent for what she proposed to give in exchange. If the first party refused to add anything, she ran the risk of losing her customer; if she added what was demanded, the bargain was concluded.

14. Methods of securing attendance at the market; its place in public and social life.—In some of the Congo countries it is a custom for a man to go to his farm on a market day. To the desire to induce the stranger to come to market Heeren²¹ describes certain Lydian and Babylonian regulations.

1 Art. STRANGERS, 2 (9). In ancient Germany the host in many cases was at once protector, broker, and interpreter (see C. C. 112 Bentley, p. 400. According to the ancient laws of India, in ancient Mexico, and during the Middle Ages, the market was the only place where it was permissible to sell movable goods. He who sold outside of it was regarded as an illicit trader, and he who bought from such a seller was not held to be a customer (Lusen, p. 725; Torquemada, xii. 16; Hucvelin, p. 457.).
MARRIAGE (Introductory and Primitive).

MARRIAGE (Introductory and Primitive).—Marriage has two main functions: it is the means adopted by human society for regulating the relations between the sexes; and it furnishes the mechanism by means of which the relation of a child to the community is determined. Owing to the preponderant importance which has been attached to the former function, the more strictly social functions of marriage have been largely overshadowed by its moral aspect, and it has not been sufficiently recognized that the function of marriage as the regulator of social relations may be of the most definite kind where the institution is in the hands of those who regard from the moral standpoint of civilized man.

The institution of marriage may be regarded as

2. Marsden, pp. 247, 269; Hagen, Eine Reihe nach dem Tobah See. Berlin, 1892, p. 156; the game booths which are found in the most populous parts of Sholaland seem to be the only centres of trade (Snoeck Hurgronje, p. 279).

3. Wellhausen, pp. 547, 159. According to Burnhard, p. 449, it was the custom among the Assy. Aramaeans, before the Wahlhadi conquest, to bring to their marriageable daughters to market, and it was formally that they were married.

5. Joyce, loc. cit.

7. O'Conor, ib. 429, 531.

is there that the public announcements of the sovereign are made. In the Kabylie market beasts and fowl and all the matters that affect the community are proclaimed. It is the place of news, gossip, and friendly intercourse of planning, and of private. The Paphos markets list all, and are enlivened with feasting and dances; and similar announcements accompany some of the Ekibo markets. Those who resort to the Congo markets go not only to buy and sell, but to make friends, drink masafon and enjoy a gossip with them, to settle petty question, to hold palavers, to arrange disputes between clans and villages, to decide on peace and war, to bargain about the purchase of a wife, to describe slaves lost or stolen, and to give publicity to transactions such as the purchase of hostages or prisoners of war, or the payment of the price of blood. It is there that the man who is robbed gives information of the robbery, and that the creditor, if the ransom be not paid, proclaims the infamy of the debtor. It is there, too, that oracles are proclaimed and criminals executed. Under the trees in its vicinity the drinkers of palm-wine, the politician, and the news-monger hold rendezvous.

MARRIAGE. See POLYNESIA.

MARRIAGES. See POLYNESIA.

the central feature of all forms of human society with which we are acquainted. It stands in an especially close relation to the family—using this term for the group consisting of parents and children. This social group rests absolutely on the institution of marriage. Where marriage is monogamous, the group formed by the family will consist of the consorts and their children; where marriage is polygamous, it will consist of a man, his wives, and their children; while in polyandry, the family will consist of a woman, her husbands, and her children by those husbands or assigned to those husbands by social convention.

The institution of marriage also underlies the extended family, this term meaning the social group consisting of all persons related to one another either by consanguinity or by those social conventions which so often take its place (see art. KIN, KINSHIP). It is the marriages of the members of the extended family that immediately determine the limits and functions of this mode of social grouping.

The relation of the clan and other similar social groups to marriage is less simple. While marriage is the foundation of the family, it is possible that the clan-organization has grown out of a state of society in which individual marriage did not exist; but, whether this has been so or not, the clan-organization as it now exists is intimately related to marriage, this institution being the means by which descent, inheritance of property, succession to rank, and other social differentials are regulated.

1. Regulation of marriage. See in all forms of

human society there are definite rules regulating whom the members of the community may and may not marry. These rules are of many different kinds, but they all fall under one or other of two main heads, namely, regulations of endogamy or exogamy, and regulation by some form of social mechanism, consisting of class or similar social groups. The rules may also be distinguished according as they prohibit or enjoin certain unions. Among all those peoples who have the family as their main form of social grouping marriage is regulated solely by kinship, and the rules regulating marriage consist exclusively of prohibitions, forming the 'table of prohibited kinds and affinities'. People to whom the family is founded mainly on the clan or other similar mode of grouping do not, however, regulate their marriages solely by this mechanism, but this kind of regulation, in all cases of which we have any exact knowledge, is combined with the regulation of marriage by kinship, the two modes of regulation co-existing, and supplementing one another. Further, this double mode of regulation does not consist entirely of prohibitions, but, side by side with the regulation by kinship, there are often definite rules which enjoin marriage with certain relatives.

The regulation of marriage associated with modes of social grouping assumes certain definite forms for which there are well-established terms, such as endogamy, exogamy, etc.

2. Exogamy and endogamy.—Much confusion has been produced in the use of these terms through the mistaken idea that the processes which they denote are opposed to one another, this being due, probably, to the influence of McLennan, who was the first to draw attention to the practice of exogamy. According to this writer, exogamy is a custom in which a person has to marry outside his tribe. There are a few cases on record, though even about these we need far more exact information than we possess, in which it seems that people have to marry outside their tribe or other similar social group, but in the vast majority of the cases for which the term 'exogamy' is used the exogamous social group is not the tribe, but that subdivision of the tribe for which the term 'clan' is generally employed. When we say that a community possesses the clan-organization, we mean that it is divided into a number of clans, the members of which must marry outside their own group. If they must marry into some other group of their own community, we have to do with the practice of endogamy, the community as a whole being endogamous, whereas those who are exogamous. From this it will follow that exogamy and endogamy are not antithetical processes, but, where both exist, supplement one another.

Endogamy in this sense is a relatively infrequent practice, being most fully developed in the caste system of India, in which the caste is the endogamous group and the gotra (q.v.) or other corresponding sub-group the exogamous unit (see art. CASTE). The social system of the Todas is another pure case of the division of endogamous social groups into exogamous clans. In other parts of the world obligatory endogamy is rare. There are many people who are isolated from their neighbours, either by physical or, still more frequently, by social conditions, such as constant warfare, who habitually marry within their own community, but their case differs fundamentally from that of the Hindu or Toda in that there is no definite prohibition of marriage within the community, and if the opportunity arises, such marriages meet with no opposition. Even in Europe there are cases in which marriage within the village or other social group is so habitual and departure from this custom meets with such social reproba- tion that we come very near to true endogamy. It would seem that this tendency to endogamy is especially pronounced where the people of the village follow up or generate manuring or country, and the prohibition of endogamy with occupation is not only characteristic of the caste system of India, but is also found in one of the exceptional examples of obligatory endogamy, which occurs in Africa in the case of the smiths, who often form a social group kept separate, by having to marry within their own body, from the rest of the community to which they belong. It is noteworthy also that there is a definite tendency towards the association of endogamy and occupational castes of priestly and royalty, and in some cases marriage within these classes is so strictly enjoined that it amounts to a form of endogamy.

The practice of exogamy occurs in many forms according to the nature of the social system of which it forms part. If the community is totemic, the exogamous social group will be the totemic clan. If the community is organized on a social or territorial base, the exogamous unit will be the village, the bare or ideal form of rules which enjoin marriage with certain relatives. The regulation of marriage associated with modes of social grouping assumes certain definite forms for which there are well-established terms, such as endogamy, exogamy, etc.

3. Australian matrimonial classes.—These form a special variety of exogamous system in which a person has not only to marry outside his own class, but has to marry into another specified group. In one form, known as the seven-class system, each moiety is composed of two sections, the marriages of members of one section of one moiety being limited to one section of the other. This system is associated with a peculiar mode of descent in which a child does not belong to the class of its father or mother, but to the other section of the moiety of one or other. In another form, known as the eight-class system, each of the four classes is composed of two sections, in which descent follows the same kind of rules as in the seven-class system, but of a more complicated kind. This form of social organization has until recently been supposed to be unique, but A. H. Brown has shown that it is nothing more than a systematization of the regulars of marriage by kinship which is associated with exogamous systems. In Melanesia there are probably similar groupings, though of a less definite kind than in Australia.

4. Hypogamy.—This name has been given to a peculiar form of the regulation of marriage, only known to occur in India, in which a woman must marry a man of a caste or sub-caste higher than her own. Where this custom is found, men and women of the same caste or sub-caste are sometimes also allowed to marry, but there is the strictest prohibition of the marriage of a woman with a man of a caste lower than her own.

5. Regulation of marriage by kinship.—Among peoples whose social system is based specially on the family and the nature of whose system of relationship shows that this mode of social organization has been of long duration, marriage is
regulated exclusively by genealogical relationship. Marriages with certain classes of relatives are forbidden and those with other classes allowed, while other marriages may not be strictly prohibited, though looked upon with more or less disfavour by the community, the chief example of this difference of attitude occurring in those cases where a man marries a cousin. We do not know, however, of any such people among whom marriages with certain relatives are obligatory, or even so habitual as to stamp their presence on the nomenclature of relationship. The regulation of marriage by relationship is not limited to peoples whose system of relationship is based on the family, but occurs also among many people who follow the classificatory system of relationship. It is found in many parts of Africa and America: it is characteristic of Polynesia, and occurs in some parts of Melanesia; while, as already mentioned, the matrimonial classes of Australia are only a specialized form of this mode of regulation. Among all these peoples, however, the results of this type of regulation differ widely from those already considered in that the restrictions apply to the very wide circle of relatives involved in the use of the classificatory system. Among the Biver, Peru, and Bantu peoples, the rules do not go so far with the prohibition of marriage merely between brother and sister or between first cousins, but also between those whom we should call second and third cousins, or even more remote relatives. Sometimes the rule forbidding marriage with whom any kind of genealogical connexion, apart from relation by marriage, can be traced. More frequently the prohibition does not take this extreme form, but there are rules limiting the prohibitions of marriage by genealogical relationship, a frequent form of such limitation being the exclusion from the prohibition of those cases in which cousins are descended from persons of different sexes. Thus, among many peoples the marriage of any two brothers or of two sisters is strictly prohibited, but not only is the marriage of cousins who are the children of a brother and sister allowed, but, as will appear shortly, these relatives may be the natural consorts of one another. The people who thus regulate marriage exclusively by relationship have lost the clan-organization which their use of the classificatory system shows them to have once possessed. Even those who still possess this form of social organization do not rely solely upon it for the regulation of marriage, but marriages with many relatives are prohibited outside the circle of the exogamous group. Sometimes this prohibition takes the form that a man must not only seek a wife out of his own clan, but must avoid the clans of both father and mother, and perhaps the clans of all the grandparents. More often, however, the prohibitions rest more directly upon kinship, and do not involve all the members of the clans with which the man is related. Many gradations occur between people who regulate marriage solely by kinship and others among whom marriage is chiefly regulated by the clan-organization, but we know no people who have been sufficiently investigated and have been found to be wholly devoid of the mode of regulation by kinship.

6. Marriage with relatives.—Among many peoples, and especially among those who use the classificatory system in the classification of marriage by kinship and others among whom marriage is chiefly regulated by the clan-organization, but we know no people who have been sufficiently investigated and have been found to be wholly devoid of the mode of regulation by kinship. 6

MARRIAGE (Introductory and Primitive)

Clasping of all or some cousins with brothers and sisters in different forms of the classificatory system.

The marriage of cousins is frequent among Muhammadans, usually with the daughter of the father's brother, and here, as in other cases in which this form of marriage occurs sporadically, the motive is the desire to keep property within the family.

The most frequent form of marriage of cousins is that which takes place between cross-cousins, namely, cousins who are the children of brother and sister. In many places this marriage is not merely allowed, but is the orthodox union, and is so habitual that it determines the form of the system of relationship and gives a special character to the whole social system. All the peoples who are known to practise this form of marriage use the classificatory system of relationship; but usually the marriage is not between cousins in the wide classificatory sense, but between the children of own brother and sister. In some communities these relatives are regarded as husband and wife without the need of any ceremony or other social arrangement, and still more frequently they apply to one another the terms used between husband and wife, even when they are not actually married to each other.

In the most frequent form of this union a man marries the daughter either of his mother's brother or of his father's sister, but occasionally his choice is limited to one or other of these relatives, the case which occurs the more frequently being that he marry's the daughter of his mother's brother but not of his father's sister. This form of marriage occurs among a few peoples of Australia, in several parts of Melanesia, including Fiji, and in India, especially in the south of the peninsula, though it was formerly more widely distributed. It is also found among the Hausa and a few other peoples of N. America, but has not yet been recorded from South America. In Africa it has recently been found by Mrs. R. F. A. Hoernle among the Hottentots.

This type of marriage has usually been regarded as a secondary consequence of the dual organization of society, and has probably arisen in most, if not in all, cases out of this form of social organization. In Melanesia it has probably had as immediate antecedent marriage with the father's sister or with the wife of the mother's brother, but elsewhere it seems to be actuated by the desire to keep property within the family. In some parts of Melanesia this form of marriage includes the marriage of second cousins, but we do not know how far such marriages occur between true second cousins or between more distant relatives. In some parts of the New Hebrides it is the custom to marry certain relatives whom we should class as first cousins once removed. Thus, a man may marry the daughter of his father's sister's son or daughter, the daughter of his mother's brother's daughter, or the daughter of his mother's mother's brother. One of these forms of marriage is especially frequent, viz. that with the daughter of the father's sister.

(d) Uncle and niece.—In general, marriage between these relatives is prohibited, but occasionally a man is allowed to marry his brother's daughter, and this marriage would seem to have sometimes been so habitual as to have influenced the systems of relationship. This marriage occurs in northern Australia and in some parts of Melanesia. It has also been observed in some parts of Europe. Several peoples of South America permit a man to marry his sister's daughter. In some cases it is only the daughter of an older sister who may be married.

Another marriage which may be included under this heading is one occurring in Melanesia, in which a man marries the wife of his sister's son, or in which he and his sister's son have their wives in common.

(c) Aunt and nephew.—Marriage with the father's sister occurs sporadically in certain parts of Melanesia, and is a regular practice among some of the Dene peoples of N. America, and marriage with the mother's sister is said to occur among the Osetes of the Caucasus. Marriage with the wife or widow of the mother's brother is still practised in many parts of Melanesia, and is shown by the nomenclature of relationship to have once been a common practice. This form of marriage also occurs among some of the Bantu peoples of Africa, and many systems of relationship of N. America have features which would be its natural result.

(f) Grandparent and grandchild.—In Pentecost Island in the New Hebrides it is, or has been, the custom to marry the daughter's daughter of the brother; and this marriage with one who, through the classificatory system, has the status of a granddaughter has imprinted itself so deeply on the nomenclature of relationship that it may have been the habitual custom of the people. This form of marriage has also been recorded among the Diari of Central Australia.

A form of marriage similar to that just described, in that a man marries a woman two generations below his own, occurs in Ambrin, adjacent to Pentecost Island. In this island a man marries the daughter of his sister's son. Still more widely distributed is marriage with the wife or widow of the father's father. This form of marriage was first inferred from the nature of the terminology of relationship in Fiji and in Tongawale Island in the Solomons, but the present writer has since found it in vogue in several islands of the New Hebrides, not only with some wife of the father's father, but with the actual grandmother.

We do not at present know of marriage between grandparent and grandchild outside of Australasia, but there are features of some African systems of relationship which suggest its occurrence at present or in the past.

7. Polygamy.—The forms of marriage so far described are characterized by the social status of the partners. The next to be considered arise out of the number of the persons who enter into union. The term at the head of this section is most conveniently used as a generic term to include all such cases other than monogamy. Its different forms are polygyny, in which one man marries more than one woman; polyandry, in which one woman marries more than one man; and communal marriage, in which more than one man marries more than one woman.

8. Polygyny.—Though this form of marriage exists, or has existed, in every part of the world, it is very rarely, if ever, practised by all members of the community, but is the special privilege of the powerful and wealthy. Polygyny can be universal only among a people which obtains women by capture or some other means from outside its own community. Sometimes the practice is limited to chiefs, sometimes, where large payments for a wife are in vogue, it is only the wealthy who can marry more than one wife. Sometimes polygyny is the privilege of those who have shown their superiority to the rest of their community in some way, as in Eddystone Island in the Solomons, where a second wife is allowed to men who have taken ten heads in warfare.
Polygynous unions differ considerably in the degree of social differentiation accompanying the union. The different wives may live together in one household, or be scattered throughout the community. Sometimes one wife is superior to the rest, and her children differ from those of other wives in social status—a condition which passes insensibly into the distinction between marriage and concubinage (see below, § 11). Sometimes there are definite rules regulating the behaviour of the husband to the different wives.

The continent in which polygyny has reached its highest degree of development is Africa, in many parts of which the custom is associated with the development of the social condition in which it exists. In Africa, polygyny forms part of an organized system of monopoly of the young women by the old men of the community. It is sometimes the custom in polygyny that the wives shall be sisters, a man who marries a woman having the right to take her sisters also as they reach marriageable age.

In the Marquesas and in Tibet and neighbouring regions, where polyandry exists in its purest form, it is of the fraternal variety. Usually the brothers grow up, they share his wife with him. Even if one of the younger brothers takes a wife among the Todas, she becomes also the wife of the other brothers. It is doubtful whether the recorded cases of non-fraternal polyandry should be regarded as polyandry at all. Among the Nayar, who furnished McLennan with his pattern of this form of polyandry, a girl goes through a form of marriage with a man, but then or later consorts with a number of men who need not be related to one another. It is a question, however, whether these men should not be regarded as eicithe rather than husbands—a point difficult to decide, since the purely matrilineal institutions of the people make the fact of fatherhood of little social importance.

A variety of polyandry which may be distinguished is one which occurs among several peoples of India, in which a young boy marries a wife who consorts with the boy’s father or maternal uncle or some other man. The wife’s offspring are counted as the children of the boy-husband, and, when the boy reaches adult age, he will consort with the wife either of one of these children or of some other boy. The motive of the custom is said to be that the boy shall have a son to take him out of Put (hell). A similar practice has been recorded elsewhere, as among the Ostiaks and Oscutes. In Melanesia, a man may have a sister’s wife; in some cases they have a wife or wives in common, but this was almost certainly part of a system of communal marriage, and it is probable that this is also the true nature of some or all of the other cases of this variety of polyandry. The polyandry of the Marquesas is peculiar in that the husbands are of different social status, one husband belonging to a more influential section of the community than the other.

We know very little of the social mechanism by means of which the number of the children is determined in cases of polyandry. In several cases it has been recorded that the children are assigned to the different husbands in order of age, but it is certainly not true of the Todas, who were once credited with this practice. Among this people there is no need for any special ascription of the children to the different husbands when these are brothers, owing to their common habitation and their common possession of property. It is only when the husbands are not brothers that the necessity arises, and then fatherhood is determined by means of a ceremony at the seventh month of pregnancy, the man who performs this ceremony becoming the father of the child for all social purposes.

We know little or nothing of the causes which have led to polyandry. Among the Todas and in the Marquesas Islands, and possibly elsewhere, polyandry is associated with female infanticide, and it has been suggested that the polyandrous marriage is the result of the scarcity of women so produced. It has also been supposed that polyandry has been the result of inequality in the proportion of the sexes, due to scarcity of the food-supply, this either producing a small proportion of female births owing to physiological causes or leading to the practice of infanticide.

It is noteworthy that the only definite example of polyandry recorded in Africa should occur among a pastoral people whose culture possesses several features closely resembling that of the Todas.

10. COMMUNAL OR GROUP MARriage.—The question whether this form of marriage exists has been the subject of a lively controversy between different schools of sociologists for many years. If we define this type of marriage as a union of more than one man with more than one woman, no one doubts that such unions do occur, but there is a point of view which conform to the definition. This form of union is found among the Todas, for instance, but there it seems to have arisen as a combination of polygyny with polyandry. It is when we pass from such cases to those in which large groups of men are held to be the husbands of large groups of women that doubt arises.

The solution of the problem turns largely on the sense in which we use the term ‘marriage.’ If this word be employed for relations between two or more individuals, there is no question that group-marriage does not merely exist, but is a widely distributed practice. If, on the other hand, marriage is regarded essentially as an institution by which the social status of children is determined, we are led to doubt the existence of the recorded cases from this point of view; and another difficulty is that of drawing the line between wife and concubine, between husband and eicithe.
not to do with a confusion between wife and concubine appears from comparison with an adjoining people, the Dieri. The Dieri have a definite term for individual marriage, viz. tippa-malkun: this exists side by side with the pirraura, which is a relation between the Ngarrabula men and women who call one another naupa would, therefore, seem to correspond with the tippa-malkun union of the Dieri, except that they are group-relations, while the tippa-malkun union occurs between individuals. The tippa-malkun marriage, however, is associated with the custom of lending a wife, while men other than the husband have marital rights as part of the marriage ceremony. If the tippa-malkun union is regarded as a true marriage, it is difficult to withhold this name from the union between naupa which seems to correspond with it among the Ngarrabula. In order to reach a positive decision on the matter, however, we should like to be more fully informed about social relations between children and the male partners in the different kinds of union.

In some parts of Melanesia there is an association of definite individual marriage with the occurrence of sexual relations between groups of men formed by the husband’s brothers and the group of women formed by the wife’s sisters. Since these groups consist of brothers and sisters in the classificatory sense, they may be of considerable size. This social fact is, now at any rate, confined to relations between the sexes, and it seems, therefore, better not to regard this as a form of group-marriage, but to speak of sexual communism associated with individual marriage.

Those cases may be similarly regarded in which all the members of a conventional brotherhood possess marital rights over the wives of other fellows. The most definite case of this kind of which we know is that recorded by C. G. Seligmann among the Massim of New Guinea, in which all the members of a brotherhood who called one another eriam have marital rights over the wives of the eriam.

11. Concubinage and cicisbeism. Reference has already been made to the difficulty of distinguishing these conditions from marriage. The most convenient use of the word ‘concubine’ would be to denote a woman with whom sexual relations are permitted, although the union does not involve fatherhood if there should be offspring. Similarly, the term cicisbeo would be most conveniently used of the male partner in a similar union. If the terms were used in this sense, the pirraura and pirrauran of the Dieri and Ngarrabula would be concubines. Their distinction would be especially applicable in such a case as that of the Todas, whose mokhtotoxviol would be distinguished as cicisbeio from the husbands proper, there being the important difference between the two that the mokhtotoxviol partnership is not subject to the law of endogamy which regulates the polyandrous marriage. The mokhtotoxviol also never obtains the status of father to his partner’s children except in those rare cases where he is the brother of the woman as an expectant mother whose husband is dead or missing, he is called upon to perform the ceremony which determines fatherhood.

The difficulty in using the term ‘concubine’ in the sense thus proposed is that in some of the cases, such as those of the OT, in which the use of the term is fixed, concubinage carries with it the social relation of fatherhood, sometimes even with full rights of inheritance and succession (cf. art. CONCUBINAGE, Introductory).

12. Marital relations.—In this article marriage has been considered chiefly as a social institution by means of which the relations between parents and children become part of an organized social system. People among whom marriage is a social institution of the most definite kind may vary greatly in their attitude towards the sexual relations of married persons. All gradations can be found between peoples who regard any sexual relations other than those between husband and wife as a heinous offence and those who allow very great freedom in this respect. Of all the cases of which we have any knowledge, however, the extra-marital relations of married persons are subject to definite restrictions, the clue to the nature of these restrictions resting upon the conception of a wife as the personal property of her husband. Thus many peoples who will kill or make war upon the offender, if a wife is found to have transgressed, will never allow their wives if their consent is asked, or will offer no objection if relations with other men form part of the saturnalia or other occasions when relaxation of the ordinary moral rules is allowed.

The departure from marital chastity are exchange of wives, which is especially a feature of Australian society, and lending wives to guests, which occurs in many parts of the world. Allowing the use of a wife in return for money or some other kind of compensation is, however, very often only a feature of the relaxation of morality which follows contact with external influence.

13. Sexual relations before marriage.—Peoples differ greatly in their attitude towards sexual relations before marriage. In general, pre-nuptial freedom is allowed to men, but great divergencies are found in the views held about female chastity before marriage. Among many people the premarital chastity of the wife is so highly valued that it may lead to such a practice as infanlulation (cf. ERE, ii. 668*, 669*), and the testing of chastity may form an important part of the marriage ceremony, the failure of this test leading to annulment of the marriage or depriving the relatives of the woman of the benefits which they would otherwise obtain from the marriage.

Among other peoples freedom of sexual relations before marriage is regarded as a normal occurrence, and there may even be an organized system of payments for such relations, or prostitution in some form may be regarded as a regular preliminary to marriage, and those who have been successful in this career may be especially sought as brides. In other cases sexual relations before marriage may be more or less freely, though they are not openly conditioned. Among many peoples such sexual relations are allowed so long as they do not result in offspring, and, as in many parts of Europe, the occurrence of pregnancy forms the usual preliminary to, and occasion for, marriage.

In addition to the forms of marriage dependent upon the social status of husband and wife and the numbers of partners who enter into the marriage, other varieties can be distinguished according to the place of residence of the married persons, and the age at which the union takes place.

14. Patrilocal and matrilocal marriage.—These are terms respectively for cases in which the wife goes to live with her husband, and the husband goes to live at the home of his wife, the usual consequence being that in the one case the children
will belong to the locality of the father, and in the other to that of the mother. These two varieties of marriage have often been distinguished, especially by writers on Indian society, by means of the Sinhalese words deega and beena, but the above terms, first proposed by N. W. Thomas, are now coming into general use. Intermediate cases between marriage and betrothal are also frequent, in which the man goes to live at his wife's home for a time, the case being closely related to that mode of obtaining a wife in which a man has, for a period of months or years, to serve the parents of the bride—categories which may be taken by some such other relative, as the mother's brother or the father's sister. In some parts of Melanesia the consent of the father's sister is essential. She usually chooses a wife for her nephew, and has the power of vetoing his marriage if he should choose for himself.

17. Marriage by purchase.—In most parts of the world marriage is accompanied by pecuniary transactions. In some cases payments are made by the husband or his relatives to the relatives of the woman, this payment being usually known as the bride-price. In other cases payments are made by the relatives of the bride, these being usually known as a dover. In other cases again there are complicated transactions in which payments pass between these persons, either by these being chiefly of a ceremonial nature, either existing alone or, more frequently, accompanying the transference of the bride-price or dowry. Sometimes the payments made for a wife or husband may be so large as to form a definite impediment to marriage. They tend to raise the age of marriage, or may even prevent some members of the community from marrying at all. In some cases, however, in which the payments seem to be very large, such as in Melanesia, the political or social system distributes the payments over a large circle, making them more practicable than would be the case if they had to be given by an individual person. Sometimes the payments are made in different stages which may correspond with betrothal and marriage, and sometimes they do not cease at marriage, but continue for some time afterwards, the birth of each child of the union being an occasion for them to be paid. Among peoples who follow the custom of marrying certain relatives it sometimes happens that the payment for a wife is made only in those cases in which a man marries some other woman.

The most frequent manner of marriage takes the form of the bride-price; but in India, and in some parts of Europe, the dowry or payment to the husband is the more usual custom.

18. Marriage by exchange.—The most definite case of this mode of contracting marriage is that in which a man gives his sister to the brother of his bride, and, since this custom usually occurs among peoples who use the classificatory system of relationship, it may lead to the exchange of women between groups of considerable size. The motive usually assigned for this form of marriage by those who practice it is that it does away with the necessity of paying a wife; but there is some reason to suppose that in some cases the practice may have arisen out of, or be otherwise associated with, the cross-cousin marriage.

19. Marriage by service.—This kind of marriage, which has become well known through its occurrence in the OF, is probably not very common, and, as already mentioned (§ 14), passes insensibly into the matriloclal form of marriage.

20. Marriage by elopement.—Among many peoples elopement is so frequent and is so little objected to by the community that it may be regarded as a regular mode of contracting marriage. In some cases it would appear to be the result of
restrictions upon marriage which have developed to such an extent as to have become irksome to the community. In the absence of any social mechanism for the abrogation of these restrictions it has become the custom to connive at their infrac- tion by taking a lenient view of the consequences.

In Australia and some parts of Melanesia where elopement is frequent it may be the secondary consequence of the monopoly of women by the old men. In other cases it may be a means of escape from the obstacles to marriage due to the bride-price.

21. Marriage by capture.—This form of marriage has aroused great interest in consequence of the idea of McLennan that, at one period of the history of human society, it was the normal mode of obtaining a wife. The capture of wives is known to occur, and the marriage ceremonial of many parts of the world includes either a definite conflict for the possession of the bride or features which may be interpreted as survivals of this process. It is very doubtful, however, whether any people habitually obtain wives from without their tribe, though the Khonds of India are said to do so, and it is probable that the conflicts of wedding ceremonial are derived from other social processes such as the custom of marrying relatives, which gave certain persons a vested interest in the women of their own community. The vague of the cross-cousin marriage in southern India makes it probable that a conflict which takes place be- tween the husband and his wife's cousin in some parts of Malakar is a survival of that form of marriage in which the cousin had a prescriptive right to the bride.

It is probable that many of the other customs which have been regarded as survivals of the capture of women from hostile tribes are rather the results of a social condition in which it was the custom that women should become the wives of certain members of their own community.

22. Trial marriage.—Unions to which this term has been applied have been recorded among many peoples, but many, if not most, of these cases should be regarded as trials before marriage rather than as examples of marriage in the sense in which the term is used in this article. Temporary unions are especially frequent where marriage is contracted with little or no ceremonial, and these cases shade off insensibly into trials before mar- riage on the one hand and into cases of divorce on the other. A union should be called a trial marriage only if there is a definite contract or ceremony entered upon with the condition that the union shall be annulled if it is unfav- oritable or if the parties to it wish to separate after a certain period.

23. Social functions of relatives by marriage.—Marriage brings the partners to it into definite social relations with large groups of persons in whom they had previously no special interest. Among some peoples, and especially among those who use the classificatory system of relationship, these social functions may take very definite and well-established forms. Prominent among these is the custom of avoidance (see Kin, Kinship, III. 9) between a married person and his or her parents-in-law. The restrictions on conduct are usually most pronounced in the case of a man and his wife's mother, and the avoidance in this case may be such that the two are not to see one another or to be in the same house or even in the same village. A more frequent form of avoid- ance is that a man may not speak to his mother-in-law or may not speak to her familiarly, and so the man may be said to avoid his mother-in-law's son that he may not use her personal name, but must address her by the appropriate term of relationship. A similar mode of conduct often accompanies the relationship of a man to his wife's father, but usually the avoidance is less strict, and the avoidance between a woman and her husband's parents is also, in general, less rigid than that between her husband and her parents. In some societies, probably everywhere, these customs of avoidance are definitely associated with the idea of the likeli- hood of sexual relations between those who avoid one another, but the occurrence of similar customs of avoidance between persons of the same sex shows that this is not the only explanation.

Similar customs of avoidance also occur between brothers- and sisters-in-law, using these terms in the classificatory sense; but they are usually less strict, and often limited to prohibition of the use of the personal name or of familiar conversation. Often these customs are combined with certain duties on the part of these relatives towards one another—duties which may be summed up as those of mutual helpfulness. This is especially the case with the relationship of brother-in-law. Some- times the duty of helping one another goes so far that a man may use any of the property of his brother-in-law. Sometimes the men must defend their sisters-in-law from the attacks of other men. The avoidance of the relatives on different sides may put an end to a fight. Still another duty sometimes assigned to these relatives is that one must dig the grave or take the leading part in the funeral ceremonies of the other.

This combination of customs of avoidance with the obligation of mutual helpfulness may possibly be explained as having grown out of the relations which arise when marriages habitually take place between hostile peoples, or the dual nature of the marriages which form part of the process of fusion of two peoples.

24. Marriage ceremonial.—The rites accompa- nying marriage vary greatly in duration and complexity among different peoples. Sometimes they are so fragmentary that they can hardly be said to exist, while in other cases the ceremonial may consist of rites of the most diverse and elaborate kinds, prolonged over weeks or months. In the lower forms of culture the ceremonial of marriage is, in general, scanty, especially where it is the custom to marry relatives. Its greatest complicity, on the other hand, is reached in India, south-eastern Asia, and the Malay Archipelago, the ceremony of the Polynesians being probably the result of Hindu influence. It is possible to distinguish certain main varieties of ceremonial. Putting on one side feasting and adornment as the expression of aesthetic motives natural to any important event in social life, we find a number of ceremonies which are connected with the economic side of marriage. Such is the transmission of objects from the friends of one partner to those of the other which form the bride-price in many parts of the world, as in Melanesia, the transactions of this kind are numerous and complicated and form nearly the whole of the ceremonial. Sometimes, however, these transactions have aspects which suggest a religious character, especially in the customs of exchange which are so prominent in the ceremonies of Polynesia, Melanesia, and some N. American peoples.

Another group of ceremonies which may have a no are not allowed to the two partners in the marriages, and are probably indications of interference with vested interests affected by the marriage.

A large group of ceremonies consists of acts symbolizing a special covenant of marriage. Such are the joining of hands and the tying together of gar- ments. Allied to these are the acts which seem
to show the superior status of one or other partner to the union. Thus the superiority of the bridegroom may be symbolized by presenting him with a whip or by boxing the bride's ears, and possibly tying the tali in India and the use of the wedding ring of our own ceremony may have had a similar meaning. Elsewhere, as in Morocco, the bride may perform various acts, such as riding a jack-saddle, which are designed to give her power over her husband.

Similar to these are the many forms of rites in which bride and bridegroom eat together or march round a fire. Other rites, such as that of pouring rice or water on the head of the bride, probably have as their motive the desire to promote the fertility of the union, or to ensure an abundance of food for the household.

Another large group of rites seems to be connected with the idea that some danger is attendant upon entrance into the marriage state. It may be that rites of this kind at marriage form part of a general custom of performing ceremonies at any transition from one period of life to another—the rites of passage of A. van Gennepe.1 Another motive may be the idea of the danger accompanying sexual intercourse to which so great an effect has been ascribed by Crawley.2

Among features of this kind may be mentioned the prolonged period which often has to elapse before consummation of the marriage is allowed, and the frequent customs according to which husband and wife are not allowed to see one another before a certain stage in the ceremonial. The many rites of purification, the assumption of new garments, and such disguises as dressing in the clothes of the opposite sex may also be of this order. It is probable that some and others are designed to impart to others the spiritual sanctity which is supposed to attach to newly-married persons.

Many of the motives for ceremonial so far considered are of the kind usually supposed to underlie magic. Other features are definitely religious in that they involve specific appeal to some higher power. Such are definite rites of sacrifice and prayer, while the practice of divination to discover whether the higher powers are propitious also falls under this head.

Among most people of rude culture no part is taken by any person who can be regarded as a priest, but, as definite religious motives come to actuate the ritual, its performance tends to pass more and more to the hands of a class of persons especially set aside for the performance of this and other religious functions.

25. Marriage to inanimate objects.—In several parts of India it is the custom, under certain circumstances, that persons shall go through ceremonial marriages with such objects as a tree, a bunch of flowers, a dagger, a sword, or an arrow. One occasion for this kind of marriage is the entrance of a dancing-girl upon her career, the motive being that, though the future occupation of the girl will render a husband superfluous, she shall, nevertheless, be married.

Another motive for this form of marriage is the belief in the unlikeliness of certain numbers. Thus, to counteract the belief that a second marriage is unlucky, a widower may marry an inanimate object in order that his succeeding union with a woman shall be his third marriage. It is probable, also, that marriage to a tree may, in some cases, especially where this forms a part of the ordinary marriage ceremonial, depend upon a belief in the influence of the tree upon the offspring, possibly in the future reincarnation of an

1 Rites de passage, Paris, 1890.
2 The Mystic Rose, London, 1892.

26. Marriage after death.—In some parts of India the body of a girl who dies unmarried is the subject of marriage rites, while the marriage of dead bachelors seems to have been a feature of ancient Aryan culture (ELE II. 22). The Aryan practice seems to have been confined when the custom of killing the wife on the death of her husband, and to have had on its motive the desire to provide the man with a wife in the life after death. We do not know the motive for the modern Indian practice.

27. Widowhood.—In some parts of the world the re-marriage of widows is absolutely prohibited, and in others widows normally become the wives of certain relatives, while intermediate cases occur in which their marriage is allowed, but is subject to any special rules. Among many peoples, especially in the case of chiefs and more influential members of the community, wives are killed as part of the funeral ceremonies of their husbands, and there is reason to suppose that there is a connexion between this practice and the total prohibition of re-marriage, particularly as the latter practice is often found in the neighbourhood of places where the killing of wives on the death of the husband is or has been practised. We are, however, in some cases, where the association occurs are India and the Solomon Islands, and the connexion of the two practices is supported in the latter locality by the fact that widows undergo a period of seclusion after death, with features suggesting that the objection is intended to represent a ceremonial death. It would seem that the prohibition of re-marriage is adopted when the extreme measure has been given up.

Several cases in which a widow normally marries certain relatives have already been mentioned. Sometimes, especially in Africa, a son takes his father's widow, excluding his own mother. Elsewhere a widow may be married by the sister's son, or the son's son, of the deceased husband; but the most widely distributed form of union of this kind is that known as the levirate, in which a wife is taken by the brother of the deceased husband.

28. The levirate.—The best known example of this practice is that recorded in the OT, in which the custom is limited to the case in which the dead husband had no children, the motive of the marriage being to raise up seed for the dead brother. The term is now used for any case in which a man marries his deceased brother's wife, and in most cases the Biblical limitation and motives are not present. The practice may be based on the idea that a wife is property to be taken by the brother with other goods, or it may form part of the duty of guardianship over the children of the brother and be designed to prevent the management of the children's property passing into the hands of a stranger whom the widow might otherwise marry.

In India, and in some parts of Melanesia, the practice of the levirate is subject to the limitation that the widow of a man may be married only by his younger brother, a man having no right over his younger brother's wife. It is possible to see how this limitation can arise out of the motives for the practice already mentioned. It was supposed by McLennan that the levirate is a survival of polyandry, and it is possible that in these Indian and Melanesian cases the practice is derived from either polyandry or communal marriage, the limitation being connected with some social functions of the relationship between elder and younger brother of which at present we have no knowledge.

Though the OT motive does not wholly account for the custom of the levirate, it shows itself in
other forms among many peoples. In many parts of Africa a child born to a widow even many years after the death of her husband is held to be the child of that husband, and the Dinkas of the Anglo-Egyptian Sudan have a custom according to which a widow without male offspring who is beyond the age of child-bearing will purchase a girl and pay a man to beget children by this girl for her dead husband. Again, where there is a need for male offspring, especially to perform religious rites, a man without sons may call on his brother or some other man to beget children by his wife.

29. Re-marriage of widowers.—We know of no people who prohibit the re-marriage of widowers, and the chief point of interest in this subject is the difference of attitude towards marrying with the deceased wife's sister. It has already been mentioned that in polygynous unions it is often the custom to marry sisters, and among people who follow this custom and many others the wife's sister is the natural spouse of a widower. Other peoples prohibit this form of union. Among many of these peoples the wife's sister is regarded as a sister, a conventional relationship often shown in terminology, and the prohibition of marriage is doubtless connected with this idea. It is an expression of the general reprobation of marriage between persons who stand in the relationship of brother and sister, even when this relationship has come about through some social convention, and when the nature of the term is only metaphorical.

30. History of marriage.—Widely different views on this topic are at present current. On the one side are those who regard monogamy as the original state from which the other forms of marriage have developed; on the other are those who believe that monogamy has come into existence by a gradual process of evolution from an original condition of complete promiscuity through an intermediate stage of group-marriage. Lewis Morgan, who has been the chief advocate of an original state of promiscuity, based his opinion on evidence which we now know to be fallacious, and at present not only do we have no knowledge of any promiscuous people, but there is also no valid evidence that a condition of general promiscuity ever existed in the past.

The problem of group-marriage stands on a different footing. Whether the communist unions of different parts of the world be regarded as marriage or not, there is no question that such unions exist, and there is much reason to believe that they have been more general in the past than are explained by the origin in communist conditions. Even if this view be accepted, however, it does not commit us to the position that this condition was once universal among mankind. It is possible that only some of the main varieties of mankind have been communist. Still less does it follow that sexual communism was the primitive condition of mankind. No people now in existence can be regarded as primitive, or even as a sure representative of primitive conditions. Even if it be accepted that sexual communism was once widely distributed or even universal, it would remain possible, if not probable, that it is not a primitive condition, but only represents a stage in the evolution of human society. If, as there is much reason to believe, mankind has never lived in small, patriarchal groups, perhaps consisting only of parents and children, the original state would have been monogamy, and, if so, the wide prevalence of communist forms of marriage must be ascribed to some factors which came to action as the social group increased in size. Even if the classificatory system be founded in communist conditions, it has features, such as the clear recognition of generations, which are most naturally explained by its having taken a still earlier condition in which the unions between the sexes were monogamous, or were restricted to such small groups of persons as to approximate to that condition.

MARRIAGE (Christian).—1. The Christian ideal. — The NT does not pretend to set forth any new law or theory of marriage. Our Lord's answer to the Pharisees who questioned Him on the subject of divorce (Mt 19, Mk 10) implies that the perfect ideal of marriage is sufficiently declared in the passage in Genesis which records the original institution of the holy estate of matrimony (Gen 2:1-24). The teaching and legislation of the Christian Church on this subject may, therefore, from one point of view, be regarded as a series of attempts to define more clearly and fully what is implied in the words of the original institution, and to enforce in practice the careful observance of the principles therein involved.

It is, accordingly, not strange that the subject of marriage occupies a comparatively small space in the teachings of the NT, and is for the most part confined to general rules as to the behaviour of married people such as might very well have found a place in the teaching of any heathen philosopher.

In the Gospels we have no direct reference to marriage, with the exception of our Lord's dealings on the subject of divorce, which probably represent sayings uttered on different occasions, but which are, at any rate, all to the same purport: divorce is in itself sinful and inconsistent with the original divine institution of marriage. In the Epistles we have a number of practical exhortations in which the duties of married persons are clearly declared. The supremacy of the husband as the head of the wife is recognized, and the duty of wisely obedience declared. Mutual love and consideration are urged with considerable insight, while the perfect unity of husband and wife as "one flesh" is duly emphasized.1

The NT, in fact, deals with marriage as an established social institution as it deals with other established institutions, laying down broad general principles of conduct, and demanding faithfulness and uprightness in the discharge of all recognized duties.

It was not necessary for the first Christian teachers to condemn polygamy, for in both the Greco-Roman and Jewish world, monogamy was the universal rule. Polygamy is not expressly forbidden in the OT, nor was it uncommon in ancient Israel; but the Jewish teachers of the post-Exilic period had come to recognize that it was not consistent with the spirit of the original institution, which plainly demands the union of one man and one woman in marriage. Extra-matrimonial connexions might not be seriously condemned in the Gentile world, but, for the begetting of legitimate children, it was the rule that there should be only one wife to one husband. While it is safe to say, however, that monogamy is assumed throughout the NT, there is perhaps only one passage which a lover of proof texts could quote as distinctly forbidding polygamy, viz. 1 Co 7:2-4 'Let each man have his own wife, and let each woman have her own husband.'

Yet, although the NT does not profess to put forth any new laws on the subject, it is most true that the religion of the gospel has done inestimable service, not only in restoring and preserving preci-

---

1 The passages of the NT dealing directly with marriage are Mt 19:4-6, Lk 16:18, Mk 10:2-12, Lk 20:27-28, 2 Cor 6:14, 1 Co 7:1, 1 Th 4:3, 1 Pet 3:3, Col 3:2, Eph 5:22, 1 Pt 3:7, 1 Th 4:3, 1 Co 7:1, He 13:4.
ous principles which were being forgotten in an age of luxury and gross moral laxity, but also in changing profoundly men's ideas of the marriage relation, of its duties and possibilities. The result is the direct outcome of the teaching of the NT.

(1) The spirit and teaching of the NT tend to put the mutual love of husband and wife in the forefront. Marriage has been described as a provision for the propagation of the race and the proper bringing up of children. The NT recognizes the importance of the Christian household and the rightful education of Christian children, but does not describe this as the main object of marriage. Again, marriage has been regarded as a provision for the satisfaction of a natural desire and a restraint upon unbridled indulgence. St. Paul acknowledges that marriage serves this purpose, but does not give it any great prominence (1 Co 7:8). According to the book of Genesis, marriage was instituted, in the first instance, to satisfy the need of man's social nature. Because it was 'not good that the man should be alone,' because companionship with his fellows was necessary for the perfect development of his nature, marriage was instituted to provide him with the closest and most intimate form of companionship. Thus the words, 'The twain shall be one flesh,' imply much more than a merely social relationship—a thought which is instructively developed by St. Paul in Eph 5:28.

(2) It is not too much to say that our whole conception of the marriage relation has been changed and changed for the better, by the high and honourable position accorded to women in the NT, and the general improvement in the status of woman which has been brought about under Christian influence, and which has not yet, perhaps, reached its final goal. Gal 3:29 so far as all blessings, privileges, and responsibilities are concerned, under which husband and wife are taught to remember that they are 'joint-heirs of the grace of life' (1 P 3: 17). The necessity tends to be equalized, and, if it may be so expressed, to equalize, the marriage relation.

When St. Paul compares the marriage-bond to the union between Christ and the Church, he is, no doubt, making use of a high and honourable position accorded to women in the NT, and his own improvement in the status of woman which has been brought about under Christian influence, and which has not yet, perhaps, reached its final goal. Gal 3:29 so far as all blessings, privileges, and responsibilities are concerned, under which husband and wife are taught to remember that they are 'joint-heirs of the grace of life' (1 P 3: 17). The necessity tends to be equalized, and, if it may be so expressed, to equalize, the marriage relation.

mind of the Apostle. The idea may not seem altogether absurd to a modern metaphysician; but, if it should seem inconceivable, we are not bound to deduce the infallibility of St. Paul's metaphysics, and may perhaps adopt the simple, positive, and practical view of the union.

It is, however, necessary to bear in mind that this idea of a mystic or psycho-physical bond formed in matrimony is, essentially, that sacramental view of marriage which was authoritatively defined in the Middle Ages, which is still the accepted doctrine of the Roman and Eastern churches, and which has had important practical consequences for Christian thought and Christian life.

2. Marriage rites and ceremonies.—The history of the rites and ceremonies accompanying marriage belongs properly to the sphere of the Christian antiquarian; but, inasmuch as those rites and ceremonies have been the subject of mystical interpretation on the part of Christian theologians, and have thus acquired a certain religious significance, a brief notice of them may well find a place in the present article.

Marriage-celebrations in all times and in all countries have been either essentially religious functions or, at all events, accompanied by religious rites and ceremonies. A marriage by a religious ceremony is, therefore, no new thing peculiar to the Christian Church. In fact, there is not a single feature in the marriage-services of the Christian communities that cannot be traced back to the ancient, that is, the nuptial ceremonies, of the Roman Empire. On the other hand, the form of our Christian services, the ministerial benediction, and the clear expression of Christian doctrine in prayers and exhortations have helped to preserve a living sense of the peculiar sanctity of marriage as taught in the NT.

Marriage is, in the first place, an affair of the family. In the earliest period the Christian congregation regarded itself as a spiritual family, and the life and concerns of every member of the congregation were of intimate interest to the whole body. No member of the congregation ought to enter upon so important a step as the contract of matrimony without the knowledge and consent of the whole congregation. This is implied in the words of Ignatius:

`prius ut ego sciat et ut patriae gaudet, mecum in matrimonio invenire etiam in locis sanctis.`

It is inconceivable, therefore, that the celebration of marriage should not have been accompanied from the very first with suitable acts of Christian worship, or that the accustomcd marriage-rites should not have been celebrated as a solemn religious function. With the expansion of the Church and the consequent weakening of the close bond of social union between members of the same congregation, the necessity for ecclesiastical sanction for marriage would be less strongly felt, and marriages might be contracted without any formal benediction.

The testimony of the Fathers, from the middle of the 3rd cent., onwards, shows what we should now describe as civil marriages were not unknown, perhaps were not uncommon, but at the same time were strongly disapproved by the Church. It is evident that the general feeling in the Church was very much the same as it is to-day. While a religious ceremony was not required as a condition for Christian communion, it was felt that the right and proper course was for all Christian people marrying honourably to seek the benediction of the Church upon their union.

From the 5th cent. onwards there can be little doubt that the celebration of marriage with ecclesiastical benediction was the almost universal custom. The inference which has sometimes been drawn from the fact that about A.D. 802 Charlemagne prohibited marriage without benediction (Capit. vii. 638) and that so late as A.D. 900 Leo the Philosopher issued a similar edict (V. Vet. 99), that purely civil marriages were very common up to the end of the 8th or 9th cent., is not borne out by anything that we know of those ages.

Nevertheless, no valid marriage should be considered valid unless celebrated by a priest in the presence of at least two other witnesses. The decree, indeed, clearly expresses the principle that the ceremony is not of the essence of the sacrament, the matter and form, which remains, as before, the right of the parties; but it claims the right on the part of the Church to regulate the conditions under which a valid marriage can be celebrated. The decree holds good only in those countries in which the decrees of the Council have been published.

In the Eastern Churches the Confession of Peter Mogilas of Kiev (A.D. 1640), in which the priestly benediction, the accustomcd formularies, and the invocation of the Holy Spirit are declared to be essentials of marriage, is regarded as authoritative.

The marriage-ceremonies in use all over the Christian world for hundreds of years past contain elements derived from two sources, viz. the sponsalia, the ancient ceremony of betrothal, and the nuptial, or marriage-ceremony proper. The solemn troth-plight, the joining of hands, and the giving and receiving of a ring or rings with certain gifts of money—the arkhe, pledge of the dowry—were the principal features of the betrothal ceremony.

The veiling of the bride, the crowning of the bride and bridegroom, the formal handing over of the bride by her parent or guardian to the care of the bridegroom, the solemn declaration of the completion of the contract, and the bringing home of the bride in triumphal state, were the ancient nuptial ceremonies. The priestly benediction may perhaps be considered as the distinctive Christian addition to the ancient ceremonies; yet even this may have been simply a special sanctification of the proper. The solemn act of marriage—its accompaniment of sacrifice and solemn benedictions, was the only form recognized by Roman law for the celebration of an absolutely indisputable marriage.

The reference to the demand for ten witnesses in St. Ambrose¹ would naturally suggest the confarretio. Old customs are often preserved in an imperfect fashion even when they become obsolete (see MARRIAGE [Roman]).

¹ Whenever the sacramental idea is referred to in this article, it may be taken that the idea herein explained is meant.

² J. S. Lightfoot prefers ἀνενόητον.
MARRIAGE (Christian)

There is no express evidence that the veiling of the bride formed part of the Roman ceremonies of betrothal; it seems rather to have been confined to the Baptists, as appears from Tertullian's Life of Joshua. In fact, however, it was a betrothal ceremony amongst Christians, the bride continuing to wear the betrothal veil from the time of the betrothal to the wedding-day (Veit, de Virg. eunuch., xi.).

A passage in Tertullian would seem to imply that the giving of a ring, though a harmless heathen custom, was not practised by Christians in his day (de Hulol., xvi.). This may have been the case with some of the stricter or more old-fashioned Christians, but the universal custom of the Church from the 4th cent. onwards would seem to show that the giving of the ring had always been generally practised.

The crowning of the bride and bridegroom was condemned by Tertullian as implying acknowledgment of heathen deities. Yet it continued to be commonly practised in the Western Church long after his day. In the Eastern Church it prevailed to the present day, and is regarded as the most important part of the marriage-ceremony in marriage in the East being often described as 'the crowning.'

That sponsalia and actual nuptials were still regarded as distinct ceremonies, between which an interval of time might elapse, up to the middle of the 5th cent., is evident from the letter of Pope Nicholas I. to the Bulgarians (A.D. 865 [PL xxix. 980]), in which he treats of the marriage customs of the Western Church. It is, however, most probable that from much earlier times the two ceremonies had been combined in practice. Formal sponsalia were not required by Roman law, and were frequently omitted. In such cases it would be natural that the giving of the ring, the troth-plight, and other espousal ceremonies would be placed at the actual Anglican custom of celebrating the first part of the marriage-service in the body of the Church, while the concluding prayers and benediction are said at the altar, is a vestige of the ancient distinction between espousals and marriages.

3. Asceticism and marriage.—The idea that there is something necessarily impure and degrading in the union of the sexes in marriage, or that, at all events, marriage must be regarded as something less acceptable or holier than the estate of marriage. There is but one passage, in the Apocalypse of John (14), which, however interpreted, seems to imply a preference for the virgin state; otherwise the NT gives no support to the doctrine. If St. Paul prefers the unmarried state, it is on purely utilitarian grounds, because of the greater freedom from worldly cares enjoyed by the unmarried. If we may accept the Pastoral Epistles as his, or as expressing his mind, the Apostle thought it most desirable that younger widows should contract a second marriage. Yet, inasmuch as what we may call ascetic ideas were widely prevalent, not only among the Essenes (q.v.), in Judaism, but in certain circles in the heathen world, it is very likely that such ideas were to some extent prevalent in the Church from the very first. The awful prevalence of vice and immorality, the consequent demand for a relentless fight against those 'filthy lusts which war against the soul,' and a sense of the strength of such desires and impulses, would naturally create a feeling of repulsion against all forms of indulgence, even the most innocent, in those newly married for a new and higher life. It is not surprising, therefore, that from the middle of the 3rd cent., the ascetic view should have taken a firm hold on the Christian Church and should have speedily become the predominant and, in fact, the universal view. Tertullian's own is that the contemplation and the admiration aroused by the devotions of the monastics and also, from the middle of the 4th cent., the intensified worldliness of the new fashionable Church would naturally foster the growth of the ascetic spirit. One command, 'Love not the world' (1 John 23), had to find some new interpretation when the world was no longer a profoundly heathen world, but a community of nominal Christians.

The doctrine of the earlier Gnostics, Basilidians, Saturninus, and of the Montanists, of the essential sinfulness of conjugal union was, of course, formally condemned, but in the extraneous hauntings of virginity in the writings of St. Jerome, and even the more moderate utterances of St. Augustine, the disbarment of the married state sometimes approaches very closely to the views of those heretics. Throughout the Middle Ages the doctrine of the superiority of the virgin state firmly held its ground, and led to many extravagances. But the teaching of the NT and the constant witness of the Church served at all events as a safeguard against the worst results of the disbarment of marriage.

It was not until the Reformation of the 16th cent., that this view of marriage was made to vindicate the claims of healthy home life and happy marriage at a position of equality with the virgin state. In Luther's eyes all monastic vows were essentially sinful (cf. Vottis monasteris, 1521), and, in general, the superiority of the married state was made to rest in our position. The question of the superiority of virginity became an essential point of controversy between the Roman Catholics and their opponents, and the Council of Trent (sess. 24, can. x.) condemned both the position of the married state with, or its superiority over, the state of celibacy.

The objection to second marriages, which were discouraged by the Church and absolutely forbidden by the Montanists, was one result of the ascetic spirit. This we should now regard as a mere harmless eccentricity, of no serious importance in the history of Christian thought; but it is far otherwise with another result of the ascetic movement—the sentiment to human weakness that, was, in the early Church, held the essential superiority of the celibate life would naturally consider that the clergy, as especially belonging to the class of holy persons, should be unmarried. At all events, in the 3rd cent., it came to be recognized that, as each man should 'abide in that calling wherein he was called' (1 Cor 7), the clergy should not contract marriage after their ordination.

Decisions to this effect are found in the canons of some local synods, though the Council of Ankyra (A.D. 314) made an exception in the case of deacons, who, before ordination, should inform the bishop if they intend to marry. From this position it was a natural step to the view that after ordination clergy should cease to maintain conjugal relations with their wives—a view which could scarcely have been put forth except by a council of celibates. The Council of Elvira (A.D. 305) laid down this rule under penalty of excommunication.
of Nicola (A.D. 323) was restrained from passing a similar ordinance only by the emphatic protest of the Martyr Confessor Paphnutius, who pleaded earnestly in favour of the perfect sanctity of married life. For, in that century, the principle that the clergy ought to be celibates was universally adopted in theory in the Western Church. Pope Siricius (A.D. 350) in his Epistle to Hiererius (PL, xii. 1132 E), described by H. H. Milman, as the first authentic Decretal, the first letter of the Bishop of Rome, which became a law to the Western Church, absolutely interdicted the marriage of the clergy. Nevertheless, all through the Middle Ages, despite the zealous efforts of men like Hildebrand, but regarded for a time as head of the Church, and the attempt of the Popes to regulate the marriage of the clergy in every part of Europe. It was regarded in general with indifference, sometimes with approval in his Church, and was zealously condemned as a right by the secular clergy. Even after the vigorous crusade of Hildebrand (1019-55), the ‘seandal,’ as it was considered, of clerical concubinage maintained its existence here and there, though it was probably never seen after Hildebrand's time regarded with the same indifference as before.

In the Eastern Church the rule of celibacy has never been imposed on the inferior clergy by the Church. The marriage of clerics after ordination was, however, forbidden, but for those married before ordination, with the exception of the bishops, the continuance of conjugal relations was permitted. The wife of a bishop was compelled either to become a deaconess or to retire into a convent. For all practical purposes this remains the rule of the Eastern Churches to the present day, except that marriage is not necessarily prohibited to the parish priest, who must, however, be married before ordination. The bishops are chosen from the ranks of the monastics, so that no parish priest can look forward to promotion to the highest position in his Church, and was zealously condemned as a right by the secular clergy. Even after the vigorous crusade of Hildebrand (1019-55), the ‘seandal,’ as it was considered, of clerical concubinage maintained its existence here and there, though it was probably never seen after Hildebrand's time regarded with the same indifference as before.

4. Ecclesiastical law and Church discipline.—The Christian Church from the very beginning was constituted as an organized society or, at all events, as a closely connected congeries of societies claiming to be the Church, and their discipline and jurisdiction are, then, no later growth or corruption of primitive Christianity, but trace their origin to the earliest times of the Church. It is certainly an inevitable fact in the Apostolic Age such questions connected with marriage should arise as would be considered suitable for the judgment of the community. In I Co 7 we have an interesting example of such questions and of the apostolic method of dealing with them. The saying of Ignatius as to the necessity of submitting a proposed marriage contract for the approval of the bishop has already been quoted.

Nor is it at all surprising that matters connected with marriage should have, from the Apostolic Age until now, occupied an important place in ecclesiastical legislation. From the civil side, marriage is regarded as a legal contract which must be regulated for practical purposes by the State. From the Christian point of view, marriage is a holy estate which the Church may claim to regulate in the highest interests of religion and morality. Experience shows that there must ever be a possibility of conflict between the two juris-

tion, in which the viridenum is not supposed to be broken and remarriage is, therefore, not permissible. The latter is described as divortium a mensa et thora, in contradistinction to the more correct terminus a mensa et thoro.

It has been universally admitted that adultery and, perhaps, some other grave offences justify the separation of man and wife. Such separation is, indeed, contrary to the high Christian ideal of marriage, but under the new dispensation, and under the old, it is necessary for the hardness of men's hearts in this imperfect world to make provision for occasional failures to attain the perfect ideal. But, while this is the case with regard to separation, there has been considerable difference of opinion on the more difficult question of divorce in the proper sense of the word. The broad general principle is that divorce is something which ought not to be, that it ought not even to be thought of as a possibility by Christian people. But is the broad general principle to be regarded as a law binding universally and unconditionally? If any exceptions are to be allowed, in what cases do they apply? Should man and woman stand on the same footing in this respect? Should there be no real divorce? Should any difference be made between cases where both partners are professing Christians and those in which one is an unbeliever or a heretic? These and similar questions have from century to century occupied the attention of Christian teachers and legislators.

The teaching of our Lord on this subject, as it has come down to us, is found in four passages in the Synoptic Gospels, viz. Mt 5.32, Mk 10.12, and Lk 16.18. In Mark and Luke the prohibition of divorce and remarriage is absolute and unqualified; in Matthew the qualifications 'saving for the cause of fornication,' except for fornication, are added. Roman Catholic divines and those Anglicans who adopt the stricter view maintain that, as each Gospel must be taken in and by itself as authoritative, the passage in Mark must be accepted as the decisive rule for Christians, while the qualified statement in Matthew must be understood as merely giving sanction to separation 'a mensa et thoro' in case of adultery.

On the other hand, it is contended that the ordinary rules of exegesis require us to interpret the unqualified statements in Mark and Luke by the fuller and more balanced statement in Matthew, so that we must not take each Gospel as an independent entity, but must compare one with another to ascertain what Christ really taught. Moreover, it is contended that, when He spoke about divorce, our Lord must have had in mind the complete severance of the marriage-bond, since that was the only meaning His hearers could possibly attach to the word. It is pointed out that the sayings in Mark and Luke are simply ordinary examples of the method of the great Prophet, who was accustomed to set forth broad principles in an absolute and sometimes an extreme form, leaving it to His people to apply His teachings with all the necessary qualifications in the manner of legislation to their individual cases and needs. That this principle has always been recognized in the interpretation of the Sermon on the Mount without in the least detracting from the supreme value of the spiritual law is well nigh impossible. Our Lord as teacher was a prophet rather than a legislator. Hence it is maintained that the passage in Matthew may be taken as a fuller expression of the Lord's mind than the briefer passages in the other Gospels, that we have His express sanction for divorce in the case of adultery, with consequent permission to marry again in the case of the innocent partner. It is not, of course, denied that, if the bond is broken, it is broken alike for both partners, but, as the guilty partner is, or has been, living in notorious sin, and can give no evidence of repentance except by abstaining altogether from marriage, such remarriage should necessarily be refused the Church's benediction in the case of re-marriage. The latter principle has been invariably and universally accepted.

Although it is evident that adultery affects the marriage not the person, it does not affect the person, yet it may fairly be said that there are other things which may make married life so intolerable, and the perfect ideal union so impossible, that, if divorce or separation be allowed at all, the grounds for divorce or separation must necessarily be confined to the one offence of adultery. This difficulty was met by many of the Fathers by showing, on good Scriptural authority, that idolatry, covetousness, unnatural offences, etc., might rightly be classed under the heading of spiritual adultery. There is probably no more than a formal difference between this and the argument which appeals most forcibly to modern minds—that there are offences which make married life so intolerable that there can be no more union. The doctrine of the Utahs is that of affections has been absolutely destroyed, the real viridenum has been ruptured, and that, therefore, such offences may rightfully be put in the same category as conjugal infidelity in the strict sense of the word.

The passages in the Synoptic Gospels have been treated as they stand in the NT without any reference to the results of modern criticism; it will be generally admitted that such treatment is justified in dealing with ethical or doctrinal questions. It must, however, be acknowledged that the recent higher criticism of the last two decades has shown a case to be made upon the matter and, to a certain extent, strengthened the case of those who condemn divorce absolutely. A large and increasing number of competent critics are of opinion that the qualification, except for the cause of fornication, formed no part of Our Lord's teaching, etc. (A. B. Bruce, W. F. Schmiedel, W. B. Bacon, C. G. Montefiore), and that He forbade divorce simply and absolutely. The four passages are reduced to two. The passage Lk 16.18, probably derived from the source Q, may be regarded as the original and genuine form which has been edited by the First Evangelist in Mt 5.32. It is quite evident that Mt 5.32 and Mk 10.12 are but slightly different versions of the same conversation, while everything goes to show that the form in Mark is the original (see W. C. Allen, T & T, 'St. Matthew,' Edinburgh, 1912, ad loc.).

If the modern critical view is generally accepted, it will, no doubt, be admitted that the case of a husband who absolutely condemns divorce will be somewhat strengthened, but it is not likely that the existing state of opinion on the whole will be very much affected. The acceptance of the critical view will simply bring into greater prominence the questions raised by the other four passages. Questions of this kind have never really been decided on grounds either of exegesis or of authority pure and simple, but that our interpretation of our Lord's teaching has always been guided by moral and theological considerations. The saving clauses, ἐν τῷ ἑαυτοὶ ἑαυτοῖς καὶ ἰδιαῖς ἐξέγερσεν τὸν Κυρίον, may be admitted to be early notes of interpretation added by the Church—a reminiscence, perhaps, of instructions actually received from the Lord—but those

1 Augustine frequently expressed the idea of the wider interpretation of 'fornication.' Si infidelibus fornicatio est, et idololatris idololatria, et avaritia avaritiam, non est divaricatum avaritiam fornicationem esse (de Sermon. Dominico, l. xvi. 40).

2 See also several passages to the same effect in the de Contingentis Adulterinis. In the Retractations Augustin (e.g. 1:19) he says, "I confess to the legitimacy of this exegesis (c. 19). Passages from Hermas and Origen in which the idea is expressed are also cited (Cf. Eadie, J.R.S.A., xvi. 1.)

3 W. C. Allen, and also holding the critical view, yet protests, in letters to The Guardian (ix. 1910) 290, 398, 1894, i. 738, against making use of critical results, and also doubt of the correctness of some exegeses, and justifies the use of the ST as received by the Church. J. A. Keil, in his pamphlet, 'An Attempt immediately to repel the laws which treat the matrimonial bond as indissoluble' (Oxford, 1835), attempted to defend the stricter view on the ground of a special provision only for the Jews of Christ's own time, and were not to apply to Christians, for whom the absolute prohibitions were intended. This view does not seem to have met with much approval, and is not now advanced.
MARRIAGE (Christian)

who plead for the right of divorce will still maintain that the interpretation was fully justified and quite on a level with many of our other interpretations of the Sermon on the Mount.

The only other passage in the NT where the subject of divorce is directly treated is 1 Co 7, where St. Paul appeals to our Lord's authority, repeating the general prohibition of divorce. There is nothing, however, to indicate that, when he speaks of a separation between wife and husband, he has the special case of conjugal infidelity before his mind. The presumption is rather the other way, and it would seem as if he were merely thinking of the case of separation and divorce which Churches, on the basis of 1 Co 7, would describe as incompatibility of temper. The chief interest of this chapter centres in the rules and regulations laid down by the Apostle with reference to matters about which he could not appeal to any direct utterances of the Lord Jesus.

In the first place, he recognizes the possibility of separation 'a mensa et thoro' (v. 11); if husband and wife are separated for any reason, they are to remain single or become reconciled to each other.

Even though he was not actually considering the case of separation for conjugal infidelity, we may feel sure that, if he had done so, the Apostle would have approved of the counsel given in the Shepherd of Hermas.

The Jewish husband who divorced his wife was forbidden by the law to take her back; but it is characteristic of the gospel to give prominence to the possibility of repentance; and so Hermas charges the husband who has put away his wife to remain unmarried (καὶ ἀνακάθησαι) so that the sinner might have an opportunity for repentance with consequent restoration (M. 1, iv. 12).

In the second place, St. Paul deals with the case of a marriage between a Christian and an unbeliever—Jew or heathen. If it is desired that the union of marriage shall not be dissolved, the marriage of the unbeliever is not to be dissolved (v. 12). St. Paul seems to have in mind a brother or sister is not under bondage in such a case, and, if the unbeliever dissolves the connexion, the Christian is free. This must be taken to mean free to marry again (cf. 1 Co 7:10 for the use of the terms 'freedom' and 'bondage').

This passage was expressly cited in later times as the authority for the canon law of the Roman Church, which permits divorce by mutual consent in cases of mixed marriages between Christians and unbelievers (see Decretales Gregorii, iv. 10, 'de Divortiis', ch. 7).

The canon law of the Roman Catholic Church unqualifiedly forbids divorce 'a vinculo matrimonii', if both parties at the time of marriage had been living together. In the case of the contrary, divorce is permitted, not only for adultery, but also for other serious causes, as, e.g., high treason, designs by either party on the life of the other, insanity, leprosy, etc.; but no one is permitted to obtain a divorce more than once. In East and West alike, in the earlier period, and more especially after the ascetic movement became popular—i.e., after the middle of the 3rd cent.—the Fathers were strong in their denouncements of any case of an innocent partner. In some cases such unions were made the subject of ecclesiastical censure and at least temporary excommunication. Yet, while the civil laws permitted re-marriage, it is evident that all the eloquence of the Fathers could not entirely prevent it, and it is probable that the average lay opinion did not generally approve of the excessive rigidity of what we may call the ecclesiastical view. The Church, however, has, from the time of the removal of the seat of empire to Constantinople, been at all times more dependent on the civil power, and, as a natural consequence, more subject to the influence of lay opinion, than the Church of the West, where the power of the ecclesiastical authorities was more unfeigned.

In the matter in hand this difference is very well illustrated in the 5th cent. by the moderation of the views of St. Basil, who refused to condemn re-marriage absolutely, though he could not approve of it, and of Lactantius, as compared with the Western teachers of the same period. Yet even up to the 12th cent., when the present canon law of the Roman Church was finally formulated, it is evident, from the official acts of the Synods and councils, that it was not possible in practice to enforce strictly the principle of the absolute indissolubility of marriage.

Re-marriage in certain cases is permitted implicitly or explicitly by the Church; and thus the following instances are distinctly recognized by the Church, viz.: Divortium (Hilibris, c. 305), Vannes (465), Agde (506), Orleans (553), Compiègne (756), and Bourges (1031); to these we may add the testimony of the Penitentiel of Theodoric of Canterbury, drawn up for the guidance of the churches under his control, which in some respects perhaps goes to an extreme in making allowances for the weakness of human nature, but in which very considerable liberty is allowed in the matter of re-marriage.

Civil legislation from the time of Constantine to Justinian bears witness, indeed, to the growth of Christian influence in the attempts made to limit the grounds for divorce and, in general, to make divorce more difficult. Nevertheless, the possibility of divorcing by mutual consent remained in force until the time of Justinian, while the grounds on which it might be obtained were numerous enough. Under the legislation of Theodosius the Second and Valentinian a wife could obtain a decree against her husband for (1) treason, (2) adultery, (3) homicide, (4) poisoning, (5) violating seculures, (6) forcery, (7) stealing from a church, (8) robbery, (9) cattle-stealing, (10) attempts on her life, (11) introducing infidelity, (12) the common assault. A husband might divorce his wife for any of the above causes; and also for (12) dining with men not relatives without her husband's permission; (14) going from home at night without permission or reasonable cause; and (15) frequenting circus or theatre without permission; to which Justinian added (16) procuring abortion, and (17) mixed bathing.

It was very natural that the Reformers in the 16th cent. should call in question the rigid medieval views on the subject of divorce, regarding them as an outcome of the claims of the ecclesiastical authorities to supreme jurisdiction, and as inspired by the spirit of asceticism. The Protestant Reforming divines in churches, the contrary, divorce is permitted, not only for adultery, but also for other serious causes, as, e.g., high treason, designs by either party on the life of the other, insanity, leprosy, etc.; but no one is permitted to obtain a divorce more than once. In East and West alike, in the earlier period, and more especially after the ascetic movement became popular—i.e., after the middle of the 3rd cent.—the Fathers were strong in their denouncements of any case of an innocent partner. In some cases such unions were made the subject of ecclesiastical censure and at least temporary excommunication. Yet, while the civil laws permitted re-marriage, it is evident that all the eloquence of the Fathers could not entirely prevent it, and it is probable that the average lay opinion did not generally approve of the excessive rigidity of what we may call the ecclesiastical view. The Church, however, has, from the time of the removal of the seat of empire to Constantinople, been at all times more dependent on the civil power, and, as a natural consequence, more subject to the influence of lay opinion, than the Church of the West, where the power of the ecclesiastical authorities was more unfeigned.
that, since separation 'a mensa et thoro' was permitted, it was more conducive to reality and more in accordance with the teaching of 1 Cor 7, that an innocent partner should be allowed the right of re-marriage than that temptations to a life of sin should be multiplied. Further, they pointed out that whereas the union had forbidden divorce had not succeeded in putting an end to the evil; that in the later period the multiplication of grounds on which marriage might be declared null and void ab initio, implying the consequent dissolution of perfectly honourable unions, had really made divorce easier and more common than before, and had become a grave scandal and the source of much immorality. Finally, with their profound reverence for the Scriptures of the OT, it was natural that the Reformers should urge that divorce could not in every case be morally wrong, since, if it were, it could never have been allowed by God under any circumstances. This last argument was put forward by John Milton with much power and eloquence in his Doctrine and Discipline of Divorce (1643). Probably no Christian writer has ever gone so far as Milton in advocating the utmost liberty for Christian men—he does not concede the right of divorce even in the grossest offence. He is, however, willing to admit that 'what God has joined together man may not put asunder,' but he will by no means allow that a mere marriage contract or ceremony, though entered upon freely by mutual consent and duly consummated, must necessarily constitute such a joining together. Marriage is indissoluble only when there is complete and perfect unity of heart and soul between the partners. It may be safely said that the absurdities to which Milton's doctrine would lead if pushed to their logical conclusions are a sufficient refutation, nor does this work of his seem to have had much effect on English thought in his own or any succeeding age.

In most Roman Catholic countries civil legislation has conformed to the ecclesiastical ruling of the Council of Trent, and divorce has been forbidden. In Austria, however, it is permitted to those who are not members of the Roman Catholic Church; on this principle the Code Napoleon (1804-10) restricted the unlimited licence which had been permitted in the earlier years of the Revolution, but allowed divorce on various grounds, including mutuel consent. With the Constitution of 1812, the earlier law was again adopted and divorce was forbidden. It was not until 1848 that the provisions of the Code Napoleon were revived, with certain modifications. The law of 1876 is a serious injury or cruelty being admitted as sufficient cause, but divorce by mutual consent being forbidden.

In America the laws vary from one State to another. In S. Carolina and Maryland, originally Roman Catholic States, divorce is not permitted; in New York it is granted only on the ground of adultery; while in Maine and Dakota it may be granted on almost any pretext.

If the Report of the Commission appointed by Edward VI. (Reformatio legum ecclesiasticorum) had resulted in legislation, it is probable that the opinions of Cranmer, Bucer, and Peter Martyr in favour of divorce would have become part of the law both of the English Church and of the English State. With the king's death, however, the prospect of legislation was at an end. The Commission appointed to report on the case of the Marquis of Northampton, who, having obtained a separation under the ecclesiastical courts, desired to marry again, allowed the second marriage; but, as the marriage had already taken place while the Commission was sitting, its decision cannot be considered as absolutely unbiased. The Marquis, however, was legalized by special Act of Parliament, and an Act to that effect was passed in 1548, but was repealed when Queen Mary came to the throne. This case is important, as it may be said to have ruled the English practice of the nation having been granted by the King, and the House of Commons had no way of stopping it, as the Act of 1547. The canons of 1604 (can. 107) confirmed the authority of the ecclesiastical court to grant judicial separation, but only on condition that a definite pledge was given by the parties not to contract a second marriage. Divorce proper with privilege of re-marriage could be obtained only by special Act of Parliament. Between the time of the Reformation and the passing of the Divorce Act 317 cases had been dealt with by Act of Parliament in England and 146 in Scotland.

The Act of 1837 abolished the jurisdiction of the ecclesiastical courts in matrimonial cases, and established a civil court for the purpose. In England and Scotland divorce can now be obtained through the court without special legislation, but the law does not apply to Ireland, where an Act of Parliament is still necessary. In Scotland a wife may obtain a divorce on the ground of adultery alone, but in England adultery or other serious and utterly depraved conduct has to be proved in addition. In both countries a wife may be divorced on the ground of adultery alone.

In 1899 a Royal Commission was appointed to consider the whole question of the laws relating to divorce and annulment. After very careful investigations, extending over two years, published their report in Nov. 1912. No attempt has as yet been made, however—up to the middle of 1913—to give effect to their recommendations by legislation. The commissioners were unanimous: if divorce is to be allowed, the method of procedure should be cheapened by the institution of special courts, so that the divorce should be made, not easy for any class, but as easy for the poor as for the rich; secondly, men and women should be placed on an equal footing, a wife being allowed to divorce her husband on the ground of adultery alone. The majority of the commissioners were in favour of extending the grounds on which marriage could be dissolved; to cover cases of wilful desertion for at least three years, cruelty, incurable insanity after five years' confinement, and imprisonment under commuted death sentence; but a strong minority protested against this. Divorce should be granted only in case of adultery.

The resolutions of the Lambeth Conference of 1888, in which this difficult practical question was fully discussed, may fairly be taken as representing the authoritative ruling of the Anglican Church as a whole at the present time.

(1) As in much of our Lord's words expressly forbid divorce except in the case of fornication or adultery, the Christian Church cannot recognize divorce in any other case, or give any sanction to the marriage of any person who has been divorced, except after that. It has the same effect as the fornication of the other party. (2) That in no case, during the lifetime of the innocent party in the case of a divorce for fornication or adultery, should the guilty party be regarded as a fit recipient of the blessing of the Church on marriage. (3) That, recognizing the fact that there has always been a difference of opinion in the Church on the question whether our Lord meant to forbid marriage to the innocent party in a divorce for adultery, the Conference recommends that the clergy should not be instructed to refuse the admission to the privileges of the Church to those who under civil sanction are thus married. These resolutions were reaffirmed by the Conference of 1898, law passed away to that time. The Commission appointed to report on the case of the Marquis of Northampton, who, having obtained a separation under the ecclesiastical courts, desired to marry again, allowed the second marriage; but, as the marriage had already taken place while the Commission was sitting, its decision cannot be
intellectual unrest, tend to encourage the demands for a wider extension of the facilities for divorce. Impatience of old-fashioned restraints and a certain looseness of old-established bonds are the natural characteristics of an age like ours. The deepened sense of the supreme importance of the spiritual union and companionship in marriage which Christianity has fostered makes the bond more irksome than ever. The Christian, however, is unable to look askance at the tendency of the ideal. Those who realize how much the stability and sanctity of home life depend on the unbroken firmness of the marriage-tie, and who recognize that the preservation of the exact ideal of Christianity is impossible, unless the public opinion is guided by the principles of the NT.

(b) Conditions of void marriage. — (1) Equality of rank or condition between the contracting parties, though required by Roman law, has never been regarded as absolutely essential for the Christian Church, however desirable in itself.

In Imperial times connexions were sometimes formed between slaves and free women, such connexions, though officially described as concubinage, betokened real marriage and moral result. It is not improbable that in the Christian Church, with the close relations of brotherhood prevailing between all classes and the excess of the number of free-born women over that of free-born men, such connexions would be by no means uncommon — the fact that they were socially recognized as creditable would, of course, have considerable weight. Some references which have come down to us suggest that this was the case, and that such connexions were regarded by the Church as essentially marriages. 'Si quia habens uxorem habet eum nee concubinam habet, non concubinam habet eum nee uxorem habet. Hanc simulationem nullius si qui simul simul undique, ut si quidem, si concubinam habet, concubinam non possit habere alias alios simul simul undique, et pro uxorem simul simul undique, et pro concubinam habet, concubinam non possit habere alios simul simul undique, et pro uxorem' (ibidem, op. Gratian, Diss. 4, quoted by Natalis Alexander, Hist. Eccles., Lecce, 1724, i. 29).

(2) The question of mixed marriages between Christians and non-Christians was, as might have been expected, one of the earliest practical problems with which the Church was called upon to deal. It formed the subject of one of the queries proposed to St. Paul by his Corinthian converts. The Apostle's reply is clear enough so far as marriages contracted before conversion are concerned. A Christian ought to continue such a union so long as the unbelieving partner is willing that it should be so continued; but when the unbelieving partner would not, the Christian marriage was holy, i.e. rightful subjects for Christian baptism. If the unbeliever decided to dissolve the union, 'the brother or the sister is not under bondage in such cases' — which must mean that the Christian would be at liberty to contract another marriage (see, for St. Paul's use of terms 'bondage' and 'freedom,' Rom. 7:4). In 1 Co. 7:12 the Apostle declares that a Christian is at liberty to contract marriage 'only in the Lord.' The general principles laid down in this chapter have always been regarded as the primary authority on this matter, though there has been much controversy as to the practical application, and even as to the exact meaning, of his teaching. Do the words 'only in the Lord' mean that any marriage contracted between one already a Christian and an unbeliever is unlawful? Does 'in the Lord' mean only with a fellow-Christian, and, if so, must the words of St. Paul be taken as a positive command or merely a counsel of prudence not to contract such marriages? St. Augustine expresses himself with some doubt and hesitation, but his opinion on the whole may be taken as expressing the general view of the Church for centuries. Mixed unions were discouraged, and even declared, though with some hesitation, to be unlawful for Christians; yet such marriages could not be wholly prevented, nor was any penalty attached to them in the first three centuries, so far as appears. The Council of Elvira affords the earliest example of a specific penalty (five years' penance) being attached to such unions. From the beginning of the 6th cent. the decrees of councils are more numerous and more definite as to what the penalties are in general much more severe.

The civil law supported the ecclesiastical judgments, the Theodosian Code making such wedlock a capital offence. In the Middle Ages the question of the observance of the exact term of Christian marriage is a matter for the Church to decide. If it omits to convert to separate from unbelievers was the subject of much controversy, the chief question being whether the separation should or should not be the deliberate act of the unbeliever, or whether any circumstances making it lawful for the believer to remain 'sine contumelia creatoris' might not justify the separation. The question was decided, on the whole, in the broader sense, by Innocent III. (de Breviar., 1198).

In early times diacetic heretics and schismatics was generally brought under the same condemnation as marriage with Jews or pagans. It is now, however, generally recognized both in the Eastern and in Roman Catholic communions that all marriages only celebrated by baptized persons are valid and indissoluble, though in the case where one of the parties is a heretic or schismatic the other may be subject to censure and penalty. Where the decrees of the Council of Trent have been published, however, this ruling does not free those contracting mixed marriages from considerable inconvenience, inasmuch as 'the celebration' is defined to be in the presence of a priest in a Roman Catholic church, and the marriage, the man being further obliged to guarantee that children born of the marriage shall be brought up in the Roman Catholic faith. Marriage otherwise celebrated is declared to be null and void. The publication of these decrees, for all practical purposes, in these countries by Pope Pius X, in the well known 'Ne tenere' decree (1907) has given rise to much controversy. Roman Catholic divines defend the decrees on the ground that the Church has the right to make any regulations she pleases as to the conditions on which she shall recognize marriages, and that it is desirable to prevent mixed marriages as far as possible, and is, further, the duty of the Church to take care that the children of mixed marriages be brought up in the Catholic faith. Their opponents urge that it is inevitable that mixed marriages will sometimes occur in a large mixed community; that, when this is so, and a marriage is lawfully performed, the Church has no right to claim that another shall be a sin on respectable persons who have, admittedly, been guilty of no immoral conduct; that to insist on a religious ceremony to which one party may object is to put undue pressure upon conscience, while to demand a pledge for the education in a particular way of children to be born is to override the law of the land and the
natural rights of parents, and that such interference is unjustifiable.1

(3) Kindred and affinity. — It was a common complaint with the Reformers and those who sympathized with them, that the multiplication of grounds of prohibition of marriage, the custom of papal dispensations in doubtful cases or cases of illegality, and the facility with which decrees of nullity of marriage could be obtained had created much difficulty in the way of marriage relations and had been the source of grave scandals.

This is forcibly expressed in the statute of Henry VIII for the regulation of marriages (1533-34):

"Many persons, after long continuance together in marriage without any alienation by either of the parties or any other at their marriage why the same marriage should not be good, had been divorced contrary to God's law on the pretext of procreation, or for other prohibitions than God's own permitted. Marriages have been brought into such uncertainty thereby that no marriage could be so sure but it should be in either of the parties' power to prove a precontract, a kindred and alliance, or a natural knowledge to defeat the same."

In the Roman Catholic Church three kinds of relationship are laid down as impediments to valid marriage, viz., blood-relationship or consanguinity, affinity or common marriage, and spiritual affinity, e.g., the connection between godparent and godchild, or between two persons who are godparents to the same child. In the Eastern Church the system is even more elaborate, and the grounds of prohibition more numerous than in the Western, which is attributed to the earlier dispensations being more commonly practised in the West since the 5th century, is unknown in the Eastern Church. In the East two brothers are not allowed to marry two sisters, and, in general, marriage between the members of two families debar the members of one family from marriage with members of the other within the prescribed limits.

A different method of describing relationships prevails in the two branches of the Church. In the Eastern Church and nephew are related in the third degree, first cousins in the fourth, and so on; marriage is forbidden within the seventh degree of kindred or affinity, natural or spiritual. In the West first cousins are related in the second degree, second cousins in the fourth, and so on, marriage being forbidden — since the Lateran Council (1215) — within the fourth degree. This is in practice almost the same as the Eastern rule. The Lateran Council, however, abolished all prohibitions on the second degree and permitted marriage to the Western reckoning. No trace of these somewhat burdensome restrictions is to be found before the 5th century. In the earlier centuries Christians would be familiar both with the Levitical Law of Holiness (Lv 18) and with the ordinary Roman law, which were, to all intents and purposes, to the same effect — marriage being forbidden within the second degree according to the Western reckoning. It goes without saying that their marriages would be regulated according to the provisions of those codes.

The only question in connexion with this subject of prohibited degrees which excites interest or gives occasion to serious controversy at the present time is the question of marriages with a deceased wife's sister. Such marriages have long been legal and customary in America, in the British colonies, and in several European countries. In England they were not unknown prior to 1835 (cited by the civil law of the English Church. Such marriages were held by the civil courts to be perfectly valid and unimpeachable in law, unless voided by special legal process undertaken during the lifetime of the parties; but Lord Lyndhurst's Act in 1835 declared all such marriages within the prohibited degrees to be absolutely illegal, and in face of very strong opposition, act utilizing marriage with a deceased wife's sister in the United Kingdom was passed in 1908. A saving clause permits clergymen who have a conscientious objection to refuse to celebrate such marriages, but in the case of Bernard v. Thomas, in which proceedings were taken against a clergymen for refusing the Holy Communion to persons so married, it was decided that the clergy may not refuse the sacraments to persons legally married though within the prohibited degrees. Meanwhile the table of affinities in the Anglican Prayer-Book remains the law of the Church, and, in strictness, it would seem that the clergy are prohibited from celebrating a marriage between a widower and his deceased wife's sister, even if they do not feel themselves bound by the famous canons of 1604 to hold that such marriages are "inconceivable and unlawful and altogether null and void." (can. 29).

The logical and constitutional question of kindred and affinity, but to this a very influential body in the Anglican Church is strongly opposed. Those who object to these marriages do not now, as a general rule, claim that they are expressly prohibited in Lv 18, though attempts more or less ingenious have been made to make what are the same. It is held, however, that the general principle that near affinity is a bar to marriage is laid down in the Law of Holiness, that a greater number of cases of affinity than of consanguinity are cited in Lv 18, and that the case of the deceased wife's sister is so exactly parallel to that of marriage with a husband's brother that the same principle may be held to stand good. Further, it is said that the reference to the sin of the Canaanites (Lv 18) shows that the prohibitions are regarded as matters of universal moral obligation and not national enactments applicable only to the Israelites. Again, it is maintained that the healthy moral sentiment which makes as regard with halting and repulsion such unions as those between brother and sister and uncle and niece should also prevail between those who are brought into such close relations of affection as brothers and sisters by marriage. The same sentiment is urged to prevail, and to destroy it must be regarded as morally injurious and degrading. Those who hold the sacramental view of a mystic spiritual bond formed in marriage urge that this bond creates as close a relationship between a man and the members of his wife's family as exists between blood-relations. Finally, it is pointed out that marriage with a deceased wife's sister has been expressly forbidden by the Church, at all events since the 4th century. It is most inadvisable, therefore, that it is to tamper with so long established a custom or, indeed, with any well-established custom in connexion with so delicate a subject as the marriage relation. Such are the main arguments by which marriage with a deceased wife's sister may be opposed. It is now worth while to consider the arguments which have been brought forward on the other side.

The very doubtful, it is urged, whether the Levitical law relating to a different state of civilization and specially intended for the people of Israel can be regarded as a moral law binding on Christians; but, even if it is accepted as such, not only is there no express prohibition of marriage with a deceased wife's sister, but, in fact, it is implied that such marriage is perfectly lawful (v. 16). The Jews have never regarded such
unions as forbidden, nor were they forbidden by the ancient Roman law. The very fact that an apostolic council (late probably late in the 2nd cent.) forbids such marriages to the clergy shows that they were not generally regarded at that time as unlawful per se.

No injury has resulted, it is held, either to marriage life or to the general tone of social morality from the permission of such marriages in America and in the British colonies. It is evident from experience that such marriages are in every many cases desired, and in large centres of population, and it is manifest that it would absolutely as a safeguard to morality that they should be permitted. It is denied that any feeling of repulsion similar to that inspired by incestuous connexions exists, or ought to exist, in the case of one's wife's near relations. Affinity ought, in certain cases, to be a bar to marriage, but the true ground of prohibition in this case is what is known as respectus parentele. The marriage of a man with his step-daughter or with his wife's widow is shocking to the moral sense because of the more or less paternal relationship involved in the connexion. According to old Eastern ideas, this relationship would also prevail between a man and his brother's widow, now become the head of the house. That marriage with a deceased husband's brother was not regarded with moral repulsion, in itself, is shown by the fact that it was commanded in the council of Trent to be performed. There is no reason, therefore, for thinking that any other principle than that of the respectus parentele governs the prohibitions of marriage within certain degrees of affinity in Leviticus, while, in the evident absence of any special prohibition against such unions among the majority of modern civilized people, no reason can be given why they should be forbidden. It is further urged that, even if the sacramental theory of marriage be accepted, since the mystic bond is dissolved by death, it may be fairly held that the connexions formed are no longer binding. That a great distinction is made between marriage with a deceased wife's sister and marriage with those closely connected by blood is evident from the fact that the Roman Church freely and frequently grants dispensations for the former, notwithstanding her high sacramental belief.

Some Anglicans, while not prepared to condemn marriage with a deceased wife's sister as absolutely wrong or immoral, yet consider it so undesirable that at least it should not receive the blessing of the Church by a marriage ceremony. Such an attitude has in most periods been taken up with regard to objectionable, but not absolutely forbidden, marriages. As pointed out above, it is the position taken by the Lambeth Conference with reference to the re-marriage of the innocent partner in a divorce case. It has, however, been said that such an attitude is not logical, and is at the same time unjust to Christian people. The majority of Christians have come to regard the nuptial benediction as almost, if not altogether, an essential of marriage and the right of every Christian. If members of the Church are committing no moral offence, they may reasonably claim the blessing of the Church upon their union; if they are entitled to receive the sacraments, it is held that it is unjust to cast such a slur upon them as is implied in a refusal to bless their union.

5. Conclusion.—Poets and story-tellers have made the love and courtship which lead up to marriage a matter of such all-absorbing interest that married life itself may well seem, by comparison, to be utterly dull, prosaic, and uninteresting. At the same time, divines and canonists have generally directed attention to the stern aspect of the matter, dwelling exclusively on the restraints and difficulties, and with watchful suspicion every form of natural indulgence. Nevertheless, the Scriptural ideal of marriage has maintained its hold in the Christian world and has been a mighty influence for the sanctification of family life and the development of character.

From one point of view, marriage is a restraint—a healthy restriction imposed on unruffled licence and excessive indulgence; it brings with it duties and responsibilities it is manifestly for the interest and energies to the utmost end and call for the continued exercise of patience and self-denial. It is well that, in a matter of so much importance, so intimately connected with our social and moral welfare, the restraints and responsibilities should be clearly defined and earnestly enforced. But there is another point of view which is, after all, the higher and truer. In this, perhaps more clearly than in any other connexion we are taught by the gospel that restraints are imposed and self-denial demanded, not for their own sake, but as a means to truer and more abiding blessedness. Holy matrimony has been divinely instituted for man's good, and he is in a happy married life man is to find his truest and most lasting happiness, and to reach the fullest perfection of which his nature is capable.

W. M. FOLLEY.

MARRIAGE (Egyptian).—Amid the abundance of documents from ancient Egypt there is singularly little to enlighten us on this subject. No representation of the ceremonial or festivities of marriage has been recognized among tomb or temple scenes; the scenes of the divine marriage of Ammon with the queen mother at Luxor and Deir el-Bahri can hardly be quoted for illustrating the human rite. Written contracts of marriage are first found in the XXVIIth dyn. (c. 600 B.C.), and first became common in the Ptolemaic period; an index of the multitude of relatives recorded in tombs and on steles, it is difficult to ascertain what degrees of consanguinity and how many wives were permitted or usual.

To secure hereditary rights in a community with matriarchal tendencies and where women held property, close endogamy might often be convenient. This would especially be the case with the Pharaohs, who claimed the distinction of divine descent, and whose acts which could hardly be allowed to their sub-
MARRIAGE (Greek).—I. General.—The Greeks, as in all other nations, founded marriage from religious or prudential motives rather than on sentimental grounds. The generation of children was, in fact, the recognized main end of marriage, with which went also the desire to obtain a creditable housekeeper. This utilitarian motive lies at the root of that long succession of Socrates and Ischomachos on household management which, as reported by Xenophon, is our most illuminating evidence on Greek married life in the 5th and 4th centuries B.C. (cf. VII. 113). The purely physical significance of marriage in relation to the State itself found, doubtless, its strongest and most logical recognition in Sparta, where wives were taken simply to be reproductive [Aesch. Comp. Lyrae. eur. Xanaria, iv. 71], and their interchange for this object was both permitted and encouraged. Yet even in Athens, as a result of the development of city life, in which women could not take any direct part (cf. the oft-quoted words ascribed to Pomes Thersites in the Greek papyri of the Fayum and Asinouite home, but A. S. Hunt assures the present writer that there is similar evidence also from Oxyrhynchus). The divine example of Osiris and Isis may have made a maidenly or spiritual marriage. In the Homeric story of Sotthon Khamwese (Ptolemaic period), the ancient Pharaoh's argument about his son Neferto-keptah and his daughter Ahure appears to be that it would be impolitic, when there were only two children in the royal family, to seek the best of them by marrying them together. His preference, following a custom, would be to marry them to a son and a daughter of two of his generals in order to enlarge his family. At a banquet he questions two of the elder Ahure, and was won over by her wishes to the other plan; thereupon he commanded his chief steward to take the princess to her brother's house that same night with all necessary things; Pharaoh's whole household gave her presents, and Neferto-keptah made a 'good day' and entertained them all on the marriage eve. This is the only account that we possess of an Egyptian betrothal or marriage that is not of the fairy-tale order, and it is noticeable that there is mention made of the marriage being an affair within the family.

Marriage was no doubt entered on soon after puberty and the circumcision of the male, though evidence here is lacking. A marriage of the Levites can be inferred only from the fact that Levites were allowed to marry among themselves (Josh. xix. 41; see LAW (Egyptian)). TheTestData aten tined them all on the marriage eve. This is the only account that we possess of an Egyptian betrothal or marriage that is not of the fairy-tale order, and it is noticeable that there is mention made of the marriage being an affair within the family.

Although several wives may be recorded on a man's tomb, there are few clear cases of marriage one living at the same time except in the large families of royal wives and concubines (cf. Erman. p. 213). For all these questions see CIRCUMCISION (Egyptian), FAMtLY (Egyptian), CONCUBINAGE, vol. ii. p. 581, CHILDREN (Egyptian); also ANCESTRY (Egyptian), ETHICS AND MORALITY (Egyptian), vol. v. p. 481 f. § 6. Divorce is provided for in the late contracts mentioned above, sometimes on behalf of the man, sometimes of the woman, and writing of divorce as known (see LAW (Egyptian)). Of the treatment of widows nothing is known beyond that their defenceless state made them objects of help and pity to the just and charitable.

P. L. Griffith.
That cohabitation existed at Athens to a considerable extent cannot be doubted, according to the laws of free women and their non-kin from the rest of Greece. Lydus mentions a law which required the husband to shun with impunity any adultery caught [157.2] by his wife, or with his concubine, though the latter are less valuable than their free sisters. These passages must cover free foreign women, from which class, as well as from that of slaves and freedwomen, the marriage obligation is suspended, if he is clear. It is clear, however, from Is. ix. 39, that even the children of free Athenian women (παλλακτας, ιστη) also sometimes became ἀνδραγαθοι and were given in marriage. However, it may be doubted, whether this privilege was extended to slaves and freedwomen. In the Athenian polity (cf. Anon. Aristos. Clases, 41.1; Xench. Proem. Vind. 890; καθάρες καὶ ἀνδραγαθοὶ παρθέναι). The point lay in the fact that, in historical times, a wife brought a dowry with her, which sometimes had the effect of making her the dominant partner in the household.

2. Permissible marriages.—It was illegal for an Athenian citizen to marry a foreigner, the alien wife or husband being liable to be sold into slavery (Law in Dem. ix. 16, dating perhaps only from the time of Pericles (Plut. Per. 37), and revived in 403 B.C.). Such marriage, however, was legal if Athenian citizenship had been bestowed on the individual, of he or she belonged to a community to which the Athenian assembly had granted rights of intermarriage (ἐπικυριακαί); but, in spite of the law and its penalties, Athenians not infrequently did contract such marriages and smuggle their issue into their φιλαρία. Legally, the issue of such marriages were illegitimate (υδάμα), like the issue of ἄνδραγαθοι. 2

Forbidden degrees were few, the practical working of the laws of inheritance and adoption (γγυή) being to encourage marriage between near relatives, and even to enforce it. Marriage of consins was condemned (cf. Is. xiii. 74), and uncle was possible (cf. Lys. xxxii. 4; Is. iii. 74), 4 and even of aunt and nephew (case of Demosthenes, father of the orator, betrothing, on his death-bed his prospective widow to his nephew [Dem. xxvii. 6]). A man might marry his half-sister by the same father, but seemingly not by the same mother. 5

Recht hat die Polygamie gewiss nicht ausgeschlachtet, aber wahrscheinlich auch nicht ganz erließ ihn. Obwohl das Gesetz nicht das gleiche ist, war dies damals der Willkür der Bürger freier Raum gegeben. 6 The law of Charondas of Thurii, inflicting sentence on the adulterer, mentions the case of his children, a stepmother (Hep. xii. 12, 14), clearly implies universal monogamy (cf. Herod. p. 59).

3. Choice of wife.—In the selection of a partner neither bridegroom nor bride had much voice; the respective parents arranged the match—often with the aid of a match-maker (συμφωνικός). Moreover, the Athenian bridegroom had little opportunity of making his own selection, or even of seeing her, before marriage, unless she was a near relative, owing to the strict conventions under which Athenian women in general lived—more strict, apparently, than those which obtained in the rest of Greece? (see art. Family [Greek]).

Pollux, iii. 21: γυναικὸς μὴ ἐν γυναικὶ ἀντίστοιχο νηπίων τοῦ ἐν γυναικὶ τοῦ ζευκτοῦ μεταφράσας, οὗτος ἐν γυναῖκι μεταφράσῃ. 5

Pollux, iii. 21: γυναικὸς μὴ ἐν γυναικὶ ἀντίστοιχο νηπίων τοῦ ἐν γυναικὶ τοῦ ζευκτοῦ μεταφράσας, οὗτος ἐν γυναῖκι μεταφράσῃ. 5

The form γύργυρος is used by Iseos only in iii. 53: τὴν μαχαλάνην ἐν τῇ γυναικὶ τῆς γυναικὸς. Moreover he uses the form γυργύρος (and so Dem. xlv. 15; Plat. Laws, 774 E; Hyper. iii. (y. 16). But modern writers have in general agreed to use the form γυργύρος in reference to him, the form γυργύρος so signify 'pledge' or 'surety', which is, in fact, its ordinary significance. The verb γύργυρος is used of the worship of the woman, τὸ γύργυρον (παρεκτ. of the woman); but the last but one is common, is place being taken by periphrases with the noun γυργύρος or the adj. γυργύρος (Wyse, on Isaeus, iii. 48).
historical considerations. Primarily and originally, the ceremony of ἡγαμία was a literal putting of the woman by her νύφος into the hands of the ἱζων, the literal between the striking of the bargain and exercise of conjugal rights (γάμος) being filled by the leading home of the newly-purchased bride. This home-leading, being part of the entire transaction which was of a strikingly public character, came to possess over increasing social significance, while at the same time it was the moment at which religion intervened to invest the ceremonies with its own special solemnities, whether of a prophylactic or of a procreative nature, of a ceremonial, of infinite variety, and of very various degrees of consciously realized import, which constitutes the actual procedure of marriage, in its social and non-juristic sense, interesting and important as it is for the student of anthropology, can be given here only in barest outline.

5. Wedding ceremonies.—The Greek γάμος was essentially a religious ceremony (τέλος), covering the deportation of the bride from her parents' house into the dowry agriculture (νυνίας) which upon it was actually paid, or agreements entered into as to its future payment.  

It should be clear from the above that the use of the term ‘betrothal’ as of the Greek term γάμμαία is simply by way of analogy, and in default of a more appropriate word. For the essentials of a modern betrothal, namely (1) from and to the woman, and (2) that the act takes place between the two individuals who so declare their will and intention, is more than likely a degradation of the primitive element; namely, the formal validity of the compact preparatory to the surrender (νυνίας) of the woman, than the formal contract for subsequent nuptials, as decisive in regard to the offsprin of the offspring. It does not follow that wedding ceremonies and home-bringing of the bride had any legal significance, except as the natural and public consequences of the formal private contract; and, just because these were the natural and normally inevitable consequences, Athenian jury-courts, so far as our knowledge goes, were never called upon to decide at what precise moment that status of marriage became actual, or what was the precise juristic significance of the γάμος in which the suitor asserted the right bestowed upon him by virtue of the marriage contract (γάμμαία).

The question, therefore, which has been debated, as to whether γάμμαία was an act of betrothal or an acting preliminary to marriage, or was not rather the conclusion of the marriage itself—first and most important of the ceremonies of the wedding-day, and actually constitutive of marriage per se—seems to receive its solution through purely

1 Cf. law quoted in Dem. xiv. 15; ἵνα ἐν γάμμαίᾳ ἐκείνον τῇ ἀδελφῇ τῇ γυναικί ἡμᾶς ἡ νυφὶ δεῖται καὶ πῶς πνεύς, and τοῖς οἴκοις εἶναι παῖδα γυναικεία.

2 Cf. Hyper. iii. (v.) (v): αὔριον μὲν ἂν ἐπιτρέψῃς τὸν γαμμαίαν αὐτὸν ἐν τῇ γυναικίνῳ καὶ τῷ παῖς τῷ πατρὶς παύειν, καὶ τοῖς οἴκοις εἶναι παῖδα γυναικεία.

3 Cf. Hyper. v. (v.): εὕρην ἂν δῆσαι τῷ σῶλω σετάς καὶ μὴ δέω νυφὶ δεῖται τῷ γαμμαίᾳ τῷ πατρὶς ἐπιτρέψις γαμμαίαν τῷ γαμμαίᾳ τῷ πατρὶς παύειν, καὶ τοῖς οἴκοις εἶναι παῖδα γυναικεία.

4 Herod. vi. 197: ἐν τῷ Ἀλκαμείστρος Μυκηναίοις εὐφυές παῖδα τὸν ἔργον ἀνεύοντος τοὺς, ἀνεύοντος τοὺς Αἰγαλεόπολις. Λασφανίου δὲ καὶ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γαμμαίᾳ τῷ γα¬

MARRIAGE (Greek) 447

The procession accompanying the bride's ędźadę to her new home took place in the evening, by torchlight, the Hymnaios song being meanwhile sung to the piping of flutes (see the description of the scene on the Shield of Achilles in Il. xix., 491 f.). The bride was introduced to the bridegroom and showed him their house, dates, figs, and other sweetmeats (καραφισάματα).

1 In Sparta a survival of the primitive capture of the bride lay in the custom of the bridegroom taking his bride from her mother's arms with simulated violence (Plut. Lyce, 15; Dion. Hal. ii. 30). For other survivals see E. P. Nilsen, "Greek Customs in the House," in Rta. xiv. (1928) 383 E. Kessler, Platerata Lebens des Kyklopen, Berlin, 1910.

6. Bride-price.—In primitive times, according to Aristotle, men bought their wives (Vul. i. 8: 1285; cf. Plato, Laws, 81 D). The Epic contains frequent mention of the bride-price (έθορα), normally calculated in oxen, paid by the suitor to the bride's father. It must sometimes have happened that the bridegroom himself undertook the marriage, general system of marriage by purchase, that a father must give something to boot with his daughter in order to secure the desired son-in-law. The economic factor, the relation between population and land, contributed largely to establish the custom of dower in place of the bride-price. In historical times, at any rate, the bride-price has been wholly replaced by the dowry given to and with the girl by her parents.

Thus the name of transition stages. Of Andromache it is said that Hecuba took her from her husband's house and price until Il. xvi. 4723 4718. In this respect Andromache is unique. According to Homer, Agamemnon offers to let him have a daughter of his wife (Il. ix. 196) to give to a present with her (γίγνεται ἐν τῷ γάμματι). The distant past, to the present position of the female, it is meant, just as by Pindar and Euripides (έθορα) is used as equivalent to δούρα.

7. The dowry.—In historical times, in Athens, the marriage settlement or dowry (προμήκη, φεροῦ) was almost a criterion of honourable marriage as distinguished from concubinage; for the freedom of divorce was limited. The whole position of the husband wife was pre- ceedings (see West, I. 28: καὶ ἀρχηγὸς πόλις ἐλαχίστως ἡ γυναῖκα ἐν τῇ γυναικί, ἂν μὴ εἶναι ἐξερευνηθείσης ἐν αὐτῇ ἀλήθειαν, ἀληθεία, ἀληθεία).

1 a) Followed exclaims which the technical and fixed phrase was γαμεῖται ἐκ τῆς γυναικὸς ἐπὶ δύο ἔργων θεών (cf. Oxyr. xvi. 15; 15). This has been variously interpreted by both ancient and moderns as an introduction or enrolment of the wife among the members of her husband's φίλοις, or a homoeolysis, or donation (see West, I. 28: καὶ ἀρχηγὸς πόλις ἐλαχίστως ἡ γυναῖκα ἐν τῇ γυναικί, ἂν μὴ εἶναι ἐξερευνηθείσης ἐν αὐτῇ ἀλήθειαν, ἀληθεία, ἀληθεία).

6 A law of Solon fixed the size of dowries at Athens; but this, if ever enforced, was certainly obsolete in the 5th century B.C., and was, in fact, virtually abrogated by the law fixing the minimum amount which could be settled by four witnesses (Hdt. ii. 24). The law which equally passed as Solonian (Dem. xlvii. 57). Hippocrates, the richest Athenian of his time, gave his daughter ten talents on her marriage with Alcibiades (Plut. Alc. 5). The state of Demosthenes the orator, with a property estimated at ten talents (Dem. xlvii. 57). The orator contains mention of dowries ranging from ten mites to more than 100 mites. Athenian mortgage-pilars, set upon property pledged as security for the repayment of dowries, show sums ranging from 300 to 4000 drachmae (600 drachmae, or 60 mites = 1 talent), but it is not clear, under the circumstances, that these sums constitute a dowry. The register from Myconos (Spart. k. 2) shows amounts varying between 200 drachmae and 1 talent. At Athens, the wife of the rich banker Pasco received three talents (Dem. xiv. 28, 35: 

6 A father might settle a dowry on his daughter by will (Lyse, xxi. 6), but was not obliged to make this provision; failing which, a daughter had no right to claim a share from the estate of her deceased brother. The dowry was more liberal, giving daughters a legal claim to one-half of a brother's share, in lieu of a dowry—an already portioned daughter having no further claim. That is to say, at Gortyn there was legal obligation to dowry. Ephorus, as quoted by Strabo, p. 497 s. the 200 talents 200 talents 200 talents, attributed by the Gortynian rule to Crete generally, and may be correct in so doing.

6 The nearest relative of a poor ἐκνόμος or ἐπίτοκος was under legal obligation either to marry her himself or to portion her on a scale fixed by law (Lys. i. 39; law in Dem. xlvii. 57). Contempt of the law was possibly construed as ἐκνόμος ἐκνόμος, involving partial drain).

6 Hence Euripides received, but gives service in lieu of bride-price.

3 In his note on the passage prefers to see it in an example of an intermediate stage, in which the έθορα are given to the parents, not to the bride. Hence is explained the term used in Il. xviii. 593, ἐπείδη δέ μοι καταλήγα το έθορα, 1 realising a high price in oxen (see James, Homer, the Greek Epic, Oxford, 1911, p. 135 f.). In Il. xxxii. 13, there is a talk of getting the price of a 'bad bargain' refunded. In Il. xiii. 492, the name έθορα is used by a suitor, with a gift in lieu of bride-price.

3 In his note on the passage prefers to see it in an example of an intermediate stage, in which the έθορα are given to the parents, not to the bride. MARRIAGE (Greek)

Under the Gortynian Code, if the wife died before her husband, having had no children, her next-of-kin was entitled to receive her dowry, rights and land and hand of the work of her hands; but, if the widower was an extravagant dowry, she had the management and use of his dead wife's property until he died or remarried, in which case it went to her children.

8. Dissolution of marriage.—Dissolution of marriage in Athens was easily effected. The husband's power of repudiation was unfeathered by any legal conditions or formalities. He simply sent the woman, with her dowry, back to her father's house. A prudent man would, as usual, summon witnesses, but need not do so (Lys. xiv. 28).

When the wife sought a separation, she must lodge with the Archon τὸ τῆς ἀπορίσκου γράμμα (Plut. Afr. 8; Andoc. iv. 14: ἐσποίκες, ἐπειδὴ πρὸς τὸν ἀνεφά στάτα τῆς σποίκης); but nothing is known of the procedure. Against a wife proved guilty of adultery the husband was compelled by law to use his right of repudiation, condonation of the offence being visited with ἁτίμα (Dem. ix. 87). On the other hand, it is certain that adultery of the husband gave the wife no legal right of dissolution, and that it was not generally regarded as sufficient ground of separation. It is evident that the possession of a dowry must have been a strong protection to the wife against a husband's caprices, and in many instances have made her virtually mistress of the situation.

Two special features call for remark in this connection. It was competent for husband and wife to agree to a mutual dissolution of marriage by an agreement in writing that another party was to be substituted. This Pericles so parted from his wife with her consent, to take Aspasia (Plut. Per. 24).

Again, the operation of the laws respecting heir-esses (ἐρήμης) often, according to Is. iii. 64, severed husband and wife (see INHERITANCE [Greek], vol. vii. p. 304). The latter occasion of dissolution of marriage differs from the first-mentioned in that it came about as the result of an application to a court of law by the next-of-kin as claimant (ἐρήμης). In all other cases there is no sufficient evidence that any public legal procedure was in use, for even the wife's application to the Archon does not seem to have been more than an application or formal notice to him in ἑτερέτοις. It is doubtful whether the additional and ὑπήκοους, which are said to have been available for husband and wife respectively, as if a sort of suit for restitution of conjugal rights, are not mere figments.

The Code of Gortyn shows that there, as at Athens, the wife's dowry was not merged in the family estate, and it was forbidden to the husband to sell or mortgage her property; for in case of dissolution of marriage the wife returned to her own family, taking with her dowry, together with half the increase thereof, and half the fruits of her own labour, as well as five statutes if the husband was to blame for the separation. On the other hand, the interests of the husband's family were fully protected by the provision that he might not make any larger donation than 100 statutes to his wife, nor make her a gift of her own property—her dowry—in any other way, for this would be in the same case both, namely, to prevent absorption of the husband's estate by the wife, for all such gifts belonged to the husband, not being given absolutely. If her husband was induced to make gifts and if she chose to remarque, her own property out of his estate into that of her own husband; the existence of now was only so far material that, if there were children, she was limited to taking her dowry and such donation as her husband might have made her. It was only of concern in the legal limit adherent, and in the presence of three adult male witnesses. If there were no children, she might take, in addition to her dowry, half the fruits of her labour, and half the produce in the house—balance going to her dead husband's heir-at-law. If she did not wish to remarque, her property remained in her own hands until she died, and then it was divided among her children; she enjoyed, therefore, more an independent position than the Athenian woman, whose property, in similar circumstances, passed into the hands of the eldest son as soon as he came of age.

1 For comparison of the Gortynian regulations with the later regulations in the East (Per. et turgiensesummat, which men heute fairly as ἀναλογίας Rechtsbuch difficult, p. 240) seems moment, 2300. 2 Athenian sentiment on this matter was very far removed from the position of Atri. (6; 1. 1316: ἀπορίσκου ὁ ἄλλος ἀπορίσκου ἄλλος ἄλλοι δὲ ἄλλοι ἀπορίσκου γραμμάτου; cf. Pol. iv. (vii) 16 = 1325): Plato, Lys. 818 E. "Thus the Ehe dem Maure keine Treuepflicht unterliegen, gehört zu den Grundmoralen der anden. Einige bezeichnen unsere Aussagen und Rechtsrichtung", (Hrom, p. 29).

3 According to Herod. v. 39, at Sparta heronness was good ground for divorce, at any rate for the royal house; cf. t. 61.

4 Other examples: Dem. xxxvi. 251: Is. ii. 69, 6: καταφύγα ἡ ὁμογενία καὶ ἡ ἀμφικολοια ἐν χρυσοῖς καὶ ἐν φόρου παρακεντητικοῖς ἐπιτάξιον ἐν χρυσοῖς λαλεῖ. Is. iii. 64: λαλεῖ. Is. vi. 41: Θουρία, according to Dio. xii. 18, freedom of divorce was law forbidding the person to whom the divorce was due to marry another person than the person he divorced.

5 The ἀμφικολοίνας ἢ ἀπορίσκουs, brought by the woman's espousal for the restitution of her dowry or other personal goods, protected the woman's interests in all respects. From this it follows that a woman who married without a dowry was in practically the same position as if she married with a dowry, as protection whatever against a husband's caprice short of actual violence to her person. 3
9. Widows.—The Athenian regulations concerning widows were as follows. If there were no children, born or adopted, the widow must return with her dowry to her father’s house; she must, as a matter of course, marry again in accordance with the wishes of her dead husband or those of her kinsmen (I. vili. 8). If there were children, she might remain in her husband’s house, where she passed under the authority of her children’s guardian. There was a general rule underlying that of her eldest son when he came of age—her dowry became the property of her children, subject to her right to support (Dem. xiii. 27, xiii. 29). She might, however, return with her dowry to her father’s house, if given again in marriage (Dem. x. 6 f.). The same option was open to her if, on her husband’s death, she declared herself pregnant (Dem. xiii. 75), in which case it was the Archon’s duty to protect her interests (Arist. Ath. Pol. 56, 7). It is clear that alone the existence of the dowry still secured on mortgage put the final decision completely into the hands of the widow and her kinsmen.

10. Marriage law in the papyri.—In Egypt, under the Ptolemies, Hellenic legal ideas and principles came in contact with those of another, in some respects more highly developed, type; later, both were influenced by the legal conceptions and practices of the Romans. In the Papyri, we are therefore in a position to distinguish between the communal marriage, in which the parties are Egyptians, the marriage regulations concerning which are partly derived from the older Greek law and partly developed under the influence of native models.

The technical term for marriage in the Papyri is ὕμνος or συνωμοσία. Dissolution of marriage (and probably therefore marriage itself) was no longer a purely private act, but required the lodging of an ἀναβάτης before an official (cf. what was required of the women in Athens, Dem. xxx. 17, 78; Is. iii. 75; ἡθος ἐνδυμάτων Σύρων διετήσσε τὴν συνωμοσίαν τοῦ ἰδού αὐτῶν, as well as the intervention of ὁρίσθημα).2 The precise relation between the religious ceremony thus imported into the transaction and the civil element represented by the ἀναβάτης and the marriage contract itself is by no means clear as yet.

The exact marriage-contents exhibit, when taken together, the following elements. (1) Statement of the giving or receiving of the woman in marriage; e.g., Mitter-Wüllen, Grundzüge, p. 227, n. 252: ηθος ἐνδυμάτων Σύρων τοιαύτα γυναῖκα πατο τα ἱερά, as in the older Greek law (cf. Is. ix. 17; ἡ Σύρος τοιαύτη γυναῖκα τοιαύτη τὸ θεότητος τῶν).3 (2) Acknowledgment of receipt of the ᾿φρον by the woman. (3) Mutual marital obligations; the husband was bound to support the wife and to treat her properly (μὴ δύσεις καὶ μὴ κακαίεις), and engaged not to repudiate her (μὴ αἰσθανόμενος ἢν βαθύνσῃς), or to be unfaithful (νομίζων ὅτι γόης γενέσθαι), of their mutual agreement (κατακαίεις τῶν ἅλλων ἀνδρῶν χωρίς τινά).4 (4) The sanction of the mutual obligations: the husband guilty of breach of his promises must repay forthwith (ἀποτρέποι) the dowry with addition of half its amount (τὸν ἵμαρτον ἵμαρτον); the wife so guilty lost her dowry entirely. Apparently the ordinary courts settled disputes so arbitarily. (5) Divorce on the man’s side (διαφυγή) was tantamount to breach of his promise (μὴ αἰσθανόμενος), and rendered him liable to the foresaid penalty; separation on the woman’s part (παρακήμα) was not regarded as breach of promise, but permission was made for repayment of the dowry within a stated time. That is to say, the husband had entirely lost that part of the dowry given him, under condition of simply refunding the dowry, which belonged to him under the older Hellenic law. On the other hand, the dowry retained here also the ownership importance which it had in Hellenic law.5 Here also it was, if not a deducible sum of money, valued and expressed as

1. For these see W. Otto, Platerat und Tempel im heilandesländischen Apotheese, 2 vols., Leipzig, 1909, i. 163, f. 294f.

2. As cited in Form. Ges. 5, § 69 (Geber zuvörn Σύρων... γυναῖκας γυναικαί), in which the woman, of Macedonian origin, gives herself away in marriage, but by a survival of native habits, in this respect, therefore, must have resembled that of the Lydians, of whom Herodotus remarks that the women give themselves in marriage (i. 93; ἡθος αὐτῆς καὶ αὐτῶν γυναίκων... besides collecting their own dowries αὐτών γυναικεῖα). Witten-Wüllen, i. 219f. · Im Gerippe dieser Urkunden bildet die ᾿φρον das Rückgrat, an welches alle anderen Bestimmungen sich anlehnen.

VOL. VIII.—29
MARRIAGE

as in Bengal at the present day a wife normally feeds on the remnants of her husband's meal.

Naturally enough, there were parts of the character of women. A wife completes a husband and is half of his self, we are told (Bhāratayatka Upaniṣad, i. iv. 17; Śatapatra Brāhmaṇa, v. ii. 1. 10), and her good qualities are frequently mentioned. On the other hand, the Mātrāyānī Sāhītī (i. x. 11, iii. vi. 3) describes a woman as untruth and as connected with misfortune, and classifies her with dice and drink as one of the three chief evils. Elsewhere (Taittirīya Sāhītī, vii. 12) a good woman is ranked below even a bad man, and the Kṛṣṇakṛṣṇa Sāhītī (xxxi. 1) alludes sarcastically to her ability to obtain things from her husband by cajolery at night.

The most important function of a wife was doubtless that of bringing into the world a son in order to perform the propitiatory funeral rites to his father and to continue the race. Adoption, indeed, was known as early as the Rigveda, but it was not popular (cf. art. ADOPTION [Hindu]), and lack of a son (avārda) was regarded as the greatest of evils. On the other hand, the birth of a daughter was regarded as a misfortune; the Atarcaṇa Brāhmaṇa (vii. 15) contrasts a daughter as misery (kṛṣṇa) with a son as a light in the highest heaven. But the women were widely held to be ritually polluted (atpah) until the father or brother, to the practised infanticide in the case of girls, has been disproved by O. von Böhtlingk.1

In political life women took no part; men alone went to the assembly. But, while the position of the wife in the religious ritual was narrowed, when the priests, there is evidence that women took part in the speculative activity which manifested itself in the 6th cent. B.C. in the Upānīṣads. We learn there not only of several women teachers, who may or may not have been married, but also of one of the two wives of the great sage Yājñavalkya, who shared her husband's intellectual activities.

In the Gṛhasthās and Dharmaśāstras, which mark the end of the Vedic period proper, and which may be held to represent the views of the period from the 4th cent. B.C. onwards, in the epics (c. 200) B.C.—A.D. 200, in the Arthādīśṭra, and in the Kāvyaśāstra we find in full force the tendencies which reveal themselves in the later classical literature and which can be observed in this development at the present day. Different types of marriage are now recognized and classified, being assigned to the different classes of the population. Marriages between people of full age are still allowed, whether by capture or to form love matches, while the Kāvyaśāstra permits love matches generally.

Against these special cases must be set the general rule, which first appears as a counsel of perfection in the Māyāra (i. vi. 8) and Gobhiṣa Gṛhasthā (iii. iv. 6), but which by the time of the later Saṁhitās—i.e., not later probably than the beginning of the Christian era—has won full acceptance, viz., that it was sinful on the part of a father to allow his daughter to attain wedlock without being married, and the girl herself fell to the condition of a Sūdra (esvālī), marriage with whom involved degradation on the part of a husband. The date of marriage is placed earlier and earlier as the authority is later in date. Thus the Saṁhitā of Manu (ix. 94) fixes the ages of husband and wife at 30 and 12 or 24 and 8 respectively; the later work of Bhāratatka (ZDMG xlv. [1892] 416 f.) and the didactic portion of the Mahābāhaṛata (xiil. xiv. 19) gives 20 and 15 and 14 and 12 respectively, while yet later texts give 4 to 6 as the lower and 8 as the upper limit. There is abundant evidence that these dates were not merely theoretical: the old marriage-ceremonial, which included as its part the taking of the bride to her new home, whenever the name of marriage (vivāha) was derived, was divided into two parts; the actual ceremony took place shortly after the betrothal (pratītpāna), but the taking of the bride to her husband's home was delayed until after puberty. The unmarried daughter (kuśumā) living at home was distinguished from the married daughter (sonāsā or savasāsā), with whose connexion with her parents was still recognized to the extent that, contrary to the rule that no mourning was observed for a married daughter, a brief period of mourning was prescribed in the event of her death before her departure from her old home. The early prevalence of the custom is also confirmed by the Greek authorities,1 and was noted by Alfrīni in the 11th cent. A.D.2 At the present day, despite the efforts of reformers, it is still the prevailing practice among all Hindus who stand under the influence of the Brāhmans to marry their daughters before puberty, and the practice has spread even among Muhammadans.

The better side of such marriages is put before us in the Hārīta Sūrti (iii. 3). The wife is to devote her whole thought to her husband and his family, to perform the domestic duties inflicted on her by her husband and sons, wash the utensils, stew cow-dung on the floor, make the domestic offerings, embrace her husband's feet before going to rest, in the hot sea-on fan him, support his head when he is weary, and so forth. On the other hand, to her falls the place of honour in the household, and she is undisputed mistress of her daughters and any other women living under her husband's roof. The description in the Sūrti is confirmed by the literature and by the practice of the present day. On the other hand, it must be noted that the intellectual achievements of women in India since the rule of early marriage became effective have not been in accord with the normal development which might have been expected from the fact of society debased in the Upānīṣads, and the heroines of the epic and the classical poetry are chosen, as a rule, from those women who, for some reason or other, have not fallen under the operation of the ordinary praction in the development of society.

MARRIAGE (Hindu)

important and widespread were the solemn handings over of the maiden by her father (kanyadana), the joining of the right hands of the bride and bridegroom (pāpygadhana), the recitation of Vedic formulae, including a speech by the bridegroom to the bride: and the giving of the bride's portion (bridegroom's) in the fire and the thirdfold circumambulation of the fire, the seven steps taken together by the wedded pair, and, finally, the taking away of the bride to her new home by the bridegroom. There is evidence from the literature that these customs formed the kernel of the normal marriage-ceremonial throughout the Middle Ages, and much of the ritual is still observed at the present day. In the Sūtric literature eight forms of marriage are recognized, and described, but with many differences in detail. In the case of Brāhmans (iii. 24) recognizes as approved four forms: the brāhma, āśva, ārāya, and prajāpattyā. The characteristics of these forms are that in the first the father of the girl gives his daughter to a suitable husband, in the second he gives her to a priest engaged in performing a rite for him, in the third the father or the mother of the girl gives her to a priest, and in the fourth the initiative in proposing the marriage comes from the girl herself. These four forms, therefore, practically represent marriages by mutual consent and parental arrangement, while the second and third have traces of marriage by purchase, though the texts are careful to explain that the bride was engaged for the purpose of being given away (śilka) or being to be given away, but was to be given to the daughter by her father as a mark of honour. It is perfectly clear, however, that the original sense of the custom was a purchase, and this fact is borne out by references in the Rigveda to the bride being purchased as a present (vi. 16) and in Śāṅkhāyana (x. 14) to the practice of giving the father-in-law a hundred oxen with a waggon, and by the recognition in the Gṛhya-sūtras of the threefold marriage of the Kāthaka and the Mānavas (i. vi. 11) of a usage by which the bride-price was paid in money to the father.

Marriage by purchase was recognized among the warrior class; in the Mābhodhāraṇa (x. exiii. 96) we are told that Parashu Ráma offers his daughter to a suitable husband in gold and horses, elephants, ornaments, etc., for the hand of his sister, and that the purchase of the maiden was the family practice of the king. Still more was the custom prevalent among the lower classes of Hindu society. In the form that survives the Vaiyāyas and the Śūdras the āśeva marriage, which was an open, out-and-out sale, though it now is disguised in toto, but facts have prevailed over the objections of the Brāhmans to the sale of children, and even at the present day marriage by purchase is common enough in Bombay, Madras, and the Panjâb, and is the normal form in Assam. In Bengal it is restricted to the lower classes of the population, but there the practice of the purchase of bridegrooms prevails instead, the practice of child-marriage having placed a high price on eligible husbands.

In addition to the āśeva form, the warrior class was allowed the rākṣasaṇa, the gandhâravasaṇa, and the pāṇḍâraṇa forms; the last is now confined to Manu along with the āśeva as altogether improper. The former type of marriage was marriage by capture in its simplest form, and its performance is related to that of the epic, though the rite of women being taken as slaves is elsewhere regarded as a capital offence. But, outside the epic, we hear little of this remarkable privilege of the warrior class, and this practice has left no survivals in modern India, though it is found among some primitive hill tribes, where it is of independent origin. Some, indeed, of the details of the marriage-ritual given in the Gṛhyasūtras have been interpreted in this sense, but the interpretation is neither necessary nor probable. The gandhâravasaṇa, rite, which some authorities recognize as applicable to all classes, and which the Kāma-sūtra, instead of ascribing as the bringing about of the marriage by the wedded pair, on the ground that the observance of these formalities would compel the parents of the bride to recognize the validity of the marriage. The pāṇḍâraṇa, which is variously described, was marriage with a girl when she cried for her self; is not recognized as a legitimate form by some authorities, like Apastamba and Vasiṣṭha.

For the Vaiyāya and Śūdra forms of marriage recognized were the gandhâravasaṇa and the āśeva with, according to some authorities, the pāṇḍâraṇa. In modern times the forms of marriage recognized are, even for Vaiyāyas and Śūdras, either the āśeva or the brāhma, under which term is understood a form of marriage containing the essentials of the first four forms of marriage.

The Śāstra do not recognize a form of marriage which plays a great part in the epic—the saṃvāravasaṇa, or self-choice, a ceremony at which a princess chooses for herself a suitor at a great assembly held for the purpose. The choice is decided by a trial of strength on the part of the suitors, the victor being rewarded with the hand of the maiden, and, even when this formality was omitted, it is probable enough that the choice was only nominally offered to the princess, which was guided by the will of her father or brothers. The only saṃvāravasaṇa which the Śāstra mention is the right of a daughter in any class, if her father does not find her a husband, to choose for herself; in this case the daughter ceases to have any right to any ornaments received from her own family, while the husband need not pay any bride-price, and is permitted to steal her away.

Only the first four forms of marriage are at all religions in character; the marriage hymn of the Rigveda (x. 85), which serves to provide verses for the normal form of marriage, deals with marriage in general and the prototype of all marriage in the form that sometimes now is disguised in toto, with Śūrya, the bridegroom of the sun. This legend is certainly recondite in character, and it is legitimate to deduce from this fact, and from the fact that the Śāstra do not deal with the forms of marriage, that the religious ceremonial was not the essential or primitive part even of the higher forms of marriage.

3. Restrictions on marriage.—It is uncertain how far the modern rule of marriage, which permits alliance between members of the same caste only, was in vogue in the early Vedic period. When the distinction of castes (jīta) was only in process of evolution from the system of classes (varṇa). It is clear from the Brāhmaṇas that the primacy of descent was an important qualification for Brāhmaṇship, but cases are recorded (e.g., Aitareya Brāhmaṇa, ii. 19) that show that the son of a Brāhmaṇ and a Śūdra wife might yet be a Brāhmaṇ, and that Brāhmaṇs could marry the daughters of members of the warrior class. With this accords the evidence of the Gṛhyasūtras and Brāhmaṇasūtras, which recognize with a good deal of agreement the right of each class to marry women of the classes below them in the established order, Brāhmaṇ, Kṣatriya, Vaiyāya, and Śūdra, which differ seriously only on the validity of marriages with the Śūdra women. Arrian, probably on the authority of Megasthenes, records (Indica, xii. 8)
that marriages were not allowed between seven particular persons, or by any marriage caste which was certainly in existence by 300 B.C. The Buddhist texts yield the same result, but they recognize that the king might marry where he would and make his son by any wife his heir-apparent. Manus still maintain the fixed marriage castes, but the later Smritis tend to rule them out as objectionable. The modern rule is strict against mixed marriages, confining the possibility of marriage to the modern castes: but the date at which this practice finally prevailed is unknown; and as even late texts repeat the permission for such marriages sanctioned by the older authorities, and the Kulin Brahmins of Bengal still avail themselves of this now seemingly very valuable privilege.

Simultaneously with the growth of the prohibition of marriage within the caste were developed restrictions on marriage within the family. In one hymn in the Rigveda (x. 19) the marriage of brother and sister is expressly treated as improper, and there is no attempt by castes to use this as an innovation, as suggested by Weber. Other restrictions are alluded to, and the Sutapatha Brhadangya expressly refers (i. viii. 3. 6) to marriage within the third gotra, the former being the rule, according to the commentator, among the Kausyas, the latter among the Sanragas, while the Daksnitayas, or people of the south, permitted marriage with the son of the father’s sister or daughter of the mother’s brother, but not, apparently, with the son of the father’s brother or the daughter of the mother’s sister. The Ghyastas and the Dharmaastas in elicit agree in prescribing that marriage should not take place between a man and a woman of the same gotra. This rule is repeated by other authors, and the distinction between gotra and father’s birth gotra is made by Bhalana, and is the general rule at the present day throughout Hindustan, and is a growing influence among the court officials. The exceptions are found in S. India, where some tribes practise the opposite rule of endogamy.

In Rajputana, among the Rajputs who claim to be descendants of the old warrior class, exogamy is closely connected in their history with the practice of marriage by capture; but there is no sufficient evidence for the view that the development of the custom generally was connected with marriage by capture. Of much less importance are the restrictions arising from the feeling that the eldest son and the eldest daughter should be married before the younger sons and daughters, a breach of this rule being merely a ground for a penance, and not a fatal bar to the validity of the marriage. The rule is, however, very old, being found in the Vayurveda (Maitrinya) Sambhita, i. 4. 9), and recognized throughout the later literature. In the south members of the castes adopt the practice of a mock marriage of the eldest brother with a branch of a tree in order to avoid the evil result of a breach of this rule.

The bride should be a virgin, and the importance of this rule lies in the fact that it renders the re-marriage of widows difficult. In the Rigveda (vi. xiii. 8) there is some indication that a woman might re-marry to the rule was respected and could not be found or heard of, and in the Atharvaveda (ix. v. 27 f.) mention is made of a spell to secure that a woman married twice may be united in the next world with her second, not her first, husband. The reference here may be to re-marriage in the case of an absent husband or one who had lost caste. The doctrine of Manus is that a woman should never be re-married, and that the marriage formulae are intended only for maidens; but he admits one exception in the case of a woman whose husband dies before the completion of the marriage. Other authorities permit re-marriage in the case where a husband has disappeared, is dead, has entered a monastic order, is impotent, or has been expelled from his caste; but the authorities differ widely as to the fourth and condition allowance which entitled a woman to re-marriage. The son of a widow who has re-married (purnambara) is ranked by Manus and other authorities only among the second six of generatic. The first birth is termed by Hindu law. But the dislike of re-marriage was one which developed gradually; the actual reproduction of such a son first occurs in Brahstapi (xxxv. 41), and the forbidding of the re-marriage of a widow occurs only in the Adi Brahmans and later works. The objections to such marriages in modern India are very strong among those castes which lay most stress on child-marriage, and, despite the legalizing of them by Act xv. of 1856, and efforts of social reformers, they are still disapproved by the higher classes.

In the case of a man, while impotence was recognized as a ground on which the wife might contract a new marriage, the marriage was not in itself null, and even mental derangement was not regarded as justifying re-marriage on the part of the wife.

4. Polygamy.—The practice of polygamy among the Vedic Indians is abundantly proved by direct references in the Rigveda and other texts, though in the main the practice ceases out of the gotra, a term of wide extension and indefinite sense, but covering all those of the same family name, is recorded by lilinariu, and is the general rule at the present day throughout Hindustan, and is a growing influence among the court officials. The mahasis seems to have been the wife proper, though the others were evidently mere concubines. In the Arthasastra, the Smritis, and the epics the rule is laid down that a man may have wives from his own caste and each of those below his, either including or excluding the Sdrda, and in such cases the wife of the same caste was the wife par excellence (dharmapati), with whom the husband performed his religious duties. The heroes and Brahmins of the epics are frequently represented as having several wives, but one of them always ranks first, and, similarly, later in inscriptions one wife only is often mentioned with her husband. The rule of precedence among wives according to caste and, within the caste, to date of marriage might, however, be overridden by the husband, who could degrade a wife from her position as chief wife; in that case he was required to make her a present equivalent to the new wife whom he was marrying. The modern rule permits the husband to contract as many marriages as he wishes without any need for justification or consent on the part of his existing wives.
MARRIAGE (Hindu)

In addition to wives proper, the Sūtris recognize the existence of concubines (ūdāsi, bhūjājyā), who were distinguished from wives by not being married in due form, and who could neither be taken for their husband's heirs. They were, however, entitled to maintenance by his brothers as his heirs on his death, and intercourse with one of them was regarded as adultery. Similarly, at the present day the keeping of concubines by wealthy Hindus is recognized in a modified form.

The Sūtris show some preference throughout for monogamy. Apastamba (ii. xi. 12) expressly disapproves the re-marriage of a man who has a wife living, and other authorities expressly state that the remarriage of a wife in common—a fact which is elaborately explained and defended in the epic. This form of polygamy is recognized by Brhaspati (xxvii. 20) as practised in the south, and by Apastamba (ii. xvii. 2) as an authorized use. At the present day polyandry is still found among Brāhmans, Rājputs, and Sūdras alike in Kurnool, where children are shared by the brothers as by the Pândavas, and among hill tribes in the Panjāb, where the children are divided among the brothers. The reasons given for the practice are poverty and the desire to avoid division of property. Among the Játs of the Panjāb the wife of the eldest brother has to serve often as the wife of the younger brother also, and the practice is common in the case of the Hindūlāy tribes. The custom also prevails in the sottis among the Nairs of the Kanara country and the Todas of the Nilgiris. The modern evidence comes mainly from Tibetan and Dravidian tribes, and the practice is now observed on the same scale as was ever widely spread among tribes of Aryan culture.

6. Divorce.—The characteristic quality of a Hindu marriage was that it was a union for life; in striking contrast to the barbarous custom of divorce among Hindus which were seldom broken by divorce. In the Sūrti literature, however, cases are recognized in which divorce in the form of the contracting of a new marriage by the wife during her husband's lifetime is allowed, and the occasions for divorce (tyāgā), i.e. abandoning a wife and leaving her without maintenance on the part of the husband, are set out. The abandonment of a faithful wife counts as a pān, which must be expiated by a severe penance, and which may involve expulsion from caste. Adultery affords a ground for divorce, and might in certain cases be punished with death, but, according to other authorities, it could be expiated by severe penances. Any serious offence against a husband might, according to Yājñavalkya (i. 72), be a ground of divorce, and Nārada (xii. 92, 93) gives as offences justifying such treatment attempts to murder, wasting property, or the procuring of abortion. In modern Hindū law there are, however, fewer grounds on which divorce can be obtained, and it is rarely allowed except for adultery and, in modern Hindū law, for adultery alone. Divorce is very common among all Dravidian tribes, which also allow freely re-marriage of wives in the case of the disappearance, long-continued absence, infidelity, or loss of note in any cause of their husband's heir. They were, however, entitled to maintenance by his brothers as his heirs on his death, and intercourse with one of them was regarded as adultery. Similarly, at the present day the keeping of concubines by wealthy Hindus is recognized in a modified form.

7. Position of widows.—In the funeral rites of the Rigveda the wife of the dead man is represented (x. xviii. 74) as lying beside him on the pyre and as being summoned to leave the dead in order to be united with his brother, apparently as a bride. The passage clearly shows that the wife was not to be burned with the dead, but it unmitigably suggests the existence of an older custom to this effect, and the Atharvaveda (xviii. iii. 1) refers to this as the right order. It was evidently not approved by the Brāhmins of the Vedic age, for it is not mentioned in the sūtras, and appears first in the late Vāikīhavasā Gṛhyasūtra (vii. 2) and in interpolated passages of the Vāyu Sūtras (xxiv. 14, xx. 39). The later Sūtris approve it, but not without occasional dissent. In the epics it plays little part, though one of Pāṇḍu's wives insisted on being burned with her husband (Mahābhārata, i. cxxv. 31); but in the later romances and historical works it is often mentioned, and as early as A.D. 509-510 an inscription is found to celebrate a sotī. Forbidden by British India in 1829, it was observed in 1829 in the Panjāb at the death of Ranjit Singh, and in 1877 by the Maharaja of Nānīka. In the Vedic period, the nature of the rite is shown by the fact that often other attendants perished with the queen or wives when the dead man was a prince. Normally the wife was burned with the dead man; if he died away from the home she might be buried alone (anuvarama), but the burning of a pregnant widow or one with a young child was forbidden, and the practice was normally more or less voluntary, except in the case of royal families, where reasons of policy and religious considerations of religion in favour of burning.

In many cases death was doubtless regarded as preferable to the fate of a widow, whom the Sūrtis and modern usage, despite the efforts of reformers, condemn to a life of fasting, devotions to her dead husband, pilgrimages, and abstinence from any form of luxury, such as the use of a bed, ornaments, etc. If she had grown-up sons, she fell under their control; if not, under that of her husband's kin, who were bound to give her no indications that such an occasion was ever widely spread among tribes of Aryan culture.

In the Rigveda it seems to have been the practice for the wife of the dead man to be taken in marriage by his brother, whether or not the latter had a wife already. This, the natural interpretation of the funeral hymn (x. xviii. 8; cf. also x. 2), is borne out by the fact that the modern usage in the Panjāb, which has preserved much of ancient practice, is for a man to marry his brother's widow, with the result that many men have two wives. In the sūtras, however, this practice is whittled down to the permission given to the brother of the dead or, if there is no brother, a near kinsman to beget a son with the widow in order to continue the race of the dead man. Such a son, when of age, would inherit his father's property, which, until then, would be managed by his mother or by his real father, to

---

1. A. Hillebrandt, ZDMG. 58 (1868) 710, explains these passages quite differently; but his view does not appear correct.

Marriage and morality. — Though fidelity on the part of both parties to a marriage was doubtless an ideal, there is abundant evidence throughout the Vedas that infidelity on the part of the husband was neither rare nor considered worthy of moral censure. In the case of the wife there is no doubt that in the Śrauti literature and in modern usage adultery is regarded as a serious offence which, in certain cases, is punished by death. Some of the Vedic passages (Taittirīya Śraut Śāstra, vi. vi. 7; Mātrikāgīnyā Śraut Śāstra, iii. iv. 7) cited as showing tolerance of adultery are susceptible of other interpretations, but there remains the fact that in the Vāraṇāvigrahā is clearly intended to remove the ill-effects of adultery (Mātrikāgīnyā Śraut Śāstra, i. x. 11; Satapath Brāhmaṇa, ii. 2. 20), that the Bhādarvāyana Upaniṣad (vi. iv. 11) contains a passage advising the wife of a Brahman, and that the Bhādarvāyana Gṛhyasūtra (ii. 28) advises a husband how to proceed in the case of going on a journey if he desires his wife to have lovers in his absence. The romances and fable literature frequently refer to the infidelity of their authors, and the references to the lax morality of previous ages are made for the purpose of proving that the recognition of illegitimate sons then accorded was anticipated at the time of the texts.

9. Marriage and property. — The widow of the dead man, according to the Nīrūta (iii. 4) and Bārhyāya (i. 1. 46), was denied the power of becoming an heiress. Gauntam (xxxvi. 21) mentions her in the list of heirs, but points out the alternative of the adoption of the practice of nīyoga for providing the son whose absence alone could the mother be heir. In Viṣṇu (xvi. 4) and Yājñavalkya (ii. 133) is found the expression of the widow as the next heir in the absence of male issue. But the extent of the right thus obtained is expressly limited by the texts: the widow could not give away, or mortgage, or sell the property thus inherited; she held it for her enjoyment for life, subject to continued ownership of her mother and her second marriage, but she held it under the control of her husband's kindred and with the limitation that she should return to them on her death. 2 If there were several widows, the chief wife seems to have been entitled alone to succeed as heir, but on her1

MARRIAGE (Iranian).—1. Zoroastrian. According to the sacred texts of Zoroastrianism, marriage is governed by the Zend Avesta (ed. T. Macan, Calcutta, 1859, pp. 1579 et seq.), where Bahram Gur takes his Indian wife to the fire temple for that purpose. The religious portion of the wedding ceremony is 'according to the law and custom of the Mazdayasian religion.'

According to the Avesta, both manhood and womanhood were attained at the age of 15 (Ys. xix. 15; ed. Skr. 19). In the Avesta we find maidens paying for suitable husbands (Ys. ix. 23; Yt. v. 87), it would appear that child-marriage was not practised. The ritual recited at the betrothal ceremony declares that the ceremony is 'according to the law and custom of the Mazdayasian religion.'

The Parsi community in India has passed through so many vicissitudes that it is difficult to determine which of the various marriage customs of the Parsis were originally Zoroastrian, although it appears to be practically certain that the strictly religious portion comes under this category. At the very beginning of the Ahrvazd, or blessing known as the Pāwargān-nameh, which is recited at the wedding ceremony, the reciting priest declares that the ceremony is 'according to the law and custom of the Mazdayasian religion.'

In some families the astrologer's services are engaged before the marriage also. When matches are being arranged by mutual friends, the horoscopes of the intending bride and groom are submitted to him, to find whether the stars predict harmony between the pair. If this is not to be the case, the projected match is broken off.

The marriage ceremony is preceded by several other rites. When the match is arranged, an auspicious day is fixed for the betrothal, such as the day of new moon, or the first or fourteenth twelfth (Bāhrām) day of the Parsi month. At times, especially in Mofussil (provincial) towns, the parties consult Hindu astrologers, who name one or more auspicious days for the betrothal, much as in the West, the match is usually arranged by the parents, with the consent of their children; but often, at the present time, the contracting parties make their own choice with the approval of their parents. Mutual friends of the two families generally carry messages and bring about the match—a course recommended by the Pand-nāmēbād-Āhrvāzād, and attested in the Sāh-nāmēh (Tr. A. G. and E. Warner, London, 1905, ii. 177 ff., ii. 125, 88-98) by the marriages of the daughters of Farrokhzad with the daughters of the king of Yemen, of Rustam with Tahmīnāh, and of Kāsh with Sūthāhāh. Until recently professional match-makers were not unknown, and they still exercise a certain amount of activity.

On the day of betrothal the women of the groom's family visit the house of the bride and present silver coins to her, and the groom receives a similar present from the women of the bride's family. The older term for this ceremony, now called was nāmeh, 'to name' (Pers. nāmeh shudan), since after the ceremony the bride receives in religious recitals of prayers for her the name of the groom, even though, by some mishaps, marriage does not take place. An unbetrothed girl was said to be 'unnamed' (nā kārdāh nāmā). Betrothal is regarded as a solemn part of the marriage ceremony, the mābarān-mār, or 'pledge of the magnitude of a man' (Ynd. xix. 15; 12), being cast into the Rivers. At the present time the priests do not take an active part in the betrothal, except in Mofussil towns, where two priests—one for each family—formally ask the parents through the priest and parson to formally give the bride and groom to each other. The priests took part in the nāmāzān (betrothal) at Surat in the middle of the 18th cent. (Anquetil du Perron, Zend-Avesta, Paris, 1771, ii. 537.), when the two families met, and the groom's family priest, after prayer, placed the hand of one of the contracting parties in that of the other. The betrothal is followed by the Dīvō, when a lamp (dirām) is lit in the house and presents are given to the women of the two families, with squares and gifts. This day is regarded as more important than the betrothal proper, because on it the dress and wedding rings are usually presented. The Dīvō is followed by the Ādamān, when each of the bride's father is presented to the bride's family. Presents are exchanged, chiefly from the bride's family, on several other days between betrothal and marriage.

An auspicious day, such as the day of new or full moon, is fixed for the marriage as for the betrothal. Tuesday and Wednesday are auspicious.

In some families the astrologer's services are engaged before the marriage also. When matches are being arranged by mutual friends, the horoscopes of the intending bride and groom are submitted to him, to find whether the stars predict harmony between the pair. If this is not to be the case, the projected match is broken off.

The marriage is generally celebrated with much pomp, as was the case in ancient Iran, as recorded in the Dinkart (ed. P. B. Sanjana, Bombay, 1874 ff., ii. 97). The groom, wearing a white ceremonial robe and holding a shawl in his hand, sits among friends and relatives of his own sex in the compound. Around his neck he has a garland of flowers, and on his forehead is a vertical line of red pigment (kuskun). In colour this is held by some to represent in India an earlier custom of the sacrifice of animal life, and in shape to symbolize the brilliant, fruit-fructifying sun, whereas the round kuskun of the bride is supposed to be a symbol of the moon, which absorbs the rays of the sun.

A short time before the marriage, a procession, headed by the officiating priests, and often by a band of music, goes to the house of the bride, where the ceremony generally takes place. The men sent thence in the company of the women in the compound. At the door, the side posts of which—like those of the groom's house—are

1. Geiger, Ostindia. Kultur, p. 241, says this in passing an allusion to the custom of asking the hand of the bride from her parent or guardian (cf. also Ynd. xx. 9). 2. A considerable time might elapse between betrothal and marriage (Ynd. xv. 9; cf. Geiger, p. 243).
marked with turmeric (whose yellow colour is held to symbolize the sun, and hence abundance and fertility), the groom is welcomed by his future mother-in-law, a fresh mark of khukhun is made on his forehead, and rice is made to adhere to it, and is also thrown over him.

During the marriage ceremony the officiating priest again sprinkles rice over the bride and groom, and before the recital of the marriage prayer the pair throw a handful of rice on each other, some mothers making the couple eat a few grains of rice thus thrown.

Environ a coco-nut, and a little tray of water are now passed three times round the groom's head and east away, and in the course of the evening the women of the bride's family make the groom dip his hand in a water-jar, in which he preserves for them the silver coin. Formerly it was also the custom for the feet of the bride and groom to be washed after the marriage ceremony, but the adoption of English foot-wear has caused this to survive only in washing the tip of the boots.

After the groom had been thus welcomed at the door, he is made to cross the threshold without touching it, and with his right foot first, these precautions being observed also by the bride when she enters her husband's house. Having entered the house, the groom awaits the bride, who sits on his left, the chairs being placed in the centre of the apartment. On stands beside the chairs are trays of rice to be thrown over the pair, and lighted candles, with a gold coin beside the bride's hand in a small vessel of ghā and molasses (typifying gentleness and sweetness); a servant stands beside the pair, holding a burning censor in one hand and a little frankincense in the other. Beside each of the contracting parties stands a witness, usually the nearest kin, and generally married persons.

The following requisites are necessary for a regular marriage: (1) the marriage must be celebrated before an assembly of at least five persons, who have been summoned for this special occasion; (2) the contracting parties are asked by the officiating priest whether they consent to be united in wedlock; (3) the hands of bride and groom are joined (hothevarī, 'hand-fastening') and a symbolic knot also plays a prominent part in the ceremony; (4) the actual marriage ceremony is followed by a benediction accompanied by sprinkling with rice, etc.

Before being seated side by side, the bride and groom are made to sit regarding each other, separated by a piece of cloth as a curtain. The senior officiating priest now joins the right hands of the pair, and, with the recital of the Yatūh ahū vaerī, a piece of cloth is passed round the chairs of both so as to form a circle, the ends of the cloth being tied together. With a repetition of the Yatūh ahū vaerī the hothevarī is then performed by fastening the right hands with twists of raw yarn, which is passed round the hands seven times, then seven times round the bridal pair, and, finally, an equal number of times round the knot in the encircling cloth. The fee for this ceremony is the perquisite of the family priests, even though the rite may be performed by other priests. The attendant next puts frankincense on the fire, and the curtain between the pair is dropped, while the bride and groom throw over each other a few grains of rice which they have held in their left hands. The one who first throws the rice is said to 'win,' and during the recital of the benedictions the priests also throw rice over the pair. They are now seated side by side.

The more strictly religious portion of the ceremony follows. Two priests stand before the pair, and of them, the priest on the left of the bride's party prays that Ahura Mazda may grant them 'progeny of sons and grandsons, abundant means, strong friendship, bodily strength, long life, and an existence of 150 years.' He then asks the witness who stands beside the groom whether, on behalf of the bridegroom's family, he consents to the marriage 'in accordance with the rites and rules of the Mazdaians, promising to pay her [the bride] 2000 dirhams of gold, and 2 dinars of real gold of Nishāpūr coinage.' A similar question is asked of the witness for the bride's family, and then of the contracting parties, the questions being repeated thrice. Next follows the recital, by both the officiating priests of the Pāvān-dāmna or Aitrāvid (tr. F. Spiegel, Avesta übersetzt, Leipzig, 1852-63, iii. 232-234, and, in great part, by the present writer, in Dastbā W. Kranji Karaka, Hitft. of the Hindu Parsis of Parseh). The admonitions in the Aitrāvid are followed by a series of benedictions, in which Ahura Mazda is besought to grant to the wedded pair the moral and social virtues characterizing the yazatas (angels) who give their names to the thirty days of the month. Prayer is also made for other blessings, and that the bride and groom may be granted the virtues and qualities of the great heroes of ancient Iran, that they may live long, and have many children, etc. A prayer is then added in Sanskrit—perhaps a reminiscence of the times of the earliest Parsi emigration to India, when it was desired to make the address intelligible to their Indian hosts.

The ceremony is followed by another group of benedictions in Pāzand, this group being called the Tan darasū (ed. E. K. Anti, Pāzand Texts, Bombay, 1909, p. 100 f., tr. Spiegel, op. cit. iii.). The marriage ceremony is repeated at midnight. From Anquetil du Plessis (i., p. i. 218, 219, 221, 238), this appears to be a reminiscence of the earlier Persian custom when, in Kirmān, the marriage ceremony was performed at midnight. This custom is not, however, universal.

A number of minor usages, not regarded in any way as part of the solemn rite, are also observed, especially by women, in the Mofussil towns. The first of these, which, like the others of this class, is now observed more as a joke, is chhedā chedi, in which the nearest friend of the bridegroom's mother ties the skirt of the āndī, or flowing dress, of the groom to that of the sārī of the bride; thus united, the pair go to the bridegroom's house. This is followed by foot-washing (cf. above), after which comes the kōsi kāno, each other, and an equal number of times round the bride and groom, the rice from the same dish, each giving the other to eat. Another custom, now almost obsolete, is making the bride and groom play ekt beki ('odd or even'). Each takes several handfuls in the right hand and the other whether the number is odd (ēki) or even (bēki); if the opposite party gives the number rightly, he or she is said to win. The underling principle is probably similar to that of the rivalry of bride and groom to be the first to cast rice on the other, as already noted.

Marriage songs are sung frequently through the nuptial ceremony; and the whole concludes with a banquet, at which courses of fish (a symbol of good omen) and sweetmeats are essential, but meat is forbidden, either out of deference to Hindu scruples or from motives of economy.

Jivaji Jamshedji Modi.

2. Next-of-kin marriage.—A problem of peculiar delicacy in ceremonial matters in the Hindu marriage is the question of the xavótt vaddhat (Pahlavi xatādakā), usually translated 'next-of-kin marriage.' The modern Parsis maintain that this is a marriage

The etymology of the word is apparently xatādā, 'belonging to the same community or șāla,' and vaddhat, 'marriage' (C. Bartholomae, Altiran, Wörterb., Strassburg, 1894, col. 1400). For a less plausible etymology, based on native tradition (Jahantab, iii. 82, West, SBE, xvin. 4400), see Burmsateter, Zend-Avesta, i. 126 ff.
between first cousins, and such is certainly its present connotation. The Greek and Latin writers, on the other hand, regarded *zvektodada* as referring to marriages of parents with children and of uterine brothers and sisters; and in this view the majority of non-Parsi scholars of the present day.

The Avesta itself offers no data for the solution of the problem, and mentions *zvektodada* only in five passages—all late.

Cassius Dio (5.47.7) says that Hasdeka's wife Hystapa was also his sister, on the basis of *Ys*., xx. 341, which cannot be deemed cogent (see Moir, *Zeitschr. f. d. Pahlav.,* 209 f.), in spite of the assertion of the late Pahlavi Fathkur-Zaridin, 48. The Pahlavi commentators on *Ys.* 4.4 clearly see an allusion to *zvektodada* between father and daughter, but the text does not sustain his exegesis.1

The view of the Greek and Latin writers is unambiguous as regards the nature of *zvektodada.* That the royal house should practise the marriage of parent and children, or of brothers and sisters, is not inexplicable. It probably rests, at least in historic times, upon a desire to keep the royal blood absolutely pure, and finds a conspicuous illustration in the history of Egyptian dynasties.

Thus Cambyses married his sister, and, though Herodotus says (iii. 31) that before this ruler's time the Persians were not wont to cohabit with their sisters, we are told that the notorious Parysatis urged her son Artaxerxes Longimanus to wed his sister Atossa (Plut. *Artoc.* 23; cf. Enseb. *Prop. Evang.* vi. 275 C) for a less certain instance see Ctesias, *Perc.* 29, to whom her own brother Daric later offered marriage (Plut. *Artoc.* 26). The Bactrian satrap Sisymithres married his mother (Quintus Curtius, viii. 19), and Teritarchus his sister (Ctesias, *Pers.* 54). The only case alleged in the Sasanian period was the marriage of Kayast with his daughter Samylke (Agathias, ii. 22). The custom is reported, however, not only of the royal family, but also of the Persians generally. Marital relations with daughter, or sister, are described to them by Diogenes Laertius (Pros. iv. 7, ix. 53), Strabo (p. 755), Plutarch (of Fort. *Alex.* i. 5), Antisthenes (quoted by Athenaeus, v. 63), Jerome (in *Jovin.* ii. 7), Clemens Alexandrinus (*Prol.* i. 7), and Maimonides (Galde, 31). Philo states (De leg. ii. 266) that childless women from union of mother and son were deemed particularly well-born, and Catullus says (lxxxiii. 3f.) that 'magus ex matre et gnato signum auter.'

This last quotation is of considerable significance in determining the real origin of a custom which excited horror among the classical authors. Xanthus Luys, as cited by Clemens Alexandrinus (*Stron.* iii. 5, ad fin.), had, centuries before, recorded such marriages as peculiarly Magian, and Strabo (p. 868) declares in his *Geography* there to be an ancient usage (cf. also Sotion, cited by Diog. Laer. *Prot.* 7). In the Sasanian period the Christian martyr Mhrangmusaphad, before his conversion, married his sister (G. Hoffmann, *Auszuge aus syr. Akten,* p. 313), and, according to the latter scholar, dated the first revision of the Ormuzdec in the 6th cent. to the marriage of *Zed-Avesta* (p. 94, n. 12, misunderstands the Pahlavi construction of this passage as containing *zvektodada* for the correct rendering see *M. Pahl.* 376 f.)

1 See L. H. Mills, *Gathas,* Oxford, 1892-1913, p. 234 f.; West, *SEB* xviii. 3921. The latter scholar dates the final revision of the Ormuzdec in the 6th cent. in *Uraghios* and *Zend-Avesta,* i. 344, n. 12, misunderstands the Pahlavi construction of this passage as containing *zvektodada* for the correct rendering see *M. Pahl.* 376 f.

two centuries later, the reformer of Magianism, Bah Afrid, forbade his followers to marry their mothers, sisters, daughters, or nieces (al-Buruni, *Chronology of Anc. Nations,* tr. E. Sachau, London, 1879, p. 184; al-Shahramani, *Alg. pp.* x.). The yaghlshahen, tr. T. Haarbarcker, Halle, 1850-51, i. 284; cf. also above, p. 401 f.). Yet there was a tradition, reported by Mas'udi (*Pv.* d'or, ed. and tr. Barbier de Meynard and Pavet de Courteille, Paris, 1861-77, ii. 155), that Parvian (the *Zerd. Avesta*) begot a daughter by his granddaughter, another by his great-granddaughter, and so to the seventh generation (cf. also Justi, *Iran. Zivilges.,* Marburg, 1855, p. 182 f.).

In the Pahlavi texts allusions to *zvektodada* are common. Observance of it is one of the surest signs of piety in the coming days of evil, i.e., the Arab conquest (*Bahman Yz.* ii. 57, 61); it expiates mortal sin and forms the one inseparable barrier to the attacks of Aeshm, the incarnation of Fury (*Siyeg* d'si-yevat, viii. 18, xviii. 3 f.) it is especially obnoxious to demons, whose power it impairs (Dinkart, i. 82); it is the second of the seven good works of religion, and it is counted the most important of the thirty-heinous sins, and it is the ninth of the thirty-three ways of gaining heaven (*Diniz* *Mag. in.* iv. 4, xxxvi. 7, xxxvii. 12). It is even said to have been prescribed by Zarathushtra as the eighth of his ten admeanth orders (Dinkart, i. 105; cf. Selection of Zat-Spam, xxiii. 13), and to arrange it is a work of merit (*Diztan d' Dink*, lxxix. 19). In a word, from it is to arise complete progress in the world, even unto the time of the renovation of the universe (ib. lxxvi. 6 f.).

These Pahlavi texts, however, cast no light on the precise connotation of the term. Yet there are references in this literature which are the reverse of ambiguous. The Pahlavi synopsis of the 16th fargart of the lost Avesta *Vardalmaznag Nask* clearly refers to the *zvektodada* of brother and sister (Dinkart, ix. xxii. 27), and that of the 21st fargart of the lost *Babi Nask* to the wedlock of father and daughter (ib. lxxvii. 7, 9).2 The most explicit statement is found in the account of a controversy between a Zoroastrian theologian and a Jewish objector, recorded in Dinkart, i. 82 (tr. West, pp. 390-410):

> *The consummation of the mutual assistance of men is Khetvathah. That union is... that with near kinsfolk, and, among near kinsfolk, that with those next-of-kine; and the mutual connection of the third of near kinsfolk which are father and daughter, son and she who bore him, and brother and sister... The first three are thus, the father and the mother, the mother and the son, and the daughter and her father; the last three are daughter and brother, son and sister, and mother and father. These three forms are illustrated, respectively, by the union between Ahura Mazda and his daughter Spenta Armitai (cf. on Ys. xlv. 4, above; and on its probable origin as a cosmogenie myth of the god *Yasog of Hvevan and Earth,* cf. L. H. Gray, *JCP* vii. (1904) 367), from which sprang the primeval being Gayomart; by the return of some of the dying Gayomart to Spenta Armitai (cf. also Brandis *EA,* 1; *Diztan-d' Dink*, lxxvi. 6; al-Buruni, p. 87), resulting in the birth of the 10th human pair, Magi and Mani; and by their prolic union (cf. also Dinkart, vii. 10, *Diztan-d' Dink*, xxxvi. 82, lxxv., lxxxvi. 41 f.).

In the 5th chapter of a Pahlavi *Kevayat,* probably

> *The statement of the text is so... that the 5th and 6th centuries* (West, *SEB* xviii. 3922). The latter scholar dates the final revision of the Ormuzdec in the 6th cent. in *Uraghios* and *Zend-Avesta,* i. 344, n. 12, misunderstands the Pahlavi construction of this passage as containing *zvektodada* for the correct rendering see *M. Pahl.* 376 f.

2 So West, p. 397; later (SEB, xxxviii. 1802) 382 he retranslates the passage so that *zvektodada* is not necessarily implied.

3 Another stock argument for brother-and-sister marriage was found in the legend of the god Artax, the father of Ahura Mazda, and his sister (Pahlavi Ym and Vinkai; see *B. d.*, xxii. 1), which is not mentioned in the extant Avesta, though it evidently dates from the 4th-5th period, since it forms the theme of Rigveda x. 10.
MARRIAGE (Iranian)

written between the Arab conquest of Persia and the 16th cent. found preceding the Dīdāšt-i-Dinik in many MSs, there is a lengthy polemic in favour of zvētkēdāš, there written zvētkēdāt (ed. Amarni, Nasrī, Dīhābār, Pahlavi Rekhtēd. accompanying the Dīdāšt-i-Dinik, Bombay, 1913, p. 498). It was, of course, written in the Western, Sasanian language. Defending it by the old examples of Ahura Mazda and Spenta Armaiti and of Māyē and Māyā, it declares that, when contracted with mother, daughter, or sister, zvētkēdāš is superior in religious observance to the marriage of Ahura Mazda, the replenishing of the sacred fire, or showing becoming reverence to a priest, and that it saves the most heinous sinner from hell.

When the millennium is about to dawn, "all mankind will perform Kīvērōt-i, and every death will perish through the miracle and power of Kīvērōt-i." The first time that a man practises it, "a thousand demons will die, and two thousand wizards and witches ..." and when he goes near to it four times, it is known that the man and woman become perfect .... Moreover never in the marriage of Kīvērōt-i becomes just as though one-third of all this world ... had been given by him ... unto a righteous man. And when he keeps four years in this marriage, and his [funeral] ritual is performed, it is known that his soul thereby goes unto the source of the darkness (zvēt); and when the ritual is not performed, it goes thereby to the ordinary heaven (yabhōt-i).

The good deeds of those who observe zvētkēdāš are a hundred times more efficacious than the same act performed by other people; and the penalty for dissuading it is hell.

From certain passages in the same chapter it is very evident that zvētkēdāš in the narrow sense here alluded to was by no means pleasing to the Parsi community.

Thus, when Ahura Mazda and Zarathushtra held colloquy, Zarathushtra spoke thus: "That duty and good work shall I do for thee, Kīvērōt-i, Kīvērōt-i." Zarathushtra spoke thus: "In my eyes it is an evil (ça) which he performed." Ahura Mazda spoke thus: "In my eyes, also, it is just as in thine; but "— since nothing is so perfect that there is no evil mixed with it — "it should not seem so." (West, p. 433)

As early as the date of composition of Dīdkart, iii. 82, however, there are indications that zvētkēdāš had come to bear its present meaning of marriage of first cousins, and this is the teaching of modern Parsi Rīvēyt (West, pp. 404, 425 f.) and the practice of Zoroastrians at the present day.

The Zandian theory of the origin of zvētkēdātāda is fairly clear. The Dīdkart holds (iii. 82) that its basis was a desire to preserve purity of race, to increase the compatibility of husband and wife, and to increase the affection for children, which would be felt in redoubled measure for offspring so wholly of the same family. Another reason — doubtless well founded, especially after the Arab conquest — that marriage outside the family might tend to religious laxity and even to perversion to another faith (Rīvēyt viii., tr. West, p. 416 f.). As a matter of fact, however, these arguments are inadequate to explain the real origin, and the suggestion of Justi (GIR, ii. 433) that the source to be found in Egypt (cf. Egyptian section, above) is equally improbable.

There is no evidence that incestuous zvētkēdātāda was known in the Avesta, and it is not until Persian writings of the 8th-9th centuries that it is unmistakably advocated (West, p. 427 f.). At the same time, the testimony of the Greek and Latin writers cannot be ignored; and, while we may grant, for the sake of argument, that in the later Sasanian time there was in the religious realm, as well as for incestuous zvētkēdātāda, as set forth by the Dīdkart and the Rīvēyt, no such reason can be alleged for the Achaemenian and succeeding periods. It is clear, moreover, that incestuous zvētkēdātāda was not restricted to noble and royal families,

1 It is true that the Pahlavi annals of the 6th-9th centuries refer to the fire-worshipers of the Dēkūtāda, and that the fire-worshipers of the Dēkūtāda were termed zvētkēdātāda as well as Dēkūtādātāda, and that there were fire-worshippers who were zvētkēdātāda in the same meaning as the Pahlavi zvētkēdātāda. However, this does not mean that the Pahlavi authors were aware of the concept of zvētkēdātāda as it is understood today. Therefore, we cannot place implicit confidence in the accuracy of these summaries. 2 The instance of Yama and Yami, already mentioned, does not militate against this; for in the hymn Rigveda x. 10, (which see especially L. von Schrader, Rekonstruktion der Gottheiten des Aryan Religions, Leipzig, 1908, p. 374 f.) Yama manifests extreme resistance to the union. The problem involved was the origin of the human race of both Yama and Yami. This hypothesis applies to the myth of Brahman's union with his daughter, a pious, single-minded comparison with the latter years of Ahura Mazda and Spenta Armaiti, and p. 457 hints that we cannot place implicit confidence in the accuracy of these summaries. 3 The instance of Yama and Yami, already mentioned, does not militate against this; for in the hymn Rigveda x. 10, (which see especially L. von Schrader, Rekonstruktion der Gottheiten des Aryan Religions, Leipzig, 1908, p. 374 f.) Yama manifests extreme resistance to the union. The problem involved was the origin of the human race of both Yama and Yami. merely a temporary excrescence, never a real tenet; and it was repudiated, no doubt, as intensely by Zarathustra as by his modern followers.

1. Consent of parties.—The chief point of difference between old Persian and modern marriage laws may be found in the family system. From the earliest times the Japanese people have been grouped in families as social units, to one of which every individual belongs, and in each family there is a head or governor, and under him a maid (patrict potestas) who has varied from age to age, but in general may be said to have been strong in ancient times and to have weakened in recent years. The family in the time of the

Taiho-ryo was very large, including over one hundred persons, but the numbers gradually decreased, until at present a family usually consists of Old Persian marriage rites we possess only meagre information. Strabo tells us (p. 753) that marriages were performed at the beginning of the vernal equinox, and that before the bridegroom went to the nuptial couch he ate an apple or camel's marrow, but nothing else during the whole day. We also learn from Arrian (Ann. B.C., vi. 7) that a seat of honour (φεδεα) was provided for the groom, and that his prospective bride came 'after the cups had gone round twice (τρεῖς φοντα). In the marriage of Jamaspji, his fiancée was welcomed by him between the parents of the parties, and often the consent of the heads of the two families was required.

From the time of the Taiho-ryo to that of the Meiji era, a marriage between a man and a woman and also between two families. Therefore, when a marriage is to take place, not only the free consent of the parties is required, but also the consent of the heads of the two families.

From the time of the Taiho-ryo to that of the Meiji era, a marriage between a man and a woman and also between two families. Therefore, when a marriage is to take place, not only the free consent of the parties is required, but also the consent of the heads of the two families.

2. Caste.—While caste in the strict sense of the term never existed in Japan, by the Taiho-ryo a humble class, which was not allowed to marry with others, was recognized, and the child of such a marriage belonged to the humble class. During the feudal age the people were divided into lords, knights, and commoners including farmers, artisans, and of which see H. Hirt, Jügelmannen, Strassburg, 1905-07, p. 703: Schraedt, Realllex. p. 634 is probably non-Aryan.

See, further, art. Family (Persian).

LOUIS H. GRAY.
6. Marriage of adulterers.—A man and woman, either of whom has been divorced or sentenced to be divorced on account of adultery with the other, may not marry—a prohibition which has existed since the time of the Taisho-ryo. Social disapproval of this prohibition is not very strong, even when the husband or wife forgives and consents, the prohibition is binding and cannot be evaded, so that those found thus married are separated by law.

7. Marriage of relatives.—Marriage between near relatives in direct or collateral lines is forbidden for the sake of health and protection from degeneracy. The marriage of cousins, or of a widow or widower with a brother or sister of the deceased, is not prohibited; and such marriages are not rare.

8. Relation of husband and wife.—In olden times the rights of a husband were very far-reaching, and a wife who obeyed her husband absolutely was considered virtuous. Men were held in high regard, while women were not. Lately the position of woman has improved, but even yet, when a wife makes a contract, she has to get her husband’s consent in many cases, and the wife’s property is always under the supervision of her husband while they are married. In Japan a woman’s private property is very limited; and those who possess property in addition to their dresses and ornaments are very few; for, according to the law of succession, all property is inherited by the male, son, and in the case of disinheritance of or there being no son by marriage or adoption can the woman inherit in regular succession. Thus, as a rule, the wife has no property, but is dependent upon her husband for support. Sometimes the marriage is made in the hope of succession if the position of woman is to be materially raised.

9. Engagement and ceremony of marriage.—The customs as well as the laws of marriage in Japan have passed through a series of changes. In ancient times marriage by sale and marriage by capture were common; but from the time of the Taisho-ryo customs gradually became more refined. There is in Japan, however, no custom of direct personal engagement or of previous personal acquaintance. Such things would be regarded as disgraceful by all Japanese above the middle class, for a formal marriage is always arranged by a match-maker who renders service to the parents of the bridegroom, and the engagement made, gifts are exchanged, and a marriage-contract is considered to have taken place. Then, upon an auspicious day, the wedding ceremony is performed, usually at the home of the bridegroom at night. The marriage intermediary, escorting the bride in her best attire, takes his seat at an appointed place, and the bride and bridegroom drink wine, exchanging cups nine times. This constitutes the entire ceremony, after which the bride and bridegroom are introduced to relatives and friends at a wedding dinner. No religious or legal form is required, except that, by the present civil code, notification must be made to a registrar in order that the marriage may be officially sanctioned. With the coming of Christianity marriages are increasingly performed in churches; and recently the custom has arisen of holding services at Shinto shrines. The law, however, requires no religious sanction, as it is only the marriage contract that is legally recognized.

10. Divorce.—Before the promulgation of the present civil code (1896-08), divorce, or, rather, repudiation, was very easily secured at the husband’s will. No legal procedure was necessary because the husband’s will, but the law fixed seven causes, one of which must exist in order to make the repudiation effective. Thus the power of the husband was somewhat curtailed; but only the husband could repudiate. The present code recognizes two forms of divorce: by mutual consent, and by judicial decree. The former requires only the mutual consent of the parties, while in the latter, on the contrary, it is necessary to obtain the consent of both upon the contested request of one of the parties. This form of legal divorce must be for some one of certain causes recognized by law, and becomes operative only after judicial judgment has been given. Statistics for 1905 show the total number of marriages to have been 8,033,168 and of divorces 63,776, i.e. about 7 divorces out of 1000 marriages. Only judicial divorces, however, are given in statistics, and by far the greater number are by mutual consent.

11. Judicial separation.—This system does not exist in Japan.

II. KOREA.—In Korea marriage is according to the old custom. Early marriage prevails, and government control has had but little effect, though upon several occasions laws have been issued, even setting the age for marriage at 20 for men and 16 for women. It is usual for a girl of 12 or 13 years to marry a boy of 10 or less. Wives are not married to fathers or older brothers or sisters, but only to younger brothers or younger sons, and they are married to other married husbands. Second marriage is not prohibited, but it is considered a disgrace by most; and those above the middle class never re-marry. Arrangements for marriage are made by fathers, grandfathers, or other kinsmen in the interests of the family; and the wishes of those who are to be married are not taken into account. The ceremony is performed at the home of the bride, and it is not necessary to notify a civil officer. Only the husband can make a divorce; the wife has no way of refusal. There is no system of divorce by consent, but by the new law, since annexation, a way has been opened for a wife to seek divorce. The number of marriages made in 1912 was 121,993, and that of divorces only 938.

III. MARRIAGE (Jewish).—Every man is bound to marry a wife in order to beget children, and he who fails to consent is given no other blame. Marriage diminishes the Image [of God], and causes the Divine Presence (shikhninith) to depart from Israel'—thus runs the rule in the Code of Qaro (Sha’ihan Arakah, Eben ha’Tzer, i. 1). It is based on ancient Rabbinic (Tannaitic) prescription (Yohananith, 636, 64v), itself inferred from well-known Biblical texts (esp. Gn 9° combined with following verse), and it is emphasized by the somewhat later apothegm: ‘Whoever has no wife rests without blessing’; such a one is ‘not called a man’ (16). Marriage was the means by which the human race imprinted on the generations the divine image; it, with the consequent domestic felicity, was the expression of true manhood. It was the basis of the social order, and thus its regulation was, in Rabbinic opinion, one of the chief differences between Jewish and primitive systems (cf. Maimonides, Ishith, i.). The social obligation was strengthened by Messianic hopes: ‘the son of David—i.e. the Messiah—will marry and have many (if only to keep earth still inhabited).’

Marriage and Divorce, New York, 1901, p. 181; 1. Abrahams, Jewish Life in the Middle Ages.
MARRIAGE (Jewish)

London, 1896, p. 114). Very profound is the Rabbinitic view that man's gézer is in this instance the cause of good; but for his passions man would not build a house, nor marry a wife, nor beget children (qiddushin). Man, in Rabbinitic theology, is impelled by two gézereras ('impulses,' 'inclinations'), one good and one evil, both of which are to be used in turning him to the love of God (Sifré on Dt 6:5, Midr. B'rakháth, ix. 5). The body-passions are not in themselves evil (e.g., F. C. Porter, 'Yoger Hara,' in Yale Bicentenary vol. of Biblical and Semitic Studies, New York, 1901, pp. 91-136, and M. Lazarus, Ethics of Judaitism, Eng. tr., Philadelphia, 1901, ii. 79 f.); Torah was the bridge by which the passions and their direction into holy ends were effected (cf. Maimonides, Guide of the Perplexed, iii. 33). The Rabbinitic theory of marital intercourse is summed up ideally and, in a sense, mystically in the saying: 'Three are at the source of the bride hum.ing; God, father, and mother' (qiddushin, 306).

With regard to the authority of parents in arranging the marriages of their children while minors see ERE v. 742. When the parties were adults, the consent of parents was not necessary to make a marriage valid (Maimonides, Ihkáth, viii.), but, as Mielziner adds,

'In consequence of the high respect and veneration, however, in which father and mother have been held among Jewes, the cases of contracting marriage without the parents' consent fortunately belong to the rarest exceptions' (p. 69).

Early marriages, arranged by the parents, were long considered a valuable aid to morals. The legal age for valid marriage was the age of puberty, but the bridegroom of the bridegroom in Talmudic times was 18 to 20 (S. Krauss, Talmudic Archöologie, Leipzig, 1910-11, ii. 28). A Jewish court would often put pressure on a man over 20 to compel him to take a wife (control of passion), but such pressure was not applied in the case of students, while ('as the gloss ad loc. points out) in modern times all attempts at compulsory marriages have become obsolete. Curiously enough, no rule is stated with regard to the age of the bride, though the girls were married as marriageable from the beginning of their thirteenth year, and at various times very youthful marriages have prevailed (see Abrahams, ch. ix.). In recent times, while, on the whole, Jews proportionately at a lower age than their non-Jewish general population, assimilation in social customs is modifying differences (statistics in JE vii. 339).

The general impression prevails that Jews more frequently than others marry their cousins. Inter-marriage between Jews and non-Jews is forbidden (statistics in JE vi. 612). No section of Jewish opinion favours marriages between parties who are not of the same religion, the difficulties of the education of the children and the disturbances of the home harmony being felt to offer strong objections. There is no bar, however, to the religious solemnization of a marriage with full Jewish rites in the case of proselytes to the synagogue.

The Biblical 'degrees' were maintained in later Jewish law, with certain extensions (Ybh. 21; Maimonides, Ihkáth, i. 6; Mielziner, p. 37), the latter being partly theoretical prolongations of linear ascending and descending relations; but in one case a new degree homologous to the Biblical was added; for, while the Mosaic Law [Lv 18:14] expressly forbids only the father's brother's wife, the Talmudic Law adds also the mother's brother's wife, and, besides, the father's sister's brother's wife (Mielziner, p. 88). The Kabbalists (see ERE vii. 603) imposed still further rigours on the marriage law.

The general question of the relation between Jewish marriages and the civil law of England is historically and legally considered in the monograph of H. S. Q. Henriches, Jewish Marriages and English Law, London, 1909. It may in general be said that, while orthodox Jews maintain some disabilities not upheld by the law of the land, no Jews permit marriages which, though allowed by Jewish law, are forbidden by the civil law. Thus, though marriage with a deceased wife's sister is valid in Jewish law, such a marriage was never solemnized in England while English law disallowed it. So, too, though by Jewish law a man may marry his niece (though a woman may not marry her nephew), no such marriage would be performed by Jewish rites, since English law forbids such a union. But the Jewish law is more severe than the English, the severity is in most cases maintained, though the tendency in Jewish liberal organizations is toward equalizing Jewish-civil with civil conditions. The orthodox Jews evidently permit a kohanim (i.e., on tracing descent from the ancient priestly family)—to wed a divorced woman; nor would the re-marriage of a divorced person be solemnized by the orthodox synagogue unless a divorce had also been obtained from a Beth Din (Jewish ecclesiastical court). On the other hand, the levirate marriage, which was no longer in general use (though a few instances are recorded) at the beginning of the Christian era, the Sadducean question in history (theologically), has now lost all vogue (Ethken hâ-zer, elxv., and commentators; JE vi. 171). In the case of a childless widow the brother-in-law goes through the ceremony of halipah (Dt 25:8), which frees her to marry a stranger (Mielziner, p. 54 f.; JE vi. 170f., where the rite is illustrated). On the levirate marriage see, further, I. Matteau, in Studies in Jewish Literature, Berlin, 1913, p. 210; on marriages between uncle and niece, S. Krauss, ib. p. 363. hâ-zer, 363.

Except for rare cases in countries where Mohammedan law prevails, monogamy is enforced by both law and custom among Jews, although neither Bible nor Talmud formally forbids polygamy (for the Talmudic evidence see Krauss, ii. 277). In the case of the levirate marriage did the Pontiff actually ordain a second marriage, and, as has been mentioned above, the levirate marriage fell into disuse. That monogamy was the Biblical ideal is shown by the less frequent than other nations of polygamy among Jews (A. Harper, Song of Solomon, Cambridge, 1902, p. 334); and the same conclusion must be drawn from the prophetic imagery in which marriage typifies the relation between God and Israel. Polygamy survived among the Jews into the Christian era (see references in JE viii. 638), but monogamy was then and thereafter the general rule. The difficulty was that, as the end of marriage was the begetting of children, childless marriages were no fulfillment of that end, and in case of the wife's sterility the older authorities were divided in view as to the relative advisability of insisting on divorce or of permitting a second simultaneous marriage (on this and several other questions of Jewish marriage and divorce, see the writer's evidence before the Divorce Commission); but by the beginning of the 19th cent. monogamy was made the binding and uniform rule for all western Jews (Abrahams, ch. vii.).

The ancient and medieval preliminaries to marriage have, in modern times, lost much of their old significance. Betrothal (karam or qiddushin) in Rabinian law was not a mere agreement or contract for a future marriage (nissiin); though not involving the actual privileges or responsibilities of the married state, betrothal was so far the initiation of marriage that it could be terminated only by death or divorce.
MARRIAGE

The betrothal ceremony, which has been performed on the same day, though in Talmudic times a year might intervene between them (Mishnah, Gittin, v. 2), was the legal betrothal was "an engagement" (shidduchim), and this 'engagement' gradually replaced the older betrothal. Often a professional match-maker (shidduchim) was employed in the Middle Ages, and the custom is still in some vogue (Abrahams, p. 170 f.). The ceremonies of marriage now include the older betrothal and marriage rites. The essence of the marriage ceremony is the presentation by the bridegroom to the bride, in the presence of two witnesses, of an object of value, and the recital of the formula:

'Be thou consecrated unto me by this [ring] according to the law of Moses and Israel.' The marriage rite was and is invalid without the bride's consent — her consent is formally stated in the kethubbah (see below); but, until the times, the husband's active part in the ceremony, the formula being spoken by the man only. In some orthodox and in most liberal synagogues the bride's part is now more active. For the validity of a marriage the presence of a Rabbi is of course essential, but such presence is usual, and so are other ceremonies: the use of a ring and a canopy (huppah), the breaking of a glass, the recital of the kethubbah, and the repetition of the 'Seven Benedictions.'

The ring in Jewish weddings is not mentioned in the Talmud, but was introduced in the Gaonic age (A. Harkavy, Tishahbuhth hogrânîm, Berlin, 1887, § 65), perhaps in the 7th century. The ring replaced the older gift of money or of an article of value; it must not contain gems (Abrahams, p. 183), and need not be of gold. Possibly the use of the ring was derived from Rome, just as the objection to marriages between Passover and Pentecost corresponds to the Roman prohibition of marriages in May (J. Landsberger, in Jud. Zeitschrif für Wissenschaft. und Leben, vii. [1869] 81). In the Middle Ages Friday was a favorite day for Jewish marriages, though the Talmud objected to such a choice. Wednesday was also a common day for such marriages. In modern times there are no restrictions as to days of the week, except that marriages are not celebrated on Sabbaths or festivals. In the orthodox synagogues marriages are still not performed (except on specified dates) between Passover and Pentecost, nor on certain anniversaries of a mournful nature. During the marriage ceremony the ring is put on the forefinger of the bride's right hand; she afterwards removes it and places it on the customary finger of the left hand. Marriages are now frequently celebrated in the synagogue, though there is no loss of validity if the ceremony occurs elsewhere, as is widely the custom in America. The whole problem as to the place where Jewish marriages may be celebrated is treated by L. Low in his Gesammelte Schriften, where many other Jewish marriage questions, historical, social, and legal, are also discussed (iii., Siegelin, 1869, pp. 15-354).

The betrothal usually stand under a huppah, or canopy, during the marriage ceremony; the rite has been abrogated in some of the modern Jewish congregations. Originally the huppah was the marriage chamber, into which the bridegroom and bride were conveyed in procession, but it is now merely symbolical, and consists of four upright posts covered by an awning of silk or tapestry (for details see Abrahams, p. 183; for illustrations, JE vi. 594 ff.). A regular preliminary to the ceremony is the signing by the bridegroom of the kethubba (Lit. 'writing'), or marriage contract (for the ordinary wording see Mielziner, p. 87), which sets forth the legal pay to the wife in case of the husband's death or the wife's divorce, and in olden times often rehearsed the wife's dowry, in respect of which, as of the husband's settlement, the kethubba conferred on her an inalienable claim on her husband's property. The wife had considerable rights over her own property (see Mielziner, p. 104 f.), and the kethubba protected those rights, and also formed a potent restraint against rash divorces. Mielziner's statement (p. 59) that the kethubba is 'now almost entirely dispensed with,' refers only to certain American and other reform congregations; it is still retained in most Jewish marriages, though it has little legal significance in many countries. The kethubba is ancient, being perhaps referred to in To 71a; it is certainly as old as the beginning of the 1st cent. B.C. (K'thuboth, 589; Abrahams, p. 207, note 2; E. N. Adler, in JE vii. 474; for the earliest instance of the term the wife's benefactor see Geonica, New York, 1909, ii. 72). In Oriental lands the kethubba often included a solemn undertaking by the bridegroom to observe strictly the law of monogamy (see Abrahams, p. 129, and the document of his own son's marriage, quoted in College Jubilee Volume, London, 1906, p. 101).

Of the many marriage customs which have prevailed in Jewish marriages one deserves special mention. The bridegroom breaks a glass, but the meaning of the rite is not always clear. It has been seen in it a symbolical allusion to the close of the antinuptial condition, but 'the most acceptable theory is that the custom arose from... a desire to keep even men's joys tempered by more serious thoughts, and on the other hand from the never-forgotten memory of the mourning for Zion' (see Annotated Edition of the Authorised Daily Prayer Book, London, 1914, p. cxxvii). The memory of Zion is frequently recalled in the Jewish wedding hymns and songs (on which see Abrahams, p. 188 f., and Biblical Love Songs, in Book of Delight, Philadelphia, 1912, p. 184 ff.). The same phenomenon is seen in the 'Seven Benedictions' cited below, where Jer 23:5 is especially used. As regards the morning day for wider spread is recorded in the Talmud (Birahth, 30b):

'When the son of Rabbi was married, the father saw that the Rabbits were present in an unappetising mood, so he took a costly vase of white crystal worth 400 zims and broke it before them to curb their spirits.'

On the other hand, joyousness is the predominant note of Jewish weddings—a joyousness hallowed by the principle that the participation in such functions is a religious duty. The dowering of poor brides was an act of sanctified loving-kindness (Shabbath, 121a); and the assistance at wedding festivals was an element in pious life (Psahim, 49a). Lyric praises of the bride were so regular a habit that we find quaint discussions as to the terms to be used in the catalogues (K'thuboth, 174). On the subject of other wedding customs, both Oriental and Western, see Abrahams, chs. ix. and x.; JE viii. 349 f.; Krauss, li. 37; W. Rosenau, Jewish Ceremonial Institutions and Customs, Baltimore, 1912, ch. xi.

Most characteristic of the Jewish marriage ceremony are the Seven Benedictions, which are already quoted in the Talmud (K'thuboth, 8). First comes the benediction over wine (on the use of wine in Jewish life see a processing of the Book, p. cxxsxxi; then follows the praise of God as the creator of all things to His glory; after this
and institution. But, if this early form of marriage is not provable for the Roman people, it is highly probable that the later form of marriage by purchase existed among them, and the love of the sexes reasserted itself in the later depictio, which, as we shall see, was a simulata transference of the bride by purchase from the potestas of her father to the 'hand' (mannus) of her husband (for the possible connexion of the dei with marriage by purchase see Westm- 

2. Early forms of marriage: confraratio, depictio, and usus. — In early Roman society we find three distinct forms or rules by which marriage could be effected. As to the historical interpretation of these there is endless dispute, but the object and conception of marriage as an institution are clear enough. The object of a insta matrimoniium, such as was the result of all of these methods, was beyond doubt to produce children capable of keeping up the religion (sacer) of the family, and also of serving the State in war and peace. Children of connubii, i.e. cohabitation without marriage, were not so capable; they could not be Roman citizens, and could not represent either family or State in any capacity. The word which covered all legitimate forms of union was connubii; as Ulpian says, in the clearest exposition that we have of the subject (V. I. 3), 'insta matrimonium est inter quo qui nuptiae sunt cohabitum connubii sit.' Connubium, orius connubii, is thus the right of contracting true or legal marriage, and belonged, as Gains tells us (I. 60), to Roman citizens only, to Latins and foreigners only when it had been legally granted by the State. And, as marriage in this true sense meant the transference of the bride from one definite legal and religious position to another, from the sacer of one family to that of another (see FAMILY (Roman)), and from the potestas of one familia to the manus of another, it is obvious that the process was one of the utmost gravity both for the families concerned and for the State. The sense of this grave importance is best seen in what, rightly or wrongly, is generally believed to have been the oldest form of patrician marriage, which was applicable only to patrician families throughout Roman history—connubium or furruum, so named from the sacred cake of fur (the old Italian wheat) used at the ceremony. 

Confraratio stood alone as needing the presence of the Pontifex Maximus and the Flamen Dialis, the former, no doubt, representing in the Republican age the Rex of an earlier time (see Fowler, Religious Experience of the People of Rome, p. 271), and the Flamen representing Jupiter, the deity of good faith in all alliances. When the preliminaries had been adjusted (sponsa, bride, etc. [see below]) which were common to all insta matrimonio, a cake of fur was offered to Jupiter Furraus, and sacramentally shared by bride and bridegroom, in the presence of the Pontifex Maximus, the Flamen Dialis, and ten other witnesses. This number ten has given rise to much conjecture; but it is so common throughout Roman procedure that there need be no special significance in it (in Livy, xxxvii. 3, it apparently has a religious meaning; and so perhaps in confraratio). A victim also was offered to Jupiter (which indicates that in the ordinary form of marriage which was stretched over two days, on which the bride and bridegroom had to sit [for these and other details see Gains, i. 112; Serv. ad .En. iv. 103, 574, Georg. i. 31; Dion. Hal. ii. 25]). The priests, in this case, must be noted, do not perform the sacrifice, but witness it, giving this rite a peculiar solemnity which our authorities do not explain, probably because they did not understand it. Modern scholars and students of Roman law have usually thought of it as the real original form of marriage.
in the Roman State, which must be imagined as consisting entirely of patrician families; it survived into historical times only as a means of supplying persons duly qualified to fill the old priesthoods descended from that patrician State, viz. the Lex Septimia, the Lex Flaminia, and the Lex Familiae uniores. Diocletian, Martialis, and Quirinalis (see Gains, i. 112). Of late, however, it has been suggested (by Conq, Institutions juridiques, p. 215 ff., followed by Lamy-Schaef, State and Family in Early Rome, p. 150 ff.) that it came into use only when the old custom of marrying within the gens was broken through, when the religious difficulty of transferring a bride from one gens to another called for special religious interference by the State. There is something to be said for this; but to the present writer it seems hardly sufficient to account for the sacramental character of the rite and the use of the skin of the victim. No ancient author says that this was the only form of patrician marriage; if it had been so, the Rex and the Flamen must have been constantly in requisition for weddings, more often than would be consistent with their other duties. But it is possible that confarreatio may have been a very special religious form, originating in the marriage of the Lex Scita, the families forming an in-circus of aristocracy, from which the Rex might be chosen, and which would be likely or willing to supply children qualified to become canuti patrini et materini in the service of the State (Gains, i. 113). It must be remembered that the patrician State itself had a history, and did not come into existence full-blown; the confarreatio probably represents an early form of it, but not exactly that which we have been accustomed to imagine.

There were two other ancient methods of transferring a bride from one family to another, from the potestas of her father to the manus of her husband; but it is to be noticed that neither of these was, strictly speaking, a marriage ceremony, and it is to be assumed that, when they were used, the real marriage rite was that described below under marriages which did not produce confarreatio in manus. In other words, the true marriage rite was, except in confarreatio, distinct from the act which vested the potestas of the father in the manus of her husband, or to that of his father, if he were a filiusfamilias in the potestas of his father. Thus cognatio, the form by which, in the presence of live witnesses and a librensis (a legalouched could be performed besides marriage), the bride was made over to the manus of her husband by a symbolic purchase (Gains, i. 113), looks as if it were a legal addition devised for some particular purpose, perhaps to enable the ordinary patrician family, which did not seek to produce children capable of filling the highest religious offices, to obtain by a single act the same legal results as in confarreatio. This is, indeed, a mere guess, and one among many, into which it is not necessary to go in this essay.

The other method which produced confarreatio in manus took a whole year to complete the process; if a duly qualified pair lived together for an entire year without a break, manus followed of necessity by procreatio; but by the XII Tables it was possible for the bride to escape this result by absenting herself yearly for three nights from her husband's house, by which means, in legal language, the noncreatio would be barred (Gains, i. 114). It is not unlikely that this was really the original form by which the husband could acquire manus, and the one most commonly in use. Confarreatio and confarreatio both presuppose the existence of the law and religion of the State in full development, but not so much for the purpose and cognatio are, however, alike in this, that they have a private and not a public character, and do not need the presence of priest or magistrate; it was easy, therefore, to pass them on to non-patricians, plebeians or Latins, when the best attained connubium; but this could not be so with confarreatio, if, as we have assumed, the main object of the latter was at all times to produce children. It is of holding the exclusively patrician religious offices.

In these three methods of marriage the union was accompanied by manus, though in the case of usus not till after a year had elapsed. Usus, indeed, shows us plainly that the Romans of early times did not think of marriage and manus as inseparable: for the bride must have been properly married under usus, if her children were to be Roman citizens, though for a year at least she was not under manus. We must also remember that, if the husband were not sui iuris, but a filiusfamilias under the potestas of his father, as must constantly have happened, the wife passed under the manus, not of her husband, but of his father. Quite early marriage and manus became separable both in thought and in fact; under the XII Tables, as we have seen, the wife was given the option of escaping a change of manus altogether, and this may be taken as proving that a tendency in this direction had already existed before that time, mainly, no doubt, from reasons of convenience connected with the family property, marriage without manus came to be almost universal. Usus died out altogether (Gains, i. 111); cognatio survived as a legal expedient in certain cases (e.g., CIL vi. 1527; the Laudatio Turia, line 14); and confarreatio became so irksome that its bonds had to be relaxed by Augustus in order to get a supply of candidates for the old patrician priesthoods (Gains, i. 120; Tac. Ann. ii. 16; Sueton. Aug. 31). Yet marriage long continued to be as complete and binding a union as before, and we now have to see what made it so, by briefly examining the process as we know it in historical times.

3. The historic period.—(a) Conditions of marriage.—The necessary conditions of marriage were: (1) the families of both parties must possess the usus connubii (as explained above); (2) the parties must not be within the prohibited degrees of relationship; (3) that marriage must be between a man who was to his wife the equivalent of what he was to his own brother's wife, bears children; (4) that marriage must be between persons over ten years of age; (5) that the consent of the parties was absolutely necessary, but not that of the parties themselves, who were often betrothed by their parents at a very early age; e.g., Cicero betrothed his daughter when she was only ten years old (Fowler, Social Life, p. 1401). This was a sure and the earliest form of marriage in many parts of the world, where the maintenance of the family is a matter of supreme importance, and no time is to be lost in securing that children shall not remain unmarried. The betrothal ( sponsale), however, at Rome was a promise rather than a legal contract, and might be broken by
consent if there was a strong dislike on the part of either boy or girl (see, however, Serv. Sulpicius, in Aus. Gall. iv. 4). The early betrothal serves to show us that the idea at the root of marriage was that of service to family and State, i.e. the prosperous condition of the bridegroom’s household, and that love and romance lay wholly outside it. Steady affection there might be and often was (Fowler, Social Life, pp. 141, 159 ff.); but the modern idea of passion with marriage as its culmination, which too often subsides and ends in divorce, was unknown at Rome. (4) As a last condition, we must note that bride and bridegroom must be of proper age, i.e., they must have reached the age of puberty and laid aside the tappa protecta of childhood. This might happen at different ages, according to natural development, but the minimum age was 12 for a girl and 14 for a boy.

(b) Ritual.—If all these conditions were fulfilled, a day was fixed for the marriage which must be one of good omen; as with us, May was an unlucky month for this purpose, and so was the early part of June, while certain other dies religious were to be avoided (Fowler, Rel. Exper., p. 38 ff.). At earliest dawn, according to ancient usage both bride and bridegroom were led to the temple, the way flecked with birds; but by Cicero’s time this seems to have dropped out, and the examination of the cata of a victim took its place, as a preliminary to the first step in the procedure, which was the declaration of consent by the bridegroom, usually but not necessarily recorded on tabulae nuptiales. Then the bride assumed the wedding dress, viz., the strophium, or hood of red or yellow, and the tunica recta with a woolen girdle fastened with the nodus hennis (see Pliny). This act, and the sacrifice which seems to have followed, are represented on many monuments, of which accounts will be found in A. Rosbach, Römische Hochzeits-und Ehedenknaele, Leipzig, 1871, passim; these acts, however, all of very late date, are not to be interpreted. The deducratio nuptiae took place, so far as we can discern, either in the bride’s house before the hearth or in front of some temple (Nonius, 351); but what temple this was we do not know, nor is it clear to what deity sacrifice was offered. On the monuments we see both cow and pig, which suggest Juno and Tellus (Varro, de Exst. ii. 4, refers to the pig as an Etruscan marriage victim). Possibly Tellus was the more usual deity (Oster, Rel. Exper., pp. 121, 138), and Juno later on; but Vergil combines the two in Aen. iv. 166. When the sacrifice had been offered by the pair, the persons present shouted Feliciter by way of good omen, and the wedding procession followed and lasted till evening.

(2) The next act was the deducatio, in which the bride was conducted to her new home—a beautiful ceremony, exquisitely described by Catullus in his 61st poem. She was taken, as it were by force, from the arms of her mother, and led in procession to the house of her husband by three boys, sons of living parents (paterini et matrini), pure and of good omen, one each from the right hand of her father, while the other two held her by the hands; flute-players and torch-bearers went before, the mysterious and unexplained cry ‘Talasse’ was raised, and nuts were thrown to the youthful hackneyed (see J. Pley, ‘De Lame in antiquorum ritibus usi,’ in RVV XI. ii. [Giesenz, 1811] 82). She was then lifted over the threshold, perhaps as a last sign of simulated reluctance to be thus transplanted, and was received in her new home.

(3) This reception, the third act in the procedure, is obscure in its detail, but the general meaning is plain. It was called ‘reception into community of fire and water’ (‘aqua et igne accipere’), i.e., into partnership in these necessities of human existence (E. Samtzer, p. 40; Grimm, Römer, Berlin, 1901, p. 18 ff.). We are also told that she brought with her three coins (asces), one of which she gave to her husband, one she laid on the hearth, and the third she threw down at the feet of eros (see Pliny, ‘See also G. Diet, Enc, p. 528, ed. Lindsay). Here she seems to be making an offering to the genius of her husband, to the spirit of the hearth-fire, and to the Lar of the family’s land allotment, who dwelt in a suellum at the entrance of the compitum (see Pliny Phars. ii. 18). She was now in the atrium, at the end of which, opposite the door, the lectus gentialis had been made ready. The morrow would find her a mater-familias sitting among her maids in that atrium or in the more private apartments behind it.

To help maintain the establishment which the marriage was to set up, she brought with her a dos, or dowry, which in strict law became the property of the husband (for modifications of this rule see art. ‘Dos,’ in Smith’s Dict. of Gr. and Rom. Antiquities). As Cuv well puts it (p. 291), her position of dignity in the house, and her title of dominus as mistress of its slaves, would have been impaired if she entered it with empty hands and lived at the expense of her husband. This is the only means of securing to the children born of the marriage succession to their mother’s property as well as to the patrimonium of the father.

The ritual which we have been examining plainly indicates that the Roman bride was to hold a much nobler position in the household than the Greek wife (see MARRIAGE [Greek]). She shared with her husband all the duties of the family, religious and secular; she lived in the atrium, and was never shut away, and not even in a woman’s chamber. She took meals with her husband; in all practical matters she was consulted, and only on questions political or intellectual was she expected to be silent.

* When she went out arrayed in the graceful stola nattionalis, she was treated with respect, and the passers-by made way for her; but it is characteristic of her position that she did not as a rule leave the house without the knowledge of her husband, or without an escort (Fowler, Social Life, p. 144).

The character instanced and exemplified by such a position is exemplified in the legendary Volunia of the story of Coriolanus, in Cornelia the mother of the Gracchi, in Cæsar’s mother Julia, and, among many others, in the perfect lady whose courage, good sense, and domestic virtues left an indelible mark on the marble of the Lapidatio Turin (CIL. vi. 1527; Fowler, Social Life, p. 159 f.).

4. Divorce.—No doubt towards the end of the
Marriage (Semitic).—Students of social evolution seem justified in holding that the family of primitive man was an intermediate development between those of the highest animals and the lowest living men. In the lowest known human societies the form of marriage is usually a temporary monogamy.1 This temporary monogamy has been accompanied among most early men by a greater or less degree of sexual irregularity, and has varied according to economic circumstances and the bent of the people. So far as can be ascertained from the existing evidence, it underwent some interesting variations among the primitive Semites.

1. Primitive Semitic.—Among many savage or semi-savage peoples it is customary to allow unconstrained female concubinage. In such communities it might in time easily come to be thought that a woman who had exercised such liberty was more likely to bear children than one who had not. There is reason to believe that something like this prevailed among the primitive Semites, and that superstitious value attached to this exercise of liberty, for in many widely-scattered portions of the Semitic world it became a sacred duty for women to sacrifice their virtue by one or more acts of free love. In the Semites, both temporary and permanent, there is also evidence of much sexual irregularity among them.

It is the working hypothesis of most Semitic scholars to-day that Arabia was the cradle-land of the Semitic people. Naturally, the peculiar desert and oasis environment of the Arabian peninsula left its impress on the Semitic family life. In the cases dates and fruit were raised, and some sustenance for the flocks was produced, but it was necessary to lead the flocks into the desert in search of pasture. Whether, however, men lived in an oasis or wandered from place to place, women would always be needed to perform the duties of the household and the camp, that the men might be free to fight, either in defence or for plunder. There are two reasons for believing that the women were for the most part the sisters and mothers of the men, whether the clans was resident in one fertile spot or was nomadic: (1) Semitic marriage was notoriously temporary, and (2) kinship was reckoned through the mother.

That marriage was, on the whole, temporary seems probable from the frequency of divorce in Semitic countries, or from the evidence of the mothers of the wife's family (below). The researches of W. Robertson Smith established as well as the evidence will permit that among the early Semites kinship was reckoned through the mother.2 The reasons for this view are as follows. (1) We know the Semitic phrase for relationship is 'bone of my bone and flesh of my flesh,' ' Flesh' (bāttir) is explained in Lv 25:9 by the general word for 'clan.' The Arabs attach great importance to a bond created by eating together; we must suppose, therefore, that they were those of the same womb and nurtured at the same breast would be more nearly of the same 'clan' and the same 'flesh' than any others. (2) The word rahim, ' womb,' is the most general word for kinship, and points to a primitive kinship through the mother. (3) The custom called 'nigikā, by which a child is consecrated to the god of his father's tribe, cannot have been primitive, but must have sprung up in a state of transition to ensure the accounting of the offspring to the father's side of the house. (4) Cases occur in the historical period in which a boy when grown attaches himself to his mother's tribe. The poet Zuhair is a case in point, and the Arabic antiquarians appear to have known that such cases were not uncommon, and that sons would choose their mother's clan led men who were wealthy to marry within their own kin. (6) Kinship between a man and his maternal uncle is still considered closer than that between a man and his paternal uncle. (7) Joseph's sons born of his Egyptian wife were not regarded as members of Israel's clan until formally adopted by him (Gen 46:13). (8) Tamar might legally have been the wife of her half-brother Amnon, the relation being on the father's side (2 Sam 13:18). Such unions were known in Judah as late as the time of Ezekiel (Ezk 22:2). Tanak, king of Sidon, married his father's daughter, and such marriages were known in Mecen. Since the marriage of those really regarded as brothers and sisters was alien to the Semites, kinship must in these cases have been counted through the mother. (9) In the Arabic genealogical tables metronymic groups are still found. (10) In Amarna inscriptions found at Hегa metronymic lines appear.3 To this evidence may be added a few items gathered by other scholars. Noldeke noted that among the Mandaeans a man is described

3 L. H. 1:128, 209.
as the son of his mother, which indicates that kinship was reckoned through the mother. F. E. Peiser pointed out that among the Babylonians a man could, if he chose, join the kindred of his wife, which is a relic of the same custom.2 Wellhausen has observed that in the Pentateuch J counts descent through the mother, while P reckons it through the father.3 Among some primitive peoples kinship is counted through the mother because they are ignorant of the part of the father in reproduction.14 Among others, e.g., the Nairs of the Malabar coast, it is reckoned through the mother because a system of polyandry prevails. The wife has several husbands, no one of whom lives with her, but all of whom visit her occasionally, and it is not known which one of them may be the father of a child.5 Which of these causes led to the Semitic system of female kinship? We have no evidence to show that the Semites were so ignorant of the processes of reproduction that paternal kinship was unknown to them.4 On the other hand, there is considerable evidence indicating that at one time a type of polyandry somewhat similar to that of the Nairs prevailed among the early Semites.

In three of the Mūallaqāt poems there are specific statements that the poets visited only occasionally were members of other clans, and that they often visited them at personal risk,2 on account of the strained relations of the clans. The marriages of Samson (Jg 14, 16) were of this type. Such marriages were often terminated by the migration of the tribes in different directions.3 Anamianus Marcellinus was, no doubt, speaking of this type of marriage when he said that among the Arabs the bride presents her husband with a gift, and a tost (i.e., if she chooses), withdraws after a certain day.4 In this type of marriage kinship would necessarily be reckoned through the mother, and the fact that such alliance would be a sufficient cause to account for the early Semitic custom of female kinship.

Such marriage conditions, while compelling the women to live with their brothers and sons rather than with their husbands, left them comparatively free from the masculine domination to which they were subjected after the rise of polygamy. Something of this freedom still survives in Arabia in parts of the peninsula like Oman and Harsa, which are not so dominated by Islam as the rest of it.5 This type of marriage which had prevailed, at least in part, was a combination of polyandry and polygamy. Just as a woman might receive successive husbands, so the husbands also might have several wives in different clans. On the whole, however, the more numerous partners would seem to have been enjoyed by the women, for the practice of putting girl babies to death prevailed down to the time of Muhammad (see Qur’an, xvi. 81-89), so that women must have been fewer than men. Marriages of this early Semitic form were not always exogamous, for Inal-al-Qais boasted in his Mūallaqāt that he followed one day the women of his tribe and spent a day in their company, and the Unazāḥ with whom he afterwards rode and whose daughter he repeatedly tasted was the daughter of his uncle.6 In like manner Lalah, the woman celebrated in the poem of Amr b. Kuthayr, was ‘Amr’s kinswoman.7 Whether the marriages which occurred within the tribe were more permanent than the alliances which were made in other clans cannot be determined, but one would naturally suppose that they were. Out of these general conditions there developed a type of temporary marriage the form of which —three nights or more—called mudda marriage, which continued till the time of Muhammad.2

Another type of polyandry, that called Tibetan, because it was first studied in Tibet, was the form of marriage in vogue at one time in the southern part of Arabia. In this form of marriage a whole family of brothers possess one wife in common. The most important witness to this type of marriage is Strabo, who says, in describing Arabia Felix:

"All the kindred have property in common, the eldest being lord; all have one wife, and it is first come first served, the man who enters to her leaving at the door the sickle which it is customary for every one to carry; but the night she spends with the eldest. Hence all are brothers of all; they also have conjugal intercourse with the same women, and she is buried with death; no adulterer is a man of another stock."3

The reference to conjugal intercourse with mothers is probably not to be taken literally, but it is to be understood as meaning that it appeared that men had married wives of their fathers.4 In other respects the passage describes all the features of Tibetan polyandry. Its existence in that part of Arabia is also attested by epigraphic evidence.5

W. Robertson Smith collected considerable evidence to show that this type of polyandry was also known in N. Arabia.6 His points are:

1. Bakhūrī relates that two men made a covenant of brotherhood, which resulted in their sharing goods and wives, a custom which seems to betray a survival of a custom of fraternal polyandry.
2. In Arabic kunrah means the wife of a son or brother, but is used also to denote one’s own wife; in Hebrew kallah means both betrothed and daughter-in-law, while in Suraic kalotah means both bride and daughter-in-law. These facts can be most easily explained as remnants of fraternal polyandry.
3. The Arabic law that a man has the first right to the hand of his cousin, and the fact that the term sahā and its attendant traditions attest, that, if a man died and left only female children, the father’s male relatives inherited the property and married his daughters, are regarded as the results of a previously existing condition of fraternal polyandry. The Qur’an (iv. 22: 23) forbids men to inherit women against their will, and forbids them to take their step-mothers in marriage 'except what is past." This is regarded as evidence that down to the time of Muhammad these ancient circumstances of polyandry had continued, and that the Prophet did not dare to touch existing unions, though he forbade such marriages in future.

Wellhauseen,7 F. Buhl,8 J. Benzing,9 and Barton10 have also held that the existence of the levirate marriages in Israel was an outgrowth of fraternal polyandry. This has been contested by C. N. Stareek11 and Westernmark.12 But their arguments appear inconclusive. It is difficult to explain why one should ever have thought of counting the seed of one brother as that of one who had died, if there had not been a previous state of polyandry in which all brothers shared in the offspring. The levirate was known in Arabia,13 in Abyssinia,14 and in Israel.15

It would seem that fraternal polyandry of the Tibetan type may have had an intermediate stage between the less well regulated polyandry of an

earlier time and the patriarchal form of marriage, which generally was prevailing at the time of Muhammad. W. R. Smith so regarded it. But, be this as it may, by the end of the 8th century B.C. it had become so widespread that it even found its way into Arabia. Marriage, which was most probably the practice in Arabia, is known as betul marriage. In this type of marriage, the partner is bestowed upon the lord of the territory or the man. The betul marriage was conducted by the bridegroom, who was the head of the family, and the bride was the owner of the property. This marriage ceremony was completed without the signing of contracts. The law did not recognize anything like our modern 'common law' marriage. One reason for this was that the bride usually brought a dowry from her father's house, which was safeguarded for her and her children. The husband also generally gave a bride-price to his father-in-law, which, upon certain conditions, was returned. As Babylonian law dealt much with the evidence of written contracts, these were regarded as necessary to a legal marriage. The terms of the marriage, according to the Code, bore somewhat more heavily upon the woman than upon the man. True, if a man was accused of defiling the wife of another, he and she suffered capital punishment (§ 129); if he forced the betrothed of another, he was put to death and the woman went free (§ 130); but a woman, if only inadvertently suspected of infidelity, was required to purify herself by the ordeal of throwing herself into the sacred river. The man, on the other hand, might have children by a concubine and suffer only the inconvenience of having the children (§ 157). If a man was taken captive and there were women in his house he was bound to return to him, but the second husband retained his children (§ 135). If the husband's absence was due to desertion of his city, he had no claim on his wife on his return, if she had remarried (§ 130).

The Code assumes that marriages shall be monogamous, although it imposes on the father the duty of raising the children of his concubines. Nevertheless, it recognizes that in the case of women who had served as sacred servants in the temple (see Hierodouloi [Semitic and Egyptian]), and had married late and were, accordingly, unlikely to bear children, and also in the case of women who through sickness were rendered barren, he might take another, if she wished to her husband's consent. This was taken because of the chronic illness of the first, the first man, if she wishes, takes her dowry and return to her father's house (§ 149). Slave concubines were frequently practised, but a female slave who bore her master children could not be sold (§§ 146 f., 171).

According to the Code, a man might divorce his wife, if he wished, but in that case he must make certain specified monetary settlements, which varied according to whether the wife had or had not borne him children (§ 137 f.). A woman might take the initiative in a divorce. If she did so, her husband could, if he wished, divorce her without alimony (§ 141). If the wife complained of ill-treatment, the life of the family was subjected to investigation. If her claim proved true, she could take her marriage portion and return to her father's house; if untrue, she was to be thrown into the river (§ 142 f.).

In the marriage contracts of the time of the 1st dynasty it appears that greater privileges of divorce were sometimes secured to the bride than the Code would have granted her. E.g., a priest married, and his contract provided that, if he divorced his wife, he must return her property and pay a half-mana as alimony. Another contract, which seems to equalize the penalties for divorce, is that a woman is to be paid a mana if she divorces her husband (§ 141).
divorce, provides that, if the husband divorces the wife, he shall be driven out to the oxen of the palace; if she divorces him, she shall be driven to the carriage-house of the palace. The marriage of his concubine during his parent’s lifetime (Gen. 34:1). As noted above (§ 1), these arrivals of Semitic polyandrous marriages. Another survival was the levirate—a custom which required a brother to take the widow of a deceased brother and count the first fruit of the union as the child of the latter (Deut. 25:5). Another type of marriage is seen in the great liberty enjoyed by women of the early period (see I S 20:12, 2 K 5:1). In the stories of Abraham and Jacob the type of marriage is also reflected in which slave concubines may be given by a wife to a husband, for the sake of obtaining an offspring which the wife is unable to bear (see Code of Hammurabi, §§ 144, 146). The general type of marriage which we have evidence in the Hebrew writings was, however, the levirate. Another evidence of this conception of marriage may be seen in Ex 20:27, where the wife is counted and a part of her husband’s parents, the marriage, concerning which two documents bear witness, records the marriage of two sisters by one man, but provides that the elder shall be the chief wife, and that the other shall perform for her certain specified duties.

From the Neo-Babylonian and Persian periods several marriage contracts have come down to us. The stipulations in them as to bride-price and dowry are in general the same as in those of the time of the dynasty, the pronouncements in the lists separate are generally omitted from the contracts of that period, although divorce did then occur. In most of the marriage contracts the man acts for himself and arranges with the parents of the bride, that if the husband is a minor, the parents make the arrangement for him. The bridegroom enjoyed in this respect more liberty of action than the bride. In Babylonia, as in the ceremony of the English Church, she had to be "given away." We have no knowledge of ancient Babylonian marriage ceremonies further than that before marriage every woman had to act once as a temporary Hierodoulos (see Herodotus [Semitic and Egyptian], vol. vi. p. 674).

3. Hebrew.—In the story of Samson there are, as noted above, some faint traces of that early Semitic type of marriage in which the wife belonged to a hostile clan, lived with her people, and was visited by her husband for longer or shorter periods. The stories of the Patriarchs reflect various phases of matrimonial development. The marriage of Jacob to the daughters of Laban indicates a type of marriage in which the husband resides with the wife’s clan, but the children are counted to her family, for Laban says: "The daughters are my daughters, and the sons are my sons" (Gen. 31:39). Then Jacob broke away, and the children were counted to his stock. This narrative forms a transition from one system of kinship to the other. A number of survivals of the two matrional types of marriage just mentioned are found in the narratives of the OT; Shechem, e.g., consented to circumcision to render himself acceptable to the clan of his proposed wife (Gen. 34:11). A number of instances also occur in which a son inherits his father’s concubines: Ishbosheth regarded Saul’s concubine as his own, and resumed Amnon’s taking her (2 S 3): Solomon for the same reason regarded Adonijah’s desire to marry Abishag as treason (1 K 2:24; cf. v. 13): Reuben was denounced for endeavouring to anticipate the inheritance of his father’s concubine during his parent’s lifetime (Gen. 34:1). As noted above (§ 1), these arrivals of Semitic polyandrous marriages. Another survival was the levirate—a custom which required a brother to take the widow of a deceased brother and count the first fruit of the union as the child of the latter (Deut. 25:5). Another type of marriage is seen in the great liberty enjoyed by women of the early period (see I S 20:12, 2 K 5:1). In the stories of Abraham and Jacob the type of marriage is also reflected in which slave concubines may be given by a wife to a husband, for the sake of obtaining an offspring which the wife is unable to bear (see Code of Hammurabi, §§ 144, 146). The general type of marriage which we have evidence in the Hebrew writings was, however, the levirate. Another evidence of this conception of marriage may be seen in Ex 20:27, where the wife is counted and a part of her husband’s parents, the marriage, concerning which two documents bear witness, records the marriage of two sisters by one man, but provides that the elder shall be the chief wife, and that the other shall perform for her certain specified duties.

The list of the degrees of kinship in which marriage was prohibited in Lv 18, 20, and Dt 27 belongs to the period of Judaism, which began with the Babylonian Exile. At no period were young people allowed to arrange matrimonial affairs for themselves; such arrangements were made by the parents (cf. Gn 21:13, 24, 25:11). Divorce was supposed that a man may also have two wives. The law of Ex 21:12-13 takes it for granted that female slaves will become the concubines either of their owner or of his sons. A similar assumption underlies Ex 21:29, 30.

The law of Deuteronomy permitted only the man to initiate divorce; it granted to the woman no corresponding power. If it represents, no doubt, the usual custom among the Hebrews. In one instance, however, it is known in which a Hebrew bride secured by her marriage contract a similar liberty. Among the Jewish papyri discovered at Elephantine in Egypt a marriage contract was found, which contains this passage:

"If to-morrow or any other day Miphtahyah shall stand up in the congregation and say, ‘I divorce As-Hor, my husband,’ the price of divorce shall be on her head. . . . If to-morrow or any other time As-Hor shall stand up in the congregation and say, ‘I divorce my wife, Miphtahyah,’ her marriage settlement shall be forfeited, etc."

Whether other Jewish women at Elephantine were accustomed to gain this liberty by contract, or whether there were special arrangements were secured to Miphtahyah, we do not know, but in any event it is a significant modification of the OT status of women in such matters. The Deuteronomist law dealt with two cases in which a man was for ever powerless to divorce a wife: if he had falsely charged his bride with not

being a virgin, and if he had been forced to marry a woman whom he had violated (Dt 22:29, 296). The penalties for adultery here more heavily on the wronged than on the wrong-doer; and in only the cases where they were equal being when the crime was committed with the wife or brother of another; then both the man and the woman to be stoned (Dt 22:22-29). The point of view was that adultery with a married woman was an offense against her husband's property (cf. art. ADULTERY [Semitic]). The wife was accordingly compelled to be faithful, but no similar fidelity was exacted of him. So long as he did not violate the honour of those who were really or prospectively the wife of another, he was not punished, except that, if he violated a maiden, he might be compelled to take her as an additional wife. The penalty imposed on a wife or a betrothed maiden for adultery seems in the earlier time to have been burning (Lv 20:20), but was later changed to stoning (Dt 22:22-29). If a woman was simply suspected of adultery, she was tried by ordeal (Nu 5:11-31). As the ordeal consisted, however, in drinking water into which holy dust from the sanctuary floor had been thrown, it must generally have resulted in the release of the accused woman. The frequent denunciation of adultery on the part of the prophets would indicate that the penalties were not well enforced and that in that day occasional venturing into the specific instances in which the penalty was not enforced.

4. Arabian. — The early Arabian marriage customs have been sufficiently treated above (§ 1); it remains to note how the tenets of Islam. By the time of the Prophet *beauti* marriage had apparently become the normal type, and polygamy prevailed among the rich. The husband had full power over the wife and could enforce her authority by his law (Qur' an, iv. 38). Some survivals of customs which belonged to the earlier time were, as noted above, condemned by the Prophet (iv. 29). Before the time of Muhammad, no limit had been set to the number of wives a man might possess. In the interest of moderation, Muhammad ordained that legal wives should be not more than four, but that a man might also enjoy concubines as many slaves as he was able to possess (iv. 3, 36). The Prophet himself, it is said, possessed as many as seventy-five. Marriage with one's mother, daughters, sisters, paternal and maternal aunts, nieces, mother-in-law, step-daughters, and daughters-in-law was prohibited (iv. 27). Marriages with foreign women were permitted, if the women were believers (iv. 10). Adultery was a crime for a woman, but apparently not for a man. Before the time of the Prophet an adulteress had been literally immured, but Muhammad changed this to imprisonment in the house of the wronged husband (iv. 19). A slave girl was to receive half the penalty of the married woman (iv. 30). Divorce of a wife, as among the Hebrews, was possible to the husband at will. Before the time of Muhammad, the formula of divorce consisted of this sentence, which the husband pronounced to the wife: 'Thou art to me as my mother's back!' After this had been pronounced over her, it was considered as unnatural to approach her as it was to approach a real mother, and so it was regarded as wrong to re-marry a divorced wife. Muhammad called this 'hacking away' from wives (xviii. 2). He declared, however, that the utterance of this formula did not constitute a real relationship, and so permitted a man to marry a wife who had been divorced (xviii. 4). A man might not divorce a woman who was pregnant, or who was nursing a child (xv. 4, 6), but apart from this condition a man and wife who did not agree might separate at any time (iv. 129), though liberal alimony was enjoined (iv. 24). It is assumed (xxxiii. 48) that no legal marriage was possible for mere whim after marriage, even before consensual relations have been established. Liberty of divorce has been freely exercised by the faithful both in ancient and in modern times. Thus 'Ali, the son-in-law of the Prophet, married, the much all that he married and divorced, more than two hundred women. Sometimes he included as many as four wives in one contract, and he would divorce four at one time and marry four others in their stead. A man might divorce his wife, for example, in order to marry eighty women in the course of his life, and Muhammad al-Tayib, a dyer of Baghdad († 425 A. H.), is said to have married in all more than nine hundred women. Pulgrave relates that the Sultan of Qatar in F. Arabia married a new wife every month or fortnight, who was then divorced and placed on a pension. C. M. Doughty tells how Zaid, his host, a petty sheikh, not only permitted his wife to be courted by another Arab, but offered to divorce her so that Doughty could marry her.

 Naturally a woman could not marry so many men, because she had not the right of divorce, and because she could have only one husband at a time; sound law and reason, rather than a surprising number. A certain Umm Kharjiah of Yemen is said to have had upwards of forty husbands, and her son Kharjiah did not know which one was his father.

In parts of Arabia a certain old marriage customs still survive in spite of Islam. Thus in Sudan and among the *Asir in S. Arabia marriage for a definite term still exists, and a man who has a permanent wife may also take a temporary one. In Sudan the woman (Tur. *katib*) beggar is the *qadi* and so has the sanction of Islam. At the expiration of the contract, the couple may separate without the formality of a divorce; if they continue to live together, a new contract is necessary. Such marriages are still practised in Mecca at the time of the pilgrimage. Marriage ceremonies among the Arabs vary greatly according to circumstances. Sometimes they consist of a feast, sometimes of a civil contract before the *qadi*, and sometimes the *qadi* himself would contract. The married woman Umm Kharjiah, mentioned above, is said to have reduced the contract to very simple terms. A man approached her and said to her, 'Betrothed!' and she replied, 'Married!' and was from that moment his lawful wife.

5. Abyssinian. — Abyssinia is Christian, though its form of Christianity is the result of an arrested development. Marriages celebrated by the Church assume something of the permanent character of marriage in other Christian countries. Such marriages are solemnized by a priest, and the contracting parties partake of the Holy Communion. A candidate for holy orders is compelled to marry once, as in the Greek Church, but he cannot divorce his wife, and, if she dies, he may not marry again; one matrimonial venture alone is permitted to him. Among the people religious marriages are not popular. All travellers agree that the Abyssinians prefer to be married by civil contract, as these

mariages may be dissolved at the desire of either party to the contract. This liberty is freely exercised. Wives are changed at will, by mutual agreement, if a man divorces his own and marrying the wife divorced by another. 1 Divorces do not necessarily dissolve friendly relations between those who separate; Parkyns visited a man whose divorced wife and her children lived in the same cell with him and another man. It frequently happens that those who have been divorced and have each married others divorce their second spouses and are again reunited. If the separating couple have children, the children and bride and bridegroom, the eldest son or daughter of the former to the mother and, if there is only one son, he goes with the mother; and, similarly, one daughter goes with the father; if the remaining children are unequal in number, they are divided by lot. 2

In addition to these irregularities, there is also much concubinage in Abyssinia, as in other Semitic countries. The levirate exists there, and its customs are operative as elsewhere; when an ancient Slav dies, the woman is the first buried, the next after her children. In other cases, the marriage is considered settled, the girl being given no voice in the matter. Civil marriages are celebrated by feasts much as in other Semitic lands, the bridegroom and his friends feasting by themselves, and the bride and her friends feasting by themselves. After a day of festivity, the bride is carried to the house of her husband, and the marriage is accomplished. This formality is observed no matter how many times the bride may have been married before.

GEORGE A. BARTON.

MARRIAGE (Slavic).—As early as the pagan period the family life of the Slavs was regulated by legal marriages, which were concluded in a solemn manner. Like other nations, the ancient Slavs had two forms of marriage: marriage by capture, a girl being captured by another family or tribe, and marriage by purchase. In the Christian period only the latter was sanctioned by the Church as a more civilized and noble form of marriage, whereas marriage by capture was prohibited and generally considered sinful. Thus, unless a series of ancient traditions and observances which visibly reflect traces of the old form of marriage by capture is preserved in the wedding ceremony. To these customs belongs, e.g., that of stopping the bridegroom on his way to the house of his bride and that of tethering the dog before the bridegroom and riding the bride; and here may also be mentioned the habit of presenting a false bride to the bridegroom. In S. Russia the wedding-guests engage in symabolical fights, which may righty be deemed a survival of the rite and family. The companions of the bridegroom violently attack the house where the bride lives, while her kinsfolk defend it and repel the aggressors, but at last the two parties put an end to the hostilities and restore harmony by a scene of fun and laughter. The Slavs (the Jugoslav) have preserved the custom of marriage by capture to the present time, and, where this form of marriage has died away, symabolical traditions have taken its place.

The wedding ceremony, performed by the different Slavic nations vary widely, but it is possible to discover in them some fundamental traits which are common to all Slavs, and which may be regarded as a survival of ancient times, while their antiquity and the custom is also considered in accordance with the chief type of Indo-European wedding ceremony, as reconstructed by H. Hirt and O. Schrader. 3 Among all the Slavic peoples are the first preliminary to the marriage, the 'wooing' and the marriage contract. The deities of the bridegroom (drubba, sent, starosta, oferje, etc.) negotiate with the bride's father concerning the conditions of the marriage and arrange the precise date for the wedding ceremony. The ceremony begins with the crowning of the bride with a wreath variously arranged and more or less ornate; the bride and the bridegroom shake hands as a mark of their mutual consent, and pass three times round the table or the hearth. Thus the nuptial knot is formally tied, and the pair give each other various presents of symabolical meaning (rings, apples, wedding-shirts, etc.). Afterwards the bride is veiled and conducted in solemn procession to the house of the bridegroom, where a hearty reception is given her, and bread and honey are distributed among the guests, who cast upon the bride various fruits, such as corn, millet, peas, nuts, hops, rice (nowadays sweets), etc., to express their wish that she may bear many children. The similar meaning underlies the custom practised by some Slavic peoples of placing a child in the bride's lap when she arrives at her new home. It is customary, when she reaches the door of the bridegroom's home, to cast the first handful of grain into his lap, and to place her upon a fur, the hair of which is turned upwards. One of the most significant gifts which the wedding-guests bring to the couple is a cock and a black hen. In S. Russia the bride throws such a hen under the hearth, probably as a sacrifice for the domestic genius. A very important place in the wedding ceremony is occupied by a large wheat cake, decorated with eggs, flowers, ribbons, and sweets, which is cut in pieces at the wedding feast and distributed to the guests. Thus the symbolic nuptial ceremonies belong, further, the untwisting or cutting of the bride's plait and the covering of her hair with a cap-like scarf. There was a rule among the Slavs—which is still, for the most part, observed—whereby unmarried women, for the sake of distinction, to wear their hair long, loose plaits, while married women wore a cap. The bride's entrance upon the status of a married woman was symbolized by the custom just mentioned, which was performed in a closed room by the women present. Then the bride used to unloose the shoes of her bridegroom.

to show her submission (sometimes she even received symbolical blows), and, after being clothed in new garments by the women and the best man, she went to bed with her husband in the presence of the clergy. After the meal and night prayers an intercourse was performed in a clear stream or at a well; later on, this procedure was reduced to a mere sprinkling with water.

Besides these chief and almost fundamental ceremonies, the various Slavic peoples have other customs connected with the popular wedding, the details of which cannot be described at full length in this article. It is interesting, however, to notice that for a long time the people attached far greater importance to these domestic wedding ceremonies than to the rites prescribed by the Church. Historical documents testify that, even in the 16th and 17th centuries, not only the common people but also the more cultured classes regarded the ecclesiastical ceremony as a purely religious act without any legal significance. A marriage became legal only after the precise performance of all prescribed observances inherited from the ancestors and consecrated by the family tradition; and this ceremony is still to be found among some of the Slavic nations.

Family (Teutonic and Slavo-Slav.) in vol. v, p. 769.

J. MACHAL.

MARTINEAU.—James Martineau (1805-1000) was born in Norwich, April 21, 1805, the fourth son and seventh child of Thomas Martineau, a manufacturer of bombazine. Of Hugenot ancestry, he was also descended through his father's mother from John Meadows, one of the ejected ministers of 1662. After four years at the Norwich Grammar School he was placed under the care of Dr. Lant Carpenter at Bristol (1819-21), to whom he owed his 'spiritual rebirth.' His teacher was a pioneer in education, and combined instruction in the elements of science as well as psychology and moral philosophy with classical and mathematical training. Thus equipped, he was placed in machinery works at Derry, but relinquished his apprenticeship after a year to undertake a hawking business in which he turned from an engineer to an evangelist [speech at Nottingham, 1856; Carpenter, James Martineau, p. 21], and in 1822 he entered Newcastle College, York, as a student for the ministry. He had been brought up in the Unitarian theology of Priestley, and embraced his necessitous pantheism with ardour, though at Bristol he had read Wilberforce and Hannah More, and was not without occasional misgivings concerning the freedom of the will. On the completion of his College course he took charge of Dr. Carpenter's school for a year (1827-28), and, after a short period of ministerial service in Dublin (1829-33), was licensed through his refusal of the ordination known as the Regium Donum, he began his longest pastorate in Liverpool (1832-57). In 1840 he undertook the additional duty of Professor of Philosophy and Political Economy in Newcastle College. On his return from York to the city of its foundation. During the creation of the Hope St. Church by his congregation (1848-49) he spent fifteen months with his family in Germany, returning to resume his ministry. The transference of the College to London led to his settlement there in 1857, and from 1859 he also ministered in Little Portton St. Chapel till 1872, when a threatened failure of health led to his retirement. In the meantime he had succeeded to the Principality of the College in 1865, which he held till June 1885.

For more than fifty years he had been actively engaged in literary work of many kinds. To the religious deists of his day he gave unstinted service, and his was the chief influence in transforming its fundamental theological conceptions, while in the wider field of philosophy he was the powerful antagonist of the empiricism and militarism of the Mills, the monism of Spinoza, scientific materialism, and the agnostic philosophy of Spencer.

The Unitarians of Martineau's youth followed the tradition of Locke. Accepting the NT as the final authority in Christian doctrine, they recognized Jesus Christ as the Messiah, whose teachings were authenticated by miracles. To this interpretation Martineau remained faithful till after 1832. But further study of the Gospels confronted him with the predictions which implied the return of Jesus in the lifetime of His disciples to judge the world, and this begot an investigation into the significance of revelation which led him to declare in his first work, The Rationale of Religious Inquiry (1819), that 'no seeming anything contrary to reason, that the last appeal in all researches into religious truth must be the judgments of the human mind' (p. 125). To work out this principle was to be one of the main occupations of his life. He was the originator of German critical study; he was familiar with Paulus and Strauss; he adopted the general results of the Tubingen school, and became their earliest and most accomplished English exponent in a work, The Creed and Heresies of Catholicism, Westminster Review, 1853). By 1845 he had abandoned the apostolic authorship of the Fourth Gospel, and in the third edition of the Rationale (1845) he ceased to demand belief in the gospel miracles as essential for the Christian name. In the Prospective Review (1845-54) and its successor, the National Review (1855-64), he secured an organ for his theological and philosophical essays, while others not less brilliant appeared in the Westminster. Indubitably in study, a constant teacher of the young, he devoted long courses of lectures to the exposition of the NT and the history of Christian doctrines, and in his last large treatise, The Seat of Authority in Religion (1869), he returned to his earlier abhorrence of the special dogmas of the Roman Catholic Church, the infallibility of the Bible, and the historical significance of Christianity, and presented Jesus no longer as the Jewish Messiah, but as the 'prince of Saints,' revealing the highest possibilities of the soul. Looking back at ninety (1865), he wrote to William Knight: 'The substitution of Religion at first-hand, straight out of the immediate interaction between the soul and God, for religion at second-hand, faked, by copying, out of anonymous traditions of the Eastern Mediterranean eighteen centuries ago, has been the real directing, through hardly conscious aim of my responsible life' (Carpenter, p. 549).

Martineau thus remained to the last a Unitarian in his interpretation of the Deity, and a Christian in his allegiance to Jesus Christ. This was not always misunderstood, partly because of his sympathy with many aspects of traditional devotion, and partly because of his steadfast refusal to belong to a Unitarian Church. This was due to the disunity of the denomination on which the majority of chapels occupied by Unitarians were held. Some of these had been founded in the 17th cent., others in the 18th, by the English Presbyterians, who, under the leadership of Baxter, had stood for 'churchism against all parties, & repudiated creeds of human imposition.' In dedicating their chapels 'for the worship of God by Protestant Dissenters' (sometimes specified as Presbyterians, sometimes as
Independents, sometimes as both together), they deliberately rejected all limiting doctrinal names. By slow processes of Scripture study many ministers and congregations gradually became Unitarian in theology. Attention was at length called to this issue, and a suit was instituted against the trustees of a charity in York founded by Lady Hewley, whose husband, Sir John Hewley (M.P. for Chipping, 1826-39) had been a warm supporter of the Presbyterians. The decision (December 1833), which displaced the Unitarian trustees, was at once seen to imperil the tenure of all the chapels, and after long litigation the existing worshippers were secured in possession only by the Dissenters' Chapels Act (1844). The controversy had a lifelong effect on Martineau's views of the true basis of Church union. To the association of individuals for the promotion of Unitarian teaching, he remained constant all his life. But he could not accept a theological name as a condition for religious fellowship. It was inevitably exclusive instead of catholic, it seemed to involve treachery to his spiritual ancestors; it barred the way to those very possibilities of change which had been the secret of the Unitarian advance. Deeply conscious of indebtedness to various schools of religious life, Martineau endeavored to form a Unitarian Christian Union, which was joined by representative men of every British Church, but was disbanded two years later. Subsequently he worked out a scheme for 'the National Church as a Federal Union' (C.P.E. (1857), 498 E), which proposed to abolish the Act of Uniformity, to release the Church of England from State control, and associate it with the other communions in a United English Christian Church. The plan aroused considerable popular interest, but the bill in which it was embodied was never actually laid before Parliament.

From the time of his settlement in Liverpool, Martineau had been continuously engaged in teaching and writing, and his intercourse with the young was a prominent cause of the changed view of the moral consciousness which led to the reconstruction of his philosophy. Trained in the pantheistic necessitarianism of Priestley, he had lived under a persuasion of obstinate and without realizing its significance. Many influences now contributed to give it new meaning. Wordsworth had long been his favourite poet; Plato called forth his admiration for 'the fair and good'; Coleridge and Carlyle had wakened in him the passion in human nature: Channing emphasized its freedom and dignity. In reviewing Bentham's 'Deontology' (Monthly Repository, 1844), while still placing the 'criterion of right' in the 'tendency of an action to promote the happiness of an agent,' he laid stress, against Bentham, on the reality and worth of the disinterested affections, and prepared the way for a wholly new set of moral values. The questions of his pupils, his personal NT study, and the hymns of the Wesleys opened new aspects of the inner life; and in the lecture on 'Moral Evil' in the Liverpool Controversy (1839) he formally abandoned the determinism of his youth. The change involved many modifications. He ceased to regard revelation as 'communicated truth'; it was effected through character; its organ was the conscience and the affections; its supreme historic type was seen in Christ as the image of the Father.

By his relation to Channing, in opposition to the one hand to the 'association' philosophy of James Mill, and on the other to the monistic schemes of Spinoza and Hegel, Martineau began to work out his new analysis of man's moral nature. The sphere of judgment was transferred from consequences without to springs of action within. In this inner world lay a multitude of appetites and energies, which were not all of equal rank. When they were examined side by side, some revealed themselves as higher, while others fell into a lower place; and this distinction of rank was irresolvable into any other element such as order, truth, beauty, sympathy, or reason. All these were relational; there was always an alternative before the mind, and the power to recognize these diverse values lay with conscience, which pronounced this better and that worse. This view was first expanded in the Prospective (1845), in an essay on Whewell's 'Elements of Morality,' and led to the definition: 'Every action is right which, in the presence of a lower principle, follows a higher; every action is wrong which, in the presence of a higher principle, follows a lower' (Essays, iii. 352). The year before, during a visit to Liverpool, Mrs. Carlyle had described Martineau as 'the victim of conscience. He was to become the greatest English moralist since Butler. Here was the witness of Deity within; here the access of the soul to divine things; here the true ground for the conception which he was afterwards to define as 'the perennial indwelling of God in Man and in the Universe.' Alongside the great inductive rationalism he ran an exposition of our knowledge of the external world (in a review of J. D. Morell's Historical and Critical View of the Speculative Philosophy of Europe in the Nineteenth Century, London, 1846, in Perspective, 1849). The notion of Perception gives us simultaneous knowledge of subject and object' (p. 562). Again and again in subsequent essays Martineau vindicated this 'natural dualism' against idealism on the one hand and pantheism on the other, and the bill in which it was embodied was never actually laid before Parliament.

The time of his settlement in Liverpool, Martineau had been continuously engaged in teaching and writing, and his intercourse with the young was a prominent cause of the changed view of the moral consciousness which led to the reconstruction of his philosophy. Trained in the pantheistic necessitarianism of Priestley, he had lived under a persuasion of obstinate and without realizing its significance. Many influences now contributed to give it new meaning. Here was the witness of Deity within; here the access of the soul to divine things; here the true ground for the conception which he was afterwards to define as 'the perennial indwelling of God in Man and in the Universe.' Alongside the great inductive rationalism he ran an exposition of our knowledge of the external world (in a review of J. D. Morell's Historical and Critical View of the Speculative Philosophy of Europe in the Nineteenth Century, London, 1846, in Perspective, 1849). The notion of Perception gives us simultaneous knowledge of subject and object' (p. 562). Again and again in subsequent essays Martineau vindicated this 'natural dualism' against idealism on the one hand and pantheism on the other, and the bill in which it was embodied was never actually laid before Parliament.
branched, Spinoza, and physical (Comte), he expanded (vol. ii.) his own interpretation of the nature of moral authority. This involved a classification of the propensions, passions, affections, and sentiments, and an arrangement of them in a scale. The scale of human experience was then contrasted with the hedonistic ethics of the other utilitarians, and the modifications introduced by the idea of evolution. In emphasizing 'Hitches in the Evolutionary Deduction' he denied that laws of matter and motion could explain the genesis of consciousness, while the feeling of moral right and freedom involved another point of fresh departure. The section on 'Conscience developed into Social Conscience and Religion' further supplied hints which modified the stress of individualism in some of his earlier writings.

The stream of Essays had ceased for some years after the suspension of the National Review (1864); but an important address on Religion as affected by Modern Materialism (1874), suggested by John Tyndall's discourse to the British Association at Belfast, and its sequel, Modern Materialism: its Attitude towards Theology (1876), brought Martineau prominently into the field of philosophical discussion. Two other addresses, Ideal Substitutes for God (1879) and The Relation between Ethics and Religion (1881), belonged to the period in which he was slowly completing the tract four volumed entitled A Study of Religion (2 vols., 1888). It opened with an investigation of the limits of human intelligence, a fresh defence of 'natural realism', a plea for the objective reality of space and time, a reply to the empirical doctrine that we know nothing but sensations, and a refutation of the agnosticism of Spencer. God had been presented at the outset as a 'divine Mind and Will ruling the Universe and holding Moral relations with mankind' (vol. i. p. 1); and the issues of theism in the doctrine of His sole causation in the natural order and His perfection in the moral order were re-established and supported with fresh illustration. The teleological concepts which had been discarded in earlier revolt against Paley were now revived on a far wider scale, and the presence of rational ends was displayed with varied scientific knowledge in the vast process of evolution. Assuming the results of his analysis of human nature in the previous treatise, Martineau argued that the concept of obligation implied the presence within us of a moral order in which God was disclosed as transcendentally holy. The intelligent Purpose and the righteous Will were then identified; the place of pain and sin under such a rule was defined; and the teleology concluded with a refutation of pantheism and a defence of human freedom. A final book carried the argument up to 'the Life to come.'

Martineau's last word on the grounds of belief and their illustration in the NT was uttered in The Story of Authority in Religion already cited, in which the origins of Christianity were expounded with remarkable force and daring (1890). The work was less technical than its predecessors, and appeased to the wide circle of those who had found invaluable help in the author's devotional writings. In the Endeavors after the Christian Life (2 vols., 1813-47) he had unfolded secrets of personal religion and moral experience in language often of lyrical passion; in successive collections of hymns (1834, 1842, 1874) testified to his deep sympathy with many types of Christian devotion. Later series of Hours of Thought on Sacred Things (1876, 1879) carried on the application of his thought to the incidents of the human not. A small book of Hours of Progressions was issued (1891) in response to the urgency of many friends, and in four volumes of Essays, Reviews, and Addresses (1890-91) he gathered up those of his detached writings which he wished to preserve. Even their wide range, over history, science, and philosophy, does not exhaust the whole scope of his productiveness, which includes a political economy and a cyclical

In the theological timidity and the ecclesiastical strife of the early Victorian era he stood forth (often alone) as the fearless advocate of the principle of religious freedom. Later years brought some apparent approximation to Utilitarianism; for instance, he was designated as 'the greatest of living thinkers'; and a younger philosopher (A. Seth Pringle-Pattison, HJi. [1903] 441) apply fixed the character of his service to his age by describing him as an ideal champion of the spiritual view of the world in a time of transition and intellectual insecurity.'

LITERATURE.—Besides the works already named, some of Martineau's early writings were collected by American friends in Miscellanea, Cambridge, Mass., 1852, Studies of Christianity, London, 1868, and Essays Philosophical and Theological, 2 vols., 1883. We may also name his Lectures in the Liver- pool Correspondent (1859), A Study of Spinoza, do., 1882, and National Duties and other Sermons and Discourses, 2 vols., 1888. See further, A. W. Jackson, James Martineau, a Biography and a Study, do. 1890; J. Drummond, The Life and Letters of James Martineau, 2 vols., 1892; J. E. Carpenter, James Martineau, Theologian and Teacher, do. 1893. J. ESTLIN CARPENTER.

MARTYRS.—See SAINTS AND MARTYRS.

MARY.—The following article, dealing with the cult of the Virgin Mary, starts from the Scriptural and orthodox positions (1) that our Lord Jesus Christ, being the eternal Son of God, because man, was conceived by the Holy Ghost and born of the Virgin Mary (1874), (2) that the human nature is thus God and man in two distinct natures and one person for ever, so is she, His mother, truly and properly described as Theotokos and Virgin Deipara—the Mother or Bring-forth of Our Lord and God, who was God when He issued from her virgin womb, wearing the manhood which of her substance had been prepared for Him, which He had taken to Himself, which He carried with Him to the Cross, which He raised in spiritual glory from the tomb, which He wears for ever at the right hand of the Majesty on high. These things are part of the faith of the whole Catholic Church; they are treated here as historical facts.

Another matter which, though Scripture is silent upon it, unquestionably belongs to that principle of influence on the development of the cult of the Virgin Mary, is assumed in this article in accordance with the view of overwhelmingly the larger part of Christendom, viz. her perpetual virginity: 'virgo concepta, virgo peperita, virgo permanens.' With the general question of the Invocation of Saints, and the merits or demerits of that practice, this article is not concerned.

The only questions, therefore, to be here discussed concern the implications of these facts. We shall inquire historically (1) what was inferred from them in the Apostolic and early ages of the Church as to the duty of Christians towards the Virgin Mother of the Lord; (2) when and how the wide-spread developments of her cult arose; and (3) the grounds on which these developments have been justified, or are rejected, by those who accept the facts.

1. In Holy Scripture. Over and above the witness borne by the four Evangelists to our Lord's having a human mother (Mt 3:19, Jn 2:14, 6:50) whose name was Mary (Mt 69), and the direct statements of two of them (Mt 1:25, Lk 1:35) that she was a pure virgin when by the power of the Holy Ghost the conceived and bore our Lord Jesus Christ in the third Evangelist several notes expressive of the high reverence and honour due to her. St.
Luke records the angelic salutation, 'Hail, thou that art highly favoured, the Lord is with thee' (19); and the angelic assurance, 'Thou hast found favour with God' (19). He makes it plain that she was the moral, and not simply the physical, instrument of the Incarnation: he brings out her willingness and consent, and changes her reply from one of simple assent, 'I am the Lord's servant' (Luke 1:38), to one of joyous submission, 'All hail to the Lord of Israel' (1:27). And, too, the same twofold evidence of the divine call may require her to adopt (19); his narrative evinces her conscious rousing 'the report' among men of which the poor Jewess still blasphemed her Son and revile herself (Luke 21:17).

In (Jn 1:49), the apostle to the Gentiles, declares that the child he brought forth was 'the Son of the living God, that all true believers might be absolved from the guilt that had been imputed to Mary.' And his authority and the evidence of the name, the struggle in the mind of the mother in the very presence of the Virgin, in the very presence of the Lord, in the very presence of the living God, are all included in the words 'And Mary, having a man betrothed to her and being nevertheless a virgin, by yielding obedience became the cause of salvation to herself and to the whole human race' (6).

If, however, we find here in the words, 'calling Mary the "advocate," of Ere, we shall do well to remember that his Greek had, apparently, συγγονος, which implies not advocacy in our sense, but rebuke. Origen supplies one of the only two places in the Fathers where the words of the Lord from the Cross to her and to St. John have the least appearance of deserving to her a permanent office for Christians. 'Seeing that, according to those who think soundly of Mary, she had no other son save Jesus; and that Jesus said to her, "Behold, thy mother, my brother," we must not think that she had sons of Mary' (in Jo. 137).

But does this go further than Christ's own, 'Behold, my mother, my brethren' (Mt. 12:50), Mk 3:31)? Both Origen and Tertullian, like Ignatius before them, draw from her motherhood of Christ arguments against Gnostic or Docetic heresy. Yet even of the Gnostics, so strong already was the Church's faith in the Virgin birth of the Redeemer—several were constrained to admit the fact, while others, allowing that He issued from her womb, protested that He drew nothing from her substance.

If any cult of the Virgin existed in these early centuries, it is in the records of the Church's worship at the time that we should expect to find it, rather than in the treatises of divines or the apologies of the defenders of the faith. But much of the accounts of the Church service of the period as have come down to us exhibit precisely the same features as do the writings of the anti-Nicene Fathers. No mention of Mary's name, no reference to her, occurs in the Nicene Holy Communion in the NT; nor in the liturgical thanksgiving in the 1st Epistle of St. Clement of Rome; nor in the Didache; nor in Justin Martyr's or Tertullian's account of the Eucharistic service. The only place where an invocation of St. Mary could come in is at the Commemoration of Martyrs and the Commemoration of the Departed; and on this all that St. Cyprian has to say is:

The other only notices of Mary in the NT are: (1) the mention of her by St. Luke (Ac 1:14) in the place that appears the first, and only one named, among the Christian women, and as still, after the Ascension, 'the mother of Jesus'; (2) the reference to her by St. Paul (Gal 4:4) as 'a woman'—an obvious allusion to the Protevangelium (Hn 3:28); and (3) St. John's taking from her experiences certain features for his prophetic portrait of the Church as the sun-clothed woman (Rev 12).

In the first three centuries,—the Christian literature of those decades toward Mary strictly to the lines of the NT. References to her are sparse; and these, though distinct as to her being the Virgin Mother of the Lord and therefore to be honoured, give no suggestion of augments which could be called a cult of her. Polycarp's short Epistle does not contain her name; but in his "The ways of the Lord, Eng. tr., Edinburgh, 1855-58, viii. 467 ff., on Jo 1:26-27." There is certainly no evidence in St. John or elsewhere in the NT that he or any other, so much as thought of her being established as a mother to pity all Christians, and help them in their approach to Christ. On the other hand, to expound the passage, as some Protestant writers (even Stier, loc. cit.) have not hesitated to do, as an indication that all Christ's earthly relationships—ever Mary's to Him as His mother—ceased and determined by His death is to come perilously near the denial of His abiding manhood whereby, as our Holy Priest within the veil, He is still 'touched with the feeling of our infirmities' (He 4:14).

A sufficient explanation of our Lord's neither calling her here His mother nor naming either St. John or her is supplied when we take it as an instance of His considerateness; had He betrayed the relationship, those who mocked at Him would not have been slow to insinuate and the newly reawakened courage of the disciple might have again been shaken by the utterance of their names.

The only other notices of Mary in the NT are: (1) the mention of her by St. Luke (Ac 1:14) in the place that appears the first, and only one named, among the Christian women, and as still, after the Ascension, 'the mother of Jesus'; (2) the reference to her by St. Paul (Gal 4:4) as 'a woman'—an obvious allusion to the Protevangelium (Hn 3:28); and (3) St. John's taking from her experiences certain features for his prophetic portrait of the Church as the sun-clothed woman (Rev 12).

MARY

It is a theorem of ecclesiastical discipline, as the faithful know, that at the moment when the martyrs are named at the altar of God, there they are not prayed for; but for others who are commemorated, the prayer is offered (Bp. I, 55). [1652, p. 89].

There is no direct evidence that among the martyrs the Virgin was so much as mentioned.

The one thing in these centuries that points in the direction of any cult of her in the Church is the appearance, somewhere in the 2nd cent., of the apocryphal Evangelium Jacobi, which was very popular, and became the basis of two later works, Liber de Infantia Mariae et Christi Soteratorius and Evangelium de Nativitate Mariae. It is from these that the legend that He who washed her parents Joachim and Anna, have been derived, and the story of Mary's nurture in the Temple from her third to her twelfth year. These books, if they were not genuine, at least met a growing and significant demand, which was not checked by their condemnation as heretical in the earliest papal Index expurgatorius attributed to Pope Gelasius (A.D. 492-496).

3. During the period of the four great councils (A.D. 325-451).—With the conversion of Constantine, the Church became so irresistible and, as Newman puts it, the spirit of the world was poured into the Church (The Arians of the Fourth Century, London, 1876, p. 258). The leaders of the faithful had to raise their standard against the heresy of this period, and heresies born of pagan conceptions of the Godhead. It is among the latter that we find the earliest notice in Christian history of an actual worship of St. Mary. Epiphanius reckons it a heresy (Herm. 32); that certain that 'Phrahe, Scythia, and Arabia' were in the habit of adoring the Virgin as a goddess and offering to her a certain kind of cake (kullosian χωρά), whence he calls them 'Collyridians'. Their practice (cf. Jer 44:19) and the way of underlining it were undoubtedly relics of heathenism always familiar with female deities. Epiphanius rebukes them:

Let Mary be had in honour, but let the Lord be worshipped (Herm. 32).

Honour to Mary' was inevitably augmented by the Church's answer (true and necessary as that answer was) to the much more formidable heresy of Arianism. Arianism, stumbling at the awful mystery of the Godhead, the Word made flesh (John 1:14) and churning in with the old pagan conceptions of gods older and younger, greater and less, presented to men the Eternal Son as only the first of creatures. It did not deny that Christ was born of the Virgin, but it denied that the human nature, issued from her womb, was personally God, it lowered the greatness and the glory of her motherhood. It is not so much, however, in the interests of her dignity as for the attainment of the full truth concerning Christ that the orthodox theologians of this period are accustomed to refer to her. This holds them all—of Cyril of Alexandria as well as of Athanasius, Basil, and the Gregory's, of Ambrose and Augustine as well as of Leo. It was in this connexion that Athanasius had spoken of her as 'hierarch of the Church before the Edmonton preacher shocked the congregation of St. Sophia by refusing her the title. Athanasius gave it her because 'from the flesh of holy Mary the Son of God came down and spilled his blood' (Ep. lix, 'ad Ep.'). And, again, because 'when He was about to ascend he was put into the hands of the Virgin' (Ep. lix, 'ad Ep.'). And also, because 'when He was in the hands of the Virgin, He returned to the Church a saviour of the world' (Ep. lix, 'ad Ep.'). And again, because 'when He was put into the hands of the Virgin, He returned to the Church a saviour of the world' (Ep. lix, 'ad Ep.').

In like manner, Gregory of Nyssa, 'Have any of ourselves dared to say 'Mother of Man' of that most holy Virgin the Mother of God' (Introd. iv. 'de Adventu Domini') (P.L. xvi. 1474). Cyril of Jerusalem, with equal force, uses Christ's birth of Mary as demonstrating the companionship truth of His real manhood. His real manhood was, he said, not less than the Virgin Mary.'—Believe that this Only-Begotten Son of God... was be- gotten of the holy Virgin by the Holy Ghost, and was made Man, not in seeming and wordly show, but truly, without passing through a channel, but truly of her made flesh... if the Incarnation was a phantom, salvation is a phantom too' (Cot. Lct. iv. 9).

All the heresies, we may say, of this period were, in one form or another, denials of the Incarnation; they all fixed men's thoughts on the question proposed by our Lord Himself, 'What think ye of the Christ? Whose son is he?' (Mt 22:21). It was impossible for the Church to refute any of them without speaking, as of God His Father, so of the Virgin Mary His Mother—to reply to Macedonianism, with its denial of the Godhead of the Holy Ghost who overshadowed her (Lk 1:35); to Apol-

narianism, which, refusing to Christ a human soul, cut off from His sacred heart its thousandfold return of her love; and then to Nestorianism, which, dissolving the unity of Christ's Person, by one and the same Word and Sonship, makes Him being Himself the Word incarnate to a man in close association with the Word, and made Mary the mother only of a human infant. All these errors helped to burn in upon the mind of the Christians of that age the truth which E. B. Pusey tells us so

'started him in his young days when first it flashed upon him that it must be true, that one of our nature, which is the last and least of God's rational creation was raised to a nearness to Almighty God above all the choirs of angels... Yet it was self-evident, as soon as stated, that she of whom Christ desired to take His human flesh was brought from herself above all created beings; that she stood single and alone in all creation or all possible creations, in that in her womb He who in His Godhead is consubstantial with the Father, deigned, as to His Human Body, to become consubstantial with her' (Edentonic, ii. 24).

It is no creature-worship; it is the sense of this tremendous fact brought home to the heart with the love of the Incarnate Son that explains at once the profound solemnity of Cyril's letter to Nestorius and the splendid elevation to Pædagogion oration on the Virgin Mother. It is not that she is the mediator (there is no hint of such a thought); it is that He is God whom she bare, whom 'she... cradled in inexplicable beauty'. Nor do we fancy (with the writer on 'Mary' in E.B. 11) that she was the Nicene solution of the Arian controversy, however correct it may have been theoretically, that 'undoubtedly had the practical effect of relegating the God-man redeemer for ordinary minds into a far away region of "remote and awful Godhead," so that the need for a mediator to deal with the very Mediator could not fail to be felt' (E.B. 11 xvii. 812f.). As a matter of fact, it was the complete manhood of our Lord that the Church in the next succeeding controversies (Monothelitism and Monothelitism) triumphantly asserted, while at the same time carefully retaining the condemnation of Nestorianism. Indeed it has been observed that it is in the creed of Chalcedon, and not in the canons of Ephesus, that the term ιεραρχησις occurs. With all the honour that they gave to her, the Fathers of this age never forgot that, if she ministered to our salvation by becoming, on and through her faith, the Mother of our Redeemer, she still was the mediator in Him that she herself was saved. The great titles bestowed upon her by the Fathers relate to the fruits of the Incarnation.

'The flesh of the Virgin differs nothing from the flesh of sin;... but her body in the same was the same as with ours, for Mary was our sister, since we are all from Adam' (Ep. lix, 'ad Ep.').
And Pope Leo I. (in a passage still remaining in the Roman Breviary as one of the Lessons for Christmas Day) says that "to [Christ's] birth alone the thrones of human passion had not contributed."

In entire consistency with this teaching of the great Fathers, we find that the worship of the Church in its liturgical services, is patterned from head to foot after the example of any cult of the Virgin. There are indications that she was prayed for.

Thus in the Armenian Liturgy, 'We beseech thee that in this holy sacrifice remembrance be made of the mother of God the holy virgin Mary, and of John the baptist, of the proto-martyr Stephen, and of all the saints' (P. E. Brightman, Liturgies Eastern and Western, p. 449).

But she is not often mentioned. In the liturgy in the Apostolic Constitutions she is not even named; if she is referred to there at all, it is as included with others—apostles, martyrs, virgins—whose names Thou knowest. In other liturgical works of the period—e.g., the Statutes of the Apostles (Ethiop. c. 350)—there is no mention of any commemoration of the departed, nor is there in the Armenian Church a liturgical office for the dead.

Enchirastic service in the Testamentum Domini gives thanks that the 'Word . . . was born of the Holy Ghost and the Virgin'; but its commemoration of the dead, 'Remember those who have fallen asleep in the fear of God, and the habits of Thy saints,' names neither the Virgin nor any other saint.

The Pilgrimage of Silvia also is silent concerning her, while the Catechetical Lectures (Lect. xxiii. on the Enchirastic service) of Cyril of Alexandria, where we might have expected to find something, has only this:

'Then we commemorate also those who have fallen asleep before us, first, Patriarchs, Prophets, Apostles, Martyrs, that as in their intercessions God would receive our petition—still no mention of Mary.

In the liturgy of the civil diocese of Africa in the time of Augustine (A.D. 400) the only place where an invocation of the Virgin could have come in is in its commemoration of the saints and martyrs, but there is again no direct evidence that her name appeared (Ordo Rom. Primi, Append. iv.). Of Basil his latest editor says:

'Of any cultus of the Virgin, St. Basil's writings shew no trace.' Even Letter CCLXX, which bears obvious marks of spuriousness, and which proceeds from a later age, does not go beyond a recognition of the Blessed Virgin as Stereosa, in which the author himself is agreed, and a general invocation of the apostles, prophets, and martyrs, the Virgin not being set above these' (Bleinhelm Jackson, Prolongamina to St. Basil, ii. 274, and 275, and De Viris Illustribus. viii. 1556). The passage runs: 'I invoke them to supplication to God, that through them, that is through their mediation, the merciful God may be propitious to me.'

That the departed saints, now 'with Christ' (Ph 19), do pray for us is an obvious conclusion from their perfected love; it has some sanction in the N.T. (Rev 8); it is argued for on this ground by Origen (de Orat. 51), Eusebius (de Martyr. Palest. v.), and Jerome (Ep. 1x.); and it was an easy transition to ask God that their intercessions might be heard for us; but 'Omniscience alone can hear the cry of every human heart, and Omnipotence alone can deliver everywhere,' and it was quite another thing to credit any saint, however highly exalted, with powers or prerogatives of this extent. Not so did the Fathers of the Church and the holy martyrs pray. Cardinal Newman admitted that no prayer to the blessed Virgin is to be found in the voluminous works of St. Augustine. And when, late in the 4th cent., we do find cases of direct invocation of this or that individual saint, it is in private prayer, and in regard to some more restricted matter in which that saint had been interested when on earth and might be presumed to be interested still. Of this limited sort was the prayer of Justina, mentioned with incidental approval by Gregory Nazianzen (Orat. xxiv. 11), 'imploring Mary the Virgin to come to the aid of a virgin in danger.' St. Mary had already been thought of as the 'virgin of virgins'—the leader of those virgin bands to whom, next to the martyrs, the Church felt that she owed a special debt. The martyrs were her witnesses to Christian truth; her virgins the conspicuous exponents of Christian purity. Virginity, be it remembered, was perhaps the last of all the graces fostered—by our Saviour Himself (Mt 1946), and by St. Paul (1 Cor 727); under the pagan persecutions the virgin martyrs had won a twofold triumph; and when, on Constantine's conversion, pagan sensuality proved a menace no less formidable to morals than heresy to doctrine, virginity, organized into monasticism, became more and more alike the expression and the shield of this side of Christian virtue. Athanasius found the monks and virgins of Egypt of the greatest use to him in his contest with Arianism. He introduced monasticism at Rome; Ambrose and Martin carried it respectively to Cisalpine and Transalpine Gaul; through the latter, the trainer of missionaries, it spread over the Celtic West. Jerome carried it to Palestine; Basil was its protagonist through Asia Minor. Virginity and monasticism, no less than orthodoxy, turned the thoughts of the faithful very much towards St. Mary. If orthodoxy found, as we have seen, that Christ's pre-eminence was sufficient to destroy the threat of Arianism, and His passion, the true reaction of His Godhead and His manhood, so did monasticism boast of her as the crown of virgins. If orthodoxy called forth the panegyric on Mary by Proclus and Cyril of Alexandria, the thought of her virginity led even more directly to her being regarded as a patroness.

It is while consoling the votaries of the virgin life that Augustine reminds them how the birth from the one Virgin is the glory of all holy virgins: they, too, are mothers of Christ if they do the will of His Father 'de sanct. Virg. v.'

Thus, too, Jerome: 'Therefore the virgin Christ and the Virgin Mary have dedicated in themselves the firstfruits of the virginity of both sexes' (Ep. xliii. ad Pam. 21), and Gregory of Nyssa:

'What happened in the stainless Mary when the fulness of the Godhead which was in Christ shone out through her, that happens in every soul that leads by rule the virgin life. No longer, indeed, does the Master come with bodily presence, but, spiritually, He dwells in us and brings His Father with Him' (de Virg. ii. 1).

4. During the mediaeval period.—For the purposes of this article, this period may be dated from the extinction of the Western Empires (A.D. 476) to the close of the Council of Trent (1563). Throughout this period Christianity runs in an Eastern and a Western stream; but, in spite of their divergence, there took place in both a remarkable development in the history of the Western Empire. It came to a head more early in the East. There, where the chief heresies concerning the Trinity and Incarnation had arisen, and where theological speculation was more congenial to the public taste, new forms of error on these subjects were constantly springing up, and to all these the orthodox found a complete answer in the Scripture records of our Saviour's birth of a Virgin Mother. His Virgin-birth witnessed alike the reality of both His creatures and the unity of His Person; it baffled monasticism: it reburied the impieties first of the Iconoclasts and then of the Muhammadans, while the calamities which afflicted and cut short, if they did not, till A.D. 1453, destroy, the empire in the East, were at least sufficient to impress all Christians who remained, or had been, its subjects with awestruck thoughts of Christ as the Judge of men. They remembered how, in the days of His flesh, the good condemnation had, unrebuked, deemed such himself not worthy to come to Christ direct (Lk 7), but had besought Him through the elders of the
It must be admitted that such prayers are but inferences, not unnatural, from the deliberate teaching of the latest, and henceforth the most influential in the East, of the Greek Fathers, John of Damascus, that Mary is the sovereign Lady to whom the whole creation is made subject by her own personal action. She, being the warrior of the office in the Incarnation, is herself, through His gift, a direct giver of help to such as may seek it at her hands. It should be added that the Feast of her (not of Christ's) Presentation in the Temple (the story of which is Christ's) in the East in the 8th cent., and was not adopted in the West till the 15th. See art. IMMACULATE CONCEPTION.

The Western Church, too, was to find through many ages the practical value of monasticism, and to carry the doctrine of celibacy to further lengths than its Eastern sister. It, too, was to have experience of errors (such as the 5th cent. Adoptionism) which, disparaging the Saviour, disparaged her also. In Spain, though her influence was felt in the Sicilies, as well as through the Crusades and Algerian piracy, it was to come into painful contact with Islam. In the West too, therefore, the reaction from those errors contributed its impetus to every movement for her virginity, and while manifold oppressions of the poor turned them naturally to the thought of her as the Mother of Pity, and the chivalry of the knight made her the Lady of his orisons. But the development of her name Mary and the legend it is hardly perceptible; in the Life of St. Columba she is not mentioned.

In Bede's De, St. Wilfrid has a vision of St. Michael telling him, 'the Lord has granted you life; now the prayers of your disciples, and the intercession of His Blessed Mother Mary, will perpetually virgins, I think, and the Hymn of the Visitation of Elia chants how 'over the Virgin Mother a shining virgin band rejoices' and how 'her honour has made many virgin blossoms to spring forth' (Ps. 20).

At Rome in the pope's (8th cent.) mass on Easter-day at the Basilica of St. Mary Major, the only mentions of her are these (1) in the Great Intercession:

"Venerating the memory first of the glorious ever-Virgin Mary, Mother of the same our Lord and Jesus Christ; and also of Thy blessed apostles and martyrs ... and all Thy saints; by whose merits and prayers we do pray, that we may be defended by the help of Thy protection; through the same Christ, our Lord;"

and (2) in the Post-Communion:

"Deliver us, O Lord ... and at the intercession for us of the blessed and glorious and ever-Virgin Mary, Theotokos, and of Thy blessed apostles ... give peace in our days ... through our Lord ... There is no direct invocation of her, nor prayer to her (Ordo Rom. Trimeste, pp. 37).

nor, indeed, is there anything more in the Canon of the Roman Mass to the present day, though in the Proprium Missarum de tempore this 'collect of S. Mary' is said on all Sundays in Advent:

"God, who willest that Thy Word should take Flesh from the womb of the blessed Virgin Mary, grant that we who believe her to be in truth the Mother of God may by her intercessions help us before Thee.'"

But neither is this, nor the Secreta de S. Maria, nor the Post-Clergy, 'Maria a prayer' in the Canon of the Mass. The last was indeed adopted in the English Book of Common Prayer as the collect for the Annunciation. The confession of sins in the Mass made "to Almighty God, to the Blessed Mary, ever-Virgin ... and to all saints," is held to be but a recognition of the fact taught us by St. Paul, that the whole body of the Church (from which death does not separate the saints [Ro 8:23]) suffers with the suffering of every member (1 Co 12:26); and, inasmuch as, in like, spicken us, it is the Head is the honour of all His members, it cannot be wrong, it is thought, to ask, as is done in the prayer 'Spero sancta Trinitas,' that our memorial of Christ's Passion, Resurrection, and Ascension may redound to the honour of Mary and all saints, as well as to the salvation of all for
whom they pray. These are regarded as fair inferences from the truth which we all confess, in the Apostles' Creed, of the Communion of Saints. The moderation of the Roman Missal did not suffice, however, for the popular devotions, which were strongly made known in the form of the litany. The effect of invoking her directly to intercede for us (fora nobis), and, next, of asking her personal help for both soul and body. Two festivals really of our Lord—His Presentation in the Temple (Feb. 2), and His Conception (March 25)—became rather than those of her Purification and of the Annunciation to her, while the Feasts of her Conception (Dec. 8), her Nativity (Sept. 8), and her Assumption (Aug. 15), already observed in the Eastern Churches, were introduced into the West, at first in other lands rather than in Italy or at Rome, and not always either with the same meaning or without protest.

Thus, the observance of the Assumption was appointed by the synod of Salzburg in A.D. 800, but is marked as doubtful in the capitularies of Charlemagne; literally its title imports no more than her death—the taking of her soul to God—and it is sometimes called her dormitio, or 'sleep.' The doctrine of her bodily assumption derived from the apocryphal story condemned by Pope Gelasius, though widely believed, and implied in the Breviary lection from John of Damascus, is not even now de fide in the Roman Catholic Church, but de extra Cathedra in the West; and, the Feast of the Assumption of the Virgin (July 25), also apocryphal in origin, was introduced from the East in the 11th cent., withdrawn from the Calendar by Pius v. (1555-57), and reintroduced by Sixtus v. (1555-90). The Nativity of Mary (Sept. 8), the 'Feast of the Annunciation,' was inserted in the Calendar of Augustine, cited in its Office, both, it is commonly said that this fact is first mentioned by Andrew of Crete (c. 750); its observance was appointed by the synod of Salzburg in 800, and in 1517 had not become general in Italy, while (c. 1110) St. Bernard blames the canons of Lyons for the innovation of keeping the feast of the conception because it was not holy like her Nativity, St. Mary being, he held, not conceived without sin, but sanctified in the womb, Thomas Aquinas said (Summa Theol. III. xxxi.) that the Church of Rome tolerated it but did not keep it (a not uncommon way with some in those days of treating popular devotions); and, when it did converse in 1571, in the chapter of St. Mary Major, it was still, so late as 1340, the festival only of the 'Sanctification of the B. V. Mary.' Underlying these different names for this festival lay the long controversy as to the sinlessness of Mary. All agreed (as all orthodox Christians must agree) that she was sanctified so as to yield a perfectly sinless manhood to the Son of God (Lk i. 38, He 7:28); but there arose in the 13th cent. a question when the process of her sanctification began, and, while divines of the date and authority of Aquinas denied her Immaculate Conception, the arguments on which Scotus based his support of it were derived wholly from abstract and a priori considerations. The discussion, nevertheless, tended to its exaltation among all other saints, on the ground not alone of her office, but of the grace bestowed on her. It must be confessed that some medieval writers transgressed all bounds in the language which they employed, Peter Damian, e.g., speaking of her as the 'dama sancta de Nativity Mar.' (PL clix. 749), while the very natural use of what Archbishop John Hamilton's Scots Catechism of 1552 calls the 'bonny image of the Baby Jesus and His Blessed Mother' to remind us of His gracious coming as an infant, sanctity of body and soul darkened into something not far from idolatry when—as sometimes happened—one image of the Virgin (generally a black or an ugly one) was regarded and resorted to as more powerful for the help of suppliants than another.

5. From the Reformation to the present day.—The fundamental position of the Protestant Reformers, that the justification and salvation of the sinner are the forms, first, of invoking her directly to intercede for us (fora pro nobis), and, next, of asking her personal help for both soul and body. Two festivals really of our Lord—His Presentation in the Temple (Feb. 2), and His Conception (March 25)—became rather than those of her Purification and of the Annunciation to her, while the Feasts of her Conception (Dec. 8), her Nativity (Sept. 8), and her Assumption (Aug. 15), already observed in the Eastern Churches, were introduced into the West, at first in other lands rather than in Italy or at Rome, and not always either with the same meaning or without protest.

Thus, the observance of the Assumption was appointed by the synod of Salzburg in A.D. 800, but is marked as doubtful in the capitularies of Charlemagne; literally its title imports no more than her death—the taking of her soul to God—and it is sometimes called her dormitio, or 'sleep.' The doctrine of her bodily assumption derived from the apocryphal story condemned by Pope Gelasius, though widely believed, and implied in the Breviary lection from John of Damascus, is not even now de fide in the Roman Catholic Church, but de extra Cathedra in the West; and, the Feast of the Assumption of the Virgin (July 25), also apocryphal in origin, was introduced from the East in the 11th cent., withdrawn from the Calendar by Pius v. (1555-57), and reintroduced by Sixtus v. (1555-90). The Nativity of Mary (Sept. 8), the 'Feast of the Annunciation,' was inserted in the Calendar of Augustine, cited in its Office, both, it is commonly said that this fact is first mentioned by Andrew of Crete (c. 750); its observance was appointed by the synod of Salzburg in 800, and in 1517 had not become general in Italy, while (c. 1110) St. Bernard blames the canons of Lyons for the innovation of keeping the feast of the conception because it was not holy like her Nativity, St. Mary being, he held, not conceived without sin, but sanctified in the womb, Thomas Aquinas said (Summa Theol. III. xxxi.) that the Church of Rome tolerated it but did not keep it (a not uncommon way with some in those days of treating popular devotions); and, when it did converse in 1571, in the chapter of St. Mary Major, it was still, so late as 1340, the festival only of the 'Sanctification of the B. V. Mary.' Underlying these different names for this festival lay the long controversy as to the sinlessness of Mary. All agreed (as all orthodox Christians must agree) that she was sanctified so as to yield a perfectly sinless manhood to the Son of God (Lk i. 38, He 7:28); but there arose in the 13th cent. a question when the process of her sanctification began, and, while divines of the date and authority of Aquinas denied her Immaculate Conception, the arguments on which Scotus based his support of it were derived wholly from abstract and a priori considerations. The discussion, nevertheless, tended to its exaltation among all other saints, on the ground not alone of her office, but of the grace bestowed on her. It must be confessed that some medieval writers transgressed all bounds in the language which they employed, Peter Damian, e.g., speaking of her as the 'dama sancta de Nativity Mar.' (PL clix. 749), while the very natural use of what Archbishop John Hamilton's Scots Catechism of 1552 calls the 'bonny image of the Baby Jesus and His Blessed Mother' to remind us of His gracious coming as an infant, sanctity of body and soul darkened into something not far from idolatry when—as sometimes happened—one image of the Virgin (generally a black or an ugly one) was regarded and resorted to as more powerful for the help of suppliants than another.
MÁSAI

Some Negro race (which in bodily characteristics verges on the Hamitic negroid) was pastoral; and cattle, sheep, goats, and the domesticated ass of Ethiopia played a great part in their life and mental consider then has been not only permitted, but more and more encouraged, by the popes the line of difference is drawn; e.g.,

'I'll, Queen of Mercy! Hall, our life, our sweetness, our hope! To thee we fly, the languished sons of Eve' (Meditations of the Breviary, reformed by order of the Council of Trent, published by order of Pope Pius V, and revised by Clement VIII and Urban VIII).

The Breviary, with the Olliers since granted, may be held to be in no strange contrast to the NT—nearly as full of Mary as of Christ. On all Saturdays, and throughout the whole month of May, votive offices of the Blessed Virgin are said. The Sunday within the octave of the Nativity is the Feast of the Most Holy Name of Mary,' the third Sunday of Sept. that of her 'Seven Sorrows'; four Sundays in October are devoted respectively to her Resurrection, her 'Motherhood,' her 'Purity,' her 'Patronage,' while the old festival of her Conception (Dec. 8, originally her Sanctification)—is now that of her 'Immaculate Conception,' and the bull of Pius IX, declaring this an article of faith to be received by all Christians supplies a large proportion of the lessons appropriate with its octave. The Breviary itself, moreover, is restrained in comparison with such books as Le Glorie di Marra by Alfonso de Liguori (1669-1757), the founder of the Redemptorist Order. Liguori goes far beyond the Council of Trent, for whereas the latter says only that 'it is useful to invoke her intercessions, he insists upon the necessity of doing so:

'Mary is our life, because she obtains for us the gifts of pardon . . . and of perseverance: 'Mary is the preacher of sinners with God (G. I., iii. vi. 2).

MÁSAI. History.—It is advisable, first of all, to specify what we mean by the term Máasi. It is the tolerably correct designation of a widely scattered but not numerous Nilotic Negro people in E. Equatorial Africa, whose habitat, down to the beginning of the 19th cent., stretched from the Nandi plateau, the south end of Lake Baringo, and the southern slopes of Mount Kenya on the north almost to the 6th degree of S. lat. in the south. On the east they were bounded by the Bantu and Galla peoples of the region between the Tana and the Omo, or the Galla of the Nandi and Bantu peoples of the Sokot and Lumbwa highlands, which form the eastern limits of the Victoria Nyanza basin. The older name which this distinct race of pastoral nomads adopted for themselves—or at any rate, for the pastoral and warlike sections of the original tribe—was (according to A. C. Hollia) H-man, which in the 19th cent., if not before, became H-náasi (spelt Masasi by some). The western and northern sections of the Máasi people, especially those peoples known as the Tuguru, Nandi, or Wasághi, were not only cattle-keepers and shepherds, but also indus-trious agriculturists. Still, the main bent of this hand-

1 In the traditions of the Máasi their house-land—Kopekob or Kopekob—by to the north of their present habitat, they left the south the 'land of strife,' show that their southward advance was attended by constant struggles with the preceding tribes not of Máasi race.

2 See Tuki-seup, in which the male wears a head-dress, closely covered by long black hair, the end of which is hanging down over his face, and the female wears a mane of long hair, that is fastened with a black ribbon.

3 In the traditions of the Bantu of the south-western Máasi that they once possessed or knew of this long-horned breed.
like aristocracy of E. Equatorial Africa — implanted this long-horned type of ancient Egyptian ox on the highlands between the Victoria Nyana, Tanganyika, and the frontier of the Congo forest. But the long-horned Galli ox has never yet made its appearance to the east of the Victoria Nyana or among the Masai tribes, whose cattle are Indian in 2. Gods.—Though in physical characteristics the negro element predominates in the Masai over any other, this people is superior in mentality to the pure-blood negro; and one is struck with a certain primitive religiosity and a natural poetry in their thoughts, stories, and religious beliefs rarely found among negro peoples, and probably due to some ancient or modern infusion of the Caucasian. The Masai believe in a far-reaching divine power subordinated to their gods, who, however, he seldom bestirs himself to circumvent. Ei-ai is known to some of the non-Masai tribes as 'Kai' or 'Gai' without the article, and by the Masai themselves is called by other names, such as Faasi. In addition to these two gods or three gods (according as the Black and Good God is or is not identified with the Ruler of the Heavens, Ei-ai), the Masai believe in superhuman beings somewhat resembling the jinn ("genii") of the Arabian Nights. It is convenient to call them similar beliefs reappear in the Sudan and in many parts of the northern range of the Bantu languages, such as the Cameroons. These jinn, or devils, trench in some of their characteristics on the werewolf conception, being in some aspects like a lion and in others like a man, or having originally taken the form of lions and then put on an appearance half human and half like an inanimate stone; or they are believed to go about looking like a man on one side, and on the other like a monstrous human being. Their favourite home is the forest. They are mainly, if not entirely, anthropophagous in their food preferences, and do not touch wild beasts.

In one of the Masai stories recorded by Hollos it is narrated that the devil's custom is to call to human beings who pass the place of his concealment in the forest. 'One, my brother, help me lift this load of firewood.' If they are foolish enough to proceed to his help, they are struck with a pointed stake which he carries. When any particular district was believed to be haunted by a devil and the firewood was to pass through it in their customary migrations in search of pasture for their cattle, they would arrange to march past the cannibals' haunt in as large a body as possible, the warriors going both in front and behind. 'Should a voice be heard issuing from the forest calling one to another, everybody remains silent, for they know that it is this devil that is calling.' In another story the anthropophagous jinn ate up all the men except a woman, who succeeded in hiding herself with her child in a pit. As the boy grew up, he made a Geoffroy's elephant (presumably) poisoned; and, when the demon, discovering their existence from the smoke of their fires, came to eat them, the boy from the branches of a tall tree hurled a spear at the monster's body, which at first thought that it was merely the slings of gods, until he succumbed to their effects. Repeating apparently in his dying moments, he said in their action as to how he might proceed to recover the cattle of the tribe, and most, if not all, of the people that had been captured. Out of gratitude these reconverted Masai elected the boy as their chief.

It is quite possible that this and similar stories, widespread over Negro Africa, refer to the lurking cannibals of some big and brutal race which lingered on in the forests of Africa long after the more open country had been populated by the modern types of man. Such grim stories may have worn over their backs the pelts of wild beasts that they had killed, and thus have seemed on one side beast, and on the other a ghoul-like type of man.

4. Cosmology.—The Masai believe that, when Naterukob,7 the demi-god of Mount Kenya, desired to bring the first men on the earth—presumably Masai—he found three things in E. Africa, viz., an already existing race of people, properly spelt Toroobo and means (dwarfish), who was a kind of pre-Adamite man, an elephant, and a serpent, all of whom lived together. In effect, he of the idea of a world within a world, and among the Masai he is hallowed as both the serpent and the elephant mother, who, however, before her death had given birth to a calf, which escaped from the Dorofo, and in its journeying about the earth it grew and increased, and to whom it confided its troubles. At this juncture God Himself (masai) intervened, and commanded the calf to present itself to the Master of E. Africa. Other variable of this story make Naterukob the divine man of Mount Kenya, and this, in some respects, seems more in keeping with the Masai, and is always referred to whenever the Masai come, the Dorofo seems to have delayed. The consequence was that the Masai received God's good gifts and bequest because such is life and the master of E. Africa. Other varieties of this story make Naterukob the divine man of Mount Kenya, and this is sometimes quoted as the source of all the interregnum, and do not involve the intervention of the great sky-god, Ei-ai.

5. Eschatology.—With regard to a life after death, in some of the Masai traditions it is related that, when the man-god Naterukob gave to his primal ancestor, Le-eyo, instructions what to say when a child died, the latter out of selfishness because the child next to die was not his own—inverted the prayer which was to adjure the child-spirit to return. Le-eyo consequently prayed that the moon, though it died, might return again, but that the dead child might remain dead. Some time afterwards Le-eyo was likely to lose a child of his own, and therefore said the prayer rightly. But it was too late; only the first invocation of nature held good, and thus man, when he dies, never comes back, but the moon always returns. Yet this great agony of the mind of man—this refusal to regard death as the end of all in the personalities of those whom we have loved or respected—prevails with the Masai to a greater extent even so that repeated assertions in their folk-tale that 'All is over with man as with the cattle, and the soul does not come to life again.' With this people there has been a gradually growing belief (it is so also among many Bantu tribes) that a medicine-man, a great doctor, a great chief, or a very wealthy

6. The Dorofo are the supposed hunters of E. Africa, shorter in stature than the Masai, but not very dissimilar from them in appearance, and containing many mixed strains of blood—Hausa, Negro, and possibly Bushman.

1 From the circumstance that this root assumes the form of one of the best known plants of Africa. The Masai, Oxford, 1895, p. 346.
3 Hollos, p. 221f.
4 J. L. Krapf, the great missionary pioneer of Equatorial E. Africa, writing in 1861 in his Preface to the Vocabulary of the Engataki Elucob (the Western Masai), thus describes the religious beliefs of the Masai: 'At the remotest antiquity there was one man residing on "Oldoinyo eito" (Kilimanjaro) who was superior to any human being, and whom Engai (heaven, supreme being, god) had placed on the mountain. This strange personage whose beginning and end is quite mysterious and whose whole appearance impresses the Watussi mind with the idea of a demi-god is called . . . Neterukob, the demi-god of this strange person residing on Oldoinyo eito reached a man named Enjantu Eunnie, who with his master lived on Mount Sambu which is situated to the south-west of Oldoinyo eito and is a high mountain but does not attain to the height of Oldoinyo eito. When this man married his wife he who by the intervention of Naterukob became fruitful and gave birth to a number of children. Naterukob also taught Enjantu to be the founder of the Kikuyu tribe. He lived on Mount Sambu where he was at ease and was content. One day he saw in the forest . . . It is to Oldoinyo eito ("Kent", in the same as the Waikamba call it) that the Waikamba say: "Let us obtain the assistance of Naterukob for getting rain, cattle, and health from the Engai."
person cannot entirely cease to exist in personality even after the body is dead, buried, and decayed. It is thought by the Masai, as by Zulus and numerous tribes of W. African Bantu, that the soul of a deceased person of importance enters one or other of the python-like snakes which frequent the vicinity of man habitations in pursuit of rats and other vermin. These (usually black) snakes are, therefore, sacred in the eyes of the Masai, who are careful not to kill them. If a woman sees one in her hut, she pours milk on the ground for it to lick up. A variety of species of snake are even regarded as totem animals by one of the Masai clans, who protect them against ill-treatment by the members of any other clan, and will even call on them for help if they get worsted in a fight, exclaiming: 'Angel of my mother's horse, come out!' The Masai believed that the female snakes thus invoked would bite like snakes had not adopted them as a totem.

It has even been suggested by some Masai, probably not earlier than the latter years of the 19th cent., that the souls of very great chiefs are not sufficiently provided for by transmigration to a snake, but in some way go to heaven, to the abode of God. It is not improbable that this growing belief may have resulted from their talks with the early missionaries in E. Africa. They certainly believe that there is what we should define as a soul, some impenetrable living essence, and that this quits the mortal body when he falls asleep. Therefore a sleeper must not be too severely wakened or the soul may be lost; the soul be left outside the body and the man die. In one mood the Masai will assert that no such things as 'ghosts' exist, because they cannot be seen; in another they appear to believe that ghosts do exist and can be seen by cattle, though not by men. When a herd of cattle halts and stares fixedly at something, if it is not a lion or a leopard, it is a ghost.

6. Divination—The Masai have a very real belief in God, and, if they are vague about His personality and uncertain whether they are praying to the Great God of the Firmament or to the Black God of the Upper Clouds, to one or other they occasionally make sacrifices of sheep—a rite usually conducted by the women, who, as a matter of course, pray twice a day, while men and children only occasionally utter prayers. In these prayers men and women associate the evening and morning stars and the snow peaks of the great mountains, Kenya and Kilimanjaro, with the Deity. They pray for children and for the health of their children, for rain, for successes in time of war, and plenty of cattle. The present writer, however, when residing many years ago at Taveta near the eastern base of Kilimanjaro, noted that the men of the Wa-Taveita (mainly Masai in race and religion, though now speaking a Bantu language) could pray most earnestly and touchingly to Eh-ai, the Power of love, in their children's behalf. When one of their number gives birth to a child, the Masai women gather together and take milk to the mother; they then slaughter a sheep, which is called a 'purifier of a hut,' or simply a 'purifier.' The sheep is slaughtered by the animal, by themselves and eat all the meat, and no man may approach the spot where the animal is slaughtered, for it is considered unlawful. When they finish their meal, they stand up and sing a song, which may be rendered approximately thus (paraphrased from Hollis):

'God to whom I pray,
Who thunders and it rains,
Give me offspring.
To thee, O God, I pray, I do pray,
Then morning star;
To thee only every day do I pray,
Then who art of sweet savour like sage plants.'

Women and children also pray for rain. The old men's prayer in time of drought (chanted round a bonfire of sweet-smelling wood into which is thrown a charm from the medicine-man) is:

'Black god, Ho!
God water us;
O thou of the utmost part of the earth,
Black god, Ho!
God water us.'

Young men pray that their cattle raids may be successful and that they may bring back herds of cattle. All these prayers seem to be indiscriminately addressed both to God and to the morning and the evening star. God is not confused with the sun or the moon, but is living behind the morning star, and more powerful than these heavenly bodies, which are beings of either sex that alternately marry and quarrel. Of the stars other than the planets Venus and Jupiter they take little heed, and, with the exception of the Pleiades (the appearance of which in June has been interpreted as the return of the lions, their hunting season), the Sword of Orion, and Orion's Belt, Comets are perturbing as indicative of approaching disasters.

8. Source of Masai religion.—M. Merker, a German officer, who lived much among the Masai of German East Africa, published a work (first issued in 1904) in which, after discussing various Masai beliefs and customs, he attributes these and, in part, the origin of the Masai, to a strong wave of Semitic influence from the north, even reviving that old story, the dispersal of the Ten Tribes. It is difficult to understand how he can see anything in Masai belief and ritual that especially suggests Jewish blood or influence and at the same time overlook the many similar beliefs and rites in the intervening Hamites or the Semiticized Somalis. For unnumbered centuries waves of Canaanite influence and even trickles of Canaanite blood have been passing from Western and Southern Arabia, Syria, and Egypt through Ethiopia into Nilenland, the Central and Western Sudan, and the steppes and forests and lake regions of E. Africa. The Masai have brought their share of these beliefs, superstitions, and customs from their northermost centre of development— somewhere, possibly, in the basin of Lake Rudolf, a region that, no doubt, was influenced from Abyssinia a score of centuries ago, as it is at the present day. At the same time, attention should be given to Merker's records of Masai traditions and beliefs, especially as set forth in the later edition of his work (Die Masai, Berlin, 1910). A. C. Hollis, whose own work on the Masai is one of importance, and Albert Steggall, a missionary long resident in the eastern part of Masailand, both argue that Merker got his information regarding Masai beliefs chiefly from Masai who had long been connected with the Roman Catholic mission, and, consequently, that these informants were transmitting to him versions of the Hebrew traditions in the OT. The receptivity of the Masai mind is no doubt great; but no mission had been established in those regions a sufficient length of time for much teaching to have been imparted to the Masai boys, nor from what the present writer knows of mission work in these regions, is it likely that either Roman Catholic or Protestant missions
at that stage in their development spent much time in translating and teaching the book of Genesis to Masai inquirers. It is more probable that the ancestral beliefs of the Masais, when first in contact with the Christian Gallas or Abyssinians, and from them imbibed those ideas of Adam and Eve and the other traditions regarding the great Patriarchs which irresistibly recall the legends enshrined chiefly in the work of the great Jewish deities, may even have percolated through N.E. Africa in pre-Christian days, when the Jews and Idumeans were influencing a good deal of W. Arabia and of Ethiopia.

The stories transcribed by Merker are not only recent reminiscences of the Jewish myths of Adam and Eve, Cain and Abel, Enoch, Methuselah, Lamech, and Abraham, but even extend to a personality like Moses, actually bearing the name of Moses (or Massaum, or Masbothfeans, according to the belief of the Ten Commandments of Sinai, and of a paradise garden like Eden.

A good deal of this account of the Masai religion must be taken in the past tense. Year by year old beliefs are fading away, and the people are becoming either absolute materialists (with the white man as their wonder-working deity) or adherents of the various Christian missions, to which they are proving useful and influential converts.

**Masbothfeans.** According to Eus. *HEW.* xxii. 51, Hegesippus had written of the Hemerobaptists and the Masbothfeans (Masbothfeans) as two distinct sects "in the circumcision among the children of Israel." The brief characterizations of the Masbothfeans given by the ancient historians are based simply upon their etymologies of the name, which they connect either with the word "sabbath" or with the word "will," therefore. Among modern scholars A. H. Johnston has advanced the suggestion that the Masbothfeans were the followers of the early heretic Theoditius, also mentioned by Hegesippus, but in all likelihood the name simply means "baptist." In glossaries of Palestinian Arabic the only word given for "baptism" is *masboth,* and, as we know that among the Mandeans on the Euphrates the regular term for ceremonial immersion in running water was *masboth,* we can hardly doubt that *masbothia* signifies people in whose religious practices such immersions formed an outstanding element. Thus the Gr. term "Hemerobaptists" might quite well have been applied to the same group, and the idea that the two names denoted different sects may simply have been a misinterpretation of the word of Hegesippus. It is, no doubt, the case that in the time of Hegesippus there were among the Jews various parties which advocated the practice of immersion, each, however, after its own particular form; there were, e.g., the devout, who bathed every morning and evening, and the "bathers of the early morning," who thought it necessary to perform an immersion before morning prayer. The term "Hemerobaptists" would, of course, be quite appropriate for both groups.

The designation "Masbothfeans," however, would also suit the Elkesaites, and, in fact, pointedly suggests that sect, as the Elkesaites tradition contains the name *Masbothia,* formed from the same verbal root as *masbothia* (cf. and *Elkesaites*, vol. ii. p. 255). By the time of Hegesippus the Elkesaites had become so numerous in Palestine—though only, it is true, in the territory east of the Jordan—that he can hardly have remained ignorant of their existence, and it would seem very probable that those who had become known to him as the sect of the Masbothfeans were none other than the Elkesaites.

**Mask.** A mask may be defined as a moulded surface, representing the anterior half of a head and face, and usually worn over the face of a person. Further significations are the mask taken from the face of a dead impersonator, impersonation alone, sculpture—the front half of a human head and face preserved—and the head of a fox. A division is made by W. H. Dall into 'mask proper,' 'maskette,' resembling mask but worn upon but above or below the face, and 'mask bead,' resembling a mask, but not intended to be worn. This division is primarily anthropological.

The use of masks in one form or other and for various purposes has been practically universal in all stages of culture above that of the Aborigines of Australia may be assumed to represent. The greater proportion of the Polynesian peoples are an exception. It will be most convenient to arrange the subject according to the purposes for which the mask is employed, incidentally noting details of form and manufacture and variations of general type. It may be noted at once that both in form and in use there is the usual similarity between the most widely separated races. The mask is in most cases ethnologically independent in origin.

1. Views as to the original meaning of masks.

The usual purpose of a mask is disguise by a more or less defined impersonation, impersonation alone, or, more rarely, protection, physical or moral. The figures impersonated may be real persons, imaginary persons, especially spiritual and divine, or various animals and natural objects. Robertson Smith regarded the use of animal masks at ceremonial as a survival of an earlier practice according to which the worshippers put on the skin of a victim, in order to 'envelop himself in its sanctity.' In the form of a 'maskette' many peoples have used the heads of animals, even as a war head-dress. The ritual mask is frequently credited with the power of imparting to the wearer the qualities of what it represents. The Eskimo believe that the wearer is 'mysteriously and unconsciously imbued with the spirit' represented by the mask, and, when wearing the mask of a totem, he becomes that totem. In the drama of the 'pueblo' Indians the actor is 'supposed to be transformed into the deity represented.' The wearer of a mask in the dances of 'primitive' peoples is 'assimilated to the real nature of the being represented'—possessed by him. But neither this belief nor the desire to be enveloped with sanctity can be regarded as the original factor in the invention of the mask. Dall considers the original mask

1 W. H. Dall, *On Masks, Labrets, etc.*, in *S REW* [1884], p. 90.

3 F. W. Nellson, in *D REX* [1890], pt. i. p. 204.4.

to have been a shield held in the hand to protect the face from missiles, and later worn on the face, after which it was carved into a terrifying aspect, with the object of frightening the foe. On another line of development it became the helmet; but this view also fails to give any psychological element. The Australians do not have the mask, but in their ceremonies they disguise the face by painting, or with down and blood. Previous to the invention of the Attic dramatic mask, the Dionysian mummers painted their faces with wine, possibly with the idea of assimilation to the deity, and the masks of the ancient Roman kings and generals, whose faces were painted with vermilion on state occasions to resemble Jupiter. But this idea is clearly secondary. Again, it cannot be argued that the mask is a development from the custom of painting the face. The two are parallel reactions to the primordial dramatic instinct in its elemental phase of the assumption of another personality. The elaborate facial make-up of modern dramatic art is, when contrasted with the Attic masks, but analogous to the blackened face of the modern peasant mummer, as contrasted with the wooden masks of the N. American dancer. We may conclude that the ideas of assimilation, whether magical or religious, of terrorism, of protection, and even of disguise are secondary, and that the primary meaning of the mask is dramatic; the mask is a concrete result of the imitative instinct.

The various purposes, therefore, to which the mask is applied have no necessary development from one another, but are natural applications to particular purposes of the original mimetic instinct.

2. War masks. These are not of frequent use. In Central and Eastern Africa warriors used hideous ‘masks’ of animal hides. The natives of Taveta wore two masks representing lions, tigers, and so forth, to terrify the enemy. In medieval Europe and Japan, soldiers wore helmets fronted with frightful masks. The frontal skull on the helmet of the German ‘Death’s Head Hussars’ is of similar origin.

3. The mask of terror. For other purposes than those of battle, the terrorist idea has been applied. The Chinese placed horrible paper masks on the faces of their children in order to frighten away the ‘goblin of the痘痘 box.’ The mask of the office of ‘sham devil.’ In China, in order to neutralize the activity of an evil spirit, a man was masked to represent it, and placed in its sphere of operations to discourage its advance. The Greek mask, like the Roman’s helmet, was copied by similar ideas, with which a primitive custom may be compared: in Timor-laut, in order to deceive evil spirits and prevent them from injuring the remains of a dead man, a coconuts mask was placed near the body. The further idea is here involved of protection by means of a mask which, so to say, draws the enemy’s fire.

A similar use of the mask is seen in the expulsion of evils. The people of China and Celbes, when ‘driving out devils,’ blacken their faces or wear masks. Possibly the manked Perchten of Central Europe had originally a similar function. There may have been a mimic struggle between the Beautiful and the Ugly masks, symbolizing a struggle for the crops; masked mummers at Kaysan sowing festivals represent evil spirits.

4. The mask of justice. Officers of justice or terrorism assume the personality of a supernatural inquisitor, the Volume of medieval Europe being a historical case. Executioners wore a mask, and possibly the black cap of the judge is an adaptation.

5. The mask in secret societies. These institutions are practically universal in the middle culture. In some cases they include among their functions the administration of some form of justice. This, like all their proceedings, is carried out with mummery, and the mask is employed along with other disguise or impersonation.

The Sindurao society of Loango collects debts; the tolled the war mask. The Kukwes, Egbo, and Egungun are other instances of the West African societies; their masks are based on various ideas connected with the tutelary spirits of the society. The Ogelon society of the Yoruba-speaking peoples is closely connected with the priesthood, and the king is obliged to submit to their decrees. The mask of Egungun represents a hideous human face; he is supposed to be a man risen from the dead, in order to spy out what is going on in the land of the living and carry off those who misbehave. The Tamate of the Banks’ Islands is a secret society whose name means ‘ghosts.’ The members possess much power, and periodically hold meetings and processions, wearing their masks.

The famous Dukduk societies of New Britain, New Ireland, and the Duke of York Islands comprise practically the whole of the adult male population. In one aspect of its functions the Dukduk is personification of justice—judge, policeman, and executioner in one. The remarkable head-dresses worn by the operators are technically mask-like structures, representing some spiritual force in the semblance of a cassowary. The operators are two Duk duk representing the male and Tubuan the female cassowary. The mask worn by each is a huge hat-like extinguisher of grass or palm-fibre, 6 ft. high. As far as the body-dress is concerned, it may be said to represent the cassowary, but the head is ‘like nothing but the head of a Duk duk. A long stick is at the apex, and the ‘tresses’ are coloured red. The female is said to be plain, the male more gaudy. The extraordinary belief is held that the Tubuan mask has been privately initiated into the society; and two female masks are kept from year to year for the purpose of annually breeding two Duk duk. The persons acting seem to be lost or merged in the mask. No one is supposed to know who the actors are. The male masks appear to be burned after the ceremony.

The committees of adults who supervise the making of young men are frequently dressed in disguise and wear masks. In Torres Straits on these occasions a man represents the deity Agul; he is painted all over and wears a leaf petticoat and a turtle-shell mask. Several masked magur (devils) frighten the novices, who are well beaten, and are told the dreadful names of the masks. A ‘wolf’ society among the Nuxkas holds initiation meetings; men wearing wolf-masks carry off the novices.
6. The divine mask.—The shaman of N.W. America, e.g., among the Makah, wears a mask for each of his familiar spirits. When giving a séance, he puts on a mask and summons the spirit with his rattle.\(^1\) The Eskimo shamans, in making their masks, give expression to their ideas of the spirit-world.\(^2\) Hence this is a creative plastic art. The shaman is said to be able to see through the animal-mask to the manlike face behind.\(^3\) In the ritual of ancient Mexico the priest wore a mask representing the god.\(^4\) On the other hand, priests in Nigeria may not wear or touch a mask.\(^5\)

From a similar point of view the protégé of a guardian spirit wears a mask, when dancing, to represent that spirit and identify himself with it.\(^6\) The Mammoo of New Guinea wears masks representing guardian spirits, when they appeal to them for help, fair weather, and the like, among the masks being those of kangoaroos, dogs, and cassowaries. The masks, when made, are flirted in order to cut them, and put in and turquiose mosaic in bands across the face.\(^7\) The image of the goddess 'Our Mother' wore a two-faced mask, and her priest donned a replica of this.\(^8\)

7. The death-mask.—In connection with the death-mask has been found some interesting lines, assisting among other things the art of portrait sculpture. Besides the practice of embalming or otherwise preserving the heads of dead friends or ancestors, several peoples have made masks of these. One such has been mentioned as placed upon the face of a Mexican idol, and there is a fine example in the Christy collection in the British Museum. In New Britain and elsewhere in Melanesia and New Guinea, such masks (full masks) were worn in sacred dances.\(^9\) The Mexicans also placed painted masks or masks of gold or turquiose mosaic on the faces of their dead kings.\(^10\) The Aleuts covered the faces of their dead with masks.\(^11\) The meaning of the last practice is obscure, but the Aleuts think that it is intended to protect the dead against the glances of evil spirits. Their practice of wearing masks in certain religious dances, so as not to behold the idol round which they revolve and whose glance means death, may be compared.\(^12\) Similarly, among the Guaymis of Panama, during the initiation of young men, the women who attend upon them wear masks.\(^13\) Basuto girls at puberty wear straw masks,\(^14\) and Lidoet girls (British Columbia) wear goat-skin masks at the same period.\(^15\) In Mexico, when the king was ill, the images of the gods were masked, possibly to prevent them from drawing away his soul.\(^16\) Some idea of disguising a person dangerous in danger, or, in the case of a head, and here the mask is merely a veil. In Siam and Cambodia masks of gold were placed on the faces of dead kings. The Shans have the same custom, using masks of silver or gold.\(^17\) These cases and that of the Algonquin may be looked upon as the next step in the evolution of the artificial face forming part of the portrait superstructure over the corpse. Death-masks proper, of gold, silver, bronze, and terra-cotta, have been found in Meso-America, Phoenicia, Luristan, Nigeria, Italy, France, the Danube valley, and Britain.\(^18\) The most conspicuous and complete examples are supplied by Mycenae and Rome. In the famous shaft-graves opened at Mycenae golden masks, 'elegantly portraits,' were found, corresponding to men and children. These at least of the latter, being of thin gold leaf, 'must have been moulded with the hand on the faces of the dead.' The masks of the men were of thicker plate, and had no eye-holes. The hands and feet of the children were also wrought in gold leaf.\(^19\) This suggests that the informing idea was similar to that of swathing the dead, painting the face, and otherwise decorating, while protecting, the corpse. The Roman nobilis kept wax portrait-masks of his ancestors in the atrium; the nobilis lay in state for seven days, during which the embalmer (pollinctor) took a mould of the face, which he then cast in wax, and painted with the natural colours. The mask was placed on the dead, and the ritual was held for a week. After the burial the mask was hung in the atrium, possibly fixed on a bust, and under it was a titulus giving the name and exploits of the man represented. These imagines were connected by lines, giving the place of origin and other particulars, as stenata. The ima imagineu gave a man the right of having his imaui carried in the funeral train of a descendant. The remarkable custom was that a man was followed to his tomb by all his ancestors, their masks being worn by persons as similar as possible in stature and form, riding in chariots. Marcellus was attended by six hundred of his forefathers and kin. The imagines were crowned with laurel on feast-days. By Pliny's time the wax masks were given way to clipeatae imaginis, i.e., medallions of metal.\(^20\)

Since Roman times the method of securing a portrait by taking a mould of the dead man's face has been continued in the great personages. This is the 'death-mask' of sculpture.

8. The dramatic mask.—The secret societies of N.W. America are, in contrast with those of Melanesia and Africa, chiefly concerned with dramatic representations. Their 'masonic' privileges are important, but they exercise little authority; in fact, these societies might be described as amateur dramatic clubs, with a religious setting like that of the medieval gilds. Frazer describes the institution as 'a religious drama like that of ancient Greece.' Various purposes other than that of entertainment are fulfilled by the performances; various, too, are the characters represented, according to the constitution of the society, whether totemic or ceremonial. The dead spirits or otherwise. But the essence of their

function is pantomime, and the mask is the means of impersonation. The masks are made of various woods—alder, maple, or cotton-wood; they are highly polished, but sometimes painted red, blue, and white. In some of the grotesque sort the eyes and jaws are movable, and worked by a string. Some are held by means of a month-bar. Some masks are two-faced, enabling the actor suddenly to change his character. The masks are surrounded, as usual, with considerable mystery, and are burned or thrown away at the end of the season. For their manufacture and use there are elaborate rules. No uninitiated person may see them being made. Little masks are worn on the fingers. The masks represent human persons—mythical, sometimes hideous—or animals. Ancestors, spirits, sulka (tutelary spirits), natural objects (e.g., the sun-mask of the Kwakintuk, set round with soul's whiskers, and feathers, which gradually expand like a fan), animals, and birds form the subjects of a remarkably varied collection. The Tsims-hians have a mask representing the thunder-bird, and at the performance mock lightning is produced and water is poured from the roof on the spectators. Salish masks represent the ancestors of the clans; viz, the wolf, owl, frog, and coyote. But, since the wearing of a mask is regarded as being unlucky, well-to-do men hire professional actors to represent the idea may be compared with civilized prejudices against the actor's profession. The dances are pantomimic representations of the myths stored by the society, and may thus be compared with the magical pantomimes of the Australians. They are meant to encourage the natural processes which they represent, and, on the other hand, with the medieval 'morality,' which was an object-lesson in good and evil. The use of the mask throws a sort of mystery over the performance, and at the same time allows the actor to remain unknown. Apart from entertainment, the pantomimes are performed in honour of dead personages, or to bring blessings on a particular man or the community. In N.W. Brazil a very pretty pantomime is performed in honour of the dead, at which the masked actors represent the gorgeously-coloured birds and insects of the forest. The drama of the Pueblo Indians is remarkable; it has features resembling those of the Australians, and the costume and dance. Divine beings are the characters represented by masked actors. The performances take place in the village square, and have (at least as a secondary object) the intention of procuring rain, good crops, or prosperity in general.

The Lamas of Tibet practised a regular religious drama, exactly parallel to the European morality and mystery; there were good and evil spirits, a protecting deity, men, and animals, and for all there were the appropriate masks. The Burmese drama employed masks for character types such as king and minister. Siamese actors wore paper masks, coloured green, red, black, or gold. A popularity of the weather did not speak; the parts were spoken by prompters. In Japan the dramatic masks of paper or lacquered wood were very elaborately artistic, gods, demons, men, and animals being represented in masks by good artists.

The drama of ancient Athens, both tragic and comic, employed the mask, which had been used in the old Bacchic mummeries that seem to have produced the painted red, blue, and white. The face of a Greek mask is made of linen, or, sometimes, of cork or wood. It was large (in tragedy) to correspond to the superhuman proportions of the actors. The onkos (bykor), a cono-shaped prolongation of the upper part of the forehead, added size and dignity to the head. The white of the eye was painted strongly, but an aperture was made for the actor to see. The mouth was permanently opened wide, and the tradition remains, unexplained, that resonance was given to the voice by means of the shape of the mask. All that the mask aimed at was the bold emphasizing of types; every feature was exaggerated, and in the huge theatres of the Greeks this fact was essential. No change of facial expression being possible and the inner shades of emotion excluded, the mask prevented any considerable evolution of the psychological drama. 'It would be difficult to imagine the part of Hamlet played in a mask.'

Pollux enumerates twenty-eight styles of tragic masks. The tyrant's mask had thick black hair and beard and wore a brow. The lover's face was pale. The comic mask was, in the Old Comedy, the portrait of a real person; when Aristophanes presented The Clouds, Socrates stood up in the auditorium to enable the audience to identify the mask of his impersonation; but, when Cleon was to be staged, the makers refused to supply a mask, such was the fear inspired by the demagogue. In the New Comedy of manners types were represented. The hot-tempered old father wore a mask with one eyebrow drawn up and the other normal; he expressed his changes of temper by turning this or that side. The Roman drama dispensed with masks until the time of Roscius, who is said to have introduced the and the Comedy of the drama. Divine beings are the characters represented by masked actors. The performances take place in the village square, and have (at least as a secondary object) the intention of procuring rain, good crops, or prosperity in general.

The Lamas of Tibet practised a regular religious drama, exactly parallel to the European morality and mystery; there were good and evil spirits, a protecting deity, men, and animals, and for all there were the appropriate masks. The Burmese drama employed masks for character types such as king and minister. Siamese actors wore paper masks, coloured green, red, black, or gold. A popularity of the weather did not speak; the parts were spoken by prompters. In Japan the dramatic masks of paper or lacquered wood were very elaborately artistic, gods, demons, men, and animals being represented in masks by good artists.

The theory of Frazer as to the magical and religious origin of the drama may be tested by the special case of the mask. He writes:

3 See Aul. Brill., and Smith's Dict. of Gr. and Rom. Antiq. 3, s.v. 'Pershoura.' This term refers to the resonance.
4 Pollux, Onomasticon, iv. 153-141.

6 Smith's Dict. of Gr. and Rom. Antiq. 3, s.v. 'Pershoura.'
8 Johnson, p. 591. 'See connect the terms 'mumming,' 'mummer,' and the Lower German 'Kumme' ('mask'); it is etymologically from man, som, used by nurses to frighten or amuse children, while pretending to cover the face.
9 Ib. p. 419 ff.
Deuteronomist code and in the Law of Holiness (Lv 26:1), and the editor of the books of Kings estimates their character in the light of this prohibition. The earlier writers, especially E and Hosea, see no harm in these stones; but the teaching of the other prophet is that this is the same thing as an aversion, and Hezekiah, Josiah, and Deuteronomy insist on their destruction. Later writers, such as P, consider the altar a divinely authorized instrument of worship, and they reproduce to describe the patriarchs as having anything to do with the massebah, representing them as making altars (cf. LXX Ex 24, substituting ἡμέραις, 'stones,' for σέπτα). Hebrew monotheism, when fully developed, denied sun and moon of their ancient divinity (Gn 1:17). ‘The heaven is my throne, and the earth is my footstool: what manner of house will ye build unto me? (Is 66:2).’ At such a period in Hebrew thought there was no longer any superstitions regard for stones, cairns, cromlechs, or menhirs.

Stones are used with no occult associations. Samuel commemorates a victory by setting up a stone which he called Eben-ezer (1 S 7:10); the Temple has two pillars, Jachin and Boaz, set up in the porch (1 K 7:4; inscriptions are recorded on stone (Gn 32:34, Ex 34:20 [the Ten Words]; Jacob’s grave is marked by a stone (Gn 35:19); Absalom in his lifetime wears a pillar, called a ‘hand,’ to perpetuate his memory (2 S 18:18); an agreement between Jacob and Laban (Gn 31:49) by the boundary between them is marked by a stone and cairn (אבמה, ‘cairn of witnesses’).

When men sought an enduring memorial, when they wished to make the death of a friend or relative, they often chose some form of stone as an emblem of the divine presence. Something more than this is indicated in this few instances. Jacob sets up a stone on the top of it, and called it Bethel (Gn 28:18, 29:3). Jacob pours a drink-offering thereon. As the massebah is found associated with altars and adaroth (massoth), or temples, in many places, so Jacob’s ceremony implies more than it states. Joshua sets up a stone saying, ‘This stone shall be a witness against us; for it hath heard all the words of the Lord which we have spoken unto us’ (Jos 24:26). The use of unknown stones for an altar (Ex 20:24, Dt 16:22, Jos 23:1) betrays the feeling that the chief would offend the nations in the stone.

Semitic and other parallels show that such instances are surviving specimens of an elaborate system of stone-worship. The massebah is found in the cognate languages, and denotes ‘lapis qui divi deciduntur’ (Lampriédis). Among the primitive Arabs the masbah serves as an altar, the victim’s blood is smeared over it; hence the name gharib. It is, however, more than an altar, it is a ‘temple’ (J. Wellhausen, Rote arab. Heidentäume, Berlin, 1885, p. 99). Herodotus (iii. 8) describes Arabas making a covenant.

An umpire draws blood with a sharp stone from the hand of each of the two persons making the contract, and with part of their garments he smears the blood on seven stones placed between them, invoking God and Allat. Herodotus might have added that the parties tasted each other’s blood (W. E. Smith, King of Israel, and Marriage, London, 1907, p. 504). The Canaanite high-place discovered at Gezer reveals the conspicuous place assigned to standing-stones in the cult of Palestine before the Hebrew occupation (R. A. S. Macalister, Excavation of Gezer, London, 1912). Phoenician coins and tablets confirm the sanctity of some stones, and the Greek name παρανος, παρανοος, appears to be derived from Beth-el.

Theophrastus, in the 4th century B.C., depicts the superstitious Greek passing the anointed stone with smoke, taking out his phial and pouring oil on them, falling on his knees to adore, and going his way (Ph. ii. 165). Traces of like practices are recorded down to the present day. A full description of a shrine of pre-Islamic stone-worship’ with a ritual preserving pre-historic customs in a Turkish village of Macedonia is given by A. J. Evans in his ‘Stone Tree and Pillar Cult’ (JHS xxv [1901] 99).

It is due to the profane intolerance of the irrational and immoral that so slight traces of litholatry remain in the OT.

‘What mean ye by those stones?’ asked the Hebrews; *ratio in absentia* answered Tacitus. To seek one principle consistently applied is as hopeless in custom as in a language. Feeling, variable and indiffere nce to logic, determines usage in regard to the cosmology of the soul and is supposed inspired awe and affection—e.g., Olympus, Fujiyama, Hermon, Horæb, Sinai—and it has been suggested that the sacred pillar is a little model of the Holy Hill. Meteorites have been found and treasured; and, if the host of heaven recorded adoration, any fragment coming on a path of light, like a falling star, or supposed to be sent amid thunder and lightning would command devotion (cf. Diana of the Ephesians and the image which fell down from Jupiter [Ac 17.10]; Záthor in Danannseas, quoted by Photius [A.D. 860], *Bibl. 3426, 26; 345a, 25*; the Kaaba at Mecca, as R. Burton thinks [Pilgrimage to El-Medinah and Meccah, London, 1893, ii. 300 f.], retaining its sanctity in spite of Islam). Moreover, the shadow of a pillar is a clue to the movement of the sun and the regulation of the calendar. The structures at Stonehenge ‘had for the most part an astronomical use in connexion with religious ceremonies’ (N. Lockyer, *Nature*, 1883, 24, 342). The word *massebkah* of *Stonehenge*, *ib. lxxii.* (1905) 32, 246, 270, lxxiii. 224. The same conclusion is maintained with regard to the standing-stones of Stenness in Orkney by M. Spence (*Scottish Review*, xxii. [1936] 401—417). The term *massebkah* or *magebkh* is used, e.g., in *Talmud* (Jewish *Biblioth.* ii. 381 [1912] and iii. 537, 2 Ch 14* cf. 14*) 31*—which, probably represents the *masebkhah* with solar associations. Palestine had a human past before the Hebrews entered it. The same holds for limited human imitations of the Jordan served as prototypes of the *magebkhah*. Of the more obvious influences specified by the Biblical writers the commemoration of the dead has always been the strongest inspiration.

Cup-markings on the *magebkhah* or on adjoining altars are not infrequent (cf. art. CUP-AND-RING-MARKINGS). On an altar they are supposed to receive the blood of the victim; on a tombstone they would serve for food and drink offered to the dead, although a plain Turk explained the hollows on tombstones as meant to gather water for the birds. The cups are sometimes in the side, not on the upper part of the stone; and that may have signified the shape of a horse-shoe. Cup-markings are held to be inconsistent with the purpose of the pillar in one case at Gezer, and the situation showed that the cups and pillar had not originated at the same period. (*PEFS* xxvi. [1904] 112 f.). The cupped stone is cited to explain Zee 39: *Behold the stone that I have set before Joshua; upon one stone are seven eyes: behold, I will engrave the graving thereof, saith the Lord of hosts, and I will remove the iniquity of that land in one day.*

‘The massebkhah is easily explained as a house for the soul. Therefore the name of the deceased person is inscribed upon it; and the monument itself is called “soul.” The male form was chosen for the graven of men, the female form for the graven of women’ (p. 116). These are, with some reservations, been approved by E. Sellin, who adds corroborations and, in consequence, suggests striking interpretations of Is 64 and 51 (OLZ xi. [1912] 119 ff.; 371 ff., 588 f.). The views of Eerdmans and Sellin are strongly attacked by K. Runge.

This indication of a soul is a welcome improvement on the suppositional *con supressione* which prevailed for some time. In spite of Herodotus, ii. 106, and similar testimony in Lucian, and the phallic columns at Gezer and Petra, it appears that this was a subsidiary and occasional interpretation of the standing-stones. The feeling that the stone slab or pillar may serve as a resting-place for the soul was inspired upon funerals or cemeteries (252 n. 5, as they are called) of giving every individual a stone. The inscribed name indicates the sex, apart from a special shape of the stone. The tomstone of a Rabbi or of a person who died of plague has a distinctive shape—regards these two principles as simply modes or aspects of one ultimate. Monism—in the quantitative sense—is opposed to dualism in regarding one principle as sufficient. There are two kinds of such monistic theory; spiritualised ufrone, which regards the universe to be the only ultimate reality, and materialism, which makes the same assertion of matter. Thus, according to the doctrine of materialism, extended, impenetrable, eternally self-existent matter, susceptible of being in hundreds of suggested imitation; the menhirs to the east and west of the Jordan served as prototypes of the *magebkhah*. Of the more obvious influences specified by the Biblical writers the commemoration of the dead has always been the strongest inspiration.

MATERIALISM.—Materialism is one of several types of metaphysical theory concerning the nature and number of the ultimate principles to be assumed in order to explain the universe. Dualism (g.v.) asserts that two independent principles must be presupposed, viz. mind and matter. Monism (g.v.) regards these two principles as simply modes or aspects of one ultimate. Monism—in the quantitative sense—is opposed to dualism in regarding one principle as sufficient. There are two kinds of such monistic theory; spiritualised ufrone, which regards the universe to be the only ultimate reality, and materialism, which makes the same assertion of matter. Thus, according to the doctrine of materialism, extended, impenetrable, eternally self-existent matter, susceptible of being in hundreds of suggested imitation; the menhirs to the east and west of the Jordan served as prototypes of the *magebkhah*. Of the more obvious influences specified by the Biblical writers the commemoration of the dead has always been the strongest inspiration.

i. History.—The atomism of Leucippus and Democritus is the earliest example of materialistic theory. According to these philosophers, the physical world and all its phenomena are made up of material particles, and mind is made up of similar atoms, smaller, rounder, smoother, and more mobile. The theory reduced all qualitative differences to quantitative (of size, form, arrangement), banished final cause or intelligent purpose from the universe, and denied the immortality of the soul, and interpreted the universe only in terms of mechanism and fixed law. The last element in early Greek atomism does not necessarily presuppose or involve materialistic theory, though Lange, the historian of materialism, seems to see it in the chief virtue of early materialistic speculation. The theory of Leucippus and Democritus was developed by Epicurus and Lucretius, with certain modifications.

At the beginning of the modern period the early Greek materialism was revived by P. Gassendi, who, however, deprived it of metaphysical significance by reconciling it with belief in God as Creator of the atoms. T. Hobbes, at the same time, taught a similar view, so that, though the theory of his philosophical system is materialistic, he cannot be called a thoroughgoing materialist. He strongly insisted that all that exists is body or matter, and that motion is the only kind of change in the universe. Gradually developing in England, materialism perhaps reached its climax in the writings of the French Encyclopedists (g.v.), after science had revealed how closely psychical states and
MATERIALISM

mental development depend on the body. P. H. D. Holbach's *Systeme de la nature* (London, 1770), which rejects every form of spiritualism and supernaturalism, marks the culmination of this movement of thought.

Nearer to our own time materialism appeared, as a reaction from post-Kantian idealism, with renewed energy in Germany, K. C. Vogt, J. Mole- schott, and L. Büchner being its leading exponents at about the middle of the 19th century. Their worthless, though reviling for the first time, perhaps, in the history of materialism—some sense of the need of an epistemological foundation for a metaphysic which resolves mental process into material, reveal great crudity of thought and knowledge in this connection, and in the enthusiasm of the scientific popularity are of no philosophic worth to an age which is careful and critical as to epistemological presuppositions, especially such as are involved in the physical sciences. Description of physical and mental events as if they were part of the same language of materialism, is easier to science; and this fact, together with the jubilant confidence with which science, flushed with many successes, over-hastily exaggerated its own scope and functions a generation ago, accounts for the manner in which many generalizations of natural knowledge have received—a colouring which has often been taken by students of the physical sciences, unpractised in philosophical reflexion and criticism, for an enlightenment in the sense of scientific truth rightly so called. T. Huxley, who on occasion could teach materialism of the most dogmatic kind, and in another mood would capitulate to spiritualism, sought permanent refuge in agnosticism, as his conscience his theory of wisdom, and more militant essays, materialism has found no literary champion among British scientists. In dogmatic form it is to be found to-day, perhaps, only in the literature of the Italian critic, Guglielmo Ferrero, and in less dogmatic essays of Haeckel, which is materialism in all but its name, awakens no enthusiasm among scientific students in Britain; it is rightly regarded as involving an obsolete standpoint which science, now mental and caution and not more critical—than formerly, has left behind.

2. The attractiveness and plausibility of materialism.—The chief outbursts of materialistic metaphysic have coincided with occasions of renewed interest in the rational philosophy of physical science. The emergence of this tendency to regard the world as fundamentally material, at successive epochs in the history of thought, is evident that materialism strongly commends itself to many minds, especially to those whose studies chiefly lie in the sphere of the physical sciences.

There are many reasons for the attractiveness of materialism as a metaphysical theory or view-of-the-world to such minds, and the view possesses great plausibility when it is contemplated from the epistemological standpoint which the natural sciences, as well as the philosophy of common sense or ordinary social intercourse, take for granted. These reasons may now be specified, and the assumed theory of materialism whence they derive their plausibility examined.

One reason why, as H. Höflling says (Problems of Philosophy, New York, 1905, p. 149), 'ever and again essays are made in the materialistic direction, although since the advent of the critical philosophy—not with such dogmatic assurance as formerly,' is that our knowledge of matter, its changes and its properties, is so much greater, and so much more easy to obtain, than our knowledge of mind. Psychology is a comparatively young science. In so far as it embraces psychophysics and is pursued in its relation to physiognomy, even psychology deals with matter rather than with mind. And in so far as it is pursued by the analytic method—the only truly psychological one—it is a study beset with enormous difficulties. Moreover, such psychological knowledge as is forthcoming and established is rarely studied by the investigator of physical phenomena. He proceeds in abstraction from essential elements involved in every 'objective' fact that he examines and classifies. Psychology, again, more immediately involves metaphysics, which for the most part is as yet as disputing ground. Lastly, the physical sciences owe much of their prestige to the fact that they are based on measurement, and, being thus quantitative, are capable of mathematical treatment, whereas in psychology (of the pure or analytic kind) measurement is rare.

The physical sciences, again, impress us with their connectedness. The connectedness of the material world exercises an overwhelming power on our minds, and especially upon the imagination. Mind, on the other hand, is regarded by us only in the form of individual minds; and these minds are not known, as yet, with anything like certainty, to communicate with each other through any other medium than that of matter. Further, we know only the inner life of the bodies or material organisms, and, so far as observation goes, we have no knowledge of mind existing independently of body, though—again, so far as observation goes—it seems that the material 'things' exist without mind. Science is also the story of the physical part of the history of a material world which existed for ages before organic beings, which alone experience enables us certainly to endow with minds, could exist upon it. Yet, more impressive is the array of facts furnished by physiology, comparative anatomy and psychology, and pathology as to the concomitance of psychical processes with physical, their dependence on material phenomena, and their correlation with other phenomena which are also of a material kind. Science provides a basis for our ideas of mental development throughout the animal kingdom with organization and complexity of brain-structure, the effects upon mind of injury or disease in brain tissue, and so forth. Thus a very strong, clear, and convincing case for the priority of matter to mind, and for the dependence of the mental on the material, is presented by science; and there is much to suggest that consciousness is a property, and, indeed, a product of matter, of the processes of physical science. The material part of science would seem, as Huxley put it, to have meant the extension of mechanical law and the realm of matter, and the concomitant banishment of spirit and spontaneity from the universe, and to afford as good ground for asserting mental phenomena to be effects of material as for asserting that to be due to physical causes.

Moreover, it may be added, it is impossible to invalidate this coherent and cumulative argument for materialism from the standpoint of the physical sciences. No counter-case can be made, for instance, out of the fact, if it be a fact, that to some mental events no correlated material changes within the brain have been discovered; for future research may possibly discover them, and it is precautions to stake our metaphysical theory on gaps in scientific knowledge. Nor can materialism be refuted by saying that thought, or consciousness in general, is physical activity or properties of matter. Heat, light, sound, and electricity are qualitatively different, yet all of them are properties of matter or of ether possessing some of the characteristics of matter. It is a baseless dogma that the effect must resemble the cause, so long as we refer to phenomenal causes and effects. Science, in its more abstract development, does indeed reduce all diversity to quantitative difference, all causality to identity, so that
MATERIALISM

heat, light, electricity, etc., are resolved into
motions of matter—i.e. of extended and inert sub-
stance; but at this level of analysis consciousness
looked upon as one kind of experience is
obscurely regarded from the purely or abstractly
objective point of view adopted by science, might
similarly be held capable of resolution into physi-
ocal antecedents. Perhaps the most that can be
urged, from this epistemological standpoint, in
opposition to materialism, is that the adoption of
it as metaphysical truth would involve us in ab-
solute scepticism, and therefore in doubt as to the
validity of materialism. For, if thoughts and all
other things are arrayed without being produced by
material causes, and their co-existences and se-
quences are mechanically determined (so that all
purposiveness is excluded), there would seem to be
no reason for believing that any of our thoughts
and judgments, even concerning matter, are true.
This argument should suffice to dispose of the
dogmatic certainty of materialism, though not
necessarily of the possibility of its (indemonstrable)
truth. That material change, while ever pursuing
the same path of least resistance should throw all
psychical epi-phenomena, the connexion of which
is that of logical sequence, is a possibility with
which the materialist must be credited, and to
which, perhaps, his opponent will allow him to be
valid. But it is a different thing to be able to
think that his own mind, which has largely
shaped his phenomena and made them what they
are for him, is but an illusion, an effect, an epi-
phenomenon, a shadow cast by the machinery that
he is engaged in the stock-in-trade of. He may
wonder that, when science, without raising the
previous question as to the nature of experience
and the implications and presuppositions of knowl-
edge, sets out in quest of a metaphysic, it should
land in metaphysics as a fixed goal. Not only do
the arguments in question lose much of their
apparent force, but consciousness, which materialism
would resolve into an epi-phenomenal effect or property of self-existent matter, is seen to
be the primary reality, and matter as we know it
should be a conceptual construction of mind.
Materialism, we conclude, misunderstands human
experience, in which subjective and objective form
one whole, while they are gradually differentiated
only through increasingly complicated processes of
conceptual distinction. The objective, moreover,
is not to be identified with the material, as if these
were convertible terms. Matter is a conceptual abstraction from experience, and so cannot be
taken for the ground or source there. Arguments,
again, are only figurative ideas; and that they
have to be endowed with the very attributes which,
in gross matter, they were invented to explain, if
not indeed with attributes that contradict all
observation, is a sufficient warning against ado-
nption of the naively realistic view that they are
corporeal or material particles.

Materialism also involves the old and obsolete
assumption that the so-called secondary characters of
matter (colour, tone, odour, etc.) are fundamen-
tally different from the so-called primary (extension, impenetrability, etc.). It was one of G. Berkeley's great contributions to philosophy to show that this distinction is untenable. The secondary quality of matter have been generally admitted to be 'in our mind' and not 'in matter.' But on closer examination it is to be seen that the primary qualities are not precisely the same. Our idea of extension, for instance, is gained only through touch or sight; and the perceived 'size' of a body depends on our distance from it. That a material object is of the same size, though at one time it may be a larger and different to a perceptive, is an inference, and involves the revision of the evidence of our senses by reasoning. The extension which we attribute to a physical object, then, is inferred, and not perceived, extension; and, if we abstract from our idea of extension the sensation-elements supplied by touch or sight, nothing remains. Therefore matter possesses extension no more than it possesses colour, except as perceived by our minds. If, then, there be any thing which is all without science exempt from the laws of our minds and the direct action of God upon them which causes the sensations whence our idea of extension (or any other quality of matter) is derived, it is evident that this something cannot be the subject of physical sense and its perception and may be in the 'mind' in the sense of J. S. Mill called a 'permanent possibility of sensation' independent of us, whose case is not percipi; but, if there be, it is an entity wholly different from the 'matter' of physical science and common sense. It is a subject-matter which would explain our experience; and, unless we ascribe our sensations to the influence of other spiritual existences endowed with 'being for self,' we cannot but assume, with Berkeley, that the nomenal matter, the substratum of sensations, the substance which constitutes the permanent possibility of sensation, is but a medium or means existing solely for our sakes, and one which, from a first point of view, is nothing but/awareness. The concept of matter, then, is built on the basis of sense-impressions; and materialism uses this manifestly conceptual construction to explain the origin of sense-impressions. It thus seeks to so pervade the world.

There are several other inconsistencies involved in materialistic doctrine, one or two of which may briefly be mentioned. Materialism implies that everything which happens and is accompanied by consciousness of its happening would happen equally well without consciousness; or, in other words, that consciousness makes no difference to the course of the world. But, if so, it is difficult, on the theory of evolution by survival of the fittest, which is the current scientific explanation of the origin and permanence of every organ and every function, as well as of every individual organism and every species, to account for the emergence, and still more for the development, of mind. Materialism is this kind of monism superhuman type, regards consciousness as the product or effect of matter, while cherishing the principle of ce nihito nihil fit in its application to what physicists call 'energy.' The law of the Conservation of Energy is often held—though doubtless quite erroneously—to assert that not only is there quantitative equivalence between the energy which, in any physical change, disappears in one form and that which appears in another, but also that the sum-total of energy in the universe is constant. The latter, and illegitimate, part of the generalization has been a tenet of materialists; and it is difficult to reconcile it with their assertion that mental phenomena are caused by material. For it means that every production of consciousness as a disappearance of physical energy should take place, unless energy is also attributable to consciousness. The last view is so objectionable on many grounds to materialists, partly because it opens the possibility that mind can produce physical effects, that they have avoided working it out. Lastly, it is generally admitted that materialism cannot explain even the simplest type of conscious process. The difficulty of conceiving how sensation or a feeling could be the necessary consequence or effect of motion in matter or mass-points, and of imagining how mathematical physics would cope with such a possibility, is overwhelming and, of course, it has never been faced.

4. Recent substitutes for materialism: hylozoism. It is not surprising, under the pressure of all these difficulties and in the light of the self-criticism to which the structure of physical science has of late been subjected, that materialism should at the present time be a practically abandoned philosophical theory. Useful as a method, it is wanting as a metaphysic; and representatives of natural science with a leaning towards metaphysical speculation and a desire for new terminological adopt in its stead a monism which has much in common with the ancient doctrine of hylozoism, according to which all matter is not inert— as mathematical physics asserts for its necessary postulate—but is endowed with the idea of 'life and potency of life'; and W. K. Clifford, in his 'mind-dust' hypothesis, and Haeckel, in his imaginative theory of atoms endowed by rudimentary souls, go yet further, and confound mental and material. Hylozoism is as ancient as the Ionian school of Greek philosophy, and was taught in a crude form by Thales. The Stoic doctrine of a world-soul is another form of it, revived and developed by several thinkers in the period of the Renaissance (Paracelsus, Teleos, Ernino, etc.). Hylozoism reappears again in the writings of the Cambridge Platonists (q.e.), as well as in the speculations of philosophers such as J. B. Robinet and T. Peirce; and pan-psychism—the view that all matter has or has a psychical aspect—which was held by Spinoza ('omnia quanvis diversis gradibus animata') (Ethics, ii. prop. xii. note) and Leibniz, is common to the numerous advocates of pluralism who finds at the present day. It is doubtful whether hylozoism, with its assertion that all matter is organized or living, can be maintained without the further assumption of pan-psychism, that the real elements of the world, and all that we call 'things,' are psychical entities endowed with 'being for self'; and, indeed, many writers seem to use the term 'hylozoism' as if it included the latter doctrine. But, without this added implication, and taken in the etiological sense alone, hylozoism involves the repudiation of most of the consequences drawn from rigid materialism. For it denies the inertia of matter and the statement that motion is exclusively caused by external forces, crediting material bodies with causality for materialistic regarding life as an inherent or essential property of all matter as such. Thus, as Kant saw, hylozoism is the death-blow to science— 'science' being understood, as Kant understood it, to mean a priori pure or mathematical physics. The latter kind of knowledge being assumed by Kant to be necessary and universal, he could write thus:

'The possibility of living matter cannot even be thought; its concept involves a contradiction because lifelessness, inertia, constitutes the essential character of matter,' (Kritik of Judgment, tr. J. H. Bernard, London, 1925, p. 304).
While Kant thus saw that hylozoism meant ruin to science in so far as it involves the calculability (by an intelligence higher than ours, though strictly finite like that imagined by Laplace) of all past and future states of the world from a sufficient knowledge of the position and motion of the material particles, even modern upholders of the mind-stuff hypothesis, and of Haeckel's hylozoistic or pan-psychic theory, have not been so clear-sighted. They would retain materialism, for all intents and purposes, while changing its name. Qualities are no longer taken in all its forms a position of unstable equilibrium; or, to change the metaphor, it is a half-way house (for temporary lodging) between materialism and spiritualism. And, as retreat upon materialism becomes more and more impossible, as hylozoism is seen to possess greater capacity to explain actuality than the doctrine of dead and absolutely inert matter, and as, finally, life means the power to act or change according to an internal principle, while only one such principle is known to us—i.e., thought, together with feeling, desire, and will, which depend upon it—it will doubtless come to be more and more plainly seen that the implications of natural science are not materialistic but spiritualistic.

**F. R. TENNANT.**

**MATERIALISM (Chinese).—**Chinese religion and philosophy have been declared by many writers to be materialistic; one of them went even so far as to regard materialism as a special creed taking rank with Confucianism, Taoism, and Buddhism. This view implies a misconception of materialism: a philosopher who does not believe in a personal God, or who assigns to a Supreme Being a substantial body, is not a materialist. Materialism assumes matter to be the only basis of reality. This is called *cosmologic materialism,* to be distinguished from *ethical materialism,* which sees the aim of life in egotism, pleasure, and sensuality. But, as with the father and mother, the child is found at the root of her great religious systems, although materialistic tendencies may be found occasionally. Nobody will seriously think of imputing materialism to the Buddhist faith, which teaches that the vital world consists of nothing enduring, a view without any reality. Taoism takes a similar viewpoint: there exists nothing except Tao, the Absolute, a supernatural, incomprehensible entity. But how about Confucianism, which has often been described as materialistic? Confucius himself owned to a 'benevolent agnosticism,' declining all metaphysical speculations, but was not averse to popular beliefs and customs. To a disciple asking him about death he replied, 'While we have no knowledge about death, let us think of the five elements (metal, wood, water, fire, and earth); reason is the life- and mind-producing element, which also contains the virtues (benevolence, righteousness, propriety, and knowledge).'

Another key paper of non-materialistic materialism was in vogue in ancient China, and seems to have been the starting-point of Chu Hsi's philosophy. At the earlier stages of civilization religion, philosophy, and sciences are usually not yet separated. So we find with the dualistic theory of yin and yang in Confucianism as well as in Taoist works. It was the first germ of a natural philosophy universally accepted by the Chinese irrespective of their religious convictions or philosophic ideas. In the commentary to the *Yi King* ascribed to Tse-sze, the grandson of Confucius (5th cent. B.C.), we read that the origin of existence is due to the cosmic dual forces yin and yang; yang is the bright, male, generative principle, yin the dark, female, and receptive power; yang forms the heaven, yin the earth. Most Chinese critics look upon these principles as material substances—an interpretation open to doubt. But we have another testimony by the Taoist writer Lieh-tse, who, in the same time of the sixth and seventh centuries, declared that he at least considered the yin and the yang to be substances. The evolution theory, though not quite scientific, reminds us of that of modern naturalists.

'The sages of old held that the Yang and the Yin govern heaven and earth. Now, form being born out of the formless, from what do heaven and earth take their origin? It is said: There was a great evolution, a great conception, a great beginning, and a great homogeneity. During the great evolution, Vapours were still imperceivable, in the great conception Vapours originate, in the great beginning Forms appear, and during the great homogeneity Substances are produced. The pure and light matter becomes the heaven above the earth below' (Lieh-tse, i. 27).

No divine being intervenes in the creation of the world, and yet we are not justified in calling Lieh-tse a materialist, for, notwithstanding this materialistic theory, the highest principle remains Tao, a spiritual being which alone is endowed with reality; the world with all its changes is imaginary. At an early age the Chinese had further developed this theory but they are not content with enlarging on the working of the five elements which were conceived as physical and as metaphysical essences as well. They were believed to become of a third element, and to be the choicest of the whole world. The sun is the element wood reigns supreme, in spring fire, in autumn metal, and in winter water; to earth there is no corresponding season. The elements have their seat in different directions: wood in the east, fire in the south, earth in the centre, metal in the west, and water in the north. They are ruled by five deities, the genii of the seasons and the four quarters.

Whereas this attempt at natural philosophy is nothing but a medley of heterogeneous, more or less fanciful, thoughts, the old dualistic theory was transformed into a consistent materialistic system by the sceptic Wang Chung (1st cent. A.D.). From various utterances it would appear that he thought of yang as a fiery and of yin as a watery element. The former produced the sun, the moon, and the other stars of heaven, while from water and its sediments earth, the oceans, and the atmosphere were developed. Both fluids are in constant motion, but under (7th-century) and by any intelligence or subservient to the purpose of any spiritus rector; it is spontaneous and regulated solely by its own inherent natural laws; heaven and earth do not act on purpose, nor are they endowed with consciousness. Wang Chung rejects all anthropomorphisms which have clustered
MATERIALISM (Indian) 493

round the idea of heaven or God. The human body is formed of the two fluids, the yin producing the body, and the yang the vital spirit and the mind. At death they again disperse, the yang, or heavenly fluid, returning to its original state of union with the yin, and the human spirit and body return to their respective elements. Confucius and Mencius, which they have never condoned. So far as we know, Wang Ch'ung is the only Chinese thinker who so far with a scientific system of cosmological materialism.

Already in the 4th cent. B.C. ethical materialism found an advocate in Yang Chu, the philosopher of egoism and pessimism. He maintains that in human life happiness is far exceeded by misfortune, and that this is the result of the bhood of the world and of men's own doing. The practice of virtue is of no avail, because in this world the wicked thrive, and the virtuous are visited with dishonour and suffering, and thereby set themselves in striving after unattainable or useless aims such as wealth, honour, or fame, or sacrifice themselves for others, but should enjoy their short span and be satisfied with the good that they have, for that is all there is to the world. In consequence of the vehement impeachments of Mencius this doctrine has never got a hold on the Chinese mind. Both Yang Chu and Wang Ch'ung have been long buried in oblivion, until they were redeemed from the conginal interest of foreign admirers.

MATERIALISM (Indian).—I. We possess several comparatively modern works which set forth the various philosophic systems of India—e.g., Summary of all the Systems, and Reunion of the Six Systems. The systems are arranged in the order of their increasing orthodoxy, from the author's point of view: the first, for which, as we shall see, materialism is a suitable name, is the worst of all, and the only one which is expressly in contradistinction with the general conception of Indian philosophy and mysticism.

In more ancient sources—in the Mahabharata, on the one side, and in the Buddhist scriptures, canonical or scholastic, on the other—we find data concerning this materialistic system which are scarce but very important.

As regards the sources that would give us direct information about the materialist school only a few citations can be brought forward, and their authenticity is not certain. 3

We are not convinced that a materialistic 'school,' a 'system,' in the exact sense of the word, existed. There have been criticized materialists, who have espoused some very well-defined theories, to whom the 'materialists,' whether Brahmins, Buddhists, or Jains, give different names, and whose opinions were, perhaps, artificially, grouped in the works of which we have spoken.

The most characteristic name is Nāstikas, literally 'deniers,' 'misbelievers,' those who say na asti, ośa ānta. 4 The most famous are (a) Chārvakas difficult to interpret; Chārvaka was a theoretician, the founder of the sect; he is undoubtedly the denier nicāgore spoken of in the Mahabharata. 5 (b) Lokāyatas, 6 'worldly,' 'spread throughout the world,' (a term which, according to T. W. Rhys Davids, denotes primarily the knowledge of nature, and whose adherents are said to be the 'explainers of [the genesis of] the world'; and (c) Bāhāmaspatas, 'disciples of Brahmāpati' (the chaplain of the Vedas, and the lord of wisdom).

2. In the Buddhist canon, materialism is attributed to 'Ajita of the garment of hair,' one of the scholars and famous ascetics of the time of Buddha. He said:

'There is no such thing as sacrifice or offering. There is neither fruit nor evil deeds. There is no such thing as this world or the next. There is neither father nor mother, nor beings springing into being. There are in the world no recluses or Brahmans . . . who, having understood, and realized, by themselves alone, both this world and the next, make their wisdom known to others. A human being is built up of the four elements. When he dies, the earthly in him returns and resembles the air, water, the heat to the air, and his faculties ['the five senses, and the mind as a sixth'] pass into space [for ether]. The four elements, one by one, pass out of his dead body away; till they reach the burning-ground men utter forth exclamations, but there their bones are bleached, and his offerings end in ashes. It is a doctrine of fools, this talk of gifts. It is an empty lie, mere idle talk, when men say there is profit therein. Fools and wise alike, on the dissolution of the body, are cut off, annihilated, and after death they are not. 7

It will be seen (1) that these formulae show a really authentic character. They are quite independent of Buddhism, for the Buddhists do not believe much more than Ajita in the use of sacrifice and offering. Perhaps they come from the Agnikas or Jatilas (ascetics who give burnt offerings, who have braved hair), who entered in large numbers. 8

Citations in the 'summary' mentioned above on pp. 205-207, and also in the Buddhist sources (see p. 425, n. 4).

2 Mātrī Upaniṣad, Manu, Mahābhārata: the name originally extended to all kinds of sceptics, deniers of the Vedas gods, or of the Brahmanalaws (see below).

3 See O. Bohling and R. Roth, Sanskrit-Wörterbuch, Petrograd, 1915-17, i. 508.

4 See Ryce Davids, Dictionary of the Buddha, i. (Oxford, 1899) 11, 119, 125, 160. C. S. Colebrooke (Athenaeum, 19th June 1835) rightly remarks that Ryce Davids is wrong in saying: 'Of the real existence of a school of philosophy that called itself by the name [Lokayata] there is no trace. The traces are numerous. See also art. Lokāyata.

5 Mahābhārata, 1. 63, 3; Sūtrasūtra Nāgīra, i. 207; Mehimtaka Nīkāta, i. 416, and also in the Sanskrit sources. This passage has often been translated. The version reproduced above is that of Ryce Davids, Dictionary of the Buddha, p. 125. It should be drawn to those of E. Burnouf (Le Lautus de la bonne foi, Paris, 1852), P. Girardot (Sept Sutras pauka, deo, 1876), and R. G. Frank (Buddhagā-tan in Amurzād abhrerattī, Götingen, 1849).

6 The sacred writings of the Jains contain the same evidence, and confirm the Buddhist traditions (see H. Jacoby, Jainā Sūtras, ii. pp. xxiii, 329, 343; Skt Jn., 1896).

A more complete study would describe the opinions of Pārāśara Kūnpī, another materialist yogin, who with Buddhist (Bhūta, 52), who denies responsibility, and teaches what is called the 'theory of non-action': 'If a discourse with an edge sharp enough, a discourse in which I should make all living beings perish, the heap, one mass of flesh, there would be no guilt thence resulting, no increase of guilt. For it is always pleasant to me, and the seeds of the Wise, and the Brahmin, and the monk, and the layman, and the beings are best this way and that by their nature,' and comes very near the well-known point of view of the Mahābhārata, namely, the complete absence of fate (dharma), and the weakness of human activity (pravritti). The same is true of Buddhist; those who said that fate (dharma) is only the sum of our former actions.
MATHURA

into the primitive community, and for whom the time of novitiate was shortened 'because they believed in the retribution of actions'.

(2) Ajita does not believe in life after death or re-birth; he believes only in the four elements, earth, fire, wind, and water, conceived in a materialistic sense; he therefore denies the fifth element, consciousness or cognition (vijjnana), which, under different names and in different manners, constitutes, in the orthodox* or 'spiritualistic' schools, the soul. The soul, from this point of view, is no more than a name, a term, which is a necessary part of the West, the soul.

The doctrine attributed to the materialists by later sources, viz. that 'thought develops in the human body from a special mixture of the elements like the intoxicating power of the fermentation of the grain or of the juice of the sugarcane,' arises quite naturally from this ancient theory of Ajita.

(3) Ajita denies the fruit of good and bad actions, and, consequently, morality. He is a Nastika, a 'denier.' He certainly denies sacrifice, supernatural births, etc., but, of all these denials, the denial of the remuneration of good and bad actions is the most monstrous. The Buddhist works teach that false opinion (vyavahara) consists essentially of the denial, which destroys the 'roots of merit' and causes a man to commit all kinds of sin.

Ajita seems to have led an ascetic life; but 'unbelievers,' 'deniers,' are usually 'libertines,' in the sense that our sources, which attribute to them sayings like the following:

As long as we live we ought to live happily, enjoying the pleasures of the senses. How can the body reappear after it has been reduced to ashes?

3. What leads us to believe that there was, properly speaking, a materialist school, is the double philosophical theory that our texts attribute to the deniers.

The only means of knowledge (pramana) is the immediate evidence of the senses. All orthodox Indian schools are wrong in appealing to induction (anumana) or to authority (the word of a competent person, of an omniscient being (paramaprajña), or of the Veda).

A sentence belonging to the literature of the materialists says: 'There is nothing in man except what is visible to the senses. Look, dear friend, at what these so-called scholars call the traces of the world.' A man who wanted to convert—let us say 'pervert'—a woman to his materialist opinions, went out of the town with her, and on the dust of the road he drew with the thumbs, index fingers, and middle fingers of his two hands, marks resembling the footprints of a wolf. In the meantime the scholars said: 'Assuredly a wolf came last night from the forest; for otherwise it would be impossible that there could be a wolf's footprints on the road.' And the man said to the woman: 'See, dear friend, what clever thinkers these men are who maintain that induction proves the existence of super-sensible objects, and who are regarded as scholars by the crowd.'

(4) Denying induction, these philosophers without philosophy are forced to deny causality. The name Svaabhāvikas is given to the scholars who

believe that things, the colour of the lotus and the sharpness of thorns, are born from the svaabhāva, 'own nature.' Much could be said on the exact value of this word; it probably means: 'Things are not produced by causes; they are because they are.'

MATHURA (Mathara).—The name Mathura, or Muttra, is borne by both a district and a town in the United Provinces of Agra and Oudh. The District (145 sq. m.) lies to the north of the Agra District, and includes many places sacred to the worship of Krishna, the most important being the small towns of Bhindābān, Gobardān, Gokul, and Mahābārī (qq.v.).

Mathura town or city stands on the right bank of the Jumna, on the main road from Agra to Delhi, in 27° 35' N., 77° 4' E. (pop. in 1901, 60,042). The city, which is the oldest settlement, was the seat of an ancient lineage, was placed by early Hindu writers in the country of the Sāruscencas, and was reckoned by Ptolemy (c. A.D. 140) to be one of the three cities of the Kaspatria. It is called Mudrā (Mudrāsa), the 'city of the poets,' and a toponym Muḍārā, the name of the people of the city, is preserved in the name Mudderā, which is mentioned by early Arab writers. In the middle ages it was known as Mathura, and it is still called Mathā in the local dialect. The city was plundered by Māmul of Ghazni in A.D. 1018-19 and again by Ahmad Shāh Durrānī in 1757. The greater part of the District came under British rule in 1803.

Mathura, one of the seven sacred cities of the Hindus, is second only to Benares (q.v.) in sanctity. The city and the western half of the District, known as the Braj-mandal, are now associated almost exclusively with the legend and cult of the cow-herd-god and Krishna, but the eastern portion of its suburbs (Growsv, Memori, p. 4). Arrangzi, who destroyed the temples, changed the name to Isalmābād and Isāmpur (ib. pp. 6, 35), but the new name never became current (see Num. Chron. 4th ser., 2 [1902] 282).

The objects connected with the Jain cult have been discovered for the most part in the Kankali or Jaini Til (mound) to the S.W. of the city, which was the site of two Jain temples, one Dharmatra and the other Svetambar. The temple of Dharmatra was only a remarkable stupa, the only Jain monument of the kind about which details are known. In its earliest form it dated from remote antiquity, possibly from 600 or even 700 B.C. The Jain faith was vigorous in the Kusana period early in the Christian era, and the images found came down to the 11th century. At the present day Jains are few and unpopular in the Mathurā District, their principal settlement being at Kosi, where there are three temples.

The numerous Buddhist remains, which are of great interest, disclose the former existence of an important monastery founded by the Nāgārjuna, probably early in the 2nd cent. after Christ. In 1869, P. Maury travelled more than two centuries later, the number of monks had diminished. The Muham- madan rule soon ended the safety of the Buddhist establishments. There are plain indications that the popular Buddhism of Mathurā included a sensual erotic element, which probably contributed to the subsequent development of the Svetambar and Digambar sects associated with the Mathurā region. Nāga worship was much practised during the Kusana period.

Brāhmanical Hinduism appears to be the most important of the Mathurā religions. The Greek writers call the chief local god by the name of Heracles, and the sculpture representing the light of Heracles with the Nemean lion is one of the most famous of Mathurā antiquities.

The temple of Kesava Deva at the Kātra on the western side of the city, rebuilt early in the 17th cent., was described by J. B. Tavernier (c. A.D. 1650: Journals in India, tr. V. Bull, London, 1889, ii. 246) as ‘one of the most magnificent temples belonging to all India.’ Aurangzeb destroyed it in 1669, and built a mosque on the site. All the old Hindu temples in the city were destroyed by the Muhammadans at one time or another.

It is evident that the cultus of Kṛṣṇa was well established as early as the 4th and 5th cent. after Christ (Bhātārī inscr. of Skandagupta, c. A.D. 466; sculptures at Maṇḍor in Mārvarī [Arch. Surv. Assam, Rep., 1903-06, p. 140]), but the local cultus of Kṛṣṇa and Kali is of a special form was not developed until the close of the 16th cent., under the influence of the Bengali Gosains of Brindāban. The history and character of the cult are well described by Grove, to whose book the reader is referred. The great temple of Vaiṣṇava under the name of Rājā, built between 1845 and 1851 by local merchant princes, is remarkable for being designed on Dravidian lines. It cost 41,000 rupees. The magnificent erotic seat of Vaiṣṇava was founded by Vallabhachārya (g.v.) (born A.D. 1479) has its headquarters in the town of Gokul.

Three Christian missions (Baptist, Church Missionary, and Methodist Episcopal) are established in the city.

VINCENT A. SMITH.

MATRÇEṬA.—Mātṛcēṭa is the name of a Buddhist author, identified by the Tibetan historian of Buddhism, Tāranātha, with Āvaghoṣa, concerning whom the identification itself appears in the work Āvaghoṣa and the works there mentioned. It may be pointed out that the identification is made only by Tāranātha, while a much older writer, the Chinese traveller I-ṣing (2nd half of 7th cent. A.D.), distinctly distinguishes two authors: The best of the ascriptions of works seems not to betray either in the Chinese tradition or, with one exception (see Kavi-ṁo-vacara-sānnakī ṃchārya, ed. F. W. Thomas, in Bibliotheca Indica, New ser., no. 1389, pp. 25-29), in the Tibetan writings, that the identification is the fact that both writers stood in relation to Kaniṣka. But this reason will be seen upon relexion to have actually a contrary bearing; for nothing is more certain concerning Āvaghoṣa than the special character he holds in relation to Kaniṣka, whereas we have an epistle from Mātṛcēṭa declining, upon grounds of age and sickness, to visit the king. Perhaps this is the reason why Tāranātha, identifying the two poets, makes an unneccessary distinction between the Āvaghoṣa and the Kaniṣka of Āvaghoṣa and the Kaniṣka of Mātṛcēṭa.

According to Tāranātha, Mātṛcēṭa was the son of a rich Brāhmaṇ named Pañcaghoṣa, who married the youngest of ten Buddhist daughters of a merchant belonging to the city of Khota (Gāndhāra). The time is given as during the reign of Śrīchandra, nephew and successor of Bindusāra—a statement which reflects the confusion of the Tibetan authors about Eastern history. The son given to the child at birth is said to have been Kāla; that he was subsequently known as Mātṛcēṭa and Pīṭrēṭa is set down to his filial devotion. We must, however, distrust the whole story; the name of Mātṛcēṭa is not a suitable name for a man, nor is marriage with a Buddhist woman very probable. The name Mātṛcēṭa, which in later times was attached to other persons, means, no doubt, like its equivalent Mātṛdāsa, ‘servant heaven’ of the Mother of Heaven in its present form (the form of Dūrgā): and this is quite in harmony with the fact that Mātṛcēṭa was at first a worshipper of Mahēśvara-Siva (Tāranātha and I-ṣing) and composed hymns in his praise (I-ṣing). He became an expert in Mandala and Tantra formulas and a master of dialectic. In the latter capacity he entered upon a course of controversy with the Buddhists of Oli-viṣa (Orissa), Gānda, Tirhūt (Tīrhaī), Kāmarāja, and elsewhere, forcing them to join the heretics, whereby he acquired the signal and unassailable Kāla, ‘the unassailable’ (Tāranātha, 1-ṣing). At the suggestion of his mother, who hoped for his conversion by the leading doctors of her faith, he proceeded to the great Buddhist centre of Nālanda, where, in fact, he was overthrown in argument and joined the order.

According to Tāranātha, the agent of his conversion was Ārya Deva, who showed him a sūtra wherein he had been foretold by Buddha. If we must reject the introduction of Ārya Deva, which involves an anachronism and is due to a certain confusion (see J A xxxii. [1903] 346), the incident is confirmed by the statement of I-ṣing that Buddha, on hearing the notes of a nightingale,
had said: 'The bird, transported with joy at sight of me, unnecessarily utters its melodious notes. On account of his good fortune (Nivara) this bird shall be born in human form, and named Mātriketa; and he shall praise my virtues with true appreciation' (Record, tr. Takakusu, p. 156 f.). We recognize here one of the prophecies (vyatarpaya, vika Van) narrated in connexion with many Buddhist divinities and others, in this case involving, perhaps, also an interpretation of the name in Prakrit form, Mātiketa = madhuvala, 'transported with joy (at sight of me).\footnote{156} In this way Dignaga has already brought into connexion with the Miśra traditions various Mani- 
touilleries from Chinese Turkestan, so that in due time it will be possible to form a first-hand appreciation of the poet's work. Pending the complete publication, we may base our estimate upon what has already been stated, and give the following English rendering of a portion of the Varnanāravanna hymn, and of the whole: Epistle to King Kan'iśka.'

The former, the 'Delineation of the Worthy to be Delineated in Mātriketa's own work (Varnanāravanna, vv. 1-3 and 30 f.) allusions both to his previous heretical poems and to the supposed prophecy of Buddha.

The remainder of Mātriketa's career may be recorded in the words of Taranātha (tr. Schiefner, p. 91 f.):

'At the time when Mātriketa was converted to the Buddhist doctrine, the number of heretics and Brahman in the Vikrama of the four quarters, who had entered the order, was very great. It was thought that, if the greatest ornament of the Brahman and Vaiśākha, induced them greatly to renounce the like of his shoes and turned to the Buddhist doctrine, that Buddhist doctrine must be in truth a great marvel. Consequently there were in Nalanda alone more than a thousand Brahman monks and an equal number from the heretics. The Acharya, being for a long time full of earnest religious concern, on his daily parinirvanas in the city for alms immense quantities of food, where he entertained five hundred dhikus, namely two hundred and fifty at contemplation and two hundred and fifty studying, leaving them to their uninterruptcd occupation . . . The Acharya's followers are also spread abroad in all lands, as finally singers and strolling chanted them and faith in Buddhism grew mightily among all the people in the land, greater service was rendered to the spread of the doctrine. Towards the end of his life King Kan'iśka sent an envoy to invite the Acharya, who, however, as he was prevented by old age from going, composed an epistle and converted the king to the doctrine. He sent his own pupil Jānakārya to the king as in- strument of the Acharya's teaching found in the Sūtras and other works, he desired to put into writing the ten times ten birth-stories, corresponding to the ten Pāramitās, which were transmitted from ear to ear by the Pañcita and Acharya, but after composing thirty-four he died. According to some biographies, it is related that, having reflected that the Bodhisattva had given his body to a tigress and so forth, he had thought he could do the same, as it was impossible. Seeing, accordingly, a hungry tigress attended by her young, he essayed to surrender his body, but at first could hardly accomplish it. But, when a still stronger faith in Buddha was kindled in him and he had with his own blood written down the prayer in seventy verses, he first gave the tigress his blood to drink, and then gave her a little strength, and then surrendered his own body. Others assert that the person who thus acted was an Acharya Parashuramavarnakāya, who is known as the latter Mātriketa. The latter composed the aforesaid poem of the Prejñapāramitā and many other Sūtras, and wrote many benefactions to the Mahābhāka of both the Great and the Lesser, and as he was a Mātriketa, he was inclined to go to Mahāyāna alone, and the Saivakas were devoted to him, he was revered as a general hero of the orthodox.'

The testimony of I-teiṅ, earlier by some 900 years, is not less emphatic (p. 157 f.):

'He composed first a hymn consisting of four hundred stanzas, and afterwards another of one hundred and fifty. These charming compositions are equal in beauty to the heavenly flowers, and the high principles which they contain rival in dignity the lofty peaks of a mountain. Consequently in India all who compose hymns imitate his style, considering him the father of literature. Even men like Bodhismatva Anakha and Vaiśākha are his disciples.

Throughout India every one who becomes a monk is taught Mātriketa's two hymns as soon as he can recite the five and ten precepts (Sīla).

This course is adopted by both the Mahāyāna and Hinayāna sects. There are many who have written commentaries on them, nor are the limitations of them few. Bodhisattva Gana (Dignaga) himself composed such an imitation. He added one verse to every one of the hundred and fifty verses, so that they became altogether three hundred verses, called the 'Double Mixed' hymn.\footnote{158} The latter composed the aforesaid poem of the Deer Park, and when, as was customary in the course of the Vedas, he was asked to compose an ode, he composed ninety-five stanzas as a contribution to the Veda, for which reason he is also known as the advocate of fruitfulness.

He proceeds to include Nagārjuna and Aśvaghosa among those who inspired Mātriketa. The renown and influence exercised in these statements are further substantiated by the fact that the two latter's works were translated, as well as others, into Tibetan, and one of them, the 'Hymn in One Hundred and Fifty Verses' also (by I-teiṅ himself) into Chinese; moreover, the originals have been preserved in the various fragments among the Miśra 
touilleries from Chinese Turkestan, so that in due time it will be possible to form a first-hand appreciation of the poet's work. Pending the complete publication, we may base our estimate upon what has already been stated, and give the following English rendering of a portion of the Varnanāravanna hymn, and of the whole: Epistle to King Kan'iśka.'

The former, the 'Delineation of the Worthy to be Delineated in Mātriketa's own work (Varnanāravanna, vv. 1-3 and 30 f.) allusions both to his previous heretical poems and to the supposed prophecy of Buddha.
MATTER. — See Mother-right.

MATRIARCHATE. — In metaphysics matter is one of the ultimate primary or fundamental forms of phenomena, as appearances or manifestations (dualism), or the sole substance in terms of which the universe is ultimately to be explained (materialistic monism, or materialism [q.v.]). In this sense matter is the reality, unknowable in itself, which underlies the properties of all particular things, in which those properties inhere, or by which, as impressions made on our senses, they are caused. It is the support, or substratum, of such properties, and it is necessary in order to explain, in any given case, their constant co-existence as a group. The British empiricists, Locke, Berkeley, and Hume, minimized the importance of the conception of substance. Locke thought that it was a mere abstraction; Berkeley dismissed matter as an abstraction and a superfluity; and Hume similarly banished spirit. Kant retained the conception in the sense of the primary in all change. Modern phenomenalism, in which the properties of the primary substance become associated with the secondary substance, and consequently of matter, regards it as denoting the unknown existent upon which physical properties somehow depend.

In the physical sciences matter is the substance of all things. It is derived from the abstract, but rather in that of the 'stuff' of which the sensible universe is composed, its supposed action upon our sense-organs and nervous system gives rise to the totality of changing physical phenomena. Physical science dispenses with metaphysical 'matter,' as perhaps an anthropomorphism, and employs 'matter' to denote simply what is common to all material or sensible bodies, after subtraction of all their particular and accidental characteristics. In the time of Descartes, Boyle, and Locke a distinction was drawn between the primary and the secondary qualities of matter. The properties regarded as primary were extension, figure, and solidity, or impenetrability; and these were believed to inhere in matter, and to be in no way conditioned by our mind. The secondary qualities, such as colour, sound, taste, and, on the other hand, were held not to subsist in matter itself in the same way conditioned by our mind. The secondary qualities, such as colour, sound, taste, and, on the other hand, were held not to subsist in matter itself but in a condition of those things, or as the qualities of the things, according to the order of the primary and secondary qualities. And modern science retains the distinction only so far as it tends to resolve the secondary qualities into conditions of substances, and to describe them in terms of analogies with the primary.

Absolute impenetrability, as a universal and essential property of matter, is not suggested by actual observation. Indeed, it was in all probability the observed penetrability of gross matter, especially in the gaseous form, that led to the first attempt to explain the properties of matter in terms of its atomic constitution. The happy guess of Democritus, that matter is composed of indestructible particles, or atoms, was revived as a genuine scientific theory at the beginning of the 19th cent. by Dalton. The observed fact which seemed to this investigator to demand an atomic hypothesis of the constitution of matter was that chemical elements combine with one another in definite and invariable proportions by weight. This would naturally ensue if combination were the union of one or more atoms of the one element with one or more atoms of another, the atoms of each element being precisely alike in weight and in other respects, but different from those of other elements. The atomic theory has ever since Dalton's time been the foundation of the science of chemistry, and the atomic hypothesis its facts and laws would be unintelligible.

But the notion of simple, impenetrable, hard atoms, such as Democritus postulated, is not free from difficulties. These atoms must be endowed with elasticity if they are to serve to explain certain physical phenomena; and this is incompatible with their simplicity. Difficulties of this kind led to the suggestion of Boscovali, that the atoms composing matter are not extended, hard bodies, but primary in the sense of little used by the scientists. Boscovali dismissed matter as an abstraction and a superfluity; and Hume similarly banished spirit. Kant retained the conception in the sense of the primary substance in all change. Modern phenomenalism, in which the properties of the primary substance become associated with the secondary substance, and consequently of matter, regards it as denoting the unknown existent upon which physical properties somehow depend.

Another hypothesis as to the nature of the atom, and, therefore, as to the constitution of matter, is that devised by A. J. Smend. In this the atom is a vortex-"ring of 'ether,' in an ethereal plenum capable of transmitting vibrations or waves. This hypothesis escapes at the same time the difficulties attending the notion of the impenetrable, solid, elastic atom, and those besetting the idea of action at a distance, or between isolated points. The ether had been postulated to explain the phenomena of light, and, later, those of electricity. It now also serves to explain the constitution and properties of matter. It has also furnished an explanation of gravitation, and it seems to require modification if it is to supply a mechanical representation of what physicists call electricity. For if electricity is material, it is indeed unreasonable to explain it to admit of mechanical description; for mechanical conceptions are derivable only from acquaintance with matter. On the other hand, the success which has attended such mechanical, or semi-mechanical, descriptions suggests that, if ether be not matter, it is at any rate very like it.

Lord Kelvin's kinetic theory of matter, which resolves matter into non-matter in motion, differs from that of Boscovali in that it offers a physical explanation instead of isolating and empty space; this plenum provides for action and reaction without resort to the notion, distasteful to physicists, of action at a distance. It differs again from Newton's in dispensing with the hypothesis of the mass in motion which are not only extended, but also, in virtue of their rotational movement, elastic.

It has been claimed on behalf of this kinetic theory of matter that it enables the physicist to deduce material phenomena from the play of inertia involved in the motion of a structureless primordial fluid, and so achieves the ideal of ultimate simplification which scientific description or explanation seeks. This is so, though it must be borne in mind that the explanations attained is an explanation of the world only as it has been first artificially

VOL. VIII.—32
simplified by science. The further claim that physics is thus capable of reduction to a branch of pure mathematics is, however, not allowable; in general, physics is a special science, and it refuses to deal with the real or sensible material world; it indeed passes, as it becomes more and more abstract, into 'pure' physics; but then it no longer is a science of the real, but only of the ideal or conceptual. Conceptual or pure science applies to the real world, indeed, but only partially or fragmentarily; it exhaustively describes the world in one aspect only, and leaves others out of account. Thus pure or abstract science of the material is valid, within limits, for economical description; it is not adequate to full explanation. That this is true in particular of the kinetic theory of matter can be seen at once when we grasp the fact that the primordial fluid—the non-matter to which matter is reduced, or which science substituted for matter—is not a real thing, but an abstraction. A perfect fluid, in the first place, is a fiction, not anything known to observation. In the second place, Lord Kelvin's medium, in so far as it is describable by the negative terms incompressible, frictionless, inextensible, and structureless, differs in no respect from empty space. The one property in virtue of which it has been argued that the ether differs from space is that of inertia. But Lord Kelvin has made clear in his 'Agnosticism, vol. i. lect. v.), inertia, in the qualitative sense, does not suffice to supply determinateness to the primordial fluid; inertia is a property of matter, but not of modes of motion, and it is perfectly possible for the property of inertia to be, as both Clerk Maxwell and Lord Kelvin recognized, the kinetic theory of matter fails to explain. This theory of the constitution and nature of matter, therefore, belongs to the realm of symbolic description. Science, indeed, in its higher or more abstract reaches, falls so far short of furnishing, as it was once jubilantly asserted to furnish, a complete philosophy of the world in terms of Newtonian mechanics that it professed to do no more than describe natural phenomena in so far as these are to be regarded as changes in the motion of masses. It abstracts from the qualitative properties and changes of matter, because these are not amen- able to the analysis it has made of matter, and replaces them by hypothetically representative movements of ideal 'masses.' Matter, with its diversities of quality for perceptual experience, is not only one in kind for abstract science; as the goal and limit of abstraction is reached, or as physics passes into pure mathematics, matter becomes indistinguishable from space. It may similarly be shown that causality is eliminated by abstract science, and replaced, for descriptive purposes, by identity, change being explained and further explained until at last it is literally explained away. The development of scientific generalization in the direction of the ideal of unification and simplicity has thus not established a materialistic metaphysic or a mechanical philosophy, but has only provided a provisional symbolical description of certain aspects of the material world, valid so long as other aspects may be neglected. Such is the philosophical outcome of the scientific mode of dealing with matter.

Until recently matter was regarded as divisible only so far as to the chemical atom. There were held to be some four score fundamentally different, simple or irresolvable, kinds of matter. Matter which may be the primary concern of the physician, of electricity was described more or less in terms of it. Matter was held to be strictly unchangeable in its elementary forms, the atom being supposed to be indestructible. Quite lately, however, all these beliefs have been reversed. It has been found, by a series of researches mainly conducted at, or in connexion with, the Cavendish Laboratory, Cambridge, that there are electrically charged, but that portions of them can be split off and exist separately, and that these detached fractions, called by J. J. Thomson 'corpuscles,' are identical, from whatever different kinds of atoms they may have been brought, and possess the same 'mass' or inertia. Thus it has become necessary to regard the atoms as complex systems, and, in spite of their differences, as built up of parts or corpuscles which are identical. Further, the corpuscle has been found to be a charged particle of electricity (electron). Corpuscle and electron would seem to be identical, because the whole mass of the corpuscle appears to be due to its electric charge and its motion. Thus 'mass,' the most fundamental and characteristic property of matter, becomes resolvable into an electrical phenomenon; the electron is the fundamental unit alike of electricity and of matter, and matter is 'explained' in terms of electricity. An atom, in fact, is composed of a large number of units of negative electricity (electrons or corpuscles) associated with an equal number of positive units of electricity.

The full importance of the discovery and isolation of electrons cannot be indicated in an article of this kind. But it is sufficient to point out that it is the cause of the excitation of the ether-waves which produce light, and also render comprehensible other phenomena not belonging to the realm of the material. But it may be noted that the atomic (or, rather, the ultra-atomic) structure of matter, hitherto a supposition or indirect inference, has at length been experimentally demonstrated. The recent discovery and investigation of radium and other radio-active substances have led not only to the proof of interpretation of matter, but to the revelation of a new sort of matter, helium, e.g., is produced by the breaking up of radium—but also to the revelation of single atoms.

'Single atoms of Helium, shot off by Radium as rays, have been revealed in two ways. Each atomic projectile produces a long train of electric ions as it passes through a gas before its energy is exhausted, perhaps by knocking loose corpuscles out of the molecules it encounters in its path. These ions have two effects. They make the gas a conductor of electricity, while they exist, so that, by placing a current through it, and an electrometer, Rutherford has shown the effect of each particle by the sudden rise in the current. Secondly, the ions act as nuclei for the condensation of mist, and, in this way, C. T. R. Wilson has made visible as a line of cloud the track of each particle' (W. D. W. Whewell, Science and the Human Mind, London, 1872, p. 240).

Recent progress in science has thus furnished new light upon the question of the constitution of matter. But the ultimate question as to what matter is, remains, as before, unsolved, and perhaps, as P. G. Tait (Properties of Matter, Edinburgh, 1885, p. 14) seemed to think, insoluble. To have learned that matter is electricity is not to have diminished the mysteriousness of its nature. To physical science indeed, matter, like a 'thing' or a 'fact,' is a datum. The data of science, however, are for philosophy or the theory of knowledge constructs. Hence it is to philosophy that we must betake ourselves if we are to hope for further elucidation of the problem contained in the question: what matter is. As we have already seen, the more abstract departments of science cannot help us, because they proceed from an artificial definition of matter derived simply to make abstract science a possibility.

'The bodies we deal with in abstract dynamics are just as completely known to us as the figures in Euclid. They have no properties which are not properties of the physicist, of electricity was described more or less in terms of it. Matter was held to be strictly unchangeable in its elementary forms, the atom being supposed to be indestructible. Quite lately, however, all
valid of matter if it be wholly inert, or in so far as it is characterized by inertia. Whether any matter is wholly inert is a question; that everything is inert must be denied. The science of matter has no basis for a materialist metaphysics.

sidered as the due subordination of the working classes. The 'respectable' press, secular and religious, fumigated against Maurice, and at length the Council of King's College appointed a committee to investigate the matter. But the result was nothing in the Christian Socialism of Maurice inconsistent with his duties or his position as a Divinity professor.

The attack was then shifted from charges of socialism to charges of theological heresy. In 1858 Maurice published the volume called Theological Essays. On most points the new book was only reiterating and expanding views previously expressed; but it made clearer the author's divergence from traditional and conventional theology especially on the subject of eternal death. He maintained, in effect, that 'eternal means spiritual. Knowledge of God, love, truth, and the like are eternal life. Eternal death is not a matter of time or place, but of spiritual separation from the divine. The locality and duration of future punishment were matters outside Maurice's message, and he seems to have believed that it was also outside the message of the Bible and of the Anglican formularies. But the religious world did not like the book; much of its content was fatal to what passed as Christianity, but it was expressed in such orthodox language that it was difficult to see how Maurice could be convicted of heresy. He must, therefore, be ejected from his professorship without any religious or theological qualification. Maurice's writings were not philosophical or theological; they were religious. The Council of King's College refused to adopt Gladstone's suggestion that Maurice's writings should be submitted to theological experts; and they compelled him to resign. The decision of the Council cannot be laid on any one party in the Church. It represented the view of the High, the Low, and the Moderate. Some High Churchmen had been at first attracted by the fervid sacramentalism of Maurice; but they soon came to suspect that his meaning was something very different from theirs. At length Pusey declared that Maurice and he were not worshipping the same God. Low Churchmen were even more disgusted with books full of intensely Evangelical sentences, which were yet fundamentally opposed to their whole scheme of salvation, their doctrine of the Fall and of the Atonement, and of the doom awaiting those who did not accept the Evangelical tenets. Broad Churchmen alone protected his position, not the Church, and his position was not that of the Church. At the end even they were puzzled as to how one who was so much in agreement with their hostility to the prevalent doctrines of the religious world could yet enthusiastically accept much that seemed to them superstitious and out of date. Nevertheless, the Broad Churchmen stood by Maurice, though he vigorously repudiated Broad Churchmanship. The Evangelicalism of Wilberforce and Simeon and the Anglo-Catholicism of Keble and Newman were the dominant forces in the religious world. Maurice had learned much from both. But at bottom he was opposed to both powerful parties, and few were disposed to forgive this attitude, in consideration of his enthusiastic support of the Church at least of their cherished principles. Time has revolutionized the situation. At present many of the best High and Low Churchmen speak with grateful reverence of Maurice, and appear to ignore the great gulf which separates his view of the Church from their own. The fervent sincerity and profusion of the Theological Essays are unmistakable, though to most readers much of the book seems tantalizing and obscure. More popular are The Prophecies and Kings of the Old Testament (1855) and The Patriarchs and Lawgivers of the Old Testament (1855). Maurice meant by revelation a literal un-}

\[\text{old heroes, and He speaks no less directly to men's hearts in all ages. This conviction attracted Maurice especially to the Johannine books, on all five of which he wrote valuable commentaries, in which he sought to bring out their profound and critical meaning. Maurice's view of criticism had to say. His attitude towards the Bible was in some respects vague. Without claiming for it infallibility, he was pained by any criticism of its contents, and disposed to re-interpret rather than reject. He would not join in the outcry against Colenso and Essays and Reviews; but he disliked the critical spirit, and had little sympathy with plain speaking which hurt pious souls, except when it was in defence of some spiritual truth. Nevertheless, he was always ready to scandalize the religious world in cases where the traditional views seemed to him profoundly irreligious. Thus Mansel's Bramp ton Lectures (1858) practically declared that man could have no knowledge of God, except what was given him by the Bible. Snob orthodox agnosticism was horrible to one who believed in a Light that lightens every man. Mansel taught, in effect, that men had no right to assume that words like 'fatherhood,' 'righteousness,' and 'that of which much is said was fatal to what passed as Christianity, but it was expressed in such orthodox language that it was difficult to see how Maurice could be convicted of heresy. He must, therefore, be ejected from his professorship without any religious or theological qualification. Maurice's writings were not philosophical or theological; they were religious. MAY, MIDSUMMER.

— Agricultural peoples throughout the world have established a ritual, marking the end of the Little Lentinal period of their common industry. This ritual, in effect, is the farmer’s religion, and it may be considered the culmination of all pre-ethical animism, and its most important development prior to the great organized faiths. In the form of beliefs customs its survival and value survives abundantly throughout Europe, and probably not a little of its belief is latent underneath Christianity to-day.

We shall discuss its meaning below. This is perhaps less complex than has been supposed; but it is clear that the agricultural meaning is associated with the popular attitude towards the changes of the seasons, lunar and solar movements, and the growth and decay of vegetation in general. The calendar of this cult is that of the countryside, and this is even suggested by the three categories to which the terms May, midsummer, and harvest belong.

1. May.—The typical European celebration of May Day is well known. Trees, green branches, or garlands are carried round, and a King and Queen of May are appointed from among the young people. According to Mannhardt and Frazer, these objects and persons represent the tree-spirit or spirit of vegetation:

The intention of these customs is to bring home to the village, and to each house, the blessings which the tree-spirit has in its power to bestow. 1

They had ‘originally a serious and, to speak, sacramental significance; people regarded that the god of growth was present unseen in the bough. The idea of the spirit of vegetation is blended with a personification of the season at which it is most viscerally manifest.2

The custom of setting up a May Tree or May Pole has been widely spread in Europe. A typical case is that of Swabia; on the first day of May a fir-tree was brought to the village, decorated with garlands or ribbons, and set up, and the people then danced round it. It remained on the village-green till the next May Day, when a new tree took its place.3

At a later stage, at least in England, the May Pole was permanent, while in Bavaria it was renewed at arbitrary periods of three, four, or five years.

1 When the meaning of the custom had been forgotten, and the May-tree was regarded simply as a centre for holiday merrymaking, people saw no reason for felling a fresh tree every year and preferred to leave the same tree stand permanently, only dancing round it.

2 Instead of a tree or a branch, a branch decked with flowers, or simply garlands of flowers, are frequently employed. English children use two hoops of osier or hazel, crossing at right angles, and twine flowers and ribbons round them. 4

3 The two popular ideas of Moorish magical belief are Loba, evil magic, and Barobo, holiness or good magic, each being a force or substance. The negative method of opposing the latter by eliminating the former is conspicuous in Berber custom. But it would be carried with it, the modern method is the earlier; they are obviously complementary.

4 A consideration to be added later may, however, have some significance here.

The negative aspect of agricultural ritual, viz. the imposition of tabu, has traces in European custom, especially in the prohibition of unlucky acts or times. Tabu is best exemplified, however, in lower cultures. The Dayaks of Borneo, for instance, consider the whole period of farming and all its operations to be subject to supernatural influences, while planting and harvest are especially critical times. The most elaborate tabus are imposed, and omens are constantly taken. Merriment and feasting follow the period of tabu.

The Swadee proclaim a gama (communal tabu) at planting and harvest. The idea ‘underlying the various restrictions is that men must not give time and attention to anything but the care of the crops.5

1 G.B., p. 1. The Magic Art. II. 73. 2 Ib. 80, 82, 84. 3 Ib. 88. 4 E. Westermarck, Ceremonial and Beliefs ... in Morocco, Helsingfors, 1913, p. 20.

If the Christian Lent was developed out of a period of agricultural tabu, there is complete continuity between the old and new faiths. The dualism of spring and death was not to be overcome. The Christian festival of Easter, where no sacrifice or sabbath have been noticed. The pagan festival of spring was not to be replaced. In Celtic Scotland, there is still a festival of May Day, followed by a dramatic advent of Spring, Summer, or Life. The former generally are dated on Shrove Tuesday, sometimes at Mid-Lent, the latter sometimes follow immediately, or at a later date—the fourth Sunday in Lent, for instance. In a few places, cowherd dances are held in the spring, and the sex of the first calf born determines the order of the harvest. The old agricultural calendar was altered to suit the ecclesiastical.

In the majority of these Lenten customs the tree or branch or doll or person is termed Summer or Summer-tree.

The Beltane fires of Scotland were kindled on May Day as late as the 19th century. The tree of human sacrifices at them were particularly clear and unequivocal. The most significant example is that of the northeast of Scotland. Here the Beltane fires were lit not on the first but on the 2nd of May, O.S. They were called Bonfires. The belief was that on that evening and night the witches were abroad in all their force, crouching in the cattle and stealing cows' milk. To counteract these forces of evil, yew and willow, chestnut and rowan-tree, were placed over the hayre doors, and fires were kindled by every farmer and cottier. Old thistle, or straw, staves, or broom was piled up in a heap and set on fire a little after sunset. Some of those present kept constantly tossing up the flames and at others several portions of the pitch-trees, poles, or poles, and ran hither and thither, holding them as high as they were able, while the younger portion, that assisted, dragged the burning fire or ran through the smoke, shouting, “Fire! Blaze an burn the witches; fire! fire! burn the witches.” In some districts a large round cake of oat or barley-meal was rolled through the ashes. When the material was burned up, the ashes were scattered far and wide, and all continued till quite dark to run through them still crying, “Fire! burn the witches.”

In Ireland, Sweden, and Bohemia bonfires were lighted on the first day of May; and in the last mentioned country the burning of the witches is prominent.

Bathing, washing the face with dew, and drenching effigies and mummers are common customs on May Day. The European May customs are also, among some peoples, celebrated at Whitsun-tide. This date is especially marked in Russia, but also occurs in the Almav, Bavaria, and other parts of Germany, Denmark, and Austria-Hungary. They are also elsewhere celebrated at Midsummer, and St. John's Eve or St. John's Day One or two other dates are elsewhere found, cases apparently of arbitrary selection of a spring or summer critical day. The Swedes celebrate a minor form of the May Day, but are remarkable among European peoples for concentrating these customs upon Midsummer-tide, when May Pole, garlands, arbours, and jumping over bonfires are in great evidence. It is curious that parts of Bohemia, while in Russia both Whitsun and Midsummer are celebrated similarly. The same ideas and practices are more or less equally applicable to May Day and Midsummer Day, but a Pyrenean custom suggests a possible connexion. Here a tree is cut down on May Day and kept until Midsummer Eve, when it is ceremonially burned.

Similarly there is a continuous connexion between the ritual and beliefs belonging to the trio of the critical periods, May, midsummer, and harvest. In Morocco the first day of summer (17th May) is the death of the earth, the first day of a new season, and the first day of harvest. It is quite natural that thrills of sun-charms or on that of purification and barbaric.

2. Midsummer.—Turning now to the midsummer celebrations, we find that in Sweden May Poles are set up and decorated, and the people dance round them, and bonfires are lighted to be danced round and jumped over. In Bohemia the May Pole itself is burned.

In Russia on St. John’s Eve a figure of the mythical personage, Kupalo, is made of straw, and is dressed in women’s clothes, a necklace and a floral crown. Then a tree is felled, and, after being decked with ribbons, is set up on some chosen spot. Near this tree, to which they give the name of Marena (Winter or Death), the straw figure is placed, together with a table, on which stand spirits and viands. Afterwards a bonfire is lit, and the young men and maidens jump over it in couples, carrying the figure with them. On the next day they strip the tree of the figure of their ornaments, and throw them both into a stream.

In some parts of Russia the ceremony is accompanied by weeping and wailing for the destroyed effigy, or by a mock combat between those who attack and those who are attacked. In Macedonia there is a ritual which seems to be a survival of the ancient Greek ‘Gardens of Adonis.’ The village swain proposes to a village girl early in spring. Then in May they build a fire not a little distance from corn, which is well grown by Midsummer Eve, when it is called Erine or Keneri. On Midsummer Day the young couple go in a procession and break the pot against the church door. Feasting follows, and in some districts a bonfire is lighted, round which the people dance. A young couple who wish to be ‘Sweethearts of St. John’ clasp hands across the fire. The two ‘gossips,’ suggests Frazer, may correspond to the Lord and Lady of the May, and ultimate the reproductive spirit of vegetation.

In Morocco smouldering fires are made on Midsummer Day or the evening before.

Men, women and children keep open watches, believing that by doing so they themselves shall be free of evil, which may be clinging to them; the sick will be cured and married persons will have offspring. Nobody is hurt by the fire since there is beroka in it."

In the Moroccan custom the smoke is more

important than the blaze; the practical point is
fumigation of men, cattle, trees, and various
belongings.

It is also noteworthy that in Morocco at midsummer magic
forces are supposed to be active in certain species of vegetation. 1
Fumigation by burning leaves and branches promotes fertility, act as
catapults; the evil eye, and bring general well-being. 2 There
is also a custom of eating, in a quasi-sacramental manner,
special foods, in which there is karaka. 3

There is probably no corner of Europe in which it has not been the custom to kindle bonfires at
Midsummer-tide. Besides the leaping through the
fire, there are customs of throwing blazing disks through the air and of rolling burning
wheels downhill. 3 A certain sanctity, as in the
need-fire ceremonies, attaches to the kindling of
the fire in some instances. A frequent custom is
that of making gigantic figures of wicker-work,
which are paraded and then burned, these mid-
summer giants being apparently analogous to the
May Kings in their leafy garb. There are also
traces of burning animals alive. 4

Frazer derives these customs of modern Europe, especially those of N. France, from the 'sacri-
cific ritual rites of the Celts of ancient Gaul,' as typical
in the druidical sacrifices, and mythically in the
death of Balder. 5

Two main interpretations of these fire-rituals
have been put forward. Mannhardt, originally
followed by Frazer, explained them as sun-
charms. 6

At the 'great turning-point in the sun's career,' the summer
solstice, primitive man 'fancied that he could help the sun in
his seeming decline—could prop his failing steps and rekindle
the sinking flame.' 7

The wheel and disk are suggestive shapes. Frazer
also noted the purificatory aspect of these customs.

Fumigation is a cleanser, and is frequently used for the
purpose, as in the need-fire. Westermarck
emphasized this aspect.

'Their primary object in many or most cases is to serve as
a protection against evil forces that are active at Midsummer.' 8

In the Moroccan customs cleansing by fumigation is the
chief idea, although there is also the ascrip-
tion of positive virtue to the smoke. Westermarck
finds no evidence for the sun-charm theory. 5 Later
Frazer regarded the two views as being not mutual-
necessarily exclusive, but admitted the purificatory theory
as being the more probable. 9

Traces exist of what has been interpreted as human sacrifice by burning on this date. Various
stories have been supposed as sun-charms. 10

In Morocco, however, midsummer ceremo-
nial bathing is connected with the idea of
securing health by cleansing, and the same idea
is attached to the European custom of rolling
in dew. 12 Various kinds of divination, as is natural
on special dates introductory of a new season (as
midsummer is often regarded), are practised.
Mock fights, tugs-of-war, games, and abuse of the
ceremonial figure are common incidents. These
have been interpreted as dramatic survivals of
a ceremonial and magical representation of a
struggle between good and evil influences, or
designed to produce by homoeopathic magic 'move-
ment' in the weather or in the growth of the
plants. 13 Magic plants are gathered at midsummer

(see art. DEW) such as fern-bloom, fern-seed,
musteloe, and St. John's-wort. 14

For the special harvest-rites see art. HARVEST.

3. Basis of agricultural rituals.—The general theory of agricultural ritual propounded by Frazer
can be connected with such primitive magical
rites as the death of Balder, and it is evident that the
growth of food-plants and animals. But in
many European cases it seems that the main
object is to purify the sphere in which the corn
grows, and many rites are concerned not with
the spirit of vegetation but with vaguely-defined
'evils, often in the form of witches.' 2 The burning
or destruction of the tree-spirit is often a doubtful
proposition. It is impossible to dogmatize on the
origin and first intention of these agricultural
rites, but it is necessary to bear in mind the
possibility that beliefs in corn-spirits and the like,
and even the magical practices themselves, may
be late accretions upon some simple psychological
and even utilitarian facts. There is also
the sense of crisis, very strong in the primitive
mind. Thus, psychic reactions in sympathy with the
objects concerned might lead to dramatic, but
unconscious, imitations—e.g., jumping to make the
corn grow; in the same way, many ex-
planations might be made of such necessary process
as weed-burning. When established,
these EX POST FACTO explanations, magical, myth-
ical, or theological, obviously tend to usurp
preeminence.

LITERATURE.—This is very extensive, but the main critical
works are cited in the text.

A. E. CRAWLEY.

MAYÄ.—Mayá, 'illusion, appearance,' is a term in
the philosophy of the Vedánta applied to the
illusion of the multiplicity of the empirical univer-
se, produced by ignorance (avādāna), when in
reality there is only One, the brahman-atman.
It is not till a somewhat late period that the word
assumes the technical meaning of this cosmic illu-
sion, although this development of its sense is not
an unnatural one. The word mayá is not un-
common even in the Rigveda, where it has the
meanings 'supernatural power,' 'cunning,' 'myst-
erious will-power,' Sayana usually explains it by
prajnā, 'mental power,' or kapata, 'cunning,'
'guile,' 'deception.' Indra, e.g., is said to assume
many forms mayāyabhya, 'by magic wiles, or mys-
terious powers'; as the possessor of this power, he
is called mayáyabhya, 'by magic wiles.'

[The use of the term in the Rigveda has been thoroughly
analyzed by A. Berggren (Religion et culture, Paris, 1878–85, iii.
It, or such derivatives as mayin, mayam, is applied to the
wiles of the demons conquered by Agni (vi. 3. 3, etc.) and Samsa-
vati (vi. 11. 3), and especially by Indra, whether alone (t. xxvi.
4. etc.) or accompanied by Viśnu (vii. xcv. 4). By overcoming
the mayā of the demons Indra won the Soma (vii. xcviii. 6).
Men of evil craftiness are mayāin (t. xcviii. 2) or dharma (vi.
xxix.15); the sorcerers use mayā (vii. xcv. 24); but the mayāin
cannot overcome 'the primal firmaments of the gods' (t. vii. 1).
The Aśvin conquer the mayā of the evil Daśyau (vii. xcvi. 30).

On the other hand, the terms are applied to good deities.
Through maya Mitra and Varuṇa send rain and guard their law
(isi. 33. 7); through maya the sun is adorned (cv. xcvii. 1).
The Marata employ it (r. xcvii. 6), and are mayin (r. xcvii.
2), or simā (r. xcviii. 1, etc.). Mayin is known to, or used by,
Traya (t. li. 9), the Asvins (t. xxvi. 10), and Varuṇa and
Mitra (t. lii. 9, etc.) and it is a characteristic of Varuṇa (r.
xcvii. 14, etc.); while by it the Aputa attained divine dignity
(isi. 1). It was also employed by Agni (t. xxv. 7) and soma
(isi. xcviii. 3), and in the former deity the mayā of the gods
are united (isi. 41); and in the latter as in the soma, of the
earthly gods (t. xxiii. 6, etc.), and even earthly sacrificers are mayin (t. xcviii. 5).

Through maya the Yaks become immortal (r. xxv. 7, xxv.
xxvi. 6, etc.) and he 'has much maya' (paramā, r.
xviii. 12, etc.). Terms of the latter development of the word are
found in such passages as r. li. 3, 'in the form of
a man, working mayās about his body,' and r. xcvii. 18, where 'through maya Indra goeth in many forms' (cf. also
r. xxvii. 7). Sun and moon succeed each other in
Maya.
With the knowledge of self phenomena become known as phases of it; they are provisionally real to a certain extent. The doctrine regards them as independent of the atman. We have not quite reached the stage of the later Vedanta, which regards phenomena as absolutely unreal, like a mirage. Ignorance, in the Upanishads, is an absence of true knowledge; in the later Vedanta it is rather an active force which compels up the illusion of phenomena for the delusion of the self. In the Upanishads also we find a kind of pantheistic compromise which grants that the world does exist, but holds that the sole reality of the atman is not in the least degree affected, for all is the atman. This view pervades the Chhandogya Upanishad, e.g.

The atman is above and below, behind and in front. The atman is all the world (vi. xxv. 2).

As time went on, maya gained an ever-increasing independence as the substance prokritis (nature), which was at first subordinate to the atman. In post-Upanishadic literature the term appears frequently in a limited sense, as in 'an illusion gazelle' (i.e. not a real gazelle); a man who craftily seeks to gain money does it through maya; ananyaya, lit. 'without maya', means 'honestly'. In these cases (for further references see Böhltingk-Roth, loc. cit.) the original meaning of maya persists.

In the philosophical sections of the Mahâbhârata the term is used in its philosophical sense. Thus Vigna, speaking as the supreme god, says: 'Entering into my own nature, and that of the gross or subtle', the last word means to be no more, hence 'to change, to deceive.'

In Upanishadic literature maya is first found in the Sâkta Upanisad (iv. 10) with the meaning 'cosmic illusion'; it is no longer applied so much to a juggler's art, but now connects with the illusion created by him. It is in the latter sense that the word is henceforth mainly used in philosophical literature. Sankara, in his commentaries on the Vedântasûtras, always used the word with the meaning 'illusion,' and the simple term employed by him became more or less stereotyped by his successors.

Although it is occasionally asserted that the idea of illusion is as late in origin as the use of maya to describe it, there is little foundation for this view, and passages may be found in the Rigveda which show that even then it was felt that there was an underlying unity beneath apparent multiplicity; indeed, the doctrine that phenomena are unreal in relation to absolute being is common to all metaphysics.

In the Rigveda, e. e. xiv. 46, evah sêd viûpa bhuvidâ vadhanti, that is the sages call by many names; it is felt that all plurality is a matter of words only, or in x. 5, where the whole universe is said to be purusha alone, it is implied that all else but purusha is illusion.

It was with the introduction of the doctrine of the atman in the Upanishads that this denial of the existence of the empirical universe became firmly established in India as a philosophic doctrine. This was an all-pervading atman, the 'self' of the universe, necessitates the exclusion of all that is not the self, and hence implies its un-ality. The substance of the teaching of the Upanishads is Brahman is real, the universe false, the atman is brahman and nothing else. Although it is not possible to quote early forms of the statement that the universe is maya, or illusion, it is frequently in-listed that the atman is the only reality, which means the same thing—that, i.e., that all that is not maya (world, etc.) is not real; it is mere appearance or illusion. This is the teaching of Yajñavalkya in the Brhadâranyaka Upanishad:

When the self is seen, heard, perceived, and known, the world is called real. When the self is not known, there is plurality of eyes from death to death (rv. iv. 19, v.)

(x. xxv. 15), and maya explains the double form of Vaiyana and advaita (non-duality); the phenomenal world does not exist; it is only maya, arising from avidya, that makes us erroneously think it to be real; maya is overcome when he who ignorantly believes himself to be Brahman realizes that in actuality he is one with the atman; then only is salvation (moksha, lit. 'liberation') finally won. In the Sûkhyana system, on the contrary, the phenomenal world is real; the Vedantic atman is ignored (Sûkhya in the Brhadâranyaka, v. 14, 2); this is a subtle but unconscious, individuality. (On the distinctions between Vedanta and Sûkhya see especially Max Muller, Sûkhyana, p. 279 ff.)

One of the most important of the early works on Vedanta is the Kârikâ (c. 4th cent. a.d.), one of whose pupils was a teacher of Sankara. He is an uncompromising advocate of the doctrine of maya, and strongly denies the existence of the universe. The waking world is no more real than the world of dreams. The atman is both the knower and the known; his experiences exist within him through the power of maya. As a rope in a dim light is mistaken for a snake, so the atman is mistaken for the variety of experience (jiva). When the rope is recognized, the illusion of the snake at once disappears; when true knowledge of the atman is attained, the illusion which makes us think of it as a multiplicity of experiences vanishes. The world has no more real existence than the snake, and, as it cannot remove or cast off what does exist, it
MAYANS

The territory of which is now the Republic of Guatemala, adjoining parts of the Republic of Honduras and of the Mexican States of Chiapas and Tabasco, and the peninsula of Yucatan, was inhabited in ancient times, as it is to the present day, by a number of different tribes, speaking allied idioms and forming a linguistic family usually designated as 'Mayan,' from the name of its most conspicuous members, the people of Yucatan. This population is to be regarded as the second of what already exists, and the latter is equally impossible, for the non-existent—e.g., the son of a barren woman—cannot be the cause of anything; it cannot even be realized by the mind.

General's moment assumed its final form in the commentaries of Sankara (b. probably A.D. 788). Sankara is well aware of the difficulties in the way of reconciling the various views of the Upanishads, and is further perplexed by the fact that the term 'atman' or spirit, he distinguishes in equal weight; the latter difficulty he overcomes by his classification of knowledge as of two kinds: a higher, the knowledge of brahmān, and a lower, including all that is not this metaphysical knowledge. He then investigates the nature of ignorance (avidyā), and concludes that it is to be sought in the knower. The phenomenal world is considered real so long as the unity of the atman is not realized, just as the creations of a dream are there till the dreamer awakes; just as a magician (māyakāra) causes aphantom, having no existence apart from him, to issue from his body, so the atman creates a universe which is a mere mirage and in no way affects the self. It is therefore impossible to realize that there is really only the atman. Multiplicity is only a matter of name and form, which are the creations of ignorance, being neither the atman nor different from their source the whole (māyapattī). The Highest One manifests in various ways by avidyā as a magician assumes various forms by his wiles. Sankara further defines two kinds of existence, empirical and metaphysical, for the first time by a distinction which seems, however, to be known even in the Upanishads. The phenomenal universe is a fact of consciousness, and therefore has a sort of existence; all experience is true so long as the knowledge of the atman is not attained, just as the experiences in a dream are real to the sleeper, until he awakes.

... Therefore before the consciousness of identity with brahmān is arrived, all worldly actions are justified (on Vedāntaśūtra, n. 1. 123).

In spite of the discussion that has raged round it since Sankara's time, the doctrine of māyā as enunciated by him still holds the field in India to-day, and one of the fundamental doctrines of his Advaitist school, pervades the philosophy of the great mass of thinkers in India.

J. ALLAN.

MAYANS.—The territory of what is now the Republic of Guatemala, adjoining parts of the Republic of Honduras and of the Mexican States of Chiapas and Tabasco, and the peninsula of Yucatan, was inhabited in ancient times, as it is
dise of ancient Central America, celebrated a great feast to the black god Ekekuan, the god of the caravans and the merchants, to the chie, and to Hobin, the god of the bee-hives. They killed a dog of the spotted colour of the canco-pod and offered blue ignamas, feathers of wild fowl, and incense. And with this feast the seven days was another great feast, called Pucumac, celebrated to Cit chae coh, the god of war. It began with a five days' watch in the temple of the god of war, and during this time the war-chief, called nacom and elected for four years by the members of the tribe, was seated on a throne in the temple of the god of war and venerated like a deity with incense-burning. The people performed a dance called holkon-okot, a warrier-dance. At the end of the five days the war-chief's house was cleaned and his new dress was on. At this time the chieftain was taught to govern the country after the death of his father, and the new chieftain was invested with his new robe and clothes and a new sword.

In the next month the feast of the moon-god, Tzitzumá, and the festival of the moon was celebrated by the Zapotecans. The moon-god was venerated as the god of the dead. After the moon-god the feast of the great earth-god, the god of fertility, the moon-god and the god of fire, was celebrated by the Zapotecans. For the south and the years corresponding to the south, we have the festival of the great earth-god, the moon-god and the god of fire, which was celebrated by the Zapotecans.

In the month of July, the feast of the moon-god, Tzitzumá, and the festival of the moon was celebrated by the Zapotecans. The moon-god was venerated as the god of the dead. After the moon-god the feast of the great earth-god, the god of fertility, the moon-god and the god of fire, was celebrated by the Zapotecans.

The month of July was reckoned as the beginning of the new year by the Zapotecans at the time of the conquest. The twentieth (main) in question was called Pop, 'straw mat,' meaning 'dominion,' 'reign.' They swept the Popmat, the village streets and renewed all objects of domestic use—plates, jars, bowls, wooden chairs, garments, and the wrappings of their idols—throwing them on the fire. The priests, who had fasted for one, two, or three months, eating only once a day and abstaining from sexual intercourse, assembled in the temple and kindled a new fire by friction, twirling a wooden stick in the hole of another: this new fire was put into the brazier before the idol, and all the priests and principal men burned incense with it to the idol. In the following months all the professional instruments of the different classes of the people—the beakers, the repositories, the utensils of the doctors, the weapons of the hunters, and the fishing-nets of the fishermen—were consecrated by anointing them with blue color. This feast was called Poctum. In the month of September the bee-keepers had a special feast at which they brought offerings of incense and honey to their god Hobin. In the month of October, called Xul by the Zapotecans, there was a great ceremony in the village of Mani, dedicated to the god Xolotl, the 'feathered snake,' the Zapotec translation of the Mexican god Qnetzalcoatl, who was venerated as a culture-hero in Yucatan, some of the most important towns of the peninsula, Mayaqui, and Uléqui Iza, having been bound by Mexican emigrants. The last feast in the year, celebrated at the time of our months November and December, corresponded in a way to the Mexican Ecclesi, ceremonies being performed to promote the growth of the young and to strengthen the old. Contrary to the custom of the Mexicans, the Zapotecans performed very particular and important ceremonies in the last five days of the year, which they called xma taba kin, 'days without name,' i.e. unlucky days, the importance of which is due to its pronunciation. These days they set up in the midst of the village the image of the deity that was to govern the coming year, this god being one of four who correspond to the four cardinal points and follow each other in turn. These gods were: (1) for the east and the years corresponding to the east, Ah bolon tz'añeb, the god of fertility; (2) for the north and the years corresponding to the north, Kinech ahuan, the sun god; (3) for the west and the years corresponding to the west, Litzumá, the old god, the moon-god and the god of fire; (4) for the south and the years corresponding to the south, Zucmitan ahuan, the god of the dead. At this time the offerings were performed in honour of these gods, and the evil that was to befall the village, according to the character of the new year and of the heavenly quarter corresponding to the god thereof, was taken, represented by the figure of a demon, out of the village in the direction of the coming year.

The priests were called ah-kin, 'lords of days,' i.e. 'lords of day-signs,' 'dealers in prognostics,' 'sooth-sayers.' The main prophet, called Panquetzi, and Mayan priesthood, in Yucatan the office of sacrificer (nacom), who had to kill the victim, was not a highly honoured one, whereas in Mexico the highest priests and—_in extraordinary celebrations, such as the inauguration of a newly built temple—the kings themselves acted as sacrificers.

EDUARD SEELE.

MAZANDARAN.—The Persian region of Mazandaran, or Tabaristan, is bounded on the north by the Caspian Sea and on the south by the Alburz Mountains, and extends from Astaraibling in the east to the Pul-i-Rud in the west. The winds from the Caspian bring abundant rain, and the country is highly fertile in contrast to the arid regions south of the Alburz. The climate is decidedly unhealthy, and the difficulty of access to the country, increased by lack of good roads, has combined with Mazandaran's inability to exclude the progress of Persia. It is to these disadvantages that the district owes its place in the history of religion in Iran.

Of the aboriginal inhabitants of Mazandaran we know nothing beyond the statement of Strabo (p. 515; cf. 520) that it was their custom to 'give their married women to other men after they themselves had had two or three children by them. The Bandahkhor (xv. 28) has a fantastic tradition of their origin, and the Dinkart (ix. xxii. 19) describes them as filthy and dwelling in holes.

In regard to the latter point, we may note that Firdausi (Shahnameh, tr. A. O. and E. Warner, London, 1902, E. 86) makes the Mazandaran White Dece in a cavalcade of the king, but one thinks involuntarily of the repeated Avesta statement that demons hide in dry earth or dwell in caves (IV. iv. 15; IV. xix. 21; Vend. iii. 7, 10).

In the Avesta Mazandaran is the abode of the Mazaiyana deveda, concerning whom E. W. West sees xviii. 1882) 29, n. 10) to pronounce them.

1 The meaning of the name Mazandaran is not certain. The old native etymology (Ion Isidori, tr. Browne, p. 14) makes it a later form of Maz, 'east' or 'morning.' Maz (so also Curzon, Persia, i. 354.) = Daromesta's etymology (Zend-Avesta, ii. 376, n. 321) is incorrect); but it more probably means 'Land of the Mazai' (T. Noldeke, 1457, tr. 1941) 178, n. 1). Tabaristan, the Arab. form of Phalavi Taparisan (on coins) or Tabaristan (Avesta, Vend. xii. 17, 24, its etymology, xii. 23, v. 27), is the land of the Zanda, the Koxer (v. 10) and the Targo, of Badoristan, v. 11. Atehnaeus (p. 448 F. Marquart, Einlau, n. 129. F. Windischmam's identification of this place, with Media (Zoroast. Stud., Berlin, 1863, p. 229) was wrong.)
view when he says that 'those demons were, no doubt, merely hoodlums' while M. N. Dhalla (Zoroastrian Theology, New York, 1914, pp. 8, 160) sees in them the nomads of Mazandaran and Gilan, 'who poured down in great numbers and pillaged the possessions of the Iranians.' A number of the Azis of the Varna doves' give names information as to their nature or habitat (1s. Ivi. 17, 32; Vend. ix. 3, x. 10, xvii. 91.) We have, however, more precise indications as to their location in the account of the threefold sacrifice by the hero, Haruta and Parvatiya on Mt. Haru to gain the victory over 'two-thirds of the Mazayyian demons' (Vt. v. 22, ix. 4, xv. 8, xix. 26), for Haru (or as it is also called in the Avesta, Haru Berezati, 'lofty Haru') is generally—and probably correctly—identified in a mythological, rather than a geographical, sense (e.g., Spiegel, Erön. Alterthumskunde, i. 191, 463, 482; Darmesteter, i. 101, n. 25; K. Geldner, Göt. Mem., xxvii. 188, and especially Geiger, Ostrotän. Kultur, pp. 42-43, and the 'Pandita,' (Yt. 17, vii. 22, xii. 25; Bund, v. 4; Ys. xiii. 3) of Haru is probably the Mt. Identification of Mazan (the noun from which Mazayyana is derived) with Mazandaran is also made by Niero- sand (Ostrotän., ii. 380), and by von St. Beaufpruis, who equates the Pahlavi version of the Yasna, renders 'Maz- alayna' by 'Mazandara' or 'Mazandardesīya' (Yt. Ivi. 17, xii. vii. 1, Ivi. 32).

Characters with the Mazdaic doves are the Varenian doves and dovecotes, or adherents of the Lie demon (Ys. xvii. 1: Yt. v. 22, xili. 37, xv. 8, xix. 26; cf. Darmesteter, ii. 373, n. 33; Yt. x. 97, xili. 21, and Ys. x. 14 are unimportant for our present purposes.) The land of Varena, was the fourteen best created by Ahura Mazda, but Angru Mainyu cursed it with 'intemperate nuns and non-arian over-lords' (Vend. i. 17.) It was 'four-eased' ('atha-ra-goesta, i.e. four-square or four-sided) (Dinkart, i. 14, n. 38), and was the birthplace of the hero Thronata or Faridun, who overcame Azi Dahaka (Vend. i. 17; Yt. v. 33)—a tale which was discussed at length in the lost Sīkōr Nām of the Avesta (Dinkart, i. xii. 17-24, and cf. also vii., xii. 9, ix. xix. 4.) The location of Varena is a matter of some dispute. It was certainly near Tabaristan (Spiegel, i. 545), but is hardly to be identified with the modern village of Verek, south of Sari, as argued by Spiegel (172), F. Justi (Handbuch der Zend-Vendische, Leipzig, 1864, p. 270 [with earlier literature], Göt. Mem., ii. 404). Equally certain is the view of C. de Harlez (Avesta trad., Lübeck, 1875-77, i. 87, n. 2) that it was the modern Kirman, A. V. W. Jackson (Göt. Mem., ii. 663 and Dhalia (loc. cit.) identify it with Gilan, and Darmesteter (i. 14, n. 38) with Tabaristan or Dailam. Tabaristan was formerly preferred by Geiger (Ostrotän. Kultur, pp. 127, 154); his later view (Göt. Mem., ii. 391), identifying Varena with the Caspian Gates, seems scarcely an improvement. Niero-sand was ignorant of the meaning of the term, for he renders Varena by saburakness, 'confusing,' and Kamne, 'love' (on Yt. i. 19, Ys. xvi. i. 1), confusing the epithet with the later Pahlavi Varen, the demon of lust (Jackson, ii. 660, 663; Darmesteter, iii. 373, n. 33; L. C. Casartelli, Philosophy of the Mazda- yaan Religion under the Sassanians, Bombay, 1889, pp. 91, 166). On the whole, Giliyan appears to be the most probable identification.

It would seem that the legend of Hoshoyanga, refers to an early invasion of Mazandaran and Gilian by Iranians, and their conquest of it, at least in part. This is borne out by the head tradition of the early 18th cent., for Ibn Isfandiyar (p. 15) held that 'until the time of Jamshid it was in the possession of the demons. He conquered them, and made them the mountains with the plains, fill up the lakes, drain the fens into the sea, open up the country, and distribute the rivers and streams.'

The Iranian religion found some place, at eartu events, in Mazandaran, for tradition sees in Farshahr and Ervinspā, who are mentioned in Yt. xii. 121, two pious men who came from Mazandaran to receive the faith from Farshahrast, the father-in-law of Zarathushtra (Dinkart, ix. xxi. 17-24).

In the Pahlavi texts a most interesting passage in the present connexion is found in the Sīkōr-gāmāyîn Vīyār (xvi. 28-36), which records a belief closely similar to the frequent pronic concept of the entanglement of light in darkness combined with a touch of the Iranian heresy of Zarvanism.

'The rain was the seed of the Mazandaran for the reason that when the Mazandarns are bound on the celestial sphere, whose light is available space, from them through a new regulation, discrimination, and retention of the light of Time, the wheel of glorification and destruction (Time) to the household-keeping male Mazandarns, so that while the last of those Mazandarns, from seeing them, is well suited to them, and seed is dispelled from them, the light which is within the seed is poured on to the earth. Trees, shrubs, and grain have grown therefrom, and the light which is within the Mazandaran is discharged into the world.'

In the Shāh-nāmān Mazandaran is described with little geographical accuracy (Nödeke, ii. 178), and the Kūrgasārs ('Vulture-heads'), who are mentioned as inhabiting the country, like the Sāgārs ('Dog-heads'), Būgūsā ('Goat-ears'), and Nārūpās ('Strap-foots, 'Jarrārōshēs'), betray the influence of pseudo-Callisthenes upon Firdausī (Nödeke, ii. 146, n. 3). In his proper shape the king of Mazandaran had a bear's head (Warner, ii. 75). The land itself was 'the home of warlock-diva and under spells Which none hath power to loose.... To go or even to think of going thither Is held unlucky ' (ib. 361).

Nevertheless, it was invaded unsuccessfully by Kā Kāns and successfully by Baydu (ib. 29, 42-44, 57-79), one of the most great achievements of the latter being the slavery of the 'White Demon,' whom Warner (ii. 271) holds to be a personification of the Mazandarans, rendered hideous by the unhealthiness of their climate. This 'White Div was

'mountain-tall, With shoulders, breast, and neck ten cords across' (ib. 55).

The magic exercised by the 'White Div' against Kā Kāns roads like a description of a severe hailstorm (ib. 40); the only other point worth noting is that his blood cured falling sight (ib. 62).

Even in the Arab period Mazandaran remained imperfectly Islamicized. As late as the 10th cent., many of the inhabitants of Dailam and Gilian were 'plunged in ignorance' (i.e. heathenism), and some were Magians, this being particularly the case with those in the mountains, pipers, and other inaccessible places (Masūdi, Provinces d'or, ed. and tr. C. Barbier de Meynard and Pavet de Courteille, Paris, 1861-77, ix. 5). It was a

'the zodiacal signs, appointed as celestial leaders by Ahura Mazda (Avesta, viii. 135) along the Caspian.' (Strabo, pp. 507 ff., 614; cf. W. Tomaschek, in Pauly-Wissowa, s. v. Dari, ii. 19, 25; and Dhalia, loc. cit.)

in a Persian fragment, a boar who was persecuted in Damvand, called 'Azmān.' The adjective has thus far been found in two other passages, but in both cases the accompanying names are illegible (C. Salaman, Mittheilungsblätter, i. (Petrogad, 1888) 88). For the local Mazandaran version, according to which Soloman imprisoned in Damvand the priest who stole his ring, see Ibn Isfandiyar, p. 36.
centre of the Hurmazite and Zaidite sects of Muhammadians (ib. vi. 128, vii. 117; cf. also ib. vii. 119). The Zaidites call for no special remark, but the Hurmazites may be briefly described, as being one of the many attempts at religious syncretism in Y. A. Sinia.

The exact meaning of the name is not absolutely certain. It is usually explained as from Pers. zarzam, 'cheerful' (cf. Persian zarzamak, 'the cheerful, gay'). The origin of the name is derived from the town of Hurmaz near Ardashib, which appears to have been an ancient centre of Mazdak's sect. This is also implied by the title Hurmazd. (Mazdak), given to him on his death (ib. vi. 119, vii. 150, note). The present writer is inclined to trace the term to the name of Mazdak's wife, Hurmazia, who, after her husband's execution, died of grief by her own hand. For he was a powerful propagator of the Mazdakite heresy, calling her teachings Hurmaz-din (cf. also C. Scherer, Christianomastik Perse, Paris, 1883-86, i. 170-75, where the relevant passage of Nisan's Mohammad-Siyyid, ed. and tr. in full by C. Scherer, Paris, 1863) is given in text and translation for the Mazdakite heresy see art. Mazdak.

The Hurmazites were divided into the Balakhiya and Mazgarya (the latter also called Muhammarin, 'red-botted'). While there is abundant material regarding the role played for more than two thousand years by the sects of the Persian and Turanian by 'Balakhiya', as well as by Mazgarya, for a knowledge of the special features of their sects we have only two sources: the Fihrist of Muhammad ibn Ishaq al-Assuli (ed. by Fligel, ZDMG xxii. 553, note 4), and from the Fihrist we learn that Bahak was the natural son of an Arab landlord of the name of Al-Kashef. He, one-eyed and poor, was adopted by a Mazdakite woman and later on adopted by Khodabakhsh, a Mazdakite, who engaged in an intrigue with Babak, and who had concealed from the public the news of his husband's death, told her lover that she would tell Babak's followers that he had decided to die and cause his spirit to pass into Babak. The present rulers, restored the Mazdakites, and enrich their adherents. The plan was completely successful, and Babak became the acknowledged leader of the sects of the old faith and these converts. After this, Babak's miracles, 'called for a cow, and commanded that it should be slain and that its skin should be spread out on the soil, and on the skin she placed a bowl filled with wine, and into it she broke bread which she placed round about the bowl. Then she caused it, and others, to eat the skin of the dead and to take a piece of bread, and to eat the wine, and eat it. saying: I believe in thee, O Spirit of Babak; as I believe in the spirit of Zayd'. (Ibid. 1850-58, ed. by G. Fligel, Leipzig, 1871-72, pp. 342-344. 18, tr. Brown, Liter. Hist. pp. 324-327) and the Tafsir fi al-din wa-tamnyiz al-farq al-najiyat an al-flaq al-halit, Lit. Hist. of Babak, and he took it from her hand, and this from which he had been derived for some glorious mission. Babak later entered the service of Zayd, and the latter died, in consequence of a wound received from the rival Iranian sects, the Buzabah, not far from Ardashib and Arzaban, and married, after a brief love affair with her, a one-eyed woman who later became known as the she was desirous for some glorious mission. Babak's mother was a Mazdakite woman, who engaged in an intrigue with Babak, and who had concealed from the public the news of his husband's death, told her lover that she would tell Babak's followers that he had decided to die and cause his spirit to pass into Babak. The present rulers, restored the Mazdakites, and enrich their adherents. The plan was completely successful, and Babak became the acknowledged leader of the sects of the old faith and these converts. After this, Babak's miracles, 'called for a cow, and commanded that it should be slain and that its skin should be spread out on the soil, and on the skin she placed a bowl filled with wine, and into it she broke bread which she placed round about the bowl. Then she caused it, and others, to eat the skin of the dead and to take a piece of bread, and to eat the wine, and eat it. saying: I believe in thee, O Spirit of Babak; as I believe in the spirit of Zayd'. (Ibid. 1850-58, ed. by G. Fligel, Leipzig, 1871-72, pp. 342-344. 18, tr. Brown, Liter. Hist. pp. 324-327) and the Tafsir fi al-din wa-tamnyiz al-farq al-najiyat an al-flaq al-halit, Lit. Hist. of Babak, and he took it from her hand, and this from which he had been derived for some glorious mission. Babak later entered the service of Zayd, and the latter died, in consequence of a wound received from the rival Iranian sects, the Buzabah, not far from Ardashib and Arzaban, and married, after a brief love affair with her, a one-eyed woman who later became known as the she was desirous for some glorious mission. MAZDA.—See ORMOND.

MAZDA.—1. History.—Mazda, son of Bardi-dād, a Persian (probably a native of Susiana), was the leader of a communistic sect which existed under the name of the Mazdakite sect, which is generally connected with the Sassanian empire. According to some accounts, the sect was founded by a certain Zardush, son of Khurrgan, 2 on whose behalf Mazda is said to have carried on propaganda among the populace, but in any case it was under Mazda that the sect first gained importance. Before he died, in 499, he was largely due to the state of anarchy then prevailing in Persia. The emperor Kawād, who ascended the throne in A.D. 488, finding himself opposed by the nobility and the influential Zoroastrian priesthood, entered into a close alliance with the arch-enemy and embraced his revolutionary doctrines. The governing classes were strong enough to depose Kawād in favour of his brother Jamsap; but after his restoration, which took place a few years later, the power of the Mazdakites continued unimpaired, though Kawād does not seem to have supported them very actively. In the concluding years of his reign a bitter struggle was waged over the succession, which the Mazdakites endeavoured to use for the support of one of Kawād's sons who was devoted to their cause, while the Zoroastrian priests, in agreement with the emperor, resolved himself, p. 200.

2 Perhaps we may suppose the nocturnal orgies which are the pagan cultus, against which the Gathas polemize (cf. xxviii. 10, xxviii. 10; cf. B. F. Day, Zoroastrianism, Leipzig, 1896, p. 51; J. H. Moulton, Early Zoroastrians and the Gathas, Leipzig, 1896, p. 143), against which there is no evidence in this case. However, it was certainly a current bit of scandalous gossip w ithout sources. 3 The Mazdakites are called Zardushistn in the Syrian Chronicle of Sibyl the Sibyl, ed. W. Wright, Cambridge, 1882, p. 26.
MAZDAK

509

prince Khusran as the presumptive heir to the throne. The course of the events which culminated in the assassination of Khusran, together with many of the thousands of his followers is uncertain. According to the narrative of a Persian official who was converted to Christianity and assumed the name of Timotheus (Joannes Malalas, in PG xlvii. 654; Theophanes, in Chron. evii. 326d; 327a.), the ritual act yielded to the Mazdakites, and, having appointed a day for his abduction, caused his soldiers to cut down all the Mazdakites who had assembled with their wives and children in the neighbourhood of Khusran. On the day appointed for the ceremony he then gave orders that the surviving members of the sect should be seized and burned, and that their property should be confiscated. Most Muslim writers place this massacre in the reign of Khusran, but the truth appears to be that, although it was carried out under Khusran's direction and probably at his instigation, it preceded his accession (A.D. 531) by two or three years. Noldeke assigns it to the end of 528 or the beginning of 529 (Gesch. der Perser und Araber zur Zeit der Sassaniden, Leyden, 1879, p. 465). The ruthless energy displayed by Khusran on this occasion earned for him, it is said, the title of Ambshakru (Ambaskan, Noldeke, Fratres, 19f.), i.e. 'he of cast away mortal spirit,' and the further measures which he took were so effectual that henceforward the Mazdakites vanish from history. That they were entirely exterminated is scarcely credible. There is some ground for the suggestion that the Mazdakite ideas maintained themselves in secret and found expression in various Antimonial sects which arose in Persia during the Muslim period (for an account of one of these see art. MAZANDAKAN). It may be concluded that the whole of our information concerning Mazdak is derived from hostile sources. The epitaph written by an intolerant sacerdotal caste over heretics who had brought it to the verge of destruction may fairly be summed up in the words "de mortuis nil nisi malum."; and, unfortunately, we have nothing from the Mazdakite side to set against the biased narrative of our Zoroastrian and Christian authorities. On the other hand, we are fortunate in possessing what appears to be the essential character of Mazdakism, however they may have misunderstood or misrepresented it in detail. Its socialistic basis is well described in the following passage of Tabari (Leiden ed., 1859-1901, i. 893 f.); quoted by Noldeke, op. cit. p. 154.:

"Among the commands which [Mazdak] laid upon the people and earnestly enjoined was this, that they should possess their property and families in common; it was, he said, an act of piety that was agreeable to God and would bring the most excellent reward hereafter; even if he had had no religious commandments upon these, yet the good works with which God was well pleased consisted in such cohabitancy." In another passage (Tabari, i. 855. 19f. = Noldeke, op. cit. p. 141) we read:

"They [the Mazdakites] asserted that God placed the means of subsistence (arzeg) in the world in order that His servants might share them in common, but men had wronged one another in that respect. The Mazdakites said that they would take from the rich for the benefit of the poor, and give back to those who had less, at the expense of those who had more; and they declared that he who possessed more than his share of wealth, women, and power, should not better to it than any one else. The most eagerly seized this opportunity, and the Mazdakites became so powerful that they used to enter a man's house and forcibly deprive him of his dwelling, his womenfolk, and his property, since it was impossible for him to offer resistance. Soon things came to such a pass that these acts were committed even to the son of his father."

While the principle that every man is entitled to possess an equal amount of property involves logically and practically cohabitation, the restrictions of sex distinctions, and the abolition of marriage, it may be asked from what point of view the principle itself was regarded by Mazdak, whether these results of its application formed part of his programme, and how far they were achieved by his followers. To take the last question first, Khusran, in his speech to the priests and nobles after his coronation (Tabari, i. 890. 15f. = Noldeke, op. cit. p. 160 f.), dwells upon the ruin of their religion and the heavy losses which they had incurred. The systematic retribution for which, to the last, he trusted to take effect, was, according to him, to consist chiefly in compensating the sufferers, establishing the position of children of doubtful origin, etc., show that the social revolution must have developed considerably, and that Mazdak himself regarded it as of capital importance. Our authorities give great prominence to this aspect of Mazdakism, and they are justified in doing so. Mazdak was not a philosopher, like Plato, content to work out on paper a theory of the ideal communistic State. He was a militant social reformer, but he was something more. Noldeke has remarked that what distinguishes Mazdakism from the organized socialism of modern times is its religious character, a peculiarity in which it resembles all Oriental sects, which, as we have seen, regard the whole of life as a matter of piety, and therefore, as the place of one worship. Thus, for example, the continuance of the Mazdakite sect is not to be traced to a fanatical zeal for religious observance, but to the force of circumstances, and the fact that the leaders of the sects were able to acquire or to hold a position of influence among the masses. Mazdak himself did not live to see the results of his efforts. He died in prison February 19, 528 (Pahlavi narrative of Shāh-nāmah, ed. Turner Macan, Calcutta, 1829, p. 1611 f.), which reflects the sentiments of the priesthood, brings out quite clearly the fact that Mazdak identified his doctrines of equality and fraternity with the religious doctrine of Zoroaster in its original uncorrupted form: i. e. will establish this *communism* in order that the pure religion may be made manifest and raised from obscurity, whoever follows any religion except this, may the curse of God overtake him who does this (ds.)" (Shāh-nāmah, p. 1613, line 11 f.).

"First things turn a man from righteousness: The sage cannot add to these five: Jealousy, anger, vengeance, need. And the fifth one that men find hard is covetousness: If thou prevail against these five demons, The way of the Almighty will be manifest to thee. Because of these five, we possess women and wealth, Which have destroyed the good religion in the world. Women and wealth must be in common. If thou desirest that the good religion should not be harmed. These two women and wealth produce jealousy and covetousness and need, Which secretly unite with anger and vengeance. The Demon (dē) is always turning against the wise, Therefore these two things must be made common property."

(6. p. 1614, line 7 f.).

Without claiming that Mazdakism was animoted by no other motives than those which his enemies attribute to him here, we may well believe that he regarded his communist scheme as the only sure means of enabling mankind to attain the object which Zoroaster had set before them, namely, the defeat of the powers of darkness and the triumph of the spirit of light. The astonishing success of his propaganda is to be explained by the force of his appeal to human sympathy, and the failure of his attempts to obtain, by means of an exclusive support for his social programme unless it had been, ostensibly if not in fact, the instrument by which he hoped to accomplish a great religious reformation. In the main he appears to have had few, if any, adherents, and no reliance can be placed on the statements of Shahrastānī and later writers who credit him with cosmological speculations closely akin to those of Mānū.

LITERATURE.—The principal references to Mazdak which occur in Greek, Syriac, Pahlavi, Arabic, and Persian literature are collected by T. Noldeke, Gesch. der Perser und Araber zur Zeit der Sassaniden, Leyden, 1879, at the beginning of the fourth exordium, "Über Mazdak und die Mazdakiten," p. 465 f., which
MEAN—MEAN (Chinese)

Is the best existing source of information on the whole subject, and by E. G. Browne, in The Literary Hist. of Persia, ii, 1890, pp. 162, 193; F. Spiegel, Erant. Alterthumskunde, Leipzig, 1871-75, ii, 292-308; G. Rawlinson, The Seven Great Oracles of the East, London, 1870, pp. 243; and R. A. F. Seyf and A. Troyer, Parize, 1848, ii, 372 ff.; and Ch. Bonnier, The Development of Mithraism, tr. by W. M. Mack and W. R. Widdow, in Proc. Soc. of Biblical Archeology, London, 1890, v, 64. Shaikh ShaJu-astani, one of the students of Dârâb Hormâzyâr (i. e. M. N. A. Vâlî, 1914, 214-215) has not yet been published. He is also well known as a great scholar, and his knowledge of both the ancient and modern languages is very extensive.

1. As a general rule, the terms of the Aristotelian doctrine of the mean are these: 'the mean of any two extremes being the middle between them, and the middle between two extremes being the mean of them.'

2. A. S. Stewart, The Ethics of Aristotle, ch. iv, 1910, pp. 85-86. The doctrine of the mean, as it is known to us, is derived from Aristotle, who calls it the 'golden mean.' It is also known as the 'golden mean' or 'golden mean.'

4. A. S. Stewart, The Ethics of Aristotle, ch. iv, 1910, pp. 85-86. The doctrine of the mean, as it is known to us, is derived from Aristotle, who calls it the 'golden mean.' It is also known as the 'golden mean' or 'golden mean.'
the principle of reciprocity' (xiii. 3); and yet 'were the superior man to speak of his way in all its greatness, nothing in the world would be found able to embrace it; and were he to speak of it in its minuteness, nothing in the world would be found able to split it' (xii. 2). The superior man does what he wishes, to his advantage, but he does not desire to go beyond this... The superior man can find himself in no situation in which he is not himself,' and, if he fails in anything, he blames himself only himself (xiv. i., 5). He advances in regular order from stage to stage (xiv. 3) and constantly strives to advance and develop his virtues so that he may pursue the path of the mean (xxvii. 6).

When occupying a high situation, he is not proud, and in a low situation, he is not inordinate' (xxvii. 7); and it is characteristic of the superior man, though 'appearing in-aid, yet never to produce satiety; while showing a simple negligenice, yet to have his accomplishments recognized; while seemingly plain, yet to be discriminating' (xxxiii. 1). Among the many virtues of Confucius, supreme recognition is made of the fact that he never swerved from the mean (xxx. i).

The remainder of the Chung Yung is devoted to law action and practical duties of government, the obligation of absolute sincerity, the path of the sage, and the character of the ideal ruler—all of which depend on the cultivation of chung yung.

The ruler is mentioned a number of times in the other Chinese Classics; e.g., the Yi King says (xliii. 3) that the ruler should 'be sincere and pursue the path of the Mean': but these texts add nothing to the main discussion in the Chung Yung.

LITERATURE.—The Chung Yung is most conveniently ed., and tr. in Chinese Classic, Hongkong and London, 1850-73, 2 vols. 246-228; ed. also his Prelogomena to this vol., pp. 35-255, and again tr. by him in SKE xxviii. (1857) 505-529.

MECCA.—Mecca (Arabic Makkah) is a city in Central Arabia, famous as the birthplace of Islam, and, except for a short period at the commencement of the system, at all times its chief sanctuary. A variety of the name, Bakka, occurs once in the Qur'an (ix. 90), and this is probably the earlier form, though the etymology is uncertain. The classical geographers, who devote considerable attention to Arabia, are apparently not acquainted with his settlement, for the text of Ptolomy (vii. vii. 32) is derived from a different root. The 'Chronicles of Mecca,' of which the earliest extant is by Azraqi (+ 215 A.H.), so far as they treat of the pre-Islamic period, are collections of fables, in the main based on the Qur'an, by Louis H. Gray.

Mecca.—Mecca is a city in Central Arabia, famous as the birthplace of Islam, and, except for a short period at the commencement of the system, at all times its chief sanctuary. A variety of the name, Bakka, occurs once in the Qur'an (ix. 90), and this is probably the earlier form, though the etymology is uncertain. The classical geographers, who devote considerable attention to Arabia, are apparently not acquainted with his settlement, for the text of Ptolomy (vii. vii. 32) is derived from a different root. The 'Chronicles of Mecca,' of which the earliest extant is by Azraqi (+ 215 A.H.), so far as they treat of the pre-Islamic period, are collections of fables, in the main based on the Qur'an, by Louis H. Gray.

The difficulties, which are mentioned elsewhere in connexion with the Meccan sanctuary, the former as a result, it would seem, of visits from pilgrims, whereas the latter probably means safety for refugees; but the texts are not very clear. The sanctuary itself is called in the Qur'an either 'the house, or 'the Ka'bah,' or 'the Ka'bah (a word said to mean no more than 'house,' and perhaps the Ethiopic word for 'double,' i.e., two-storied), or 'the place of prostration, the Sanctuary.' In iii. 90, it is called 'the first house established for mankind and a guidance to the worlds, containing manifest signs, the station of Abraham, and whoever enters it is secure.' This would by itself imply that the Ka'bah was the first house ever built, as a model for all others. And that Abraham is in this sense older than his abode. Elsewhere (xiv. 40) Abraham states that he had settled his family by it (or in it) in spite of the sterility of the valley, in order that they might pray there regularly; and he prays that the 'house' (and not the house only) might be secure. In xxi. 27 he is represented as doing in his time much the same as was afterwards done by Muhammad: he was told to purify the house for his sake that it might be a path to the people, and a token of purification (tawaff, standing, inclination, and prostration). In ii. 149, Abraham is associated with an event which had been earlier than the Prophet, except so far as the N. Arabian tribes were known by monothelites, on the authority of Genesis, to be descended from the patriarch. It seems clear, however, that the Ka'bah was only one of many sanctuaries which were visited, and, if the word hijr to which is used for 'pilgrimage,' be explicable from the Hebrew hag, 'draw round,' the Arabian month which is called after it is likely to mean 'month of going round,' i.e., the round of the sanctuary, that is, the time during which the pilgrimage is made, without any reference to the preceding 'month of squatting' at home. The word technically used of going round the Ka'bah, tawff, seems also to be properly used of going a round, as, e.g., is done by a sentinel, and this ceremony may be due to confusion of thought.

The pilgrimage which became stereotyped in Islam involves visits to places which are likely to have been seats of distinct sanctuaries, some at a considerable distance from Mecca. The difficult sara, evi, speaks of 'winter and summer journeying,' which is traditionally interpreted of Meccan caravans, and in the biography of the Prophet these play an important part. The Muslim chroniclers suppose that the Ka'bah is owing to their character as 'Allah's people,' enjoyed immunity from attack, and so had special facilities for the carrying trade. It is not easy to reconcile this with the primitive conditions which were very clearly prostrated, but it is possible that this story is an invention of exegetes, who coupled sara evi. with evi, which more decidedly deals with Mecca, and is itself a fragment, scarcely to be construed in its present form. In it the Quraish (the tribe in possession of the Meccan sanctuary) are advised to worship the Lord of this House, who has given them food after hunger and safety after fear. These two pheno-
and Taif; it is more probable that only Mecca is meant. Of walls we first hear in the reign of Mu'ta'in (A.D. 626-627) and these did not surround the settlement, which was naturally protected by mountains, but merely blocked the passes. Snouck Hurgronje 1 is probably right in thinking that the community first gathered round the well Zamzam which furnished a constant supply of brackish water. The tradition gives as the names of the tribes which formed the community, but scarcely hints at any sort of municipal organization or government. Still more surprising is the idea of Mecca, not merely of all, but of any of these, we should have expected to be associated with a sanctuary. The wealth of the tribes is likely to have consisted mainly in camels, but other forms were probably known; visitors to the shrine have frequently noticed the heavy loads levied on pilgrims as personal tribute, and this source of wealth is, as we have seen, indicated in the Qur'an. We possess only casual notices of the amounts demanded in later times, but these indicate that the piety of pilgrims to Mecca was considered a considerable period. The Fatimid khilifs expected the governor of Mecca to make the pilgrimage tax his chief source of revenue; besides this the pilgrims paid for admission to the sanctuary, and those who brought goods had to do so in accordance with the law. All these taxes were imposed on sovereigns to abolish these dues, but they had a tendency to revive, and their analogues doubtless existed in the period before the rise of Islám.

Prior to the rise of Islám it would appear that some portions of Chaldea were added to Mecca, and the biographies of the Prophet prefer to give us the names of persons who had either adopted that system or showed some leaning towards it. At the usual period of the rejection of the existence of any Christian place of worship at any time in this city. The tradition represents the pagan inhabitants as tolerant towards religious innovators and dissentients, so long as the local beliefs were not assailed. It is for such a community as was intimately bound up with the local religion that it is difficult to suppose that dissent could remain quite immune from persecution.

There is reason for thinking that the Prophet's original attitude towards the Meccan religion was uncompromising, and that his success would have involved the abolition of the ceremonies of which the Ka'bah formed the centre. His rejection by the Meccans at the first was therefore understood by the Prophet, and in accordance with the rule of the Sharifs, who has lasted to our day: this word, signifying 'pilgrimage' is applied in all countries to the descendants of the Prophet. He submitted to the suzerainty of the Fatimids now established in Egypt, but in most respects was an independent ruler. His successors shifted their allegiance from Cairo to Baghdad and back according to the value of the gifts received; and throughout the subsequent history of Mecca recognition has been granted without difficulty to the suzerain who offered the highest price. According to Ibn Jukair 2 who visited Mecca in the years 1183 and 1185, the Sharifs were of the Zaidi sect, which, while recognizing the rights of the Prophet's descendants to the succession, held that considerations of expediency might justify their being ousted; the practice of the Prophet gave him a right to this. This is in accordance with this doctrine. The dynasty founded by Ja'far was displaced at the beginning of the 13th cent. of our era by another, also claiming descent from 'Ali. The founder was one Qatadah, who appears to have energetically supported the rising Zaidite dynasty of San'a, but whose successors fell back into the former practice of recognizing the power which for the time was capable of displaying the greatest generosity. The 'Chronicles of Mecca' consist largely of the particular disputes between Qatadah's descendants, which not infrequently had to be settled by the active interference of the Egyptian Sultans, who, from the fall of Baghdad until the conquest of Egypt by the Ottomans, were ordinarily recognized as suzerains by the Sharifs. The Sharif 'Aljan (1346-75), who for a time transferred his allegiance to the Mongol rulers of Persia, definitely rejected the Zaidi system and made that of Shâfi'i dominant in Mecca, though the other orthodox systems were recognized; the dominance of the Hanîfite school, which is the official system of the Ottoman government, dates from a much later time. A permanent garrison was first established

---

in the neighbourhood by the Egyptian Sultan Jaqmaq (1458-53). On the Ottoman conquest of Egypt in 1516 the allegiance of the Sharifs was transferred without difficulty to the Sultan of Constantinople. The new rulers, who were almost the authority of the Sharifs, to a greater extent than their predecessors, and the presence of a Turkish governor at Jeddah has constituted a permanent restriction upon it. The introduction of Turkish suzerainty also led to the adoption by the Sharifs of an intolerant attitude towards the Shiites of Persia, who could only with difficulty and at some risk obtain admission to the pilgrimage. In the 17th cent., owing to the decline of the Ottoman power, and this was involved in family quarrels, became somewhat less dependent on Constantinople, and could even at times defy the representative of the metropolitans at Jeddah. Both the sacred cities were threatened by the increase of the Ottoman power, and in 1695 Mecca was evacuated by the Sharif, and presently occupied by the Wahhabis, who reformed the place according to their ideas. The Sharif was, however, after a short time re-installed on his professing to adopt some Turkish customs. Details concerning the extent to which these subjects were excluded from the pilgrimage. In 1813 an expedition sent by Muhammad ‘Ali, founder of the khedivial family in Egypt, succeeded in recovering the sacred cities, and a TurkishPossession was in effect, though, however, the rule of the Sharif was nominally continued. After a time the Ottoman power was again represented by the governor of Jeddah. Both the meaning and the limits of the sanctuary (haram) were extended by Isfahan. The sense of this Arabic word is ‘to forbid,’ and a sanctuary is a place where certain acts are forbidden, of which the most important is bloodshed; it is unlikely that the limit was before life in the mountains extended beyond the Ka'bah itself. As for the keeping in that at this time the dwellings of the citizens surrounded the Ka'bah, leaving only a small area for the dwellings, the descent of the sanctuary necessary; and operations of this kind were undertaken by the second and third Khalifs. The area was further enlarged by the pretender ‘Abdallah b. Zubair, but the actual mosque surrounding the Ka'bah, built by al-Walid I (A.H. 705-715), who erected a colonnade with marble pillars and other luxurious decorations. Further additions to the area were made by the Abbasid Mansur (755), who also built a minaret, and who in the inscription placed on his work, claims to have doubled the area. Further large additions were made by his successor, Mahdi, who at great cost had a torrent diverted with a view to bringing the site of the Ka'bah into the centre of the mosque. Yet further the tents were erected by the Wahhabis (850), who also introduced luxurious ornamentation. The frequent repairs required by the mosque were due in part to the floods by which Mecca was repeatedly visited, and to some extent to damage done during civil disorders. Under the Khalif Mu'tamid considerable extensions and restorations were again carried out in the years 894-896, and the like are recorded for the year 918 under Mu'qtadir. Under this Khalif serious mischief was wrought by the Coromans, who massacred the pilgrims, and for a series of years practically put a stop to the institution; their atrocities culminated with the seizure in 317 A.H. of the Black Stone, which they conveyed to their headquarters in Hajar, whence it (or some substitute) was sent back twenty years later. This revolt had already been seriously in- jured in the time of 'Abdallah b. Zubair, when the Ka'bah was burned down, and, in spite of great precautions, it was finished by an earthquake in an Egyptian Shi'ite in the year 414, and not long afterwards was broken into three pieces by some Persian fanatics. The kissing of this object, which forms one of the pilgrimage rites, is not mentioned in the Qur'an, but probably is a survival from pagan times.

In 1399 a large part of the mosque was destroyed by fire, and orders were presently given by the Egyptian Sultan Faraj for its restoration with increased dimensions. This was finished by 1401. In 1551 the Ka'bah itself was found to be in need of repair, but before this could be effected the question was raised whether this sacred building could lawfully be touched by the builders; and the fanaticalolunteers were by no means in sympathy with those holding the negative view. The precedent of Abraham and Ishmael (Qur'an, ii. 119) finally decided the question in favour of the restoration. In 1571 orders were given for the complete rebuilding of the mosque, which was finished in 1583, by a successor. Details concerning the extent to which these buildings were so extensive as to cover by a mosque of Mecca or in Medina to preserve historic buildings or retain ancient sites. The architectural features of the mosque have never stood in the way of those who would wish to erect them as a place of pilgrimage. The case of the Sharif, whose besieging forces were to some extent responsible for the burning of the Ka'bah in 64 A.H., did no more than would have been done by any other Muslim ruler who was engaged in suppressing rebellion. Various buildings which figure in the early history of Islam were cleared away as the need for enlarging the temple area arose, and little regret was felt for them. On the other hand, many mosques which have no justification for their construction have been built in the early history of Islam. The jurist Malik (179 A.H.) asserts that this was restored by Omar to a place where it had occupied before the Days of Ignorance, on the faith of a chart preserved in the treasury of the Ka'bah. As we have seen, the Black Stone, which is supposed to represent the right hand of Allah, is of very doubtful antiquity. Besides the prohibition against bloodshed which theoretically covers the area occupied by the city, there are other legal peculiarities belonging to it. Closely allied to this prohibition is that against the chase, which is even extended to the cutting of trees and the plucking of herbs. This ordinance is modified in a variety of ways; it seems clear that the slaughter of noxious beasts is generally permitted, and wounding to a certain extent is also lawful. The slaughter of game has to be atomed for by compensation, on a scale fixed by the Qur'an. There is some difference of opinion among jurists on the question whether rent may be taken for

---

VOL. viii.-33
houses in Mecca; according to modern travellers, this question is purely academic, since the inhabitants largely earn their living by letting their houses to pilgrims.

The place of Mecca in the Muslim religion is otherwise not free from anomalies. On the one hand, it is clear that the standard of morality and piety practised by the inhabitants has at no time been particularly high, and various travellers have been shocked by their experiences; on the other hand, there is no doubt about the sanctity of the place and the spiritual benefits that accrue to those who go thither. These are not indeed free from danger; for, just as the value of good actions is highest in Mecca than elsewhere, so the debt incurred by evil deeds is there increased; and, according to the Saffis, evil thoughts and intentions are punished in Mecca, but not elsewhere. If Abū Talib al-Makki († 580 A.H.) is right, pious men in early times who went thither on pilgrimage used to pitch two tents, one within and another outside the sacred area, devoting the former exclusively to religious exercises. The resulting danger was one of the reasons why continuous residence in Mecca was discouraged. The Ghazīlīf († 505 A.H.) were the fear lest familiarity should breed contempt and the fact that absence makes the heart grow fonder. It could also be urged that, according to the Qur'ān, 'the House' is present in the returned pilgrim, to be visited, not made a residence of (i. 119).

The various sovereigns who have been protectors or 'servants' of the sanctuaries have ordinarily been lavish in marks of their favour and somewhat perfunctory in munificence to the pilgrims; among the public works executed by these benefactors the greatest amount of space appears to be devoted in the Chronicles to the aqueducts; one which conveys water from Mt. Arafat to Mecca, utilising a channel originally constructed by order of Zubaydah, wife of Hārūn al-Rashīd, occupied fourteen years (965-979 A.H.) and cost enormous sums, owing to the difficulty of piercing the rock and the primitive character of the methods in use. Numerous colleges, hospitals, and a mosque has been erected by Islamic sovereigns and their ministers, many of them furnished with endowments. The fate of all pious foundations in Mecca, according to Snouck Hurgronje,3 is the same: most of the houses and mosques have been at some time or other purchased in order to serve as endowment, but gradually passed from hand to hand in such a way that they retain the name waqfīf (on which see E.R.E. vii. 877 f.), without serving any pious purpose. The name, however, prevents their being legally sold, yet sale is often necessary, and this is effected in fact, though new names are employed to serve instead of 'sale' and 'purchase.' An attempt was made by a Turkish resident in the middle of the 19th century, to declare all such transactions invalid, but his removal was procured before this could be carried out.

The ejection of the places of learning has not had the effect of rendering Mecca at any time a university centre, and its printing-press has contributed very little to Arabic literature; nevertheless as a gathering-place for the pious it has regularly served for the dissemination of ideas, which have been noted by A. Le Chatelier, indeed, attributes the part played by Mecca in recent times to the influence of the Sanā'is: 'La conférence nouvelle rendez à la Mecc a le rôle de foyer du fanatisme musulman, qui avait fait perdre la carte secrète de l'islam' (Les Conférences musulmanes du Hadith, Paris, 1857, p. 19).

The author of a dialogue on Islamic revival be-

tween Muslims of various nationalities recently placed the scene in Mecca.1 Yet the cosmopolitan character of the pilgrimage appears from the time of the early Islamic conquests to have rendered this sanctuary the place where the Musliins address the Muslim world as a whole. Deeds of settlement of succession to the khilafate were issued and deposited here by Harūn al-Rashīd.2 If a man wished to procure a copy of a rare work, he would have a crier advertise the want among the pilgrims.3

In spite of the rule which forbids access to Mecca on the part of non-Muslims, many Europeans have undertaken the pilgrimage, some indeed having adopted Islam for the purpose of carrying out this project. In Christians at Mecca (London, 1909) Augustus Ralli gives accounts of sixteen such visitors, beginning with Ludovico Varthema, 'a gentleman of the city of Rome,' who reached the forbidden city in 1563. Since the publication of Ralli's collection two more English travellers have been added to the list: Hadij Khan and W. Sparrow, With the Pilgrims to Mecca, 1902; London, 1905; and A. J. B. Wavell, A Modern Pilgrim in Mecca, 1913.8 Other pilgrimages that by R. F. Burton (Pilgrimage to Al-Medinah and Mecca, London, 1855-56) is classical; it adds, however, very little topographical information to that which had been given to the world by R. L. Durocher (Le Meccah, Paris, London, 1829). Of the others the account of the city by Snouck Hurgronje (op. cit., 1885) is the most important. In several cases the travellers were so fully occupied with the task of preserving their own and their followers' lives that they have not been able to collect any information of value; and in not a few instances the veracity of the narrators has been questioned, not without cause. Besides these accounts by Europeans there are many in existence by Muslims, some of whom have employed the French language. It is asserted that the number of the former who have succeeded in witnessing the pilgrimage and returning to tell the tale is small compared with that of those who have sacrificed their lives in the attempt; and those who have accomplished the task safely have in most cases done so by the exercise of great cunning and ingenuity. The plan of H. Maltzan (Walshfahrt nach Mekka, Leipzig, 1865), who, in order to pass for a Muslim, borrowed the personality of an Algerian, but have any valid reasons for returning, is now in progress, but at no time or other purchased in order to serve as endowment, but gradually passed from hand to hand in such a way that they retain the name waqfīf (on which see E.R.E. vii. 877 f.), without serving any pious purpose. The name, however, prevents their being legally sold, yet sale is often necessary, and this is effected in fact, though new names are employed to serve instead of 'sale' and 'purchase.' An attempt was made by a Turkish resident in the middle of the 19th century, to declare all such transactions invalid, but his removal was procured before this could be carried out.

The ejection of the places of learning has not had the effect of rendering Mecca at any time a university centre, and its printing-press has contributed very little to Arabic literature; nevertheless as a gathering-place for the pious it has regularly served for the dissemination of ideas, which have been noted by A. Le Chatelier, indeed, attributes the part played by Mecca in recent times to the influence of the Sanā'is: 'La conférence nouvelle rendez à la Mecc a le rôle de foyer du fanatisme musulman, qui avait fait perdre la carte secrète de l'islam' (Les Conférences musulmanes du Hadith, Paris, 1857, p. 19).

MEDALS.—See COINS AND MEDALS.

MEDIAN RELIGION.—The religion of the ancient Medes is one of the most difficult and disputable questions in ancient Oriental history. The statements of the earlier classical authorities are not easy to reconcile with the Iranian Avesta, and fresh elements of difficulty have been introduced by the decipherment of the cuneiform inscriptions.

The actual facts are these. As far back as the 14th cent. B.C. the cuneiform inscriptions of Bogaz Koi have shown that there was an Aryan, but not as yet Iranian, population in Mesopotamia who worshipped the gods Mithra, Varuna (written Urvanana and Aruna), Indra, and the two Nasatya, the Vedic corresponding of the Dioscuri (cf. E. Meyer, S.E.A. III, 1908, pp. 14-19). In the 9th cent. B.C. this Aryan population had become Iranian.

and was settled east of the Zagros mountains, where it was known to the Assyrians as Madâ, or Medes, a name also written Amadi, like Anamori for Mardoi. From this time forward the names of the kings and chiefs of Media and the neighboring districts mentioned on the Assyrian monuments are Iranian, and in a list of Median princes conquered by Sargon in 714–713 B.C. we find the name of Mazâkina, proving that he was the good Mâdâ. The Wise, was already worshipped (cf. also F. Hommel, PSBA, 1899, p. 132). The name of 'Mîrta,' the sun-god, is also found in the tablets from Assur-lam-pa's library at Nineveh. On the other hand, 'Mîrîrâh, opposed to the righteousness of Ekbatana, is termed in the inscriptions, not 'King of Media, but 'King of the Umanan Manda' or 'Hordes,' an archaistic title given by the Babylonians in early times to the northern barbarians. See Mâdâ, pp. v. v. The similarity of the names Mâdâ and Manda raises the question whether the Medes of the classical writers who were conquered by Cyrus were not really Scythians who had adopted religious beliefs and practices that had been transferred to their Median subjects or neighbors.

Like the Medes, the Persians also were Iranians.1 But here again the inscriptions make it certain that whether Cyrus and his successors, the founders of the Persian empire, were of pure Iranian stock, and whether the religion of Cyrus, at all events, was not the polytheism of Susa (cf. art. Achaemenians, vol. i, p. 76). Both Cyrus and his son conformed to the ancient worship of Babylon. Gaumâta (Gomates), the Magian, is expressly stated by Darius (Ih. [Pers. text] i. 63 f.) to have destroyed the ahdaya, or prayer-chapels, of Persia, a word which is translated 'temples of the gods' by von Oppenheim in the Babylonian version of the Behistun inscription.

These Darius claims to have restored, along with other possessions of the Persian and Median peoples, through the help of the great god Auranâzî (Ahriman [q. v.]). But there is no reference to the Zoroastrianism of the Avesta in the inscriptions of either Darius or his successors; their priests, moreover, were not Magians, whose overthrow and massacre were, on the contrary, commemorated in the festival of the Magophonia.2 and the bodies of the Persian kings seem to have been burned in the ordinary way; the Magians were not, as the law of Auranâzî was the 'Lie' (drozga), the Achaemenian equivalent of the Zoroastrian Angra Mainyu (Ahriman [q. v.]). The date of Zoroaster (Zarathushtra) is uncertain, but modern scholarship is inclined to assign it to the 6th cent. B.C.; and Jackson seems to be right in concluding that he arose in Media rather than in Bactria, the tradition which makes him a Bactrian being late. Zoroaster is unknown to both Herodotus and Ctesias, the earliest mention of him occurring in a fragment of a poem, probably written by such an author as the Persian King (i. 104), but he also implies that they were a class of priests (i. 140), and he describes certain of them as interpreters of dreams (i. 167). He further ascribes to them the Zoroastrian practices of renouncing the dog and destroying noxious animals (i. 140). No sacrifice could be offered without the presence of a Magus, who accompanied it with a hymn (the Avestan Gatha); and there was neither altar, fire, nor libration (i. 132). The Greek historian, however (i. 631) that 'the Persians' (whose priests were the Median Magi) had 'no images of the gods and no temples or altars, considering the use of them a sign of folly.' Thus Abûru, the Medes, were opposed to Zoroaster, and the sun-god, revered as a god of the fathers by the Medes, among whom the Magi were a sort of hereditary priests, like the Levites in Israel; and that the religious system of Darius represented the religion of the Persian aristocracy, but that the origin and fundamental principles of the two were the same. The conquest of Media by Persia would have introduced the Median forms of theology among the Persian people, though their influence would have been considerably weakened by the fact that Darius and his successors transferred to their Median empire, through the help of the great god Auranâzî, the religion of the Medes and supreme over all other gods. The existence of the latter, however, was admitted: at Behistun Darius says that he was assisted not only by Auranâzî but also by 'the other gods, all the heavenly and terrestrial' (cf. Avesta-7, 9, 77, 79). The Magi were a sort of hereditary priests, like the Levites in Israel; and that the religious system of Darius represented the religion of the Persian aristocracy, but that the origin and fundamental principles of the two were the same. The conquest of Media by Persia would have introduced the Median forms of theology among the Persian people, though their influence would have been considerably weakened by the fact that Darius and his successors transferred to their Median empire, through the help of the great god Auranâzî, the religion of the Medes and supreme over all other gods. The existence of the latter, however, was admitted: at Behistun Darius says that he was assisted not only by Auranâzî but also by 'the other gods, all the heavenly and terrestrial' (cf. Avesta-7, 9, 77, 79).

MEDIATION. — Mediation is a word of extreme vagueness, but is here considered only in its technical or quasi-technical applications in religion. In a sense all we are and have is mediated to us somehow. Our very being comes to us through our parents. The society into which we are born and in which we are trained mediates to us most of
what we think of as intellectual, moral, and religious revindications. The greater part of what comes under these headings is not original achievement of man, but is imposed upon him; it comes to us in some way by the mediation of others. It may be possible to make our own what is thus mediated to us, and to become possessors, as it were, in our own right of what we have inherited or been taught; but, to begin with, every creature born in time owes to mediation of some sort the whole capital with which he adventures upon independent life.

1. The NT use of the term 'Mediator.'—The technical use of the word is best and most easily grasped if we start from that application of it which is most definite and concrete, viz. its application to the work of Christ. There are five NT passages where this is found: 1 Ti 2:1, Heb 4:14 12, 16. In all these passages Christ is represented as mediating between God and man. And man has been estranged. The relation which normally subsists between them has been destroyed, and the work of the mediator is to restore it. In 1 Timothy this work is explicitly connected with the redemptive death of Christ: there is one mediator between God and men, Himself man, Christ Jesus, who gave Himself a ransom for all. The same connexion is implied in all the passages in Hebrews; there is the spoken mediator of a new covenant, or a better covenant. The covenant is the religious constitution under which God and men form one society, or live a common life. The old and inferior constitution, under which the idea of religion was not realised, was a fall. This was annulled because of its ineffectual character, and in place of it, through the mediation of Jesus—i.e., by means of, and at the cost of, His incarnation and sacrifice—comes the Christian relation of men to God and to one another. This the end of the world was the peaceable kingdom, and is defined by Suidas as Ἑλπιστήριον, 'peace maker.' The verb μεσιτεύω, which occurs once in the NT without an object (He 8:2, though some here would supply τὴν ἐνοσοκομίαν, 'His promise') is elsewhere usually transitive: μεσιτεύω τὴν δικαίου εὐδοκίαν (Polyb. xi. xxxiv. 3): 'to achieve the settlement by friendly mediation.' A state of hostility or estrangement, in which the making up of the peace is the work of a third party, and can therefore be called mediation, is the background of the primary Christian use of the term.

2. Extension of mediation in the NT from redemption to creation.—But even in the NT it is not limited to this use. It is not only that peace with God, or the forgiveness of sins, or reconciliation, or eternal life for the spiritually dead is mediated through Christ and His redemption; Christ is presented also as the mediator of creation. All that has come into being through Him. We find the idea without explanation, as if it were self-evident, or an agreed proposition among Christians, in 1 Co 8:6. It is expanded in Col 1:16, with a view to securing to Christ, who has just been referred to as the mediator of salvation (in whom we have our redemption, the forgiveness of sins [v. 14]), a place of dignity above all angelic powers. In Colossians, apparently, such powers were recognized by some or other; it comes to us in some way by the mediation of others. It may be possible to make our own what is thus mediated to us, and to become possessors, as it were, in our own right of what we have inherited or been taught; but, to begin with, every creature born in time owes to mediation of some sort the whole capital with which he adventures upon independent life.

3. Rationale of this extension in Paul.—So far as can be seen, there are only two possible explanations of Paul's use of the term 'mediator.' First, it designates and reduces the idea of mediation, so far as it applies to all being, to a pure formality. It assumes that Paul had identified Christ with some supernatural being to whom this attribute or function of mediating creation already belonged and that with the identification there went, as a matter of course, the ascription of this attribute or function to Christ. This is supposed to explain why Paul, when he introduces the idea of creation through Christ, does it simpliciter, without any justification or explanation: he is only doing what every one would concede who agreed with him in identifying Jesus with the Christ. But to this there are many objections. As far as can be known, there was no trace whatever in the Pharisaism in which Paul was reared of any such idea as that the Messiah was participant in the creation of the world. Further, though this may be discounted as a subjective impression, Paul writes in Colossians with passionate earnestness on this subject, and not like a man manipulating borrowed ideas which have no vital relation to his experience. And, if it be said that it is not the Jewish eschatological Messiah with whom Jesus is identified by Paul, but a Greek idea, the Logos of popular Greek philosophy, of whom such things were predicated as Paul predicates of Christ in connection with creation—then the further question is raised, How did Paul come to

MEDICATION

make this identification? He never mentions the Logos by name. There is no indication in his writings that he knew anything about philosophy or that he had any interest in its problems. The Logos of the present philosophy, which did mediate something between God and the universe, was the philosophical solution of the difficulty which he had never felt: namely, how the transcendant God was to come into any relation to a material world. Paul was not troubled by this any more than the OT prophets or Jesus Himself; nor does he ever bring his doctrine of creation through Christ into any relation to it. The motive and the meaning of that doctrine must be sought elsewhere.

A real debt to his thought, as opposed to this formal one, may perhaps be found in another way. In Paul's experience, Christ was everything. He had reconciled him for himself and made him a new creature. He had put him in possession of the final truth and reality in the spiritual world, that which could never be transcended and could not exist unless he lived in Christ, he lived in the eternal world, and he felt that to that world and to the believer's interest in it everything else must be subservient. He could say, "All things new (1 Cor. 5:17); All things work together for good to them that love God, to them that are called according to his purposes (Rom. 8:28)." And all things here must be taken without restriction. It means not only all that happened when Jesus (1 Co. 15); All things work together for good to them that love God, to them that are called according to his purposes (Rom. 8:28). And all things here must be taken without restriction. It means not only all that happened when Jesus lived, but what he did in the world, which Christians live must be essentially a Christian world. It is not a world in which anything can defeat God's purpose in Christ; it is not a world in which the final sovereignty of Christ can be frustrated; it is a world which is essentially related to Christ, to His work of reconciliation, and to His supreme place at last as heir of all things. Now, is it not legitimate to say that a way which was created for Christ was created in Him and through Him? The difficulty of apprehending what is meant by the creation of the world through Christ is only one aspect of the difficulty of apprehending Christ's pre-existence and mediation. Again it is only one aspect of the omnipresent and immanent Divine which defines the relations of eternity and time. If preexistence is a legitimate way of expressing the absolute significance of Jesus — the fact that what we see in Him is the eternal truth of what God is, and that therefore He belongs to the very being of God, before the foundation of the world — then the mediation of creation through Christ is a legitimate way of putting the conviction that in the last resort, and in spite of appearances, the world in which we live is a Christian world, our ally, not our adversary, or, if our adversary, one who is necessary, that in conflict with and victory over him we have found the way of salvation. Paul does not start with the speculative idea that creation could not be immediate, and that all material and spiritual existences things on earth and in heaven, things visible and invisible must owe their being to the mediation of some supernatural power which is identified in his mind, we cannot tell why, with Jesus. He does not start thus, and then give this vague speculative idea any particular application when he comes to explain the Christian redemption. On the contrary, he starts with Christ, and with the experience of redemption, which, as a matter of fact, is meditated through Him. But the redemption thus meditated is something of absolute significance. It involves contact with ultimate realities, with the eternal truth and love of God in Christ; it kindles a light in the soul which must fall on everything in the world if we are to see it as it is; it involves no smaller a conviction than that the world is essentially a Christian world, and it is this conviction, which is still involved in Christian faith, that forms the vital content of Paul's doctrine that all things were created through Christ.

That the world has this character may, of course, be doubted. It may even be argued that no moral life, no life involving moral probation, is possible except with a background of nature which is morally indifferent; it is only in a world which is indifferent to the distinction good and evil that man can prove his devotion to good for good's own sake. But there is really no such world, though the lightening does not shun the good man's path. What the doctrine of creation meditated by Christ implies is that in the very constitution of nature it is possible to discover the same principles and laws revealed in the life and work of Christ. If it were not so, no one with roots in nature would understand Christ's work, and the whole book would be made as a book of the New Testament only out of account, it is mediation in the specifically Christian sense, just as in Paul and Hebrews. The whole book might be summed up in the phrase of 14:11, "No one comes unto the Father, but by me." It is to Jesus that men owe all the experiences which constitute salvation. They are variously described, most frequently as life and eternal life, yet they come to men through Him and Him alone. Yet a counter or complementary truth is presented in the same Gospel. No man comes to the Father but by Jesus, yet no man comes to Jesus but him who is drawn by the Father (6:4). It is as thought there were powers in the world antecedent to the historical Jesus which had Him in view, which prepared men to understand Him, and to welcome His mediation when He came into the constitution of nature, in the impression which it makes as a whole on the spirit of man, in human life itself with its various experiences of success and failure, of wronging others and being wronged, of forgiving others and being forgiven by them, there is a sum or complex of forces which bears witness to Christ and constitutes a providential drawing of men by the Father to the Son.

But it is only when we receive the New Testament and believe in Him that we truly come to the Father. The earlier stages of religion are mediated to us through all the experiences of life; these provide for a broad and indisputable basis for the present, and now, and make it independent of any particular historical mediation — i.e., of any mediation through persons or facts which have their place in the past. But this immediate experience of religion — a religion, as some might call it, of inwardness and spirituality, which has its center in itself, and is not at the mercy of a historical criticism for which no fact is beyond question — does not, according to the Evangelist, enable men to dispense with what is mediated through Jesus; it only enables and prepares them to appropriate it. It is consummated through Him. Only he who has seen Jesus has seen the Father. And, para-
doxical as it may seem, this historical mediation does not shake the certainty of religion; the perfect religion does not become doubtful because the mediator of it lived in time. We are 'in Him that is, and he that believeth hath the witness in himself' (1 Jn 5:20).

In the prologue the idea of mediation is even more explicit than in the body of the Gospel, and it is wider in its range. The first three verses are more speculative than anything in Paul, and it is difficult to think otherwise than that the author has identified Jesus with the Logos of the current philosophy, and that he is speaking of Him in terms whose antecedents are philosophical rather than the specifically Christian sense of mediation. The very ambiguity of the term Logos (pato, orato) may have contributed to it. He suited him equally well to have Jesus feel that in Christ they had God's last word to man, and to have Greeks feel that in Christ they had the answer to all the world's perplexities. The rational principle or truth in which all things lived, and moved, and had their being. The one knowledge and the other alike, he would have held, were mediated to men through Jesus. It is by no means clear, however, that the prologue makes the Logos, as distinct from the historical Jesus, the mediator either of a universal revelation of God to man or of a special revelation of God to Israel. The interest of the Evangelist in such speculative ideas is perhaps less than has been assumed. The traditional and somewhat grandiose interpretation of the prologue, according to which the Incarnation does not appear until v.14—an interpretation which has so completely passed the stage to which those who delight in the idea of a general revelation in nature and history culminating in a final and adequate revelation in Christ—is almost certainly wrong. The movement of thought in the prologue is spiral. The Incarnation appears already in v.1, and the history of Christianity up to the time of the writer is summarized in v.4. Revelation in its full and specifically Christian sense, the mediation to men of that knowledge of God which is eternal Life, is accomplished only through Jesus, the Word made flesh. The difference from Paul may be said to lie in this: in Paul Jesus mediates revelation through redemption (we know God as Father because He saves us by Him); whereas in John He mediates redemption through revelation (we are saved from sin and death because through Jesus we have the knowledge of the Father). But the distinction is true only when it is not pressed. In both writers it is the propitiatory work of Christ, that is, the mediation itself, which is vital: Jesus is the mediator between God and men. The wider sense of mediation, according to which Jesus mediates creation as well as redemption, while it is found in both, has not the same emphasis. The apostles seem to feel that their religion ultimately implies this, but it is not this that directly inspires or sustains it.

5. Mediation and Jesus' consciousness of Himself.—The most important of questions to the Christian religion is whether this specific sense of mediation, which is not only recognized by but pervades all the apostolic writings, is confirmed when we turn to the mind of Christ Himself. He never speaks of having anything to do with the creation of the world, but was He conscious of being in any sense a mediator between God and men? Did He stand between them to any intent? Did men in any sense owe to Him either the knowledge of God or reconciliation to God, or were these supreme spiritual blessings immediately open to them, in independence of Him? The questions have been answered in both ways. Harnack's famous dictum (Das Wesen des Christentums, Berlin, 1900, p. 91), that in the gospel as preached by Jesus the Son has no place, but only the Father, is so qualified by other statements that its author can hardly be cited for the negative. Much more uncompromisingly representative of this side are W. W. Hepburn and W. Heitmüller. The former, in Das Urchristentum (Göttingen, 1914, p. 364), in discussing the relations of faith in Christ and faith in God (in Paul), explicitly renounces the idea of a necessary mediator of salvation. Christ was there, as a matter of fact, and therefore Paul had to give Him a place in his religion somehow; but Weiss, with a sense of his own daring,1 declares that there was no necessity for His mission and work in the nature of God, and that God's eternal love, that is only through Christ, must have had its way even if Christ had failed the redeeming work of the Father, or if God in the fullness of His love had been able to dispense with the sacrifice of Christ. There is not, indeed, any appeal here to the mind of Christ, with regard to mediation, but there is the expression of a conviction which forecloses any such appeal. In Heitmüller's Jesus (Tübingen, 1913) the denial is even vehement: 'It is quite beyond doubt that according to the preaching of Jesus we have to do in religion only with an immediate relation of man to God: between God and man nothing and no one has place, not even Jesus. Religious significance in the proper sense Jesus in any case does not claim' (p. 73).

But Heitmüller feels a certain embarrassment when he deals explicitly with some words of Jesus. He admits that they disclose prolepses to a universal church, but a superprophetic consciousness—e.g., the well-known passage Mt 11.13. To be the bearer of a unique revelation, the Son simpliciter—it almost terrifies us to think of it. It is not a divine self-consciousness, but it is almost more than this. It might impel us to ask whether it was compatible with soundness and clearness of mind. 'Here is the point at which the form of Jesus becomes mysterious to us, almost uncache' (p. 71). Further on, he speaks of the riddle as insoluble (p. 80), but apparently he thinks that he has reduced it to less disquieting proportions when he writes (p. 125) that Jesus seems to have claimed for Himself only that He is the way to the Father. It is difficult to see how He could have claimed more. The opposite view, that the place which the NT generally assigns to Jesus, as the indispensable mediator between God and men, is in harmony with Jesus' consciousness of Himself, is argued by the writer's Jesus and the Gospel (London, 1908, p. 150ff. on the self-revelation of Jesus). The argument covers both the Johannean idea of the mediation of the knowledge of God (as in Mt 11.13) and the Pauline idea of the mediation of redemption (as in Mk 10.30). What it does not expressly extend to is the speculative idea that creation as well as revelation and redemption is mediated through Christ.

6. Other mediators than Jesus.—Emphasis is laid in the NT on the exclusive character of Christ's mediation: there is one God, and one mediator between God and men. This is the idea of such passages as Ac 4:12 ('none other name'), Col 2:9 ('in him dwelleth all the fullness of the Godhead bodily, and in him ye are made full'), and He 7:26 (the priesthopd which does not pass to, or cannot be trrenched upon by, another), as well as of Jn 14. What is in view in these passages is the idea that Christ in His work of reconciliation may have rivals and competitors, but none in degree—principalities, powers, dominions—owe their own being to Him, and have their functions.

1Wir müssen es aus sprechen ... chrilicherweise nennt man sagen' (60).
whatever they are, in a world which He has reconciled to God.

The exclusiveness of His mediation with regard to nature (being) as well as redemption is strongly asserted both in Col 1:16 and in Jn 1:1. Probably in both these passages, there is reference to forms of Gnosticism which it is difficult for us to define. For ancient thought generally, and therefore for ancient religion, the world was full of invisible powers of a personal or quasi-personal sort, and the individual created and preserved for themselves in the religious life. They came between God and the soul in ways that we cannot appreciate, and the interest of the apostles is to expel from the relations of God and the soul every personal or quasi-personal sort of mediation which is the voice of God's experience against uncontrolled imagination. The controversies of later theologians, Catholic and Protestant, on the mediation (intercession) of saints are like this, but not identical. Those who are interested in this theme will find support for denying that the saints can pray for us. All that is to be said is that we do not know anything about it; but whatever the saints may do for us they can do only in dependence on Jesus, not as mediators of any rights which might be vested in them. In A. G. apart from Him.

7. Mediation in the OT.—If we look back from the NT to the OT, we find much every where which can be described in terms of mediation, though *mediatrix* occurs only once in LXX (Job 9:1), where, according to T. K. Cheyne (*EBi*, 3003), it answers to *vτης*, and means a person who could interpose betwixt God and man, and is his imperfect or arbitrary mediator—an arbitrator who would see justice done. This is akin to the *διαβρωτή*, defined by Aristotle as *διαβρωτή*, and often found in Greek as a synonym of *mediatrix*; but it is hardly the equivalent of the NT *mediatrix*, whether we regard revelation or reconciliation as that which comes to men through Him. If we confine our attention to the relations of God and man, in which the term mediation is properly applied, both aspects of it present the same difficulty. Revelation of God, is mediated to men through the prophet. It is not necessary to ask here how it is mediated to the prophet himself; for the purposes of religion he obtains it immediately. He stands in God's council and hears His voice; it is the voice of both, God and man, or Hes, or perhaps an echo of it as the prophet's voice can utter, that is heard when He speaks. There is no external criterion for distinguishing the true voice of God from a voice which speaks lies in His name. The secret of the Lord is with them that fear Him (Ps 25:14); they have, without knowing it, what the NT calls (1 Co 12:8) the gift of 'discernment of spirits.' As revelation is mediated through the prophet, so is the reconciliation through the priest. The Levitical system may have been very imperfect—it was destined, indeed, to perish by its inadequacy; but the idea of it was to enable men to approach God, to give them access to Him, to make them all that they had done, to have communion with God, living as members of a society of which He was the head. The Levitical system does not, of course, exhaust what the OT exhibits of the mediation of reconciliation. Much importance is attached to prayer: the hour of irredeemable ruin is come—the final breach between God and His people—when Jeremiah hears that, though intercessors like Moses and Samuel stood before Jehovah, they could not turn His heart toward Israel (Jer 15:1). The ministry of intercession mediates for man to God, as well as the ministry of sacrifice—unless we reduce the latter to the former, and regard sacrifice as in essence 'embodied prayer.' It is another form, possibly a form of intercession, of showing the cost at which reconciliation is mediated to sinful men.

8. Later developments of mediation.—Though the main content of mediation in the OT may be condensed under the heading of priestly and prophetly, it is not quite exhausted there. Especially in post-Exilic literature, where the transcendence of God is emphasized till it depresses the soul, we find intermediate beings appear whose functions are wider and less defined. Sometimes they have to do with the creation of the world, sometimes with its government in nature or in history; sometimes they are specially concerned with Israel's fortunes, or with the giving of the law; sometimes they are beings, the angelic hosts, who, instead of making the prophets or sages. Foreign influences as well as philosophic necessities determined the form of such thoughts, and they grew to have a larger and larger space in many minds. In B. C. 113, in *2 Baruch* (§2), there is a sufficient account of this faith in intermediate beings (Hypostaselehre), so far as it can be derived from the Greek Bible. The most important of them was Wisdom, the Logos, though, in *2 Maccabees*, in *Ezek.*, in *Ecclesiasticus*, in the *Apocrypha* in *Ilk 11*, possibly has, because it seems to have fallen out of favour in the NT, and is not once mentioned where we might most have expected it, in the Johannine writings. Perhaps this was due to J. Grill has suggested (Untersuchungen über die Entstehung des vierten Evangeliums, Tübingen, 1902, p. 199 f.), to the frequency with which in Gnosticism *σωφία* represented a lost son which had to be redeemed (etc.), and the importance to Wisdom came the Word or Logos. On this see W. Boussort, *Die Religion des Judenreichs*, Berlin, 1906, p. 309, and cf. art. LOGOS, § 2. The doctrine of the Logos as 'mediating' is developed at great length and with infinite mystics in Philo. It can be best studied in E. Bröcher, *Les Idées philosophiques et religieuses de Philon d'Alexandrie*, Paris, 1908, i. p. 11 f. It is perhaps not unfair to say that in Philo the Logos mediates in the secret mediations between God and knowledge, but not through a form or mediation further, between God and man as made in the image of God and participant in reason, but that it is not a mediator in the specifically NT sense of the term, i.e., a mediator of redemption between God and sinners. The verbal coincidences between Philo and the NT are often, perhaps always, conceal a wide divergence of meaning. A full discussion of what Jewish belief in mediating powers eventually came to be may be found in F. Weber, *Die Lehre des Talmud*, Leipzig, 1886, ch. iii. H. Schwab enumerates five: (1) the angel Metatran, (2) the Word, or Hĕmeret (v. v.), of Jahweh, (3) the Shkhbinah, (4) the Spirit of God, and (5) the Bath Qôl, or heavenly voice through which revelation is given. Where the mind starts with these generalities, whether in a more speculative or in a more religious interest, it does not seem able or impelled to bring them to any convergence upon a single mediator; but the NT writer, starting from their experience of Christ as the only and the real revealer of God and reconciler of sinners to Him, are able to regard all these doctrines of mediating hypostases as hints or suggestions of what they possess in Jesus, and are not afraid in a manner to identify Him with them all. Whatever they promised or were intended to secure has been finally made good and secured through Him. He is the Wisdom of God—the Key to the world of nature, of history, and
of all human life: He is the Word made flesh; Paul can even say (2 Co 3:7) that in His exaltation He is the Spirit. All mediation between God and sinful men is summed up and exhausted in Him. He is Himself our Peace. But all mediation, if it is not theologically mediated in this sense between God and creation is also transacted through Him. The last, however, is not the starting-point; the mind rises to it only inferentially through an overpowering impression of the absolute significance of Jesus as the mediator of reconciliation; it is one way of expressing the conviction that He is the Beginning and the End, the First and the Last.

9. Subordinate sense of mediation (means of grace).—Mediation in a subordinate sense is the subject of the whole doctrine of the means (medio) of grace: that is, of the divinely appointed ordinances through which the salvation of Christ is brought home to man. Grace is mediated through these ordinances, especially, according to Protestant theology, through the Word, sacraments, and prayer. The conditions under which the use of them becomes effectual for salvation—i.e., the terms on which grace really is mediated through them—are stated in all the confessions in more or less total and arguable form. Comparative religion offers examples of mediation more or less analogous to those here considered. Wherever there are religious institutions and customs, they are mediatorial. It is through them that the idea of a religion is conveyed to the people, who are brought up within its pale. Sometimes there are what A. M. Fairbairn used to call "developmental coincidences" between other religions and Christianity where there is no real interdependence. Thus there was an Arabic tribe calledMedian in the first instance as dwelling in the air which is midway between heaven and hell. But the local meaning deepened into a moral one. Mithra became mediator between the inaccessible and unknowable God who reigns in the ethereal spheres and the human race which lives its restless life here below. He is addressed as great Mithra, messenger of the gods, mediator of the religion of the elect (F. Camont, Les Mystères de Mithra, Brussels, 1913, pp. 129, 139, 146). Similar phenomena are abundant in the religions of India. But we nowhere find a religion of which we can say, as has been said of Christianity, that it is what it is because of the presence in it of the mediator.

LITERATURE.—As the idea of mediation involves that of the mediator, so mediatorial literature especially raises the question whether Christ has a necessary place in the Christian religion, and, if so, what that place is, and what it implies as to Christian Christology. In itself, the literature is really co-extensive with that of Christian theology. Other discussions of main aspects of the subject are to be found in J. Butler, Analogy of Religion, ed. J. H. Bernard, London, 1800, pt. 2, ch. v.; and J. Martineau, Studies of Christianity, 5 vols. (1857-1878). Besides the works mentioned in the article, all modern writings on NT theology are more or less relevant. But the formal treatment of it, even in the Jesus-Paul literature, is not frequent.

MEDICINE.—See Disease and Medicine.

MEDICINE-MEN.—See Shamanism.

MEDINA.—Medina, in Arabic with the article, means the 'Town,' as opposed to the desert (Qur'ān ix. 102, 121), and is the name usually given to the city whither Muhammad fled from Mecca, sometimes interpreted as 'the Prophet's City.' Its proper name was Yathrib (ib. xxviii. 13), evidently the 'A'dhārā of the Byzantine (s. r.) and the Al-Dhār at Tolemy (vt. vii. 31), apparently identical in origin with the Egyptian 'Aθωβα (indeed a form Athrib is mentioned in their names elsewhere: Taibah or Tābih, to be compared with the Hebrew 'Tab', [J. 11, etc.], and perhaps with the Greek θησ, meaning 'fragrant' or 'good.' Many more names are collected by Samhādī (803 A.H.) in his monograph on Medina (Khuṣāṣ al-ṣafā, Cairo, 1285), but these are mostly honorific epithets; one, however, which he quotes from the OT is Salīqu (Isa. lx. 11; Joel ii. 12, etc.); but this identification is certainly erroneous.

Since Stephanaeus Byzantinus gives the relative adjective of Yathrib as ἀθωβορός, it must have been the home of some person known to the Greek-Roman world not later than the 6th cent. A.D., and to the end of the 7th cent. there probably belonged one 'John of Yathrib' mentioned in a letter of James of Edessa to John Stylites; this Yathrib is identified with Medina by some writers (ZDMG xxiv. 1870 p. 253), but it is difficult to suppose that there can have been a 'presbyter of Yathrib = Medina' at that time. For the early history of the place, then, as well as the later we have to rely exclusively on Muslim authorities, who naturally have much to say about a town which played so important a part in the history of their system. It is unfortunate that their notices of its pre-Islamic history are mainly fabulous, though they contain important live forms. The settlement, which is often called 'Between the two lābas,' i.e. volcanic formations, was at the commencement of Islam a joint one of Arabs and Jews. The former were grouped in two tribes, the Ansar and the Khazraj, whereas of the latter three tribal names are headed down—Quain'qā, Qurash, and Nadir. The native Jewish tradition appears to know nothing of these colonies, whose names surprise us; for the last two are clearly Arabic, and it is supposed to have had a dialect (or jargon?) of their own, some fragments of which are preserved in the Qur'ān (iv. 48), but are exceedingly puzzling. This fact would seem to militate against the supposition that they were Arabs who had adopted Judaism. If we are justified in attributing to them some of the Jewish matter that is found in the Qur'ān, they must have been acquainted with portions of the Oral Tradition, to which there are occasional references; and it is practically certain that the early Islamic lawyers were indebted to proselytes from these communities for certain technicalities and even whole maxims. The personal names which are preserved are partly Hebrew, partly Arabic. The Muslim tradition represents the Jews as further advanced in civilization than the Arabs of Medina, and engaged both in trade, including lending money on security, and in cultivation of the soil; the date was the most important product. Further, they are said to have had schools, and to have written Arabic in Hebrew script, as was done at a later time and is done even now. They were under the protection of their Arab neighbours, and were occasionally compelled to fight in the tribal wars, much against their inclination.

Between the Ansar and the Khazraj there was a long-standing feud, which led to the parties summoning the Prophet in the manner recorded in his biography. This furnishes many analogies to that of the Arabs, provides illustrations of this expedient for putting an end to civil strife. He called his new adherents Ansār, 'Helpers,' a name which, according to the Qur'ān (iii. 30, 31), originally belonged to the apostles, and doubtless is a popular etymology of Nazarene.

Like many other statesmen, the Prophet found in external warfare the best remedy for civil strife; and, sometimes elected his adherents were required to migrate to Medina, the
town grew vastly in magnitude and importance during his despotism. Neither he nor his immediate successors had any taste for architecture or other forms of art, and, though building must have made use of the increasing population, it was, like the Prophet's mosque and domestic quarters, of a primitive kind. There are traditions, probably deserving credit, that the former had to be repeatedly enlarged and repaired during this period; but reconstruction on a considerable scale appears to have taken place first in the time of the Umayyad Walid b. Abd al-Malik, who gave orders in the year 88 for the destruction of the older building and the houses of the Prophet's wives, and the whole area in a new mosque covering 200 x 200 cubits. According to Tabari (Chronicles, Leyden, 1789-1901, ii. 1194), the Khalif demanded and obtained assistance from the Byzantine emperor, both in materials and in workmen. The new mosque was elaborately decorated, and rewards were offered to the artists, who, however, according to Samhūdī's authorities, were at times guilty of profanity. The whole was under the direction of Omar b. Abi-d-dir (afterwards Khallīfah), who introduced a mihrāb and four minarets.

In 160 A.H. further additions were made by order of the Khalif Walid, and his successors repeatedly repaired and decorated it. The whole building wasJacob restored chiefly by the Egyptian Sulṭāns, whose successors continued to adorn and enlarge it. It was again burned down in 888 A.H., and rebuilt by order of Qāṭībī with great magnificence and exquisiteness in the time of Samhūdī, who was absent at the time of the fire, but lost much of his property owing to it. Qāṭībī's is the existing mosque. Architectural details connected with the various buildings are given by R. F. Burton (Pilgrimage to El-Medinah and Meccah, London, 1855-56, vol. i. ch. xvi.), who also adds some details for the period since Samhūdī. Apparently a certain amount of destruction was effected by the Wahhābīs, who also plundered the treasures; but, when they had been forced to evacuate the place in 1815, the damage was made good.

Visitations of Medina are not incumbent on Muslims, but it is regarded as a dutiful act, the Prophet having said: 'Whoever performs the pilgrimage is not to fall within the proper rule of me' (quoted by Harīrī, Mağāna xxxix.). The visit is, of course, to the Prophet's grave, which is the chief object of interest in the sanctuary; for the Sunnīs those of his first two successors and his daughter Fatimah, but the Shī‘ahs of his Imāms, are also of importance. For a description of the tomb itself, which is screened off, Burton goes to the traveller Ibn Juhayr (ed. M. J. de Goeje, London, 1907, p. 121), neither having seen it himself nor having met any one who had. According to Ibn Juhayr, a place is supposed to be left vacant beside the others for Isa b. Maryam (i.e. the Christian Saviour). The European fable of Muhammad's coffin being suspended by a magnet between heaven and earth seems to be unknown to Islamic writers, though it bears some resemblance to a story told about that of Timur-Lenk, which, according to Ibn Iyās (History of Egypt, Cairo, 1831, L. 347), had to be something held because the earth was unwilling to receive it. Various superstitions connected with this tomb are to be found in the works of European travellers, especially that of J. F. Keane (Six Months in the Hejaz, London, 1887, p. 225). Some puritan sects the visitation of the tomb is regarded as idolatrous, but this view is unusual.

Medina remained the political capital of Islam during the reigns of the Prophet's first three successors, but lost that position in the civil wars which followed the death of the third. In normal times it counted as an annex of Mecca (q.v.), whose governor was responsible for it; hence there is a dearth of native chronicles, and Samhūdī makes use of the usual notices of the tracts of Ibn Juhayr, somewhat as modern European writers use the passage. On the other hand, owing to the continued residence of the Prophet's widows and such of his companions as were students or devotees, it became the first university of Islam, where what are called the Islamic Sciences, were founded. Numerous jurists arose in Medina, and presently a canon of seven was formed. The people of the place claimed that the governors should consult them about almost all of the internal and external affairs of the state. As late as 200 A.H. its jurists or traditionalists were regarded as more scrupulous than others (D. S. Margoliouth, The Early Development of Mohammedi anism, London, 1814, p. 73). On the whole, the school of Medina, associated with the name of Malik ibn Anas (q.v.), was supposed to attach more importance to tradition and less to inference than the school of Iraq, which had been founded by Abu Ḥanīfah. The differences which resulted were not of trivial importance, though discussion at times raged fiercely (see LAW Muhammadan).

For at least the Umayyad period Medina was supposed to be the seat of literary criticism as well. When a question-year 634 A.H. there was an entrance to a council of one of these Khalīfahs concerning the source of a certain line of poetry and the relative merits of certain poets, the Khalif sent to the governor of Medina, ordering him after his sermon in the mosque to refer to local historians, whose opinion, which proved able to decide them (Aghānī, Cairo, 1285, viii. 180). It would seem that the beginning of Islamic libraries is to be sought in Medina; the poems of the Prophet's court-poet, Ḥassān b. Thabit, were kept there, and the copy was renewed when it showed signs of evanescence.

LITERATURE.—Of the work of Samhūdī cited above the abridgment was published 1258 A.H. the original of which exists in the Bodleian Library. The portion of it which deals with places of interest in the neighbourhood is summarized by F. Wustenfeld, Der Gebiet von Medina, Gottingen, 1873. Accounts of the modern condition of the place are to be found in many of the records of pilgrimages, most recently in those of Hadji Kharazi and others, "With the Pilgrims to Meccah, 1906, London, 1907, and Ā. J. B. Wavell, A Modern Pilgrim in Meccah, do. 1912.

MEDITATION.—See DEVOTION AND DEVOTIONAL LITERATURE.

MEDITATION (Buddhist).—See BODHISATTVA, vol. ii. p. 752 sqq., Dhyana.

MEEKNESS. I. OT conception.—The Hebrew word for meekness (םֶנֶפֶשׁ) is closely connected with the ideas of humility, poverty, and submission. A great feature of OT literature is the attempt which it constantly reveals to reconcile with the facts of experience the principle that righteousness brings prosperity, while wickedness is inevitably followed by disaster. In view of the apparent contradiction of this principle by the facts of life, some OT writers (Ps 37, Job) attempt to vindicate the ways of God to man, and to establish the ultimate reality of this principle by insisting that the suffering of the righteous and the success of the wicked are temporary, and that the end of a righteous individual is prosperity and success, while the end of an evil-doer is degradation and downfall.

2. NT conception.—Christian teaching derives the concept of meekness from the OT, but enlarges and spiritualizes its meaning and application. The deep significance attached to this con-
exception in the NT lies in its identification of the loftiest ideal with the profoundest reality. The meek man is thus defined as one who not only "counts it better to suffer than to do wrong" (Plato), but as one who "resists not evil" (Mt 5:37). He is not one who surrenders his interests of life, but in so doing he is not emptying his life but rather filling it with more interests. In ceasing to contend for his own rights against others he gains the rights of all others himself.

Accordingly, Jesus calls as his disciples to surrender even the most obvious rights of property (Mt 5:5). But the ground of such surrender is not the denial of individual rights on the part of Christ. On the contrary, he assigns the highest importance to the right to property. He confers upon the meek a title not only to the Kingdom of Heaven, but also to the inheritance of the earth (Mt 5:5). Such possession, however, is to be realized only through spiritual development; that is to say, self-surrender, or self-assertion by self-surrender or by insistence upon individual interest, but only as the individual identifies the common welfare of men with his own. Hence Christ's responsibility is the material factor in private gain, and His ultimate conquest of all opposition by depriving others of the very power of setting up interests in opposition to His own.

3. Philosophical conception.—(1) Its place in the history of ethics.—While the ethical systems which have in many cases been characterized by lofty ideals of conduct, the profound conception of meekness indicated in the preceding paragraph is distinctive of Christian ethics. The ethical ideal has generally been conceived as pleasure in some form or other. Hedonism (q.v.) conceives it as the pleasure of the moment, but the objection to this view is that such transient pleasure cannot satisfy a consciousness that is not momentary. Eudemonism, on the other hand, seeks to repair this defect. He confers upon the meek a title not only to the Kingdom of Heaven, but also to the inheritance of the earth.

But how is such a quality of character, which has as its distinctive feature the utter absence of self-assertion, actually to achieve the conquests and acquire the possessions which are thus ascribed to it? (2) Its relation to the doctrine of evolution.—According to the principle of natural selection, it has been agreed that in the evolutionary process the unworthy or 'unfit' must be cut aside in order to make way for the survival of the fittest. There are some who, therefore, would support such institutions as hospitals, almshouses, and sanatoria we are retarding the process of evolution. It is argued that we are thus breeding degenerates and criminals, consumptives and consummatics, and, worst of all, taxing the same healthy, and law-abiding citizens for their support.

But this view fails to recognize all that the doctrine of evolution implies. It confuses this principle with that of letting the weakest go to the wall. It is hardly necessary to point out that by adopting such a principle we should burst our finer feelings and should therefore sink in the moral scale. And the cost in time, money, and efficiency for other pursuits that is entailed in our care for the aged and diseased is, in comparison, incomparably lower, and with the moral gain. Thus we find that the preservation of the infirm and consideration for the weak are strictly compatible with, and, indeed, an essential feature of, evolution, inasmuch as they tend to develop a quality of human character which has the highest survival value. The growth of the spiritual Kingdom and the dominance of the world by meekness and humility are thus progressively realized.

MEGARICS (Megapak).—Eleucides of Megara is generally regarded as the founder of the Megaric school, though it would be more correct to keep his name for the system by setting it down as a point of view later. Eleucides himself was an Eleatic and also an 'associate' (etaprio) of Socrates. The account of his philosophy given by E. Zeller (Philosophie der Griechen, ii. 1, Leipzig, 1889, p. 244 f.) is vitiated by his adoption of Schleiermacher's identification of the Megarics with the 'friends of the forms' (etipw fiaia) of Plato's Sophist. It is quite impossible to reconcile the few facts we know about the teaching of Eleucides with the theory of pluralism in the form-structure of our kind. Plato himself (Parmenides (p. 149, ed. V. Cousin, Paris, 1829-27), states quite distinctly that the 'friends of the forms' were the 'wise men of Italy,' that is to say, the Pythagoreans. On such a point Proclus' testimony is conclusive, for he had access to and was familiar with the works of Plato's immediate successors.

The most trustworthy account that we have of the Megaric doctrine is that of Aristotle, the teacher of Alexander of Aphrodisias (2nd cent. A.D.), some extracts from whose History of Philosophy are preserved in the Preparatio Evangelica of Eusebius (xiv. 17). Its Eleatic origin is at once apparent from these, and Aristotle expressly says that it was first the doctrine of Xenophanes, Parmenides, Zeno, and Melissus, and later of Stilpo and the Megarics. In the first place, they made it their business to "throw" (xaraiaaMEV, a metaphor from wrestling) all sensation and appearance, and truly in reasoning along the method which they adopted was that elaborated by Zeno, a method which was known as 'dialectic' by its admirers and as 'eristic' by its critics. It consisted in showing that two contradictory but equally cogent conclusions could be established with regard to everything without exception, and that there was therefore no truth at all in any of the appearances presented to our senses. That is
what Plato calls ἀπίσταιος, and we still possess a curious fragment of a work in the Dorian dialect, generally known as the Diotima (the name is without authority), which applies the method to certain ethical antinomies. It is most natural to regard this work as a product of Megara, and we know the Megarics clung with special tenacity to their native dialect.

The effect of this criticism is to leave us with nothing but the One or the Whole (τὸ έντό, τὸ ἔν δήνω) and to deprive the Many and the Parts of all claim to reality. That was the doctrine of Parmenides, but there is evidence that Cynicides understood it in a rather different sense than the founder of his school, and it is here that we can trace the influence of Soocrates. The One of the Eleanics had been a continuous, corporeal μένεσθαι, whether finite (Parmenides) or infinite (Melissus), but Cynicides took the step of identifying it with the Good, which was 'called by many names, such as God, Wisdom (φρονημα, and Μειν (τοί). It was in this way that 'the Absolute' made its first appearance in the history of philosophy, and its claim to the sole reality was based upon the inherent contradictoriness of all appearance.

The philosophy of Cynicides had a very great influence upon Plato, who (Megara after the death of Soocrates, and it to this influence that we may most probably ascribe the unique position assigned to the Good in the Republic. It was impossible, however, for Plato to escape the permanent, absolute doctrine of any kind; for that excluded from Reality what he was most interested in, the Soul, and especially the best Soul of all, namely God. The Parmenides and the Sophist are chiefly occupied with this problem, and it is plain that Plato believed himself to have disposed finally of the Absolute. That led, of course, to a breach between the Academy and their fellow-Socrates of Megara, and from this time forward we may discern the beginnings of a distinct Megaric school. As was natural, the negative dialectic was more zealously cultivated than the central doctrine of Cynicides. When an abstract Absolute has been set up, there is not much more to be said about the dialectic, and it was always available for the criticism of rival philosophies.

Aristotle was naturally the chief object of the Megaric attack, which was led by Eubulides. Aristotle's own logical theory was to a large extent determined by the dialectic, and it is plain that Plato believed himself to have disposed finally of the Absolute. That led, of course, to a breach between the Academy and their fellow-Socrates of Megara, and from this time forward we may discern the beginnings of a distinct Megaric school. As was natural, the negative dialectic was more zealously cultivated than the central doctrine of Cynicides. When an abstract Absolute has been set up, there is not much more to be said about the dialectic, and it was always available for the criticism of rival philosophies.

them, to give a new impulse to 'the study of the Law' (i.e., the consolidation and development of Jewish religious thought and practice) after the troubles attending the persecution under Hadrian. So great was the estimation in which he was held that, by one authority, these disciples are styled 'Meir and his associates' (Midr. Rab. to Lv 15). Learning, mental acumen, and critical spirit were combined with a lofty character to make him the remarkable man he was. His parentage and birthplace are either uncertain or unknown. Contrary to the Talmudic practice, he is cited without a paternal name, and his dogmatic precision is the legend which made him a son of Nero, a fabled convert to Judaism (Gittin, 55c). Even his real name, Menashah (Moses), was half-forgotten. When Agiba, slaying the edict of the Roman authorities, continued to teach, Meir stood by (T. B. Brakhot, ii. 6). His other masters were Rabbi Ishmael, to whom he went because he deemed himself intellectually unequal to the task of following Agiba's discourses, and—a still more interesting fact—Elisha ben Abuyah, who was later to become an apostate and a declared friend of the Romans. From the latter, recurrent though he was, Meir did not altogether dissociate himself in after years. He listened to his doctrine, and made discreet use of it.

'Like one who eats dates, he devoured the fruit, and threw away the stones' (Midagah, 12b).

His exclusive love was not exclusively love of learning; there united with it grateful regard for one who had once been a cherished teacher, and likewise the hope of winning back the renegade; but his relations with Elisha were viewed with suspicion, and were partly the reason why his reputation with his contemporaries fell short of his posthumous fame.

Returning to Agiba later on, Meir was ordained by that master, and began to teach in the Rabbinical schools. In his discourses he availed himself largely of the Haggadah (the homiletical method of Scriptural interpretation) and also of fables and parables. Thus it was said of him in later times that 'when Rabbi Meir died the parable-makers died with him' (S. T. 49a). He is credited with being the author of three hundred fables, of which only a few have been preserved in the Talmudic writings (Sanhedrin, 35b).

His knowledge of Latin and Greek also helped him in his Biblical lectures. His acquaintance with the sacred languages was so extensive and precise that when once, on his travels in Asin Minor, he entered a synagogue on the eve of the Feast of Purim and found that there was no copy of Esther forthcoming for public recital, he wrote out the entire book from memory (T. B. Megillah, 2). For this intimate knowledge of the sacred text he was doubtless largely indebted to his profession as a scribe.

Compared with the exegetical methods of his immediate teachers, his own mode of interpretation may be said to have been rationalistic. Keen and bold dialectic played a large part in his expositions, so that it was said of him (Sanh. 24a) that, in his lectures, he was like one who uprooted mountains and ground them together. He amazed and perplexed his colleagues by his daring decisions, for Meir, he said, would not regard to regard to regard in the Bible as necessarily having a common subject-matter; Meir, however, held a different opinion. There are many such passages, he declared (Siphre to Nu 25), which have no organic connexion. Thus his view was viewed differently by different minds. Some admired his rationalism and courage; 'Meir's very stuff,' they cried, 'teachers' knowledge' (Jer. Tanhurim, ix. 11). Others disapproved. 'Enough, Meir,' protested his colleagues when once he was more than usually daring (Midr. Rab. to Ca 12). Nevertheless, as Isidore Halevi (Hamburger, i. 15), in virtue of his qualities of mind and heart, he breathed into Judaism the breath of a new life. As to the Hhalakhah (the body of decisions on ritual practice), his orderly and logical arrangement of the material contributed greatly to make the compilation of the Mishnah possible. He was a stringent upholder of the ritual law; but he was even more strict with himself than with others.

'There was one of my colleagues who was wont to set aside, in my own personal practice, the decisions of my colleagues when those decisions have been more stringent than mine' (Shabbath, 15a).

His strength of character is further illustrated by his opposition to Simeon ben Gamaliel II., then presiding over the Sanhedrin at Usha. To Meir had been assigned the office of 'hakham of that body (as to the duties of that functionary see J. E. art. 'Hakam'). Holding Simeon's knowledge of the Law inadequate, and resenting the President's excessive regard for his own dignity, he conspired with Rabbi Natan, one of his associates, to secure the Patriarch's deposition. Simeon was rudely betrayed, and it was the conspirators who were ejected. Later on Natan was re-admitted, but Meir sturdily refused to make the necessary submission, and he narrowly escaped excommunication in consequence.

His domestic life was at once happier and sadder. His wife Beruria (Valeria) is one of the great women of the Talmud. The daughter of the martyr Rabbi Hananiah ben Terafon, who suffered under Hadrian, she was noted for her learning and moral worth. The touching story which records her wonderful fortitude in the hour of crushing calamity has been told again and again.

During Meir's absence at the academy one Sabbath eve, their two sons suddenly died. Beruria withstood the sad tidings from her husband until the day of peace was ended. Then she told him of it in a parable. 'A friend,' she said, 'left me some jewels to keep for him years ago—so long ago that I had come to look upon them as my own. Now, at a sudden, she claimed them; but I find it hard to part with them. Must I really give them up?' 'Why ask such a question?' answered Meir, 'you should have restored them already.' 'I have done so,' she replied, as she led him to the death-chamber (Midr. Mekhile to Pz 515).

This is not the only instance in which the Talmud is just enough to admit that one of its greatest sages was taught by a woman; Beruria instructs her husband in the higher knowledge on another notable occasion.

Amongst the pin-pricks of unsympathetic neighbours, Meir angrily calls down imprecations upon his tormentors. His wife rebukes him. 'Rather,' she protests, 'they may be repentant; for the Psalmist's application is not "Let sinners be consumed out of the earth," but "Let sin be consumed" ' (the allusion is to Ps 104:19, where the Hebrew is susceptible of Beruria's interpretation; for the story see Br. 109).

The Rabbi, despite a certain severity and intolerance, was worthy of his wife. His defects were the defects of his qualities. If sometimes he set his face like a flint towards other men's weaknesses, he was strong and fierce. His sorrows touched himself. He, too, could preach and practise the great duty of submission.

Echoing Ec 25, he says: 'Let thy words before God be few; school thyself to be silent, and give way to the death well' (v. 69). And, again, 'As we should thank God for the good, so should we praise Him for evil' (v. 69). God Himself suffers with His sorrowing children (Mish. Sanh. 34b).

Expounding in novel fashion the verse, 'A good name is better than precious ointment; and the day of death than the day of one's birth' (Ec 7), he said that death, the consummation of life, is good for those who pass hence with a good name (Br. 17a). Again, he said that what, according to Gen 1 in, God saw and proclaimed very good at the Creation was death (Midr. Rab. to the verse). The section of the Mishnah known as Aboda...
(Ethics of 'the Fathers') assigns a typical maxim to the mouth of the Rabbis. The maxim associated with Meir reads as follows:

'Mist thy toil for worldly goods and give thyself to the Torah; but be holy of spirit towards all men' (Abodh, iv. 10).

Meir was clearly no Platonist; he did not consider it to be a sage, was, for him, to have an incentive not to pride, but to humility. To study the Law, too, was not an end in itself; it must be made an impulse and inspiration to the noble life. Thus in another utterance of the sage he pictures God as saying:

'Devote thyself with all thy heart and soul to know my ways,' thus saith the Lord; 'thou shalt walk in my Law in thy heart and my fear before thine eyes; guard thy mouth from sin, and purify thyself from all transgression. Then will I be with thee always' (Jer. iv. 12).

Equally notable are his teachings concerning social duty. Men are not to be judged by outward appearances.

'Look not at the flesh, but at what it contains; there is many a new flesh that contains old wine, many an old flesh which has new wine in it' (Abodh, v. 29).

Nor are men to be judged by the honey of their words. If we have two friends, one of whom admonishes us and the other flatters, we should love the former, for he is leading us heavenwards (Abodh & R. Nathan, 29). He preaches sincerity even in our minor usages of social intercourse; warns us against inviting a friend to dinner when we know that he will not accept the invitation, and against offering him a present which we believe he will not take (Beruria, 69a; Tob. Bo. Betha, vi. 14). It is a man's duty to adapt himself to the ideas and customs of the community in which he lives; in Rome he should do as Rome does. The angels, the sage points out, when they came down to earth and appeared to Abraham, at first terrified; when Moses went up to heaven he neither ate nor drank (Midr. Rab. to Gn 18).

Applying to Aaron the words (Mal 2), 'he did turn many away from iniquity,' Meir thus characterized the great high priest:

'If Aaron chanced to meet a man who was careless to salutate him, so that, when the latter next time meditated an evil deed, he said to himself, 'Were it me! how shall I then look Aaron in the face?' in like manner, if two men quarrelled, Aaron would go to one of them and say, 'See, my son, what thy friend is doing; he is beating his breast, rending his clothes, and crying: 'Woe is me! how can I look my friend in the face, seeing that I have sinned against him?' Then he would go to the other and say, 'My son, do not say that at length they embraced and were reconciled' (Abodh & R. Nathan, 12).

Meir has left many maxims on the self-regarding duties also. He exhorts us to the contemplation of God 'who is rich?' he asks, and he answers, 'He that hath peace of mind with his riches' (Shab. 256).

'That he feels shame,' he says elsewhere, 'will not quickly be led into sin' (Netharim, 29a). The sin of Samuel's son (I S 8), he declared, lay in their demanding what was due to them (Shab. 56a). The Law (Exx 29) ordains that a man who steals an ox must make fivefold restitution; but, if he steals a sheep, the restitution is only fourfold. The difference is to be explained by the fact that, unlike sheep, the ox is a toiling animal. 'Here,' cries Meir, 'is a proof of the worth of labour in the sight of God!' (Menah. to the verse). In common with the Rabbis who exalted the law of the sanctification of the week, and with the early Christians (see E. Gibbon, Hist of the Decline and Fall of the Roman Empire, London, 1901-06, ii. 17), he condemns the theatre and the arena. The one is the 'seat of the scornful' (Ps 1), the other a place of proximity to the cruelties of the gladiatorial contests (Abodh & R. Nathan, 57; Abodh. Zarah, 18b). He emphasizes the futility of human ambitions by an apt remark: man, he says, is born with his hands clenched as though he were king of the whole world; he dies with his hands wide open, for he takes nothing with him (Midr. Rab. to Ec 54).

Unbending to the ignorant ('unci homines [u. r.]') and the sinner alike among his own people, Meir shows himself tolerant and liberal towards men of alien creed.

The Gentile who gives himself to the study of the Law is as worthy as the Jew, if he be in subjection to the Law and speaking of God's statutes, says that if a man do them, he shall live by them—a man, not a priest or a Levite (Zdbbd Qumran, 23a; Sanh. 29c).

He had many conversations with Gentiles, chiefly polemical.

One of these opponents designates a race a people contemptuous of God, driven by the Master from his house, and put in subjection to other lords. 'God,' argues the controversialist, 'has made you ever so many mitzvahs; when will the Gentiles assimilate with us?' Meir protests against the theory. 'Rather,' he affirms, 'we are to be likened to a son whom his father has disowned, and the paternal heart is ready to take back if he return penitently' (A. Jellinek, Beth ha-Midrash, Leipzig, 1853-78, iv. 21). 'If,' says another disputant, 'your God loves the poor, why does He not sustain them?' 'In order,' Meir replies, 'to give us an opportunity of escaping Gehenna by the practice of loving-kindness' (Zdbbd Baruth, 180).

Like Aqiba, his master, Meir is pictured by the Talmud (Qiddishah, 81a) as undergoing the temptation of St. Anthony. Satan, so runs the legend, appears to the sage in the likeness of a beautiful woman, who would entice him with her wiles.

But he escapes them. The legend puts in concrete shape the traditions concerning the Rabbis' unyielding rectitude which gathered about his name. Another story tells of a journey which Meir made to Rome in order to rescue from a house of ill-fame his wife's sister, who had been taken captive after her father's martyrdom. It is said that his mission was successful (Abodh Zarah, 180).

Born, it is believed, in Asia Minor, Meir died in that country. He enjoined his disciples to bury him on the seashore, so that the waters which loved the land of his fathers might touch his bones (Jerus. Kilayim, 32b).

He had no equal in his generation is one Talmudic authority (Erubin, 13b); and, in a public eulogy pronounced on him by Sepphoris, Rabbi Jose declared him to be a 'great man and a saint, but humble within' (Jerus. Ber. ii. 7).

Of all the Tannaim, Meir's name is most widely known among the people. In the house of every pious Jew there is a money-box hung on the wall, in which the inmates deposit their alms for the poor of Palestine. This box bears the inscription 'Meir, Eshah han-Nesi' ('Meir, the wonder-worker'), an allusion to the miraculous power attributed to him in Talmudic and popular lore (see E viii, 436).

MORRIS JOSEPH.

MELANCHOLY. — In Greek physiology the bodily constitution of an individual, his appearance, his liability to disease, and also his mental character were explained by the proportions in which the four humours were distributed in his framework. These were blood, yellow bile, black bile, and phlegm, the predominance or excess of which gave respectively the sanguine, the choleric, the melancholic, and the phlegmatic temperament. Melancholy (melancos and χαλκός) was thus the result of a mental disposition of people. Various mental, among men, and writers on insanity are still careful, in their description of cases, to indicate the 'temperament' of each patient. The differences are now made to depend either upon the blood or upon the nervous system, or both. If the blood is decisive, the difference may be sought either in its substance—the number of red cor-
MELANCHOLY

— or in its circulation; if the nervous system, in the strength of the rate of reaction, or be inflamed due to the infection of the nerve-tone, which has since been retained and developed (Anthropologische Vortrage). No part of the nervous system, he showed, is ever wholly at rest during life: every stimulus finds a certain degree of reaction already present in the nerve-endings and nerve-fibres on which it acts; what we call rest is, therefore, a moderate degree of activity, which may rise or fall, and which is maintained by internal stimuli, acting through the blood. This is the condition of the nerves, their preparedness for action; the higher the tonus, the stronger the reaction. On the nerve-tone will, therefore, depend the sensitiveness of the individual, his prevailing emotional attitude, and his quickness and firmness of response. A low tone shows itself in the dull, heavy expression of face (in the phlegmatic, e.g.), the relaxed muscles, the deliberate movements, the tendency to 'run to fat'; a high tone in the vivid complexion, alert expression, and quick movements of the impressionable choleric. The melancholic, according to Idenhe, has also a high nerve-tone, but reacts through the emotional or affective system, rather than the voluntary; whereas the choleric relies feeling by prompt and strong sensations, the melancholic is denied this advantage: his melancholy is the brooding upon and nursing of emotions, a habit from which genus, or, it may be, merely hypochondria and hysteria, spring.

Wundt's simple formula has been widely accepted, that emotion is primarily a question of emotion, that emotion together with the tonus of the conditions of change, one in intensity, or rate, the other in rate; hence the fourfold division: strong and quick — choleric; strong and slow — melancholic; weak and quick — phlegmatic; weak and slow — sanguine. Strong emotions under modern conditions mean a predominance of pain; slowness of change means that the mind takes time to follow out its own thoughts, is not wholly absorbed by the present but looks to the evil ahead. These tendencies characterize the melancholic (Grundzüge der physiol. Psychologie, iii. 637). The scheme is too simple to fit the complexities and subtleties of human character, however, and there is no general agreement as to the true order of temperament, as many as nine having been suggested.

1. Melancholy and pain. — Melancholy differs from the other dispositions in being a well-recognized temporary emotion or mood, as well as a prolonged or permanent, and in being among the most prominent symptoms of a definite form of insanity — melancholia or mental depression. It has formed the theme of one of the most wonderful books in our language: The Anatomy of Melancholy, by Robert Burton, first published in 1621.

The melancholy with which he deals, and of which the 'causes, symptoms, prognostics, and cures' are set forth with such fertility of illustration, is 'an habit — a chronic or continued disease, a settled humour;' but it is built up, as he recognizes, out of 'melancholy in disposition,' which is 'that transient: Melanchole, which comes and goes, hope the smallest occasion of sorrow, need, sickness, trouble, fear, grief, passion, or perturbation of the mind, any manner of care, discount, or thought, which, however, without anxiety, distress and vexation of spirit, in any way opposite to pleasure, mirth, joy, delight, causing no motions or a distress. In which every colic in the improper sense, we call him melancholy that is dull, and, sour, humisph, ill-disposed, solitary, any way moved, or displeased.

'...Melancholy in this sense is the character of Mortality' (6. 164 [ed. London, 1906].

It might be said that this temporary melancholy is merely mental pain, however caused, and that the disposition is a state of mind in which mental pain is the dominant tone. The expression of melancholy is that of pain, the pale face, the drawn look, lips and eyes turned slightly downwards at the corners; the respiration slow and sighing, the pulse the low, the temperature lowered, the nutrition processes, including the appetite, impaire, so that the body seems inactivity. It is a malingering of the will, there is also a loss of sensitiveness to outer impressions; they lose in clearness and distinctness; the judgment follows suit, and the whole mental character is, even though only for the moment, changed for the worse. It is the ceremonial of the mind.

'The patient thinks only of himself and his sufferings; altruistic passions, family affection yield to an egoism of the most exacting and extreme type' (P. Janin, Les Sensations internes, Paris, 1869, p. 190 ff.).

Mental pain may be less acute, but it is more persistent than physical pain, and it has the same reverberation throughout the system. The distinction between the two is probably artificial; mental pain accompanies all physical pain, while in its turn physical pain — discomfort, loss of nervous tone — is a constant accompaniment of mental pain.

The most acute pain, it is the over-excitation or exhaustion of some sensory or motor nerve; so the most common cause of the latter, mental pain, is the over-strain or exhaustion of the brain centres and tracts concerned in attention, emotion, memory. This is certainly the case; in the over-study were two of Burton's causes of melancholy. So melancholy may be regarded as a pain of fatigue, as due to excessive functioning on the emotional or intellectual side, especially when the strain has not been rewarded with satisfaction.

The extraordinary persistence of melancholy, the difficulty of distracting the mind from it, is, due, as Beaurin urges, not merely to the fact that its causes — the desires, the memories — are persistent, but also to the 'sentiment of the irreparable, which is at the root of almost all mental pain, the idea that all has been lost and without hope. Whatever it is that she will never see again the child that has died in her arms, the artist who sees that he will never be able to realise the ideal of his dreams, the inventor whose discovery is held up to ridicule, the poet whose verses, that he believes to be inspired, are laughed at, the thinker who seeks for truth and finds only doubt, the Christian who sees the foundering of his belief and of his faith, all have this sentiment of the irreparable, of the irretrievable return, which leaves behind only nothingness and despair' (op. p. 231).

2. Melancholy and the sense of values. — Melancholy is the mood of an imaginative mind; it is true that an animal is sometimes described as 'melancholy'; a dog that has lost his master, a wild animal in captivity in a narrow space, a bird deprived of her mate: death, even self-inflicted death, is known of distinct temperaments, as many as nine having been suggested.

Mental pain may be less acute, but it is more persistent than physical pain, and it has the same reverberation throughout the system. The distinction between the two is probably artificial; mental pain accompanies all physical pain, while in its turn physical pain — discomfort, loss of nervous tone — is a constant accompaniment of mental pain.

The extraordinary persistence of melancholy, the difficulty of distracting the mind from it, is, due, as Beaurin urges, not merely to the fact that its causes — the desires, the memories — are persistent, but also to the 'sentiment of the irreparable, which is at the root of almost all mental pain, the idea that all has been lost and without hope. Whatever it is that she will never see again the child that has died in her arms, the artist who sees that he will never be able to realise the ideal of his dreams, the inventor whose discovery is held up to ridicule, the poet whose verses, that he believes to be inspired, are laughed at, the thinker who seeks for truth and finds only doubt, the Christian who sees the foundering of his belief and of his faith, all have this sentiment of the irreparable, of the irretrievable return, which leaves behind only nothingness and despair' (op. p. 231).

2. Melancholy and the sense of values. — Melancholy is the mood of an imaginative mind; it is true that an animal is sometimes described as 'melancholy'; a dog that has lost his master, a wild animal in captivity in a narrow space, a bird deprived of her mate: death, even self-inflicted death, is known of distinct temperaments, as many as nine having been suggested.

Mental pain may be less acute, but it is more persistent than physical pain, and it has the same reverberation throughout the system. The distinction between the two is probably artificial; mental pain accompanies all physical pain, while in its turn physical pain — discomfort, loss of nervous tone — is a constant accompaniment of mental pain.

The most acute pain, it is the over-excitation or exhaustion of some sensory or motor nerve; so the most common cause of the latter, mental pain, is the over-strain or exhaustion of the brain centres and tracts concerned in attention, emotion, memory. This is certainly the case; in the over-study were two of Burton's causes of melancholy. So melancholy may be regarded as a pain of fatigue, as due to excessive functioning on the emotional or intellectual side, especially when the strain has not been rewarded with satisfaction.

The extraordinary persistence of melancholy, the difficulty of distracting the mind from it, is, due, as Beaurin urges, not merely to the fact that its causes — the desires, the memories — are persistent, but also to the 'sentiment of the irreparable, which is at the root of almost all mental pain, the idea that all has been lost and without hope. Whatever it is that she will never see again the child that has died in her arms, the artist who sees that he will never be able to realise the ideal of his dreams, the inventor whose discovery is held up to ridicule, the poet whose verses, that he believes to be inspired, are laughed at, the thinker who seeks for truth and finds only doubt, the Christian who sees the foundering of his belief and of his faith, all have this sentiment of the irreparable, of the irretrievable return, which leaves behind only nothingness and despair' (op. p. 231).
ness of their nervous system, but rather to the fact that the old man is better able, through his experience, to interpret the impressions, to see them in their true perspective, and in relation to life as a whole, whereas for the young each impression is taken in isolation, is weighed only in its relation to an immediate need or desires of the self. Hence the greater the individual's satisfaction of his life, the higher his happiness, and the deeper his pain. In the same way melancholy is more frequent in men than in women, in the northern races than in the southern races of Europe. A northern race, perhaps because its civilization is up to now recent growth, is more conscious of itself, and less conscious of the wider group in which the loss of one individual is compensated by the gain of another. It was mainly from Russia, Germany, and Scandinavia that the melancholy school of writers of last century—the Fin de siècle—came. Suicide is said to increase in number northwards, and one of the most common causes of suicide is melancholy (see Burton's disquisition on suicide [i. 405]; and Metemkoff, p. 366). At the back of all melancholy is fear—fear of pain in the first instance, then fear of loss, of failure, of death, of society's judgment upon oneself. The greater the value, or, rather, the greater the apprehension of a good, the greater the pain at its loss, and the greater the pain at the prospect of its loss. Hence melancholy is, paradoxically, more common in the idealist than in the materialist. Paul Bourget, writing of Baudelaire, finds the key to the melancholy temperament in modern art in the figure in the mysticism and idealism of his early faith. When such a faith, the faith in the eternal, has been strongly held, its object deeply adored, the loss of faith in it, and of love, is irreparable. The individual may no longer have the intellectual need to believe, but he still has the need to feel as when he believed. The desiries remain, strengthened by habit, and in the sensitive soul their influence is irresistible; yet their satisfaction is impossible. Melancholy then is the effect of failure of adaptation to the environment, in matters of faith and belief. The stronger the resistance of facts to the realization of the thinker's dream, the deeper his melancholy. To the mystical soul faith is not the mere possession of an idea, nor a dogma; God is not for it a word, a symbol, an abstraction, but a real being in whose company the soul walks as a child in its father's, who loves it, knows it, understand it.

Once an illusion so strong and so sweet has gone, says Bourget, no substitute of less intensity will suffice; after the intoxication of opium, that of wine seems mean and paltry. Driven away at the touch of the world, faith leaves in such souls a gap through which all pleasure slips away. The more the sufferer tries to escape, the more securely is he held, until at last there remains as his only satisfaction the dreadful but consoling figure of that which trees from all diaversy, and delivers from all doubts,—death (Paul Bourget, Essais de psychologie contemporaine, Paris, 1892, p. 21).

Still deeper is the melancholy of an unsatisfied desire, when the failure of satisfaction lies, not in the resistance of external circumstance, but in the inability of the subject to enjoy, an inability which is itself a mark of exhaustion; it is the soul that has lived most, felt most strongly, indigual its passions to the full, till its power to feel is almost destroyed, that finds life most unbearable.

Le mensonge du désir qui nous fait osciller entre la brutalité maussadière des circonstances et les impassibilités plus imprévues, nous emporte encore.

It is the melancholy of nature after the storm, of the evening, of the grey light that comes after the sunset, of the brown tints of autumn trees—exhilaration or doom after stress and decay.

Less tragic is the melancholy that is associated with pensive, deliberation, thought, as in Milton's Il Penseroso—the melancholy of the poet and of the philosopher. Beaumis connects this also with pain, however. When man reflects, he is forced to return to our according to Beaumis, that he is born to pain, and that pleasure is only an accessory in his life.

'There is no physical pleasure which can compensate for an hour of angina pectoris, no mental enjoyment which will disappear before the pain caused by the death of one we love, the intellectual pleasure which is not annulled when we think of how much is unknown in our fate. Personal pessimism, at the root of every reasoning, of every meditation' (p. 290).

Happily, he adds, most men do not reflect or meditate upon the fate either of themselves or of others; their interest faces outwards, not inwards; they have no time to worry over problems that great minds have found insoluble; or, if they do worry over them, they are able to set their worries at rest by the acceptance of a solution ready-made, on the authority of the Church or the pastor.

3. Melancholy and exhaustion.—The essential nature of melancholy has been probed more deeply from the point of view of pathology, and in various ways the idea of exhausted or decreased energy has been brought into connexion with the known laws of mental activity.

To Devan Lewis melancholy means nervous enfeeblement; the subject is no longer able to do easily and smoothly even the most familiar and habitual acts; it is only with effort that he can think, or attend to what he hears or reads. It appears to us that the true explanation is due to mental operations being reduced in level so far as to establish conscious effort in lieu of the unconscious operations, or latent states of consciousness which accompany all intellectual processes. The restless movements of the intellectual eye (in the artist, poet, etc.), as well as those of the state of mental excitement, bespeak in the former case the exalted muscular element of thought; and in the latter a highly reflex excitability, but in the melancholy the element of reflex activity is universally at rest, the eye is fixed, dull, heavy, sluggish in its movements and painful in effort, the cerebral functions limbs motionless. The only muscles in a state of tension are those which subsist emotional life, viz. the small muscles of expression (Textbook on Mental Diseases, p. 121). 'Facilities the muscular element of thought has as its results on the subjective side, enfeebled ideation and the sense of objective resistance' (ib., p. 122).

The eye sees less clearly, the mind interprets less accurately; the will acts less vigorously, and less effectively; it may be that the motor ideas, which are the ones, if not the excitants, of action, cannot be formed or recalled accurately in the mind; hence apathy and inaction. The environment, the non-ego, appears as antagonistic or foreign to the self; it is no longer the world in which we moved freely and pleasantly, but one which is new and strange, which resists our efforts and counters our desires. The result is a rise in the subject-consciouness; the mind is thrown back upon itself. The man broods upon his sufferings, which become his wrongs, and, in interpreting or explaining them, suspicion of others is the simplest and therefore the most frequent way out.

According to Pierre Janet's interpretation, melancholy represents a stage on the way to absence psychologique, or psychic misery, with its accompanying disaggregation of the personality, and subjugation of the conscious by the unconscious or unconscious self. There are innumerable degrees of attachment and detachment of acts and ideas to the self. In thought-reading and in table-turning, we have simple instances of how acts are carried out which correspond to ideas or thoughts in the mind of the subject, yet not the excitants, or voluntary or conscious on his part: he is aware of the result, not of his own agency in it. In spiritualism—the possession of the medium by the supposed spirit of the dead, who gives through the medium information which the latter has neither wanted nor state, is wholly unaware of enjoying—we have a more systematized form of the same thing.
Finally, in hypnotism, in hysteria, morbid impulses, fixed ideas, and obsessions, there are vivid examples of how thoughts, or, rather, systems of thoughts, may become loosed from the control of the subject, yet by the conditions of their occurrence appear entirely foreign to him; he is their slave, they take possession of him, he is carried away by them. Passions, of the source of which the patient is usually unaware, darting back perhaps to a forgotten childhood, may yet lead (to actions for which he cannot recognize his responsibility, which he may indeed forget immediately afterwards and, therefore, wholly fail to connect with his "real" self. It is not until he becomes morbidly exposed to his own feelers the physician as agent; any proof of this that can be brought forward must have a shattering effect upon the self-consciousness; the patient feels that he no longer has a grip of himself, that he may do some incredible act of violence, cruelty, immodesty, or crime. He becomes estranged from himself—and this doubledness is itself an added source of depression; it is the same in effect whether the two personalities succeed each other in time, as alternating personalities, or exist simultaneously, although acting separately; the disaggregation means an impairment of the self, often revealed by an actual loss of intellectual power, weakened concentration of attention and will. The subject becomes morbidly conscious of the one feeling, the physical agent; his health, his prospects in life, etc. This subjectivity is the essence of the melancholy disposition. It remains to ask what is the cause of the disaggregation of consciousness, the psychological nature of which melanchoia so prominently is a symptom. According to Janet, the cause may either be physical or mental; physical, as the exhaustion of a prolonged illness, or of a sudden shock, or continued over-exertion, as in heavy physical struggle, as in the rage of a lover, as a result of excessive grief, prolonged mental worry, strong emotional excitement (e.g., religious). The great vital crises, at puberty, adolescence, and the change of life, with the feeling of strangeness which the loss of old and the gain of new sensations and impulses bring, are common causes of at least a temporary disaggregation and depression. The theory is not widely different in effect from that of Bevan Lewis; in both it is the co-ordinating power of the subject is lacking; the elementary impressions and impulses fall apart, as it were, into their primitive independence; the subject seems out of touch with his environment, is unable to face the tasks of his social or occupational life. According to the degree of disaggregation or rise of subject-consciousness, there may be simple melancholy, hysteria, or actual insanity (P. Janet, L'Automatisme psychologique, pt ii. chs. iii. and iv.).

4. Melancholy and personality.—The sense of mystery, of strangeness, of possession, that occurs in melancholy deserves to be considered in detail. In melancholy, as has been shown above (§ 3), the sensations are less clear, their threshold is higher, the perceptions based upon them are blurred, partly from the relaxation of the muscles of attention, partly from the absorption of the mind by the pain, real or imaginary. The individual neither sees nor hears so clearly as before; the commonest objects may look strange, the most familiar voice sound different; but these things are not as a change in the experiencing subject, but as a change in the objects experienced. One's friends, one's country, one's world have changed, and the subject feels that he must adapt himself to the new sphere. Still greater is the loss of clearness in the memories. The most vivid experiences, when they can no longer be clearly and definitely recalled, tend to lose the warmth and intimacy which memories of 'my own experiences' should possess, as compared with those of others of which I have merely heard or read. Thus in melancholy man and depression lose the memories of my own life lose their emotional tone; they seem to belong to another than myself. It is true that this state lends itself to analysis, and that the habit of analysis, once formed, may continue which was its origin. But melancholy is clearly a feeling of the past, a memory of one's life, and it is not to be described and understood as if it were a curiosity; melancholy is not curiosity, melancholy is the disease of the life. It is true that melancholy is a feeling of estrangement, but it is the feeling of estrangement, not estrangement itself; melancholy belongs to a life, and a life is not a mere condition.
other hand, such memories are not 'sociable'; they do not bring other thoughts in their train; especially they lack 'determination' value, the tendency to direct the mind systematically when one thought to a train of others; they tend to clog thought. The subject becomes more and more conscious of inefficiency in his profession or in his social life; and the consciousness of failure has the usual consequence of making the actual failure all the greater.

5. Melancholy and pessimism.—Melancholy and pessimism are two sides of the same state of mind, the one expressed in the attitude and disposition, the other the theoretical interpretation. Happiness becomes a dream which is never realized, and which it seems hopeless to pursue. Subjectively, indifferently, apathy, want of feeling; objectively, death, seem the only desirable things. The ideas, imaginations, and suggestions that arise in the mind of the melancholy, according to a well-recognized law (see Störing, Mental Pathology, p. 222 ff.), tend to be of the same emotional tone as that of the disposition in which they are called up, i.e. painful, depressing: the melancholic sees only the sad, the tragic, the bitter side of things, the pain that is suffered, the sins and crimes and follies that are committed, not the pleasures, the kind- ness, the love, of the world. Melancholy, whatever its source, has played a powerful part in religious movements. It is not only that religion and its history furnish the melancholy mind with a cohort of images of the most fearsome type, but that the structure of the suffering self sends it to religion, to the idea of sin and its punishment, as the most obvious and nearest interpretation; and, finally, that religion offers the only adequate relief and hope of escape. Religion is the most melancholy of all Burton's most curious dissertations (pt. iii. sec. iv. membrand i.), and James's Varieties of Religious Experience, lects. vi. and vii., on 'The sick soul,' give a modern presentation. It is there shown how, as in Polistel's case, melancholy may be accompanied by a total change in the estimate of the values of things: things that seemed of the utmost value before now seem worthless; they excite no emotion of the highest whatever the cause of this is, the world, and people, look different and are thought of differently—as strange and unreal. It is also shown that in a rational being the strangeness and change of feeling invite to a search for an explanation of self or in the action of other beings upon oneself. Either of these ways may lead to religious conversion and relief.

6. Moroseness.—The pathologist Pinel, in his treatise on Mental Alienation, depicted melancholies as of two distinct types—the one filled with enthusiasm for art, for literature, for all that is great and noble, or, among ordinary people, merely pleasant, lively, and affectionate, yet apt to torment himself and his neighbours by obscure and chimerical suspicions; the other is the type to which the Emperor Tiberius and Louis X. of France belonged—men who are gloomy and tac- tious, deeply suspicious of others, fond of solitude. Sometimes of others is the theme of the most cunning and duplicity of the most dishonourable and cruel kind, which, if power is added, become fiercer and less restrained as age increases (P. Pinel, L'Alienation mentale, Paris, 1809, p. 164). This represents with some accuracy the morose type of melancholy. Moroseness springs from the disposition to regard others as having secret designs upon one's property or life or place, and to avoid them in consequence. It involves extreme self-centring and misanthropy. Melancholy is a disease of the imaginative, moroseness of the unimaginative mind—the man who does not aspire beyond that which he has already attained, the man of narrow range of ideas, unable to appreciate the values that others place upon, but soiled by the specially the ideal values. Probably the pivot of the morose character is, like that of melancholy, fear or anxiety.

As de Faurac has said of the miser, 'It is undoubtedly true that from insecurity springs anxiety, and that anxiety becomes a torture and a source of trouble for the mind. It has for effects the diminution of activity, the development of defensive tendencies to the detriment of the expansion of the cult of absolute security, and the horror of risk. It is intimately bound up with insociability (L'Arcisse, p. 23).

This is true especially with or any kind of feeling for others; he is vindictive, and, if opportunity allows, savage, brutal, cruel.

MELANESIANS.—1. Extent and limits of the subject.—The region of the South Pacific, which is called Melanesia, is well defined, except on the western side. The boundary on the east lies between Fiji, which is Melanesian, and Samos, which is Polynesian. To the south the Melanesian island of New Caledonia is separated by a considerable space of ocean from New Zealand, which is Polynesian, as are the small islands of Micronesia on the north from the Melanesian Solomon Group, but to the west the islands of Melanesia overlap New Guinea. Some of the inhabitants of that vast island are Melanesian, at any rate in language; but, though Melanesians have been called Papuans, there can be no direct reference to their culture, except in the Melanesian cannot be placed as a whole in Melanesia. Five distinct groups of islands are without question Melanesian: (1) the Solomon Islands, with the groups which connect them with New Guinea; (2) the Santa Cruz group; (3) the Banks' Islands and New Hebrides; (4) New Caledonia, with the Loyalty Islands; and (5) Fiji.

The first discovery in Melanesia was that of the Solomon Islands by Spaniards, under Mendaña, in 1567. In 1589 the same voyage discovered Samoa; in 1598 the same voyagers discovered Santa Cruz; and in 1606 Quiros and Torres discovered the New Hebrides and Banks' Islands. The Dutch discovered Fiji in 1643. French voyagers in the latter part of the 18th cent., and finally Captain Cook in his second great voyage, completed the general survey of all the groups. In the records of these passing visits it is vain to seek for information concerning the religion of the natives. The discoverers saw what they believed to be temples, idols, worship and invocations of devils; they interpreted what they saw, as succeeding voyagers have done, according to their own conceptions of savage beliefs. It was not till missionaries, about the middle of the 19th cent., began to live in closer intercourse with the native people and to learn their languages that any certain knowledge vol. viii.—34
MELANESIANS

of Melanesian religion could be gained. The following account represents in the main the knowledge which has been gained by the Melanesian Mission of the Church of England. The religion of the Melanesians is considered in another article (p. 131). The account here given has been drawn from the Solomon Islands, the Santa Cruz group, the Banks' Islands, and the Northern New Hebrides. It has been gathered from natives of those groups in native language, and much of it has been gained from what educated natives have written in a native language. Very little, however, has come from the Western Solomon Islands or the Southern New Hebrides; but there is every reason to believe that religious belief and practices in these islands do not differ considerably from those of the central parts of Melanesia.

2. Basis of Melanesian religion.—From whatever source they may have derived it, the Melanesians generally have held the belief that their life and actions were carried on in the presence and under the influence of a power superior to that of living man. This power, they thought, was all about them, attached to outward objects, such as stones, trees, air, exercised by themselves, i.e., either by men, alive or dead, or by 'spirits' who never were men. This 'sense of the Infinite,' as Max Muller (Lectures on the Origin and Growth of Religion [III], London, 1878, lect. i.) calls it, was the foundation on which the religions beliefs and practices in Melanesia; the general object of their religious practices was to obtain the advantage of this power for themselves. This power is impersonal, and not physical in itself, although it is always put in human person; and all remarkable effects in nature were thought to be produced by it. It is not fixed in anything, but can abide and be conveyed in almost anything. All spirits, beings superior to men, have it; ghosts of dead men generally have it, and so do some living men. The most common name for it is mana (q.v.). The methods by which living men use and direct this power may well be called magical; the controlling force lies generally in words contained in chanted or muttered charms. If worship is addressed to beings who are not living men, and if the use of their power is sought from them to do good or to do harm, it is because such beings have this mana; the forms of words have efficacy because they are derived from the mana; a common object, such as a stone, becomes efficacious for certain purposes because such a being gives it mana power. In this way the influence of the unseen power pervades all life. All success and all advantage proceed from the favourable exercise of this mana; whatever evil happens has been caused by the direction of this power to harmful ends, whether by spirits, or ghosts, or men. In no case, however, does this power operate, except under the direction and control of a person—a living man, a ghost, or a spirit.

3. Objects of worship.—The objects of religious worship, therefore, were always persons to whom prayers or sacrifice was offered, or in whose names charms were recited, with the view of gaining supernatural power, or turning it, either directly or indirectly, to the advantage of the worshipper. These personal objects of worship are either spirits or spirits impersonated by the personal beings in whom the spiritual power was already manifested naturally abides, and who never were men; by ghosts are meant the disembodied spirits or souls of dead men. To keep these distinct is essential to the understanding of Melanesian religion. Natives themselves are found to confuse them at times, while Europeans are usually content to call all alike deities, gods, or devils.

(1) Spirits.—A native of the Banks' Islands, where spirits are called nui, wrote the following definition:

What is a nui? It lives, thinks, has more intelligence than a man; knows things which are only known by the powerful with mana; has no form to be seen; and has no soul, because it is itself like a soul' (see Codrington, Melanesians, p. 125).

The nui of the Northern New Hebrides is of the same nature. Yet such spirits are seen, in a shadowy, unsubstantial form; and there are many spirits called by the same name to whom the definition does not accurately apply, while the stories concerning them treat as if they were men with superhuman and quasi-magical powers. Still the natives steadily maintain that these are not, and never were, men. In the Solomon Islands being were believed to exist who were personal, yet who had never been men, and who lacked the bodily nature of men, but they were very few and enjoyed little religious consideration. The term which is applied to such beings is also applied to some who had undoubtedly existed at some time as men. The question arises whether those beings, concerning whom stories were told and believed in the Banks' Islands and New Hebrides, which showed them to be like men of more than human power and intelligence, should not be called gods. Such were Qan in the Banks' Islands, Tagaroo, Suge (in various forms of the names) in the New Hebrides, and Lata in Santa Cruz. To such as these the natives apply the word 'god.' But the native word by which they are known, such as nui, is applicable also to other beings for whom 'god' is too great a name, this category including elves, fairies, nameless beings already mentioned, who have no physical form, but are still spiritual, so to speak, not corporeal. To describe all these, to distinguish them from dead men, the best general term seems 'spirit'; and it is to these beings that the religion of the New Hebrides and Banks' Islands looks, as once did the Polynesian and waiotara, the power which must be called spiritual, which are not in themselves, and which they seek to obtain for their advantage by sacrifices, prayers, and charms.

(2) Ghosts.—It makes the matter clear if this term be used when the beings spoken of are simply men who are dead in the body while that part of them that is not bodily retains activity and intelligence. In the Banks' Islands and New Hebrides the word meanings which the Hawaiians call tamate or natama, in the Solomon Islands a very common word in various forms is tidalo. The question again occurs whether these should not rather be called gods. There are certainly some to whom prayers and sacrifices are offered, whose place and time in human life are forgotten or unknown, and whose existence as persons possessed of powers far superior to those of living men is alone present to the belief of the existing generation. Such may not unreasonably be called gods. But, whereas in the Eastern groups such beings are plainly called 'dead men,' it seems more correct, and serves better for clearness, to use an English word which shows them once to have been living men, and separates them from any such beings as are believed never to have belonged to human kind. The word 'god' cannot be a translation of 'dead man.' Where, as in the Solomon Islands, a distinct name, such as tidalo, is in use, the term of the word 'god' does not so plainly apply. Yet the natives emphatically declare that every tidalo was once a man, that the tidalo is the spirit (tamata) which once was the seat and source of life, intelligence, and power in a man who was then in the body. The living men who worship the tidalo regard themselves as possessed of that non-corporeal nature which alone remains in the dead, and is the seat of the dead...
man's superhuman power. They believe that some of them have a measure of that power, derived by them from the dead. They believe that, when they are dead, they will also, it may be, receive a great access of this power. The difference which they recognize between the souls of the living and the souls of the dead is that they are alive and have but a comparatively small measure of spiritual power. But it should be understood that every living man does not become a tindalo after death. The large mass of the Melanesian, whose grave is marked by a small mound, or whose grave is unmarked, show no remarkable powers in their lifetime; alive they are nobodies, and such they remain when dead. But there are always some living men who show great tindalo, their spiritual success and influence. Such success and influence are not ascribed by the natives to natural powers, but to the possession of that spiritual power which they have obtained from the tindalo with whom they live in constant and close association. Indeed, they are expected that he should prove to be a tindalo, a ghost worthy of worship, an effective helper, one whose relics will put the living in communication with him. Thus, after the death of Gamindo, a chief among bathing natives, whose grave was invd and a sign of his power sought from him. On proof of this power a shrine was built for him, his head, his tools, and his weapons were preserved in it, and sacrifices with invocation were offered. Since then, a tindalo appears to European visitors to be a god; but to the natives of the place, who now worshipped him, and among whom he had lived as one of themselves, he was his ghost, in the common English sense of the term, who was among the spirits, expected that he should prove to be a tindalo, a ghost worthy of worship, an effective helper, one whose relics will put the living in communication with him. Thus, after the death of Gamindo, a chief among bathing natives, whose grave was invd and a sign of his power sought from him. On proof of this power a shrine was built for him, his head, his tools, and his weapons were preserved in it, and sacrifices with invocation were offered. Since then, a tindalo appears to European visitors to be a god; but to the natives of the place, who now worshipped him, and among whom he had lived as one of themselves, he was his ghost, in the common English sense of the term, who was among the spirits, of whom they had some conception, not an ancestor. The natural tendency is, as new objects of worship of this character arise, and as one great man after another dies, to neglect and despise the dead and their shrines of the past generation, while the elder wonders and powers attract faith and veneration to new ghosts and shrines. As the object of worship thus became more of an ancestor, he was less an object of worship, and certainly there are some concerning whose time and place of life the natives professed to be ignorant, but whose names, such as Daula and Hauri in Florida, are known to all, and who are now universally believed to be very powerful, although in ancient times they lived in human form on the island. These may be called ancestors, and they are worshipped, but not as ancestors.

The personal beings towards whom the religion of the Melanesians turn a great many men, with the view of obtaining their mana for aid in the pursuits, dangers, and difficulties of life, are thus spirits and ghosts; and it is remarkable that the Melanesians are thus divided by their religious practices into two distinct groups. But certainly there are some concerning whose time and place of life the natives profess to be ignorant, but whose names, such as Daula and Hauri in Florida, are known to all, and who are now universally believed to be very powerful, although in ancient times they lived in human form on the island. 5. Sacrifices.—There can be little doubt that sacrifices properly so called have a place in Melanesian religion. One simple form is universal. A fragment of food ready to be eaten, a bit of betel-nut, and a few drops of kava poured as a libation are offered at a common meal as the share of departed friends, though perhaps only as a form or as a memorial of them, but which they will be gratified. This is accompanied with a prayer. With the same feeling of regard for the dead, food is laid on a grave or before a memorial image, and is then left to decay, or, as at Santa Cruz, is taken away and eaten by those who have made the offering. In a certain sense, no doubt, the dead are thought to eat the food. Yet the natives do not apply to these offerings the words which connote sacrifices in the strict sense of the term. In the Western Islands the offerings in sacrifices are made to ghosts and consumed by fire as well as eaten; in the Eastern groups they are made to spirits, and there is no sacrificial fire or meal. In the former nothing is offered; in the latter native money has a conspicuous place.

(1) In the Solomon Islands.—A sacrifice in San Cristoval, one of the Solomon Islands, has been thus described in writing by a native of the place:

'In my country they think ghosts are many, very many, indeed, some very powerful, some not. There is one who is principal in war. This one is truly mighty and strong. When our people wish to fight with any others, they choose a ghost as the chief of the village and the sacrificers, and the old men, and the men older and younger, assemble in the place sacred to this ghost;
human sacrifices were occasionally made, and such were thought most effectual for the propitiation of an offended ghost. In this case the victim was not cut out in the form of a pig as when a pig was offered; but a piece of flesh was buried for the ghost's portion, and bits were eaten by young men to get fighting power, and by the sacrificer who had made the offering.

In the island of Santa Cruz the flesh of pigs or vegetable food is placed before the stock of wood that represents a person recently deceased for him to eat; feather-money and betel-nuts are laid out for ghosts, and food is thrown to them at sea. These offerings are distinctly ordered for the offerings which are naturally used, but they are soon taken up and disposed of by the offerers as common things. Such offerings resemble those of food laid on graves or at the foot of an image in the Solomon Islands, which would not then have the name of sacrifices, but the full sacrifices of the Solomon Islands, as has been shown, have the sacrificial characteristics of intercession, propitiation, substitution, and a common meal.

23. In Bank's Islands and New Hebrides.—To offerings here, no doubt, the name of sacrifice is far less properly applied, and yet it is almost necessary to employ it. The offerings are made in almost all cases to spirits, but in some cases to the ghosts of the dead, and are offered together with native money; nothing is killed or burned, nothing eaten; and the offering is laid upon a stone, cast into water, or scattered upon a snake or some other creature, the stone, the creature, or the sacred object being as it were fused with the spirit who is to be conciliated or from whom benefits are sought. Access to the spirit is to be obtained through the sacred object; but the common worshipper or supplicant cannot obtain this access by himself, and is consequently obliged to use the services of a go-between who knows the stone or whatever it may be and through it is able to know and to approach the spirit. The worshipper generally gives native money to the "owner," as he is called, of the sacred object who then gives a little money to the spirit, and perhaps pours the juice of a young coconut on the stone, while he makes his request on behalf of his client. There is thus an intercession, a propitiation, an offering, and some sort of a communion with the spirit who has pleasure in receiving. So far it is a religious action of a sacrificial character, and is distinct from prayer. In the New Hebrides, besides similar sacrifices to spirits, offerings are made to the gods of powerful men literally derived from either at their graves or in the places which they haunt. Men who know these and have access to them take nuts, food, and pigs (living or cooked) to the sacred place, and leave, or profess to leave, them there. Nowhere in these islands is there an order of men who can be called priests. The knowledge of the spirits and of the objects through which access to them can be obtained is open to all, and is possessed by many. Most of those who possess it have received it secretly from their fathers or older relatives, but many have found it by happy accident for themselves, and have proved their connexion with the spirit by the success of their ministered charms. it may be conferred by men who have the mana, the spiritual power, to confer it. It may be said, generally speaking, that among these sacred objects there are no idols, in the strict sense of the term. It is true that images are made more or less in all quarters to represent the dead, being set up as memorials at funeral feasts, in burial-places, in canoes, and in places of general assembly. They are treated with respect; offerings of food are made, and other valuable things are occasionally laid on them, but the image represents men of men deceased, likenesses to some extent, and representations; they are not worshipped, and are sacred only because of what they represent.

(1) Stones.—Sacred places almost always have stones in them. It is usually the case in the Solomon Islands that certain stones give sanctity to the place in which they naturally lie; and, when a place has for other reasons become sacred, stones which have that character are brought and placed there. Here again recurs the idea that certain stones or places possess the mana, the power, of a man who has died. In this group stones may be divided into those that naturally lie where they are reverence and those which have mana derived for various reasons from a spirit, and which are carried about and used for various purposes, and as amulets. The mana is said to be the same as mana in another form. The stones of the burial-place of a powerful man receive mana from him, or a man who had mana is buried near sacred stones, thus connecting the ghost and the stone. In other cases, the stone is brought about after the death of such a man, for, however never was a living man, that it acquires a mysterious quality, and becomes the means by which the mana which the man who has the knowledge of the stone can have access to the spirit. Many sacred stones then are sepulchral, for this is usually the case in the Solomon Islands. The sacrificial already described are offered upon stones. A stone is also frequently sacred in the Eastern Islands because a spirit is associated with it. Such stones may be divided into those that naturally lie where they are reverence and those which have mana derived for various reasons from a spirit, and which are carried about and used for various purposes, and as amulets.

Such stones may be divided into those that naturally lie where they are reverence and those which have mana derived for various reasons from a spirit, and which are carried about and used for various purposes, and as amulets.

(2) Trees, streams, and living creatures.—Trees are sacred because they grow in a sacred place, or because they have a sacred snake, e.g., that haunts them. Some have a certain inherent awe attaching to their kind. The natives deny that they ever regarded a tree as having anything like a spirit of its own corresponding to the soul of an ancient man. Streams, or rather pools, are sacred as the haunts of ghosts in the Western, and of spirits in the Eastern groups. The reflection of a man's face upon a practically dead spirit gives the ghost of spirit the hold upon the man's soul by which it can be drawn out and its life destroyed. Among living creatures which are sacred, sharks have a conspicuous place. If one of remarkable size or colour haunts a sacred locality, the mana of the ghost clings to the spirit of the fish, and the name of the deceased is given to it. Before his death a man will give out that he will enter into a shark. In both cases it is well understood that the shark to which the ghost has betaken himself was, before it was thus occupied, a common shark; but, now that he is in it, the place where the man lived is visited by the fish, and the neighbours and relatives of the deceased respect and feed it. A spirit, known to some one who sacrifices for it, can, in like manner, be introduced in the Banks' Islands into a shark, which thus becomes familiar. In the Solomon Islands a crocodile may be a ti'ndolo, since the ghost of a recent ancestor may possibly have entered it, or may be known to have entered it. It is the belief that any living creature that haunts a house, garden, or village may well be regarded as conveying a ghost. Among birds the frigate-bird is conspicuous for its sacredness in the Banks' Islands; the ghosts of deceased men of importance find their abode in them, and indeed ancient and widely venerated ti'ndolas dwell in them. In all the groups there is something sacred about kingfishers. Snakes are regarded as a certain veneration wherever they are found in a sacred place. The original female spirit, that never was a human being, believed in San Cristoval to have had the form of a snake, has given a sacred character to a certain species of snake in the Banks' Islands, and still more in the New Hebrides. Snakes with which certain vui' associated themselves, and which therefore have much mana, are worshipped and receive offerings of money in sacred places to which they have come. It is believed to appear in human form to tempt a young man or woman.

Is, then, the religion of the Melanesians altogether an animistic religion? Nowhere does there appear to be a belief in a beiaus, a spirit in the shape of any natural object, tree, waterfall, storm, stone, bird, or fish, so as to be to it what the soul of a man, as they conceive it, is to his body, or, in other words, so as to be the spirit of the object. The natives certainly deny that they hold any such belief; but they believe that the spirit of a man deceased, or a spirit never a man at all, abides near and with the object, which by this association receives sacredness, or mana, and becomes the vehicle of such power for the purposes of those who know how to obtain it.

7. Magic and charms.—The belief in magic and the use of magic and charms do not perhaps properly belong to religion; but among Melanesians it is hardly possible to omit this subject. The foundation of religion is the belief in the surrounding presence of a power greater than that of man; and in great part the practice of religion is based on the belief that this power can be turned by men to their own purposes. The natives recognize, on the whole, a regular course of nature in the greater movements of things which affect their lives, but at every point they come in touch with what they take to be the reach of common knowledge, bring good luck and prosperity, or blast and curse. No man has this power of himself, but derives it from a personal associate, who, being the ghost of a deceased, or a spirit of a nature which is not human. By charms (certain forms of words muttered or chanted, which contain the names of the beings from whom the power is derived) this power becomes associated with the objects through which it may act, and all things are personal relics, such as hair or teeth, remains of food, herbs and leaves, bones of dead men, and stones of unusual shape. Through these objects wizards, doctors, weather-mongers, prophets, diviners, and dreamers do their work. There is no distinct order of magicians or medicine-men, just as there is no separate order of priests; the knowledge of one or more branches of the craft is handed down from father to son, from
une to sister's son, or, it may be, is bought and sold. Many men may be said to make a profession of magic, and to get property and influence thereby. A man cannot, it may be said, be a chief without a belief that he possesses natural power. There is no doubt that those who exercise these arts really believe that a power resides in them, though, indeed, they are conscious of a good deal of deceit.

A great part of this is sympathetic magic, and seems to the people to have reason in it. The failure of some charms or of some magician does not discredit charms or magic, since the failure is due to the counteraction of another and stronger charm, and some have been, secretly or openly, opposed by another who has on his side a more powerful ghost or spirit. Thus the people were at every turn in contact with the unseen world and its powers, and in this religion was certainly at work. It is not necessary to enter into this subject in any detail.

With regard to sickness, it is often said that savages do not believe that any one is naturally sick. That is not the case in Melanesia, in the case of some of the islands sick people are considered down to the core from the head to the feet, and are believed to be caused by ghosts or spirits; and the more important the patient is the more reasonable it seems to ascribe his sickness to some ghost or spirit whom he has offended, or who has been under a curse. It is common to ascribe sickness to a spirit in those groups where spirits have so great a place in the religious regard of the people. There it is the ghosts of the dead who inflict sickness, and can be induced to remove it if the patient will bring the power of the dead. A wizard is paid by a man's enemy to bring the malignant influence of the dead upon him; he or his friends pay another to bring the power of other dead men to counteract the first and to save the endangered life; the wizard who is the more powerful—who has on his side the more or the stronger ghosts—will prevail, and the diabolical power obtained by charms or resident in objects which are used with charms; the Melanesian in all his employments and enterprises depends upon unseen assistance, and a religious character is thus given to all his life.

Tāmu. This word, commonly tapu or taumā, in the islands of Melanesia now under consideration, and established as an English term, was taken from the islands of Polynesia. In Melanesia the belief prevails, clearly marked by the use of distinct words in some islands, that an awful and, so to speak, religious character can be imposed on places, things, and actions by men who have the mana to do it. A place, e.g., in which a powerful man has been buried, where a ghost has been seen, which a spirit haunts, is holy and awful of itself, never to be lightly invaded or used for common purposes. But a man who has the proper power can tabu a place as he chooses, and can forbid approach to it and common use of it. Behind the meaning of the power is the ghost of the dead or the spirit whose power the man has. Tāmu implies a curse. A chief will forbid something under a penalty. To all appearance it is as a chief that he forbids, and as of a chief that his prohibition is respected; but in fact the sanction comes from the ghost or spirit behind him. If a common man assumes the power of tabu, as lesser this supreme power, there is no doubt that those who exercise these arts really believe that a power resides in them, though, indeed, they are conscious of a good deal of deceit.

Thus to a considerable degree, in the Banks Islands at least, men of no great consequence, as well as the societies which has fallen, or been, secretly or openly, opposed by another who has on his side a more powerful ghost or spirit. Thus the people were at every turn in contact with the unseen world and its powers, and in this religion was certainly at work. It is not necessary to enter into this subject in any detail.

A place, e.g., in which a powerful man has been buried, where a ghost has been seen, which a spirit haunts, is holy and awful of itself, never to be lightly invaded or used for common purposes. But a man who has the proper power can tabu a place as he chooses, and can forbid approach to it and common use of it. Behind the meaning of the power is the ghost of the dead or the spirit whose power the man has. Tāmu implies a curse. A chief will forbid something under a penalty. To
in the sense that they are descended from it?

Decidedly not. It was a human ancestor who associated himself with the pigeon; the pigeon represents the dead man, the pigeon is a tindalo, a ghost, any other way. A living man was not the

\[\text{supw},\text{ an institution which is entirely social, and has no religious character. To gain advance and distinction in it requires, no doubt, the spiritual power of mana, as does every other form of success, and so sacrifices, prayers, and emblems are used; and doubtless the \text{supw} is under the sanction of tabu. It is also true that a man's position after death is believed to depend in some measure on his rank and his liberality in this society. But the account of it cannot come under the head of religion.}

(2) Mysteries.—A religious character attaches much more truly to the mysteries, the mysterious and secret societies on to give the native life in the Solomon Islands and in the Eastern groups. The lodges of these societies appear to visitors to be temples and seats of religious worship; the images within them seem to be idols. They found themselves in the company of the deities, and the Tabu was considered a secret order, and a rigid tabu guards them; to those outside the secret and unapproachable retreats the mysteries and sounds and the appearance of the members in strange disguise convey a truly religious awe. The mysterious and secret societies and their members are therefore in a constant state of communion with the dead, the ghosts which are everywhere, more or less, objects of religious worship. In the Banks' Islands the name of the mysteries was simply 'the Ghasts.' Yet, although the mysteries are within the mysteries as food to the dead. The explanation was that this man, before his death, announced that after death he would be in banana fruit, and that they were not to eat it. Soon he would have been an ancestor, the banana would be his object, whereas clearly there was no
descent from a banana in the belief of the people. This, then, is no totem, though it may illustrate the origin of totems.

(3) In another of the Solomon Islands, Uawa, not long ago the women would not eat, in the meaning of the word, the fruit of the banana, and had ceased to plant the tree. The elder natives would give to the fruit the name of a powerful man whom they remembered living, and say that they could not eat him, thus accounting for the non-product of their plantings as food. The explanation was that this man, before his death, told them that after death he would be in banana fruit, and that they were not to eat it. Soon he would have been an ancestor, the
drum would be his object, whereas clearly there was no
descent from a banana in the belief of the people. This, then, is no totem, though it may illustrate the origin of totems.

(4) In the New Hebrides, in Aurora Island, there is a family named the octopuses. They do not call the octopus their ancestor, and they freely eat it; but their connexion with it is so intimate that a member of the family would go to the reef with a fisherman, call out his own name, and say that he had wanted octopus, and then plenty would be taken. This, again, seems to approach totemism.

(5) The Banks' Islands and New Hebrides, however, there is what comes very near to the "individual totem." In Uawa, it was conceived that they had a peculiar connexion with a living creature, or it might be a stone, which had been found, either after search or unexpectedly, in some singular manner. If this was a living creature, its life was joined with its life; if an inanimate object, the man's health depended on its being unbroken and secure. A man would say that he had his origin in something that had presented itself to him. In Aurora also, in the New Hebrides, a woman dreams or

fancies that there is something—e.g., a coconuts—which has a particular relation to her unborn child, and this the child hereafter must never eat.

10. Societies, mysteries, and dances. (1) Societies.—A very curious novelty is that in the New Hebrides and the Natives of the Torres: Banks' Islands, and the New Hebrides is the universal presence in those groups of a society, called by some form of the name \text{supw}. There are, or were, certain objects connected with the life of the dead, and they connect this with the religion of the people. The visitor to a village would see platforms built up with stones, with high, pointed, shrine-like little edifices upon them, within which were the embalmers of a fire below and images in human form above. If he hit upon a festival, he would see such images carried in the dance. But such appearances show, as a matter of fact, nothing else than the presence of this society, since they are merely the hearth and the emblems of the men of high rank in the

MELANESIANS

535
may almost be said that relation to a creator has no religious influence at all, though reference to Qat as the maker of men is made in correcting children in the Banks' Island. The existence of the world, as the natives conceived of it, and the course of all the great movements of nature, are questions of which control of power over all was ascribed to certain spirits. The makers were spirits. In the Solomon Islands the belief in Kanaasibware is characteristic. She was a female spirit in the shape of a snake; she made men, pigs, dogs, goats, fruit-trees, and the salt of the earth; death had not yet appeared. There was a woman who had a child. The snake strangled the child: the mother chopped the snare in pieces; thereafter all good things changed to worse, and death became instantaneous. These spirits, and the progeny or representatives of this female spirit, but she cannot be said to be worshipped.

In the Banks' Islands and the New Hebrides, as has been stated before, spirits are the principal objects of worship, of which the Melanesians are believed to have had much to do with the fashioning of the world of man. Yet it must be borne in mind that they are by no means held to be originators; they can assume any shape desired by the circumstances under which they are called on to act, and may be represented as individuals by men who are not exceptional. He who directs his thoughts toward them is considered to be well disposed to them. The Banks' Islanders did not include the Solomon Islands; that of the Solomon Islanders was a much wider world. Wherever the circumference of the circle fell the sky was supposed to shut down fast upon it. Under this heaven the sun and moon made their journeys; and the stars hung in it. They were not thought to be living beings, but rather rocks or islands. In the sun and moon were inhabitants with wives and families, in whom the spirit of the dead, or such as they are acknowledged to be, though the natives speak of them as ghosts.

Thus the world of the Melanesians was populous with living beings, visible and invisible, with men, with the ghost of the dead, with spirits great and small; and pervading and surrounding all was a power which belonged to all spirits, to the dead as such, and to many men; all these could direct and control the course of events. The world so inhabited was bounded by the Melanesians by the circle of the sea which surrounded the islands which were known to them, a circle which varied in place and size according to the position of the sun and moon. The Banks' Islanders did not include the Solomon Islands; that of the Solomon Islanders was a much wider world. Wherever the circumference of the circle fell the sky was supposed to shut down fast upon it. Under this heaven the sun and moon made their journeys; and the stars hung in it. They were not thought to be living beings, but rather rocks or islands. In the sun and moon were inhabitants with wives and families, in whom the spirit of the dead, or such as they are acknowledged to be, though the natives speak of them as ghosts.

12. Death and of after death.—Without some belief in a life after death, as well as in a power superior to that of living man, it is plain that the Melanesian religion could not be such as has been described. This implies a belief in a soul of man, though what that is they find it difficult to explain. They naturally use different words in their different for his return. Though no longer visible, he still controlled to a great extent the forces of nature, and he heard and answered the cries of men. In a way the natives looked upon him as an ancestor as well as their creator, but they were emphatic in their assertion that he was never a man himself; he was a spirit, a vat, of a nature different from that of man; and, because a spirit, he was master of all magic power, and full of that mana which was at work in all around. It is, however, possible to take him very seriously or allow him divine rank, even though he is the central figure in the origin of things and his influence is present and effective. In the New Hebrides nearest to the Banks' Islands Tagaro takes the place of Qat. He is no doubt the Tangaroa of Polynesia. He made things as Qat did; he had his brothers, ten of them, and there was another, Supwe, who thwarted Tagaro and made things wrong. Tagaro and his brothers belong to the chief of the land of spirits. In Santa Cruz, Lata corresponds, but not very closely, to Qat and Tagaro, since he also made men and animals.

These greater spirits are named and known as individual persons. Besides these, in all the islands are spirits innumerable and unnamed. These are they whose representative form is very often a stone, which haunt the places which their presence makes sacred, who associate themselves with snakes, sharks, birds, and the various things through which men can communicate with them and draw from them the spiritual power from which comes all the good and evil in the world, which can be turned to injury as well as succor. It may safely be said that these spirits were not malignant beings, though they were spiteful at times and were willing to do harm to the enemies of their friends. The multitude of beings who in the Solomon Islands have power in storms, rain, drought, and the growth of food—the yipona, hi'ona, and others—seem to belong rather to the order of spirits than to that of the spirits of the dead, in which case they are acknowledged to be, though the natives speak of them as ghosts.

The soul can go out of a man in a dream or a faint; it can be drawn out of the body or injured in the body by magic or spiteful spirits or pigs; when finally separated from the body in death it becomes a ghost. Such a soul is peculiar to man. It is true that the souls of other islands, such as Hades, there is something which is like the ghost of a pig, of a weapon or ornament, something that remains and has a shadowy form; but the natives will not allow that even a pig, an intelligent and important personage with a name, has a soul as a man has.

(1) Death.—It was not part of the original nature
of men that they should die. In stories the first men are represented as changing their skins, as snakes cast their slough, and returning to youth and strength, until by some accident or folly life could no longer be so renewed, and death came in. When it came, the way to the abode of the dead was in the possession of the men themselves, and if they were buried in Hades. The funeral rites do not require description. The disembodied spirit is not thought generally willing to depart far from the body which it has left or the place in which it has lived; but, the body being buried, or otherwise disposed of, the ghost proceeds to its appointed place.

(2) Hades.—There is a great difference between the conception of the Solomon Islanders and that of the Banks' Islanders and New Hebrides people whether the dead go to their own place or whether the dead man all the time remains in one place. In the Eastern Islands Hades is in the under world; in the Solomon Islands the dead, though there is an under world, depart to islands and parts of islands belonging to their own group, and are conveyed to heaven in a canoe, a 'ship of the dead.' In all parts of Melanesia alike the condition of the dead in these abodes is an empty continuation of the worldly life; the parts of the ghostly island are not to be eternal, except in so far as the native imagination has failed to follow their existence with any measure of time. But, though the dead congregate in Hades, they still haunt and frequent the homes of their lifetime, are active among the living, and, as has been shown, in the Solomon Islands the religion of the living is mainly concerned with the worship of the dead. In these islands the weapons, ornaments, and money of a man of consequence are buried with him or placed on his grave. Whether these decorate the dead or serve his use in Hades is uncertain. It is as when a dead man's fruit-trees are cut down, as they say, as a mark of respect; he ate of them, it is said, or if he were alive, he would take up their abode.

The notion is general that the ghost does not at first realize its position, or move with strength in its new abode; and this condition depends to some extent on the period of the decay of the body; when that is gone, the ghost is active. It is to expedite this activity that in some parts the corpse is burned. While in a general way the ghosts of the dead pass up to their Hades above ground, there are some which have their principal abode in the sea. Before his death a man may declare his purpose of taking up his abode in a sea-bird or a shark, or the dead body may be sunk into the sea and not buried. These sea-ghosts have a great hold on the imagination of the natives of San Cristoval and the adjacent islands, and were frequently represented in their carvings and paintings. They appear as if made up of fishes, and fish are the spears and arrows with which they shoot disease into the living.

In Santa Cruz the dead, though they haunt the villages, go into the great volcano Tamami and pass through the Banks' islander's Hades. In vanishing out of the island Hades has many entrances; in this they have villages in which they dwell as on earth, but in an empty life. The ghosts hang about their graves for a time, and it is not desired that they should return, otherwise they have eaten all portion thrown for them. The great man goes down to Panoii with his ornaments, that is, with an unsubstantial appearance of them. In the Northern New Hebrides there are passages to Hades at the ends of the islands, the northern or southern points, by which ghosts go down, and also return. In Lepers' Island the descent is by a lake which fills an ancient crater. Living persons in all these islands have gone down to see their dead friends; they have seen the houses, the trees with red leaves, and the flowers, have heard the songs and dances, and have been warned not to eat the food of the ghosts.

(3) Rewards and punishments.—There remains the important no one else the condition of the dead is affected by the character of the living man; whether the dead are happier or less happy, in better or in worse condition, according as they have been, in native estimation, good men or bad on earth.

(a) Solomon Islands.—It cannot be said that in these islands the moral quality of men's lives affects their condition after death. When the canoe of the dead took the ghosts of Florida across to the dead friends; they have seen the houses, the trees with red leaves, and the flowers, have heard the songs and dances, and have been warned not to eat the food of the ghosts.

(b) Banks' Islands and New Hebrides.—In these islands there is something which approximates to a judgment of a moral kind. It is true that, as a man's rank in the world has depended very much upon the number of the pigs he has slain for feasts, so the ghost-fare has been neglected by those who have not the mark are thrown from the trunk into the gulf beneath and perish.

(c) Solomon Islands.—It cannot be said that in these islands the moral quality of men's lives affects their condition after death. When the canoe of the dead took the ghosts of Florida across to the dead friends; they have seen the houses, the trees with red leaves, and the flowers, have heard the songs and dances, and have been warned not to eat the food of the ghosts.

LITERATURE.—J. Lubbock, The Origin of Civilization, London, 1870; E. B. Tylor, P. O., 10, 1868; A. W. Murray,
MELETIANISM.

There were two Meletian schisms, each having considerable influence on the fortunes of the Arian controversy. The earlier took its name from the Meletians who were bishops of Lyopolis in Egypt; the later from the Meletius who was consecrated bishop of Antioch in A.D. 360.

1. The Meletian schism in Egypt.—Melitios (Epiphanius) or Melitos (Athanasius) was bishop of Lyopolis in Egypt, and his dispute with Peter, bishop of Alexandria, led to a schism which received attention at the Council of Nicaea. According to Athanasius (Ap. c. Ariusian, 39), Meletius was excommunicated in A.D. 365 or 366, so that the quarrel was already of long standing when the Council assembled. The origin of it is extremely obscure. As Hefele points out (Councils, Eng. tr., i. 343 ff.), there are three separate accounts: (1) in documents discovered by Maltby and published by M. J. Routh, Religio Sacra, Oxford, 1814-18, iv. (2) in the writings of Athanasius; (3) in Epiphanius. All these differ in their details as to the origin of the schism. The first of the three documents (Routh) is a letter of certain Egyptian Christians in prison who were afterwards martyred by Diocletian (Enn. III. viii. 10). It is supposed that the actual writer of the letter was Phileas, bishop of Thmuis. Meletius is addressed as a fellow-champion of the faith, and evidence given in Routh's letter that the bishop who nailed up the Meletius letter which makes the third of our documents, to the people of Alexandria, bidden them to avoid all communion with Meletius. From this very early period the schism became at an end. Meletius' offence was that of (presuming on the rights of Peter and the other bishops by enjoining orders out of his own diocese. It is to be noticed that these irregularities took place before the deposition of Meletius: the portion of the schism is nothing more than the schism about the irregular ordinations. In his Apology against the Arians (ch. 59) he gives as the cause of the deposition of Meletius that he had been guilty of many offences, particularly of having sacrificed to idols and of having humiliated the bishops of Alexandria, Peter, Achillas, and Alexander (ch. 11). In his Letter to the Bishops of Egypt and Libya he asserts (ch. 22) that the Meletians were declared schismatics fifty-six years before this, but that the charges were then dismissed. Ambrose (c. 310-384) decried the Meletian heresy. Socrates (HE i. 6) gives practically the same account as Athanasius, and may, as Hefele suggests, have copied from him. The third version of the origin of the schism, however, differs materially from both, and yet it has been hitherto considered. It is given by Epiphanius (Harr. lxi. iii.), and printed in Routh (iv. 105). Meletius says, this writer, was a perfectly orthodox bishop. Indeed, he credits him with having accursed Arius to Alexander, whom Meletius, though a schismatical bishop, was on good terms. The real cause of the dispute was, according to Epiphanius, the question of the treatment of the laity. But Epiphanius' account, as Hefele shows, is full of inaccuracies, and contradicts the earliest evidence, as when, e.g., he makes Meletius a fellow-prisoner with Peter. But he may have been correct as to the underlying cause of the schism, Meletius being, like some of the Donats and the Donatists in Africa, the representative of the severe disciplinarians. Epiphanius had, moreover, special knowledge of the Meletians from their schism having spread to his native place, Eleutheropolis. Perhaps because of his doctrinal orthodoxy, Meletius and his party were treated very leniently by the Council of Nicaea. It may be that canon 6, affirming the authority of the bishop of Alexandria, was directed against them; but in the synodal letter (Soc. H. vi. 9) Meletius was not permitted to ordain or appoint clerics any more, and those whom he had ordained were to be admitted to the Church (μετακινησθαι χριστονιοι) and to rank below the clergy ordained by Peter and his successors. Athanasius was much troubled by those schismatics who joined his opponents; and from their ranks came his bitter enemies, the priest Ischyras, Arsenius, and many others. Athanasius bitterly regretted the decision of Nicaea in his letter (Ap. c. Ariusian, 71 ff., where a list of the followers of Meletius is given). The schism lasted down to the middle of the 5th century (Soc. H. i. 8).

2. The Meletian schism at Antioch.—The importance of the disputed episcopal succession at Antioch is due to the fact that it was the scene of good understanding between the Roman and Alexandrian Churches and those Asiatic Christians who, though at heart orthodox, were less uncompromisingly Nicene than many of the Athanasian party. The dispute, which lasted for more than fifty years, ranged the great saints and Fathers of the later years of the 4th cent. in opposite camps. Against St. Basil, St. Gregory of Nazianzus, St. Flavian of Antioch, and St. John Chrysostom were opposed St. Dianus of Rome, St. Ambrose of Milan, St. Peter of Alexandria, and, much against his will, St. Athanasius himself. The merits of the controversy are perhaps essentially no more or less dispute we have heard the old-fashioned or new side. To understand it is necessary to trace the divisions of the patriarchal Church of Antioch from the days of the Nicene Council. Eustathius, the bishop, who had been one of the foremost champions of orthodoxy, was thrown into a serious schism in consequence of his open advocacy of the Nicene Creed, as well as of his controversy with the Arians, who was installed as bishop of Constantinople in A.D. 360. It now became necessary to provide a successor at Antioch, and Meletius was chosen, being supposed to be a man of peace in accord with his own account (P. Shawn. Le Schism d'Antioche, p. 72, note). In his sermon, however, on P. &p; he declared himself on the side of the Nicene Creeds, and was at once deposed and exiled, and Eusebius put in his place. Thus Meletius, once the Arian nominee, had become a Catholic confessor. Since the deposition of Eustathius, the faithful Nicene remnant had remained apart under the care of the
priest Paulinus, and did not enjoy the prospect of communicating with the followers of Meletius, who, unlike them, had not borne the burden of the contest. The party of Paulinus, however, was not considerable—yet it had significance in its protest to Euzoius, who is said to have had a regard for its leader, to allow it the use of a small church. Meletius's party, on the other hand, was numerous and increasing owing to the popularity of the bishop, and it seemed probable that under him the Catholics would ultimately be united. In 362 Athanasius held the small but important Council of Alexandria (see Athanasius, vol. I, p. 789). A synod of the three rival bishops of Antioch was sent to Alexandria at the desire of Eusebius of Vercelli, who had attended the Council; but on his arrival he found that his companion in exile, Lucifer, bishop of Callirius in Sardis, had taken upon himself to consecrate Paulinus bishop of the old Nicene party at Antioch. As far as Antioch was concerned, the schism was unimportant. Meletius was universally beloved, and his moderation in regard to the points at issue in the controversy was more in accordance with Arian and Syrian Christianity than the uncompromising attitude of Alexandria and the West. Nor was Athanasius averse to a settlement, which let bygones be bygones, and allowed the good work done by Hilary of Arles and the other bishops of North Minor to the Nicene Creed to bear fruit. But, not wishing to disavow Lucifer, the bishop of Alexandria recognized Paulinus, as did also the Roman see. The dispute had now reached a stage at which those were in line with which made the unhappy Donatist schism so incurable in Africa—the difference being that the Donatists (q.v.) rejected bishops who had been unfaithful in regard to heathenism, and the Easterns of Antioch those who had once been infected with heresy. The Roman see under Damasus declared unsatisfactory for Paulinus; but throughout the East Meletius was regarded as the champion of orthodoxy; and he was a sufferer under Valens for his adherence to the Nicene Creed. The Cappadocian fathers, Basil and the two Gregorys, were devoted to Meletius, and John Chrysostom belonged to his church and was first ordained reader and afterwards deacon by him. The Epiphanes, the father of Evagrius, a bishop of Alexandria, who in vain appealed to Athanasius to recognize Meletius, and was seriously troubled by the uncompromising support which Damasus gave to Paulinus. Things were further complicated by Athenasius, the father of the famous Athanasius, who, although condemned for his erroneous opinions, is recognized not only as a defender of Nicene theology, but also as one of the profoundest thinkers of his time (see APOLLINARISMS). Among his friends was the presbyter Vitalinus, who had been made priest by Meletius, but was ultimately consecrated by Apollinaris as rival bishop to Paulinus (c. 375). Thus, including the Arians, the Church of Antioch was now divided into four parties, the three Nicene bishops being Meletius, Paulinus, and Vitalinus. Strangely enough, not a shadow of suspicion rested on any one of these three rivals in regard to character. Meletius and Paulinus were both recognized as scribes, while Vitalinus,高新区 orthodoxy of his consecrator, Vitalinus was highly respected by the most honoured churchmen of the day. Some hope of ending the schism was given when the six leading presbyters of the Church agreed to recognize either Meletius or Paulinus if one survived the other. In 381 Meletius was at Constantinople, taking a leading part in the Second General Council. This Council was destined to affirm the creed of Nicea and reunite the Church, though it proved unable to bring peace to the distracted community at Antioch. Meletius died during the Council; and, for some unexplained reason, Flavian, one of the six presbyters who had agreed to recognize Paulinus if he survived, consented to be consecrated bishop in place of Meletius. His action appears on the face of it indefensible; but, as he proved a remarkably saintly bishop, there may be some extenuating circumstances for his conduct of which we are not aware. The appointment of Flavian was one of the reasons for the Roman see's regarding the Council of Constantinople with disfavour. Paulinus was supported by the bishops of Egypt, Cyprus, and Arabia, while Tomus, Syria, and Paphlagonia adhered to Flavian. The Orientalists recognized Flavian, and, when the serious affray of the statues was causing anxiety in the city, it was he as its bishop who pleaded the cause of the people at Constantinople (A.D. 387). Paulinus died in 388; and before his death he consecrated Evagrius in his place as a most uncanonical proceeding. The Westerners seem to have supported the claims of Evagrius, and Ambrose urged Theodoreus to compel Flavian to resign, which he had refused when Flavian made the decision of the Church there; Theophilus of Alexandria was naturally opposed to him, as were Epiphanius and Jerome. When, however, Evagrius died, no rival bishop was consecrated. On Chrysostom's appeal to Flavian (398) he managed to heal the schism so far as Alexandria and Rome were concerned; and Flavian placed the names of his two rivals—Paulinus and Evagrius—on the diptychs of the Church. The Easterns continued to hold the schism till the time of Alexander (414-415), who healed the schism by an act of Christian courtesy, visiting the Eastern church in Easter day and being accorded a hearty welcome by the congregation. The schism was somewhat healed when Flavian, patriarch of Antioch (481-485), brought back the relics of Eustathius. The schism of Antioch would no be a more than a somewhat dull chapter in ecclesiastical history were it not for the underlying causes, indispensable for the right understanding of the intricate questions which make the religious divisions of the East so complicated. As has been indicated, there was a singular absence of bad feeling and, we may add, of bad motives. We hear nothing of the personal enmity between them which mark the course of the Donatist schism. But throughout we can see how incompatible were the ideals of the great patriarchates of Rome and Egypt with those of the East. Meletius, Flavian, John Chrysostom, Apollinaris, and, to some extent, Paulinians, all felt the encroachments of the bishop of Alexandria supported—except in the case of Chrysostom—by Rome. What has been called the Meletian schism was a foreshadowing of troubles to come which rent the Church asunder, and it is a phase in the long struggle between the rival theologies of Alexandria and Antioch, which dates from the days of Origen.

MEMORY. I. Use of the term. (a) The term 'memory' can be used in a wide biological sense to signify retention of the effects of stimulation. In this sense it is regarded by some writers as a fundamental attribute of living matter—a view
MEMORY

which was put forward by Ewald Hering in 1870, in a paper read before the Imperial Academy of Science at Vienna, 'On Memory as the Universal Function of Organized Matter.' Wherever there is life with growth and development, there memory necessarily arises, since each new process is the outcome of the old and implies its retention. Memory is a faculty not only of our conscious states, but also, and much more so, of our unconscious ones. Our ideas do not exist as ideas, but as continuous processes. The special disposition of nerve substance in virtue of which this substance and what it contains is the same after which it happened yesterday, if it is properly stoked. The reproduction of organic processes, the refreshment of the recollections capable of guiding them in their task and of giving to the motor systems the habit which is suggested by the lessons of experience. . . . But, on the other hand, the sensori-motor apparatus furnishes an ineffective, that is unconscious, means of two, the perception of a body, of externalizing themselves, in short, of becoming present. For, that a recollection should reappear in consciousness is so necessary that it should descend from the heights of pure memory down to the precise point where action is taking place.

James Ward would subscribe to the biological doctrine of memory, but finds it meaningless save as interpreted in terms of the psychological.

'No, the bare term "reception" itself, and all cognate terms, such as "trace" or "residuum," are meaningless unless some present circumstance can be related to the past; thus they presuppose memory. The analogy of inscribed records is a favourite resort of those who strive to elucidate the nature of memory by physical imagery; we find it again and again in books. For example, a record, or memoranda alone are not memory, for they presuppose it. They may consist of physical traces of an event, called "unconscious," suggests signs; the masonic memory then, if it is to be worth anything, is something that seems to me clearly to require not merely physical records or "emotions," but living experience or tradition.

For Hering the marvels of instinct are but the marvels of habit hand on from generation to generation. A memory reveals at the skill with which the spider weaves her web should be in hand that she did not learn her art all on a sudden, but that innumerable generations of spiders acquired it gradually and step by step.

Samuel Butler, in Life and Habit (1877), set forth the same doctrine, although he was at that time ignorant of Hering's paper. Into a later book, entitled Unconscious Memory, he incorporated the material of the German lecture. At the present day a similar view of memory is presented by such biologicals as Francis Darwin, K. Semon, and H. S. Jennings. It should be noted that in such a biological doctrine of memory there is no necessary reference to consciousness. The structural development and behaviour of plants and animals may testify to memory in this wide sense without thereby giving evidence of consciousness.

(b) In a psychological use of the term such a reference is essential. As generally understood in psychology, memory denotes the retention of experience, and its subsequent reproduction with the consciousness that it belongs to the past. To remember is to refer back. The distinction between memory as a conscious experience and memory as a biological fact has been emphasized by H. Bergson in his distinction between the memory which inquire into an memory which repeats. All our bodily habits are memory in the latter sense, but not necessarily in the former. Acquired skill implies practice with the retention of past progress, but in the exercise of skill there need not be any conscious reference to those past exercises whereby this skill was acquired. Both forms of memory may be combined when performed habit or acquired skill is used on any occasion by a conscious reference back to past efforts, successes, and failures.

For E. B. Titchener, the relation of the two forms of memory are described in a paper, 'The Relation of the Two Forms of Memory,' Ap. B. Titchener, 'Unconscious Memory,' pp. 164, 111, 112.

2B. p. 129.

portrays the relation of body to soul; each may enter into the service of the other.

'The bodily memory, made up of the sum of the sensori-motor systems organized by habit, is then a quasi-instantaneous memory to which the true memory of the past serves as base . . . . the memory of the past offers to the sensori-motor mechanisms all the recollections capable of guiding them in their task and of giving to the motor systems the habit which is suggested by the lessons of experience. . . . But, on the other hand, the sensori-motor apparatus furnishes an ineffective, that is unconscious, means of two, the perception of a body, of externalizing themselves, in short, of becoming present. For, that a recollection should reappear in consciousness is so necessary that it should descend from the heights of pure memory down to the precise point where action is taking place.

James Ward would subscribe to the biological doctrine of memory, but finds it meaningless save as interpreted in terms of the psychological.

'No, the bare term "reception" itself, and all cognate terms, such as "trace" or "residuum," are meaningless unless some present circumstance can be related to the past; thus they presuppose memory. The analogy of inscribed records is a favourite resort of those who strive to elucidate the nature of memory by physical imagery; we find it again and again in books. For example, a record, or memoranda alone are not memory, for they presuppose it. They may consist of physical traces of an event, called "unconscious," suggests signs; the masonic memory then, if it is to be worth anything, is something that seems to me clearly to require not merely physical records or "emotions," but living experience or tradition.

For Hering the marvels of instinct are but the marvels of habit hand on from generation to generation. A memory reveals at the skill with which the spider weaves her web should be in hand that she did not learn her art all on a sudden, but that innumerable generations of spiders acquired it gradually and step by step.

Samuel Butler, in Life and Habit (1877), set forth the same doctrine, although he was at that time ignorant of Hering's paper. Into a later book, entitled Unconscious Memory, he incorporated the material of the German lecture. At the present day a similar view of memory is presented by such biologicals as Francis Darwin, K. Semon, and H. S. Jennings. It should be noted that in such a biological doctrine of memory there is no necessary reference to consciousness. The structural development and behaviour of plants and animals may testify to memory in this wide sense without thereby giving evidence of consciousness.

(b) In a psychological use of the term such a reference is essential. As generally understood in psychology, memory denotes the retention of experience, and its subsequent reproduction with the consciousness that it belongs to the past. To remember is to refer back. The distinction between memory as a conscious experience and memory as a biological fact has been emphasized by H. Bergson in his distinction between the memory which inquire into an memory which repeats. All our bodily habits are memory in the latter sense, but not necessarily in the former. Acquired skill implies practice with the retention of past progress, but in the exercise of skill there need not be any conscious reference to those past exercises whereby this skill was acquired. Both forms of memory may be combined when performed habit or acquired skill is used on any occasion by a conscious reference back to past efforts, successes, and failures.

For E. B. Titchener, the relation of the two forms of memory are described in a paper, 'The Relation of the Two Forms of Memory,' Ap. B. Titchener, 'Unconscious Memory,' pp. 164, 111, 112.

2B. p. 129.
The latter view certainly represents the commoner form of memory. The attempt to classify the relation in which the suggested idea stood to the present consciousness gave rise to the 'laws of association.' The types of relationship, contingency in time and place, similarity and contrast, were emphasized by principles of connexion of the past datum with the present datum. If the present datum was said to suggest the past experience which preceded it more frequently or more strongly, the present datum was called the 'cause', and the past experience the 'effect.' The importance of the idea of connexion in the minds of the contemporary associationists is demonstrated by the experience of the present and that of the experience recalled; in a Micheaur-like mood we forget the natural connexions and recall only artificial. The importance of the idea of connexion in the minds of the contemporary associationists is demonstrated by the experience of the present and that of the experience recalled; in a Micheaur-like mood we forget the natural connexions and recall only artificial. which children aged 12 can reproduce correctly immediately after learning be represented by 100, the amount which can be reproduced forty-eight hours later without any further learning will be 110. A similar increase in content reproduced is found in other kinds of school material. In the case of nonsense syllables, although forty-eight hours later some syllables can be reproduced which have not been remembered immediately after learning, the total amount reproduced is less. This tendency for remembrance, as it has been termed, is more marked in children than in adults. The greater organization of adult consciousness would enable any experience to attain its full value and association speedily, and, when reproduced, it is already developed, and henceforward decay rather than growth will be its life-history. In the case of the less organized experience of the child it may be otherwise. The meaning and association of an experience would develop more slowly, and might be incomplete when the demand for reproduction followed at once upon its first reception.

4. Pictorial imagery, which relies upon memory reproduced as ideas depends very largely upon imagery. Imagery is of the same character as sensori-experience—visual, auditory, tactile, motor, etc. Francis Galton proposed grouping individuals into classes according to their incidence of imagery used in reproduction—e.g., an audile, one who reproduced past experience in terms of auditory imagery, heard words descriptive of the facts recalled. Most people were said to belong to a mixed type, i.e. to use several types of imagery. It would seem, however, that the kind of imagery used, even by a so-called audile or a visualizer, depends very largely upon the idea reproduced and the purpose for which it is reproduced. The fragmentary character of imagery makes it possible for imagery used in reproduction as compared with sense presentations, has always been recognized. The schematic and symbolic character of imagery with respect to the idea for which it stands has received more attention recently. The function of imagery would seem to be to provide a focus for attention, and thereby to give clarity and definitiveness to ideas. It has been noticed that, wherever the process of reproduction is taken place with difficulty or where a train of ideas develops slowly, there the presence of imagery is marked, and the imagery seems indispensable to the realization of the ideas in question. Where, on the other hand, ideas are reproduced readily in either a train or a visual manner, imagery is sketchy and in some cases scarcely recognizable. The question has been raised whether reproduction is possible without imagery, without even the symbolic imagery of words standing for the ideas reproduced. Here, as in so many other psychological problems, no dogmatic answer is possible in the present state of knowledge. There is much patient research in connexion with the question, and the more recent training in the development of the problem and of its solution.

On the development of memory and memory training see art. Development (Mental).

BEATRICE EGGLESTON.
Jewish scholars agree that this refers to Onkelos (e.g., Maimonides, in Yed., 180th vii. 4; see also L. Zunz, Gottsdienstliche Vorträge, Frankfort, 1862, ch. v.). The aim of the version was to give a correct rendering of the text. Where he differs from the original he does so in favour of the Halakhah and the rulings of the rabbis of Egypt.

Ex 23:19-20 states: 'Ye shall not eat flesh with blood . . . the fruit of the good tree' (Ex 23:19) is already called thorns. 'The people shall be eaten out of assembly' (Heb. 'one house') (Ex 12:19) in accordance with Pesah, 81a.

It is obvious that the version was intended to convey the spirit of the original. The singular use, and deviation from the original in the case of the names and acts of God was to guard against misconception of the nature and irrevocable usage of the name of God. We find, accordingly, the divine unity insisted on.

Elohim with a plural predicate is rendered in the singular (Gen 2:4); it is translated 'to know that Jehovah is God, there is none beside him.' 'Who is like unto thee among the gods?' (Ex 13:13) becomes 'There is none beside Thee.' 'Thus art God'; so 15:1 Jehovah is great, and there is no other God.'

Jehovah may not be even contrasted with other gods. Not even may the term 'god' be applied to other divinities. They are either 'metal' or 'abominations' (Gen 35:2), or 'tires' (31:7), 'he brought him up to the high place of his terror' (Heb. 'Baal'). (Nu 23:15).

To avoid the constant God with man or ascribing the same action to both, Onkelos would introduce a paraphrase: 'They believed in the Memra of Jehovah and in the prophecy of Moses' (Ex 14:12).

The people murmured against the Memra of Jehovah and strove with Moses' (Nu 21:3-4), or the construction would be changed into the passive: 'Let it not be spoken to us from before Jehovah' (Ex 20:27). The same construction is employed when human actions and passions are ascribed to God: 'The Lord will hear all the prayers heard before God' (Gen 21:17), 'the labour of my hands is revealed before God' (31:17). It is revealed before me' (I know') (Ex 23:29); a Memra from before Jehovah came to Abraham (Gen 20:7): 'I abashed met with a Memra from before Jehovah' (Nu 25:4). This construction explains Onkelos' rendering of Ex 33:7, which accidentally resembles 1Jn 1:1. 'By his word the world was created.' In the place of 379, the everlasting arms, he reads, Like the Belshita version, 3879 he the Memra moved (translated) the world, which in the passive assumed the above rendering.

It is evident that a version made under the influence of a rigid uncompromising monotheism and adherence to the rigid formulae of Rabbinic theology would avoid the assumption of an intermediate being distinct from God. To compare the Memra with Philo's Logos would distress the Targumists with more thought than they otherwise claim, and it would be impossible to understand why only this term and nothing more of Phicolonic exegesis and mysticism should have found its way into the Targums. Its use in all the Targums rather warrants the assumption that its adoption is older than the Alexandrian Logos. We are inclined to think that it was introduced by the Mithurgi-Ma'mor when the name HVH ceased to be pronounced and before Adonai was substituted, some time during the Persian period. The Memra, therefore, is the deity revealed in the activity, just as the Shitkiah and Ikhar represent the divine majesty and glory. The term is based on Gen 1:1, emphasizing the fact that the world came into being by divine command.

Onkelos uses Memra when speaking of human authority:

The Memra of Pharaoh' (Heb. 'the mouth of Pharaoh') (Gen 45:25); he does not receive our Memra' (Heb. 'will not obey our voice') (Gen 21:17).”

---

**MEN, THE.**—In the Gaelic-speaking portion of Scotland the 'Men' were for about two centuries the recognized leaders of religious thought, and the popular representatives of spiritual and evangelical worship. They were called 'the Men' because they were laymen, and not ministers. The circumstances in which they arose varied in different districts; the causes to which they owed their origin admit of little doubt.

In the reign of James IV., Robert Bruce, the eminent Edinburgh preacher, was sent to Inverness. In a letter, written in Feb., 1618, to Sir James Semple, the Laird of Belviwe, the exiled minister says:

'This His Honess would command me to the scaffold; I have a good conscience to obey him, and it would be more welcome to me than this highness (D. Calculated, Hist. of the Kirk of Scotland, Edinburgh, 1612-49, vii. 185).

The lingering death which Bruce deplored resulted in the establishment in Inverness of meetings for prayer and fellowship, and in the gathering together of bands of ministers who continued to mould the religious life of the Highlands for many generations.

After the restitution and re-establishment of Episcopacy in Scotland in 1662, nearly 300 ministers relinquished their itinerant life, and their places were filled in the greater number of parishes by ministers who did not possess the confidence of the people. In the more populous districts of the South, the unity of the people, and their devotion to Presbyterianism, enabled them to maintain their religious zeal by means of conventions, meetings for purposes of worship held in defiance of the law. In the North a number of the ministers readily turned Episcopalian, and retained their livings.

The people were less inclined to adhere to Presbyterianism, but, even so, the more devout among them were roused to opposition by the manner in which the vacant livings were filled. The parishes were large, the population was sparse, and combined action for the holding of conventions was almost impossible. Religious instruction was for a time neglected. The 'curates,' as the new incumbents were called, exercised little or no influence.

When ministers were no longer regarded as leaders of the people in sacred things, there rose to take their place men of devout lives, of integrity of character, familiar with the Scriptures, and recognized as possessing spiritual gifts, who, going from parish to parish, held meetings, were accepted as religious guides.

At a later period, the arbitrary manner in which patronage was exercised in the Presbyterian Church, and aspersions in by Church courts, revived the influence and maintained an institution which had already obtained a foothold in many districts. Bands of earnest Christians boldly denounced legal arrangements which ignored religious needs and aspirations, and the people, sometimes for doing so, were interested in a common object drew them together. They deplored the low state of religion in the land, they yearned for spirituality of worship and a greater knowledge of Holy Scripture among their countrymen. They held monthly or quarterly meetings for prayer and fellowship. These were occasions of high spiritual enjoyment. Sometimes the company sat up during the whole night, and passed the time in prayer and praise and spiritual conversation.

In order to prevent any misconstructions of their aims they provided themselves in some cases with carefully drafted constitutions. A document, dated 17th September 1788, setting forth the objects and rules of the society of the Men in Ross-shire shows that, while they deplored the low state of religion throughout the land, they did so in a spirit of self-righteousness; they were at the same time faithful in dealing with one another.

Among various evils they note, thrusting in ministers on reclaiming congregations with the force of the law—pontors who have nothing in view but the fleece.' The same docu-
ment gives as one of the rules of the society: 'Thirdly, as the Word of God requireth, that we should consider one another, to provoke unto love and good works; therefore, if one or more of us see or hear anything unbecoming in the walk, conduct, or expressions of one another, that we be frank to one another and acquaint the Scripture rule: 'Go tell thy brother his fault,' etc. (Mt. 18:17); 'Thou shalt not hate thy brother in thine heart: thou shalt in any wise rebuke thy neighbour, and not suffer sin upon him.' (Lv. 19:17). It adds to these assertions that the public meeting together, out of different parishes, will be miscon- structed; but, so far as we know ourselves, we have no divisive views in it; nor do we make a faction, and we desire to give none offence.'

So conscientious were the men in their utterances and their conduct. Their activity was far removed from that fanatical enthusiasm into which religious zeal frequently degenerates. One exception, still referred to with bated breath, when reminiscences were called for, was the 'Constituent Convocation' of the Free Church of Scotland, held in Edinburgh. This meeting brought together, out of different parishes, which were expert in making a running translation from the English version into the language of the people. The more gifted among them expounded the Word, and not in a spirit of earnestness of heart, but with a coldness and lack of the training of the schools. The deep respect for the people for an ordained ministry was reflected in the fact that these spiritual guides, even when their influence was most powerful, were not ministers or preachers, but 'the Men' (nu Droine).

By 'the Men' the evangelical spirit was kept alive in large districts, and the comforts of religion were brought within the reach of the strictest of their fellow-men, the poor and in many a remote hamlet. They generally set apart one night of each week for prayer, and another for fellowship or conference. On the latter a portion of Scripture was selected to be the subject of discussion. This passage was referred to as the Book of Christ, or the 'Question.' The Men, each in turn, gave an exposition, generally bearing on experimental religion, and thus their gifts of speech and of scriptural interpretation were developed. Fitted to the Book of Christ, a public assembly was combined with a sense of personal responsibility, with a knowledge of the Word, and in such an assembly the power of the preachers, though lacking the training of the schools.

The deep respect for the people for an ordained ministry was reflected in the fact that these spiritual guides, even when their influence was most powerful, were not ministers or preachers, but 'the Men' (nu Droine).

The Men continued to stand aloof, and in the more northern districts they formed bodies known as 'separatists.' The more they diverged from the Church the more they developed contempt for all learning except a literal knowledge of the Authorized Version of Scripture, they became narrow and intolerant. But in later times opposition to instrumental music and church choirs, a severe observance of the Sabbath, a blind devotion to the recognized translation of Scripture, a general condemnation of scholarship, and a zeal for public assemblies all merged into fatalism characterized generally the scattered fragments of a body whose sway was at one time both powerful and beneficent.

The old spirit has not altogether disappeared. A different type is occasionally met with. 'Men,' tender-hearted and spiritually-minded, still preserve the best traditions of a past age. In the absence of the minister one of these may be found here and there to conduct the Sunday service in the church or meeting-house. Standing at the presiding minister's desk, equally ready to give an extemporary address or to read a portion of some 18th cent. divine, he follows devoutly the usual order of service, except that he does not pronounce the benediction. These Men live saintly lives, they are honored by the people, and they help to preserve the simplicity and spirituality of religion.

MEN OF GOD—Lyndati bochd, 'Men of God,' is the self-assured name of many men who regard themselves as the only true worshippers of God; they believe that God is to be found only among themselves, ordinary Christian church-going being, in their view, worldly and false. By the outside world they are usually known as 'Kilbys,' i.e. 'Flagellants,' though they themselves repudiate this title. As a matter of fact, they are essentially
not flagellants but dancers, flagellation being a mere accompaniment of the dance, and not even a universal practice. The name is probably a cor-
rection from 'Christ,' the least traceable title by which they designate themselves as those who have Christ in their midst, in their leaders.

Although the Men of God have many 'Christis,' they are not a Christological sect in the proper sense of the word, for their Christology is only one side of their doctrine of spiritual ecstasy; that is to say, they are a secret sect who practise asceti-

cism and fall into trances. Their principal means for drawing down the Spirit is dancing (redeniye); other devices are the singing of songs, of which they have a great number, couched in highly poetical language, and fasts. A member of this sect who succeeds in receiving the Spirit in full measure becomes a Christ or even a God Zebaoth (a Christ of the highest rank) or a Mother of God; those who receive the Spirit in a less degree are invested with the title of one of the apostles, or of the ecclesiastical saints, and honoured as prophets or prophetesses. In their belief, even Jesus of Nazareth at some time had, only through rece-
ing the Spirit at His baptism. While these persons have received the Spirit as a permanent possession, ordinary members of the community may obtain Him temporarily through the same means.

Besides severe and often protracted fasts, complete sexual abstinence is a feature of their asceti-

cism. Those who enter the sect as married people must henceforth live as brothers and sisters. Obviously, a great number of the leaders are not married at all, but may take a young woman into their house as 'sister' in 'spiritual marriage,' exclusive of sexual intercourse. The latter constit-
tuted the trespass of Adam and Eve, and is condemned as the sin ever since. In accordance with this view, childbirth is regarded as extremely sinful, while children are despised as 'little sins.' Generally speaking, the Men of God aim at a monastic style of living, their houses being arranged as convents and the women wearing a kind of nun's dress. Like all Russian sectaries, they enforce complete abstinence from intoxicating liquors; even coffee, and in many communities tea also, is forbidden. On the whole the Kiliysky system lays heavy stress on the mortification of the flesh (the resurrection of which they deny) that it has not been able to set up a practical ideal of life. Altruism appears among them essentially as sympathy, which has to display itself in the bestowal of alms. In accordance with this, asceticism, they lay great stress on the voluntary endurance of persecution from the State and from the Church, and the sect is persecuted even to the present day as 'extremely pernicious.' In earlier centuries the persecution was excessively brutal; attempts were made to crush them by the rack and the scaffold, but in vain, and they furnished many martyrs. Since the beginning of the 19th century, those methods have been replaced by imprisonment and transportation to the Caucasus and Siberia.

The Men of God, however, seek to show the courage of their opinions not by open confession of their faith, but by concealment of it, and it is precisely their obstinacy in this matter that has often brought upon them increased severity of punish-

ement. This concealment of their belief is due to their view of the Holy Spirit, whom they regard as a power which blinds observation, revealing Himself in secret and averse from publicity. If a man talks about the Spirit, he loses Him. Con-
sequently not only are their ecclesiastic religious services secret, but they generally conceal the fact of their adherence to the sect. They outwardly conform to the State Church, and attend Confes-
sion and Holy Communion, although they spit out the wine afterwards. They themselves celebrate communion with kvas (a sour drink from rye meal and malt) or with water.

Any one who desires admission into the sect must, at an initiatory rite, conducted with an extremely elaborate ceremonial, swear a solemn oath that under no circumstances whatever, not even under the severest persecution, will he dis-
close his belief either to his nearest relatives or to the ecclesiastical confessor. In reality this sect thoroughly despise the State Church as 'the world,' the kingdom of darkness, of which they, as 'Christs,' regard the popes and clerics (clergy) as Jewish priests and Pharisees. In opposition to the Orthodox Church, they are sure that they are the only true Church, the Kingdom of God on earth, because they alone possess the Spirit of God. The services of the Orthodox Church are useless, since they dispense with dancing, the proper means for bringing down the Spirit from heaven.

The Men of God have also services in which there is no dancing; these are the 'usual confer-
ces,' and consist in singing, and the reading and exposition of Holy Scripture; but they are only as-
assemblies for attracting adherents, and they hint darkly at the 'better services.' In reality the source of revelation for this Scripture, but the Spirit which descends upon them during the dance. Any one who feels the desire for the 'better services' must undergo long pre-
paration before he is received into the sect by one of the leaders. To the 'better services,' a kind of frenzied dance takes place, consisting of a series of variously arranged movements performed singly and collectively, while songs are sung without any instrumental accom-
pacompaniment. The object of the dance is to induce at least some of the performers to fall into an ecstasy (named the 'bath of regeneration,' since the redeniye is regarded as the real spiritual baptism in opposition to the mere water-baptism of the Church). The 'Christis,' 'Mothers of God,' prophets and prophetesses especially, but sometimes also the ordinary members of the community, when in the ecstatic state, break into improvised doggerel, and prophesy the 'common fate' of their temple and the 'priesthood of all believers.' This secret service closes with a common meal—the 'love-feast'—which is regarded as the true communion. The services generally begin in the evening, and continue far into the night.

The sectaries have also provided a substitute for the other sacraments of the State Church. But the ritual varies in the different congregations and even in the same congregation, according to cir-
cumstances. The Men of God do not believe, with the Orthodox Church, that a sacrament must have the prescribed form in order to be efficacious; in their view, the Spirit operates unfettered and creates for Himself whatever form He chooses. They seem to have special liberty of their own, such as dancing round a tub filled with water at the summer solstice. Here, doubtless, we have to do with a relic of Slavic heathenism, and vestiges of heathen ideas are also found in their songs and ritualistic formulas. This sect is not yet received a Christian colouring in the vision of the 'golden Christ,' who appears out of the steam above the vessel.

The attribution of sexual excesses and sacrificial rites to the Men of God appears, according to the Russian official reports themselves, to be utterly slanderous and merely a device of the State Church to combat the sect, and brand as hypocritical an asceticism which is more strenuous than her own.
Our earliest sources of information regarding the sect, which they call "Christovostvitchina," are Vyrosoin (who wrote in 1691), Dimitri, bishop of Rostov (who wrote between 1702 and 1709), and Theophylact Lopatin-ki (1745), and further information is found in the reports of two trials of Klystovshchina elsewhere. In the monastery there it seems to have marked a reaction against deeply-rooted immorality. It also spread beyond Moscow, to the district of Moscow itself, to Yaroslav and Uglich, and to the town of Venyov, south of Moscow. In the first trial Prokof Lapunin, a soldier of the bodyguard (strelcets), appears as "Christ," his wife, Akulina Ivanova, and the nuns Nastasya and Maria (who were both finally beheaded in Petropavlovsk) as "Mothers of God." Altogether more than 300 persons were condemned.

According to the reports of the second trial, the sect had considerably diminished in the Moscow monasteries, but, on the other hand, had spread much more widely among the peasant population as far as the Petropavlovsk and intermediate district of Vladimir and Nijni-Novgorod, while, at the same time, Moscow maintained its central position as the head quarters of the sect.

Moscow was the scene of operations of the "Christ's" Serge Osipov, Vasily Stroynov, and, more famous than these, Andrey Petrov, who, known as the "Happy Idiot," had the entrance to the houses of aristocracy, and carried on his propaganda there for the sect not entirely without success. "Christ's" Damila Philippov and Ivan Sulsov. Of these the first is said to have also ranked as "God Zeboath," and the second as the "Heavenly Father." For the most part of the 17th century in the government district of Kostroma, while the second, as his disciple, spread it in the Oka and Volga districts and introduced it into Moscow. The evidence of Dimitri and Theophylact as to the founder of the Klystovshchina applies to Sulsov; but ancient songs of the Klysti speak of one "Christ," Ayveryan, who lived in the 14th century, and of another, Yemelyan, who lived in Moscow in the time of Ivan the Terrible. The majority of Russian scholars consider the sect much older than historical information reaches. Although the attempt to derive it from the heathenism of the Slavs and Finns must be pronounced unfortunate, owing to the decadely Christian character of the sect, the suggestion which derives it from the Bogomils (q.v.) seems extremely credible; but, on the other hand, the Klystis are entirely devoid of a trace of the Bogomilian cosmology, and they suggest rather the Messalians or Euchites (q.v.).

In the 19th century Kostroma and Moscow maintained their central importance in an ideal sense as places hallowed by tradition, especially in connection with the intense activity of the "Mother of God," Ulyana Vasil'yevna. The actual centre, however, was shifted in the middle of the century south-eastward into the government districts of Nijni-Novgorod, Samara, and Tambov, through the activity of Radayev and the "Christ's" Vasily Shtshilev and Avvakum Kopylov. The former, with his peculiar mystical teaching, and like some later "Christ's," takes a special place among the Klystovshchina at 1769-89 in the empire. It was his attempt to free himself from the trance-producing spirit, he caused asceticism to fall into abeyance, and shamefully abused the devotion of his female followers. On the other hand, Vasily Shtshilev and the "Christ's" resembling him have no immoral rites ascribed to them, but merely uneharly.

In the further course of the century the centre of the sect was pushed still further southward into the Caucasus territory, especially through the conspicuous energy of Kopylov's pupil, Porphyry Katasov. He and his followers again took the title "God Zeboath," and ruled not only all the communities of the Caucasus, where the Klystis, under their new name "Shaloput" ('eccentrics'), lead a considerably harassed existence, but also those of Southern Russia upwards to Suolensk, each of which has its own "Christ." Many Klystis communities honour as a Christ the orthodox "Father John of Kronstadt," famous through his Klysti communities are not large, since they depend for their increase, as they must, on account of their sexual abstinence, almost entirely on proselytism. Although they are now generally to be found everywhere in the Russian Empire, there are Russian peasantry, their total number, which can be only approximately reckoned, cannot exceed 200,000. Their significance for the national life, however, is, on account of their sober and industrious mode of life, far greater than this number would lead one to suppose. This article, the attitude of which is very different from that of Russian scholars, is based upon the writer's book, Die russischen Secten, i. (Leipzig. 1897), which, besides the Klystis, deals with such sects as the Skakany, Malevovantsi, and Paniaschkovtsy, all of which are dependents of the different bodies of the Klystovshchina. The latter have assumed special forms as they passed from the sphere of influence of the sect to that of the Lutherans, the Stundists, and the Molokans ("Milk-drinkers"). Among the Lutheran Förderland the sectaries are called Skakany ("Hoppers"). Kondratii Malevovantsi founded a sect in about the middle of the 18th century in the government district of Kiev about 1890, and his teaching caused an epidemic of trance-phenomena. The Molokan-Klysti are called Prygany ("Jumpers"). There were, and still are, numerous other bodies which, on account of some peculiarity, split off from the sect. Although the "Worshippers of Napoleon," who used to revere him as a "Christ," seem to have died out, the Adaniotes, who seek to get rid of men's reliance on mortal relics, and the Paniaschhakas, therefore, go naked at divine service and in their houses, still exist to-day. The sect of the Paniaschhaka regard the body as not only sinful but directly possessed by the devil, and intensify the asceticism accordingly.

**Literature.**—The most important Russian works on the sect are: 1. Dobrovol'skii, Lyudi bozhie: Rossiskii gosudarstvennyi nahoditelnii pravospravnyi duchovnyi zhizn (The Men of God: the Russian sect of the so-called spiritual Christians), Kazan, 1873; 2. N. Rentskii, Lyudi Duchii divnye i Skoptsi ("Spiritual People and Skoptzes") Moscow, 1872; 3. K. Kuteev, Sekty Klystov i Skoptsi (The sects of the Klystov and Skoptze), Kazan, 1882, St. Petersburg, 1900; 4. A. Rzhezdoincovskii, Klystovshchina i Skoptzetstvo i Rossi ("Klystovshchina and Skoptzism in Russia"). Moscow, 1893. There are also numerous articles in newspapers.

K. Grass.
MENCUS.—1. Life.—Mencius, or Meng-tse (371–288 B.C.), second only to Confucius in the annals of orthodox Chinese philosophy, was born in Tsou of a family whose ancestral home was in Lu, the native State of Confucius. While still very young, he lost his father; his education was thereafter conducted by his mother, who is famous among the women of China for the care with which she brought up her son. Nothing is known of his other predecessors, except that they were of the school of Confucius, whose Mencius regards as his supreme master among men, and proposed to himself as example (Mencius, ii. i. 2, iv. ii. 22). When we get certain knowledge of him, he is a person already well known and accomplished by his fellow-countrymen. In Mencius we have the first appearance of what is known as the School of Mencius, from one Stee to another according as the reception of himself and his doctrines was favourable or otherwise, accepting such gifts as he deemed consistent with his self-respect, and devoting himself to the exposition of his views on ethics and politics. This he did with acumen and considerable liveliness, frequently using illustrations, some of which are famous.

From the man of Sunn, who assisted his corn to grow long by tying to the knee boughs of trees to support the stem, to the development of character (ii. i. 2). The moral absurdity of nature is next made evident by the example of arcadian life and the exemplification of the life of a sage (ii. ii. 4). The man of Niu, whose natural vegetation is destroyed by the cutting of the beards and the browning of cattle, is a figure of human nature, which, through the occurrences of daily life, loses its innate beauty. The man of nature in the brief respite of the night or the calm of dawn (i. i. 6).

In addressing himself to the princes and governors of his time, Mencius may sometimes have been guilty of undue compliance with the faulty dispositions of those with whom he dealt (i. ii. 3); if so, it was from unworthy motive, but only to secure the immediately acceptance of his teaching. For the most part he spoke his mind with an admirable freedom, not overawed by the pomp and display of the great (vii. ii. 34), but acting according to his own teaching that respect is best shown by giving righteous counsel (ii. ii. 2). Mencius is quite conscious of his own worth. He alone in his age could bring tranquillity and good order to the empire (ii. ii. 13). His words will not be altered by any future sage (iii. ii. 9). He is not only the law-giver, but a keeper home to his countrymen (i. ii. 11, iv. iv. 24), though he occasionally employs unworthy shifts to maintain his dignity (ii. ii. 32). Looking on himself as the continuator of the Confucian teaching (vii. ii. 38), he regarded it as his sacred duty to pass on the teachings of Yang and Mo (iii. ii. 9). This he did with vigour and acuteness, while always willing to receive repentant heretics without reproaches, not tying up the leg of a pig which had already been got back into the pen (vii. ii. 26). The last twenty years of his life Mencius spent in Lu, where, with the assistance of his disciples, he prepared that sole record of his teaching which is called by his name and now as one of those standard writings known as The Four Books.

2. Ethics.—Mencius's view of human nature is fundamental. Man's nature is good in the sense that 'from the feelings proper to it it is constituted virtuous' (vi. i. 6). The four cardinal virtues—benevolence, righteousness, propriety, knowledge—are not infused into man from without, but have their rise from the feelings of commiseration, of shame and dislike, of modesty and compliance (vi. i. 6), of approving and disapproving (ii. i. 6). These four principles are accepted as psychological facts not reducible, e.g., to any form of self-interest (ii. i. 6). All that is needed for perfect virtue, in which a man becomes possessor of himself (iii. i. 4), is that these innate principles be developed (ii. i. 6, vii. i. 15; cf. also 'All things are already complete in us' (vii. i. 4)); and for this human nature is self-sufficient: failure arises only from the supposition of self-suppression, making the necessary effort (i. i. 7, iv. i. 10). From another point of view Mencius analyses human nature into chih (mind, will, volition and desire) and ch'i (passion-nature, emotion). The former is supreme, but the latter is not, to be vicariously suppressed, but developed in accordance with righteousness. Otherwise one's nature suffers defeat—as it also suffers defeat through action in which the impulses occasioned by the passion-nature must be appeased. The unity of the passion-nature with righteousness is to be accomplished only by persistent practice of righteousness; but, given a mind set on righteousness, this result necessarily follows (ii. i. 2). The violation suppression of the passion-nature, by which the integrity of a man's being is impaired, must be distinguished from the abscission of desires in an ethical interest (vii. ii. 35). Mencius, in basing his ethics on human nature, appears to have been not only the ancestor of but the founder of the term 'nature.' Such seems to be the drift of a Socratic argument in which he maintains that 'the nature is not to be confounded with the phenomena of life' (vi. i. 3 [Legge's tr.]). Elsewhere he points out that there are two natures, one natural, and in connexion with them there is the appointment of heaven, and the superior man does not say of them, 'It is my nature.' There are also moral propensities which are the appointment of heaven, but which the superior man must instead render rather as natural (vii. ii. 24). In things equally natural there is a gradation of worth, which can be recognized by thinking (vi. i. 14). Moreover, the sense of shame, which a man may not lack (vii. i. 61), is indicative of the righteousness, which alone is properly his nature. In the possession of this nature, good in its composition, all men are alike, evidence of this being found in the fact that, as in matters of physical taste, music, and beauty there are common standards, so also is it in morals (vi. i. 7). This originally good nature is the child heart (iv. i. 12), which differentiates man from the lower animals (iv. ii. 19); and in possessing it the respect for the sage is not unlike the sages (i. i. 2, iii. i. 1), who simply have apprehended before me what my mind also approves (vi. i. 7). The sages, however, are spontaneously what other men attain to by effort (iv. ii. 19, vii. i. 23), though they, too, learn from other men (ii. i. 8). The great man is he who does not lose his child heart (iv. ii. 12); but for most men it is lost, and the grand aim of education is its recovery (vi. i. 11). Morality is the supreme task laid on each man (iv. i. 19), which requires unremitting diligence (vi. i. 9, vii. ii. 21). Nothing can be done with self-satisfied conformists to current standards, these 'thieves of virtue' (vii. ii. 37); for it is in the dignity of the morality should criticize itself (vii. i. 5). The way to sage-like virtue begins in ordinary duties (vi. ii. 2), and the carrying out of principles already possessed by all (vii. ii. 31). Vigorous action according to the duty of doing what is the closest approximation to perfect virtue (vii. i. 4). It is also perhaps hinted that virtue is the mean between extremes (ii. i. 9, iv. ii. 61, 10). For self-direction it is of the greatest importance 'to estimate the mind,' i.e., to become acquainted with the real nature of one's motives (i. i. 7), and second thoughts are often best (iv. ii. 23). Life presents a series of alternatives of which the higher is, by reflexion, to be chosen in spite of
the seductions and obscurations of sense (V. i. 15). Righteousness is to be preferred before life itself (VI. i. 10). The righteous man is beyond the reach of calamity (IV. ii. 28, VII. i. 21). The only inevitable calamity is self-incurring (IV. i. 5). Seduction is the sin of oneself and of others, superior to the seductions or threats of riches, honours, poverty, and force (III. ii. 2). To rejoice in virtue bodes unconcealable grace of department, which is the perfection and music (IV. i. 27, cf. VII. i. 24).

Benevolence, righteousness, self-consecration, fidelity, with unwearied joy in these virtues—these constitute the nobility of Heaven (VII. i. 16). Realized virtue is sure of a transforming influence on others (IV. i. 12); failure to evoke a response should lead to self-examination (IV. i. 4). Virtue cannot be selfish; to find purity by withdrawing from all contact with evil one must become an earthworm (III. ii. 10). Each man is responsible to the extent of his moral attainment for the instruction of others (V. i. 7), and to instruct others is the greatest fidelity (II. i. 8, III. i. 4), while neglect of this duty degrades the virtuous to the level of those whom they should teach (IV. i. 20). Of all the filial virtues, filial piety is the only one that is referred to in any detail. Mencius quotes the definition of it as serving one's parents with propriety, burying them with propriety, and sacrificing to them with propriety (III. i. 4). The service of the parents is the greatest of all services and the root of all others; it has regard not only to physical sustenance, but to the wishes of the parents (IV. i. 19); and it takes an unquestioned precedence of duties to wife or children (IV. i. 20). Filial piety, piety itself in the funeral rites (IV. ii. 13); and, in view of the importance of sacrifice to ancestors, lack of posterity is the gravest in-stance of un filial conduct (IV. i. 26).

3. Politics.—Mencius has no scheme of social reconstruction. Existing social usages (e.g., concubinage) and the existing political arrangement—an empire consisting of small States, each with its own king, but owning the supremacy of one State whose ruler is emperor—all this Mencius simply accepts. What he is concerned with is the rectification of moral relations within this existing social framework. He follows the current analysis into the five relations of father and son, sovereign and minister, husband and wife, older brothers and younger brothers, and friend; and desires the cultivation of the corresponding virtues, affection, righteousness, harmony in difference, order, fidelity (III. i. 4). Of these relations that male and female should dwell together is the greatest (V. i. 2); and within the family we have in service of parents and obedience to elder brothers the fundamental exemplifications of benevolence and righteousness (IV. i. 27, VII. i. 15). Mencius opposes any such obliteration of natural relations as he finds in Mo's doctrine of universal love. Men have 'a root,' i.e., they have a special relation to their parents and therefore a special duty corresponding thereto (III. i. 5). So, too, Mencius opposes all anti-feudatory schemes, and teaches that society implies a differentiation of function in which those who labour with the mind govern, and those who labour with their strength are governed (III. i. 4), and in which the teacher of righteousness has his due place (III. i. 4). In doctrine of the mind and body, two points need to be noted especially: the emphasis on morality and the democratic bias. Rule is based not on force, but on willing submission accorded to virtue (III. i. 3, IV. ii. 16). If the ruler be virtuous, his influence extends to all. There is no secret of statescraft—it needs only that the ruler give scope to the innate goodness of his nature (i. i. 7, II. i. 6). Let him dismiss all talk of 'profit,' and think only of benevolence and righteousness (i. i. 1). In the disorderly times of Mencius such a benevolent government, having regard for the people's welfare (IV. i. 3, 9), would be the chief virtue for the truly benevolent ruler has no enemy within the empire (VII. ii. 4). Rulers are the shepherds and parents of their people (i. i. 4, 6), and must make it their first business to see that they (the people) have a certain well-being, for without that they will abandon themselves to crime (i. i. 7). Mencius is very emphatic on the necessary precedence of a sound economic condition.

When pulse and grain are as abundant as fire and water, how shall the people be otherwise than virtuous? (IV. i. 23).

Agriculture, therefore, and then education are prime interests of State (III. i. 3). The strength of a kingdom is in its morale (i. i. 5, IV. i. 1). Destruction is only self-incurring (IV. i. 8). A wise prince will be guided by his ministers (i. ii. 9), but he is himself ultimately responsible for the government of his State (I. ii. 6); he must treat his ministers with respect (II. ii. 2), regarding them as his hands and feet, and they will then regard him as their brothers, filial piety being one of these great family duties (IV. i. 6). New men, however, are not to be excluded (i. ii. 7); only the ruler must seek those by whom he may be taught (II. ii. 2). The love of what is good is the main qualification for being a minister, and who has good thoughts will gladly lay them before him (VI. ii. 13). Let the ruler be guided in the appointment and dismissal of ministers by the voice of the people (i. ii. 7). In a State the people are the most important element; the spirits of the land and grain are the next; and the sovereign is the lightest. Therefore to gain the peasantries is the way to become emperor (VII. ii. 14). The voice of the people is determinative of the sovereignty in a kingdom (I. ii. 10), and in accordance with it a prince may rebel even against the emperor (I. ii. 3). For a sovereign forfeits his rights by wickedness and becomes a mere fellow (II. i. 8), and, if not removed by the members of the royal house (II. i. 9) or other mighty, true or false, by the people or by the leader of a righteous rebellion. He who takes on him this duty of removing his sovereign must be sure that he is 'the minister of heaven' (II. i. 5, II. i. 8). He who is such is marked out by the appointment of heaven, showing its will by his personal action and his conduct of affairs, which are such as to win universal submission.

'Heaven seen according as my people see; heaven hears according as my people hear' (V. i. 4).

All wars of ambition are condemned (IV. i. 14, VII. ii. 2), and ministers who encourage the ambitions of their prince are 'robbers of the people' (VI. ii. 9). If right government prevails in the empire, the princes of the feudatory States will be submissive one to another in proportion to their virtue, and not in proportion to their strength (IV. i. 7). As for the details of a truly benevolent government, 'never has any one fallen into error who followed the laws of the ancient kings' (IV. i. 1), whom he finds in the spring and autumn period, and on which he fixes his historical interpretation. Of more interest is his references to heaven. He quotes, with approval, from the Shu King, or Book
of History, the saying that heaven, having pro-
duced the inferior people, appointed for them rulers
and teachers to be assisting to God (t. ii. 3). As
heaven protects all, so, in glad imitation, should
the great Sovereign of small States. While the ruler
of a small State should recognize the decree of heaven and be willing to serve the
great State (t. ii. 3). Such obedience to heaven
preserves creation, while disobedience entails
disaster. The two parts of human happiness are
individual's (v. i. 2), and man's (v. i. 3). That
which happens without a man's causing it is from
the ordinance of heaven (v. i. 6).

There is a decree for everything, and a man
should receive subserviendy as what can be correctly
ascribed thereto; but he who understands what is
meant will not stand under a precipitous wall, nor
can death under fetters be justly ascribed to
heaven's decree, though death in the discharge of
duty may be so attributed (vii. i. 2). Man's duty,
therefore, is to do the right and leave the issues to
heaven (t. ii. 14, vii. i. 1), which in its painful
discipline of individuals has moral ends in view
(vii. ii. 15, vii. i. 18). From men's nature we can
know heaven; and to preserve one's mental constitu-
tion and virtue, human nature is the way to serve
heaven (vii. i. 1). To have no shame before
heaven is one of the things in which the superior
man delights (vii. i. 29). Heaven is the realized
ideal after which men aspire (v. i. 12). Specifically
suggestive is this saying:

"Though a man may be wicked, yet if he adjust his thoughts,
fast, and bathes, he may sacrifice to change!" (v. i. 22; for
the faeton contradictory see art. God (Chosen)).

5. In conclusion a few miscellaneous points may
be noted. Memins indicates the correct method
for understanding Nature by obedience and not
by violence in the investigation of her pheno-
mena (iv. ii. 26). He gives us a good canon of
interpretation:

"Those who explain the Odes [i. e. the classical Shi King] may
not insist on one term so as to do violence to a sentence, nor
on a sentence so as to do violence to the general scope" (v. i. 4).

To this may be added his comment on the Book
of History, which may perhaps be generalized:

"It would be better to be without the Book of History then
to give entire credit to it" (v. ii. 3).

LITERATURE. — J. Legge, The Chinese Classics, Hongkong and
London, 1854-57. The year by year translation, with
the Chinese text, are published separately, The Life and Works
of Memins. See also E. Fæster, "The Mind of

P. J. MACLAGAN.

MENDELSOHN. — Moses Mendelssohn, otherwise Rabbi Moses of Dessau, philosopher,
writer, and Bible translator, was born 6th Sept.
1729 at Dessau, where his father, Mendel, was a
poor scribe and teacher in a family descended from
Rabbi Moses Isserles, a distinguished Talmudist
and philosopher of the 16th cent., known as
"Rena." Moses Mendelssohn was taught Rab-
binics by the local Rabbi, David Frankel, who
published a commentary on the Palestinian Talmud
in 1739. Frankel was expelled to the Rabbinate of
Berlin in that year, and the young student followed
him there in 1743.

At Berlin Mendelssohn was taught French
and English by A. S. Guimper, and taught himself
Latin and Greek. His taste for philosophy was
inspired by the study of Maimonides' Guide of the
Perplexed. He earned a precocious livelihood
as tutor in the home of a well-to-do Jewish silk
merchant, Isaac Bernhard, in whose warehouse he
acquired a thorough knowledge of English as book-keeper. His evenings and all his leisure
he devoted to philosophy. He was a follower of
Wolf and Leibniz, but was much influenced by the
English School of empiriques, especially Locke and
Shaftesbury. His acquaintance with Lessing, who
was also born in 1729, began in 1754, when he
defended Lessing's drama Die Juden against ad-
verse criticism. Lessing became his lifelong friend,
and dubbed him the second Spinoza. It was
Lessing who had Mendelssohn's first work printed
—the Philosophische Gespräche (1755). In 1755
they collaborated in an anonymous and piquant
attack on the Berlin Academy—Pope ein Meta-
physiker! and the next year Mendelssohn trans-
lated Rousseau's Discourse on the "Inequality parmi les femmes," though he ridiculed
the author's partiality for man in a state of nature.
Though M. Steinschneider (Cat. libr. Hebr, in Bibl.
Badenoue, Berlin, 1852-69) enumerates 29 separate
Hebrew works of his, and though he wrote Hebrew
poetry when a child of ten, it is as a writer of
classical German that Mendelssohn becomes famous.
His essay on esthetics, Von Erhabenen (1757), was
studied by Schiller and Herder. In admiration,
rather than in Lessing's pity and terror, he found
the moral object of Tragedy. The stories about
his friendship with Frederick the Great are legend-
ary. On the contrary, he criticized the king's
Poésies diverses en 1780, and told to the Berlin
poet, Dubois, to "protect him for writing in French.
The royal displeasure was
so great that he was threatened with expulsion from
Berlin, but the Marquis d'Argens intervened,
and as a "philosophe mairais catholique" pleaded
with his Majesty as a "philosophe mairais pro-
testant" to grant to the "philosophe mairais juif"
the privilege of residence.

In 1768 Mendelssohn was awarded by the Berlin Academy a prize of 50 ducats for his essay Uber die Evidenz der metaphysischen Wissenschaften. In 1771 the Academy elected him a member, but Frederick the Great refused to confirm the appointment, and no protest, not even that of Queen
Ulrica of Sweden, was of any avail to get the king
to alter his decision. Mendelssohn left Berlin
"at the request of the king" (1782) and moved to
Prance to serve as court poet to Prince Carl of
Brunswick. He was the first book of
philosophy read and discussed by Goethe and
later by Schiller, and dissuaded from suicide many
disappointed or degenerates. Mendelssohn rapidly
acquired a unique position among the intellectuals
of Berlin. His chief friends, besides Lessing, were
Hamann, Gleim, Wieland, and Herder, and the
Swiss writers Zimmermann, Iselin, Gessner, and
Lavater.

The last was the famous physician, immor-
talized by Darwin; but it was in his capacity as
a very zealous pastor that he caused the Jewish
philosopher much trouble and annoyance. He
published dedicatedly a pamphlet on the Topic of
Palingénésie philosophique (1769) to Mendelssohn,
and urged him to abandon Judaism and become
a Christian. The Jew, having obtained the sanction of
the Consistorium zur Censor, replied in his
Schreiben, an den Heim. Diakonus Lavater zu
Zurich (1770), manfully defending his position. It
was not only yesterday that he had examined the evidences of his own religion. What but convic-
tion would induce him to remain a persecuted
Jew? He never changed his religion.
This reply produced a storm of protest. J. B. Kolbele in his *Antijudaismo* (1770) was among those who accused incautiously upon him in various pamphlets, of which his best biographer, M. Kayserling, gives a full list. Next year an anonymous *Pro- mensa* was published in his defence. This attack, though it injured his health, turned his thoughts to Judaism and the Jews. As early as 1761 he had prepared a Hebrew Commentary on the Logic of Maimonides, and had presented the MS to one Sepsen Kalnin, who published it at his own expense.

Perhaps his most important work, so far as his influence on his co-religionists was concerned, was his translation of the Pentateuch into classical German with a *bifr*, or commentary, in Hebrew. His first assistant was Solomon Dolno (*1813*), who quarrelled with Mendelssohn in 1789. Mendelssohn's brother Saul took Dublin's place in the translation of Exodus, but Hartwig Wessely, a scholar born rich, but afterwards impoverished, later became his chief collaborator. This translation of the Pentateuch met with much opposition from the orthodox Rabbis Landau, Jacob Lissa, Elijah Wilna, and Hirschel Levin (formerly chief Rabbi of London and then of Berlin) because of whose objections it was not published in Berlin. Ly *198*, where 'thou shalt rebuke thine neighbour' was toned down to 'canst'; but the storm of opposition ceased, largely through the aid of Italian Rabbis, who, though orthodox, were also converts to Judaism.

Mendelssohn's translation of the Psalms, which had been begun before 1770, was not completed for thirteen years. During this period the translator took up the work only spasmodically and just when he needed the money. In 1784 he sold his MSS for 300 thalers and published it in 1788, but lost money by the publication; next year it was published in Hebrew characters with a *bifr* by one Joel Löwe. The Song of Deborah and the Song of Songs were the other Bible translations completed by Mendelssohn. The heathen public took them as an appeal, not a criticism, of Judaism. Though Mendelssohn was not a scrupulous lover of syntax, he wrote up to 1769 on that part of the Bible he had published anonymously. In 1769 it was clear and sympathetic, though greatly admired by Herder, is not the chief for a novel division into sections, differing from the traditional chapters. Mendelssohn seems to have assigned a higher critical value to those days, and scolded Bishop Benjamin Kennicott's textual alterations of the Bible. One immediate result of the translation was a change in the course of education of Jewish boys, and the inauguration of German rather than Jewish ideas. Part of the Jewish Liturgy was also translated by him, viz. the Haggadah, a Passover service—a fact which seems to have escaped the notice of bibliographers.

In 1776 Mendelssohn collected money—and students—for the unacknowledged college 'Pulchri Heroe' of Dessau. In 1781 his and his rich disciple, Isaac Daniel Itzig, founded the Jewish Free school in Berlin, the first institution of the kind, where not only Bible and Talmud, but also German, French, and sciences were taught by Jewish and Christian teachers. Similar institutions were afterwards founded on the same plan in Dessau and other cities.

After his wife's death, Lessing had bad battle to tolerate his *Antijudaismo* and conceived the idea of meeting the theologians with a comedy. This was the origin of his famous drama *Nathan der Weise*, which appeared in 1779, and which was in some respects a development of his youthful production *Die Juden Lestern*. Lessing's play on the story of the Jew Melchizedek in *Boecacoe's Decameron*. About no German work except Goethe's *Faust* has so much been written. Nathan is Mendelssohn, Recha his daughter Dorothy, the tempter Lessing, the Swiss widow Daja is intended for Lavater, the dervish is Mendelssohn's mathematical friend Abraham Wolf Kollwitz of Reichenburg, and so on.

The controversy engendered by *Nathan der Weise* led to a plea for the civil emancipation of the Jews by C. W. von Dohn (*Ueber die bürgerliche Verbes- serung der Juden*, Berlin, 1781), translated into French by Mirabeau (London, 1787). Six hundred copies of this translation were forwarded to Paris for the use of the French States-General, but lost in that troublesome time, and eventually burnt in the Bastille. In 1782 Mendelssohn published a translation of Manasseh ben Israel's *Espеранцо de Israel* (Amsterdam, 1659), with an introduction pleading for emancipation. He was again reproached for remaining a Jew, or for being a 'wobbler' between Judaism and Christianity, and this induced him to write his *Jerusalem* (1783), a work on religious power and Judaism. In this book, translated into English in 1784, Mendelssohn explains why he was not a Christian. It is a plea for the separation of State and Church, and urges that 'Kirchenrecht' is incompatible with true religion. Judaism, he urged, has no dogmas or chains upon belief; Joseph Aboab de Sousa, who had reduced the thirteen creeds formulated by Maimonides to three (cf. ERE iv. 240), was not heretic. Judaism required conformity with ceremonial law, but tolerated complete liberty of opinion.

In *A Reconsiderer* his children, Mendelssohn substitutes in the creeds the words 'I recognize as true and certain' for the words 'I believe.' Ceremonial laws he regarded as a sort of living scripture and the great bond between Jew and Jew, urging that, even if their utility were no longer clear, they were still binding. Actions are our duty, but creeds, symbols, and formulas are the letters of reason. In this way he reconciled the deism of Leibniz and the English deists with revealed law, and thus condemned the so-called *Betrachtungen über Bonnet's Palingenesie* are both pleas for toleration, but not for uniformity of belief. In both he warns his disciples against prejudice, superstition, and even enthusiasm. *Jerusalem* evinced his keen appreciation of English drama, said that it was incontrovertible, and wrote a highly appreciative letter about it; Mirabeau said that it ought to be translated into every European language; Michaels found fault with its condemnation of Anglican bishops for consenting to sign the Thirty-nine Articles, and Mendelssohn had to explain his position in the *Berliner Monats- schrift*, of which he was one of the founders in 1788. By some contemporaries he was attacked as an atheist and by others as a 'Talmud Rabbi,' but he saw no inconsistency between his philosophical belief and his faith. His Hebrew works are written entirely from the Rabbinical standpoint, and he was a good Talmudist, as is proved by his correspondences with Jacob Emden.

Mendelssohn's *Morgenautunden*, like his Bible translation, was in the first instance intended to lend his son Joseph to a true belief in God. Its publication, in 1785, was designed as a refutation of Spinoza himself as well as of Lessing, who was a Spinozist. In 1833 Alexander von Humboldt, in a letter to M. Mortara, described him, in his youth, he and Mendelssohn's sons had heard these very *Morgenautunden* given forth by the philosopher in his study. Mendelssohn proves the existence of God; the nature of the Divine Being and His characteristics
were to be treated in the second part. Its philosophy is an attempt to advance upon the sensuality of Wolf by the help of English empiricism. He claimed that human common sense, when working hand in hand with reason, was infallible.

Though self-taught, Mendelssohn was neither a dilettante nor a popular philosopher. Hegel pronounced him a philosopher, and as a writer of German, his style furnishes the best example of German prose after Goethe and perhaps Lessing. Its characteristic was its Socratic irony. A pre-destined Kant, his writings are far easier to understand. Kant himself was proud that the Jewish scholar had attended one of his lectures, and was always polite to him, though he expressed disappointment that Mendelssohn had not reviewed his Kritik der reinen Vernunft, when it appeared in 1784. Simultaneously with the publication of the Morgenstunden appeared F. H. Jacobi's treatise Uber die Lehre des Spinoza auf den Haken Moses Mendelssohn. Lavater had rebuked him for not being a Christian; Jacobi now charged him with atheism. He was profoundly disturbed by what he considered a cruel attack, and retaliated with his Address an die Freundes Lesers. He brought the manuscript to his publisher Voss on 31st Dec. 1786, and two days later he had analytic stroke. There is little doubt that Jacobi's attack, in which Lavater, Herder, and Goethe had all sided against the Jewish philosopher, brought about his end.

He left three sons and three daughters. His sons, Abraham and Isaac, ran the famous banking house of Mendelssohn and Co., which still exists. The former in 1849 reviewed Rosetti's Dante. The great musician Felix Mendelssohn was Abraham's son; another grandson, G. B. Mendelssohn, edited the philosopher's complete works in 1843-45.

Mendelssohn's first biographer, his pupil I. A. Eichel, described him as short and shoul erered, but feeble and pigeon-breasted, with thick black hair, dark complexion, bright eyes, and high forehead, a voice soft and gentle, and in conversation crisp and persuasive, but never long-winded (Tödlicher Rambambam, Berlin, 1786).

There is much difference of opinion among Jews as to his influence on them or not. The general view seems to be that it has proved better for Jews than for Judaism. His chief opponents were the 19th cent. Russian intellectuals known as the Maskilim, especially Peretz Markish, who in 1811, in his work of denouncing Jewish nationalism, belittled his knowledge of the wisdom of Israel, and characterized him as a merchant rather than a Rabbi. Yet without doubt he was the first and most typical of modern Jews, the first to identify himself with another nation and yet remain a Jew.

'Judaism, which hitherto had impressed the whole mental activity of the Jew,' says Segal in Aspects of Hebreo Genius (p. 183), 'was narrowed down by Mendelssohn into a mere religion. He separated the man from the Jew. . . . To Mendelssohn's followers such a dual life became difficult. Traditional Judaism did not easily lend itself to be compressed and squeezed. . . . Mendelssohn's followers experienced the conflict between Judaism and generation at every step. They threw off the burden of Judaism. . . . But . . . the period of the Reform, who in the second period of religious reform and the readjustment of Judaism to the new conditions of Jewish existence.' Jewish nationalists of the present time, not quite like Mendelssohn, regard as the chief cohere of the desire for assimilation felt by a small section of their co-religionists. Mendelssohn was an apologist for religion in general rather than for Judaism in particular. That was his chief merit in a Vottelagen and in sceptical Berlin. The finest epigram about him, and one which he himself would have appreciated, is the distich, "Es ist ein Gott, das singt Moses schon. Doch den Beweis gab Moses Mendelssohn."
MENNONITES

and Mrs. A. Brous; and, in 1884, in order to prevent the decline of their little number, the Mennonites founded the Vereinigung der Mennonitengemeinden im deutschen Reiche (Union of the Congregations of Mennonites in the German Empire). Their periodical, Mennonitische Blätter, has been issued since 1854.

They have congregations in Alsace, the Bavarian Palatinate, Baden, Wurttemberg, Hesse, Nassau, at the lower part of the Rhine, in Westphalia, East Friesland, at Hamburg, Friedrichstadt, and in West and East Prussia.

c. France.—In France the Mennonites held their first conference at Toul in 1901; their paper, Christ schützt die Kinder, was issued in 1908.

d. Russia.—An emigration of Mennonites to Russia took place when the celebrated empress Catherine had promised them great territories in her empire, where they would be permitted to live according to their own religion and customs. About 2000 left Prussia in 1783; and many others followed them until 1824. At first they suffered many trials, not the least of which were to discard among themselves. As they persisted in their heretical convictions, the government needed an elder who had received the imposition of hands. They prospered, however, in their new fatherland, which gave a shelter also to the fugitive Mennonites from Hungary. At present there are congregations in the districts of Jekaterinoslaw and Tauria, Warsaw, the Crimea, Saratow, Samara, Caucasus, and Chiwa. In their colonies the school management is excellently ordered, the church affairs are managed by the elders of the congregations, and the preachers, selected from among the brethren, fulfill not only the duties of their ministry, but also those of their civil calling.

In 1874 a great danger threatened the Mennonites: exemption from military service was abrogated, and thus the privilege conceded to them by the empress Catherine and the emperor Paul was annulled. Large numbers of Mennonites prepared to quit Russia; in the years 1874-80 more than 15,000 left for America. This made an impression upon the Russian government; the emperor sent the minister, P. E. F. von Totedten, to them; after mutual deliberation the resolution was made that the Mennonites could perform their military duties in the forestry of the State. This arrangement has been maintained ever since; the Mennonites, however, according to their old traditions, have always sought to relieve the suffering of war.

e. America.—The Mennonites are far more numerous in America than in any other country. The first colonists were Dutchmen who, about 1620, settled in New Amsterdam (now New York). Under the pressure of the heavy persecutions in the Rhine land, thirteen families at Crefeld resolved to emigrate to the New World. They landed on 6th October 1658, three pioneers having already bought 8000 acres of land in Pennsylvania from William Penn, and they founded Germantown (now part of Philadelphia). Seven other families followed in 1658; and from that time the emigration continued during the whole of the 18th cent. and still more during the 19th. In 1829 Swiss Mennonites came to America, followed in 1830 by many South Germans, and afterwards, as we have said, by whole congregations from Russia, beginning from Galicia and one from West Prussia.

The emigrants formed many friendly connexions with the Quakers and other sects, but they preserved their independence. They came with the hope of being free from all hindrances in following their own customs and institutions; some of them even entertained the desire to establish in the New World the true kingdom of God according to His ordinance. It was only after long deliberation that they dared to entrust the ministry of baptism and of the Lord’s supper to an elder who had grown up in the Mennonite pastorates in Germany or in France, and it was only after that all the Mennonites in Europe; and even now the most rigid of them will not permit their fellow-members to enter a church.

The Mennonites have a great regard for their past history—and not unjustly. Their forefathers were the first to protest against slavery; they committed their scruples to writing on 18th April 1688, and delivered the document to the magistrate. In a manly and Christianlike spirit they declared: ‘Freedom of conscience reigns in the Mennonites and rational, and personal freedom ought to reign here for every one, criminals of course excepted.’ In the War of Independence their defencelessness was respected; nevertheless many emigrated in 1786 to Canada, as they could not approve of insurrection against the British government. Conservative in all things, they have not even yet, after two centuries, given up their old language, ‘Pennsylvania Dutch.’

The Mennonites of America are divided into: (1) Old Mennonites, who form the great majority; their periodicals are the Mennonitische Rundschau and The Herald of Truth (the Germ. ed., Herald der Wahrheit, has ceased to appear since 1901—an event of great consequence to those of them); (2) ‘Amish’ Mennonites; and (3) the ‘General Conference.’ Since 1890 the last-mentioned party has endeavoured to form an organization between all the Mennonites of America, respecting the peculiarities of each congregation. The foundation of Bethel College at Newton, Kans., was favoured by them.

2. Characteristics.—Wherever Mennonites are found—in Switzerland or in Germany, in Russia or in France, in the United States or in Canada—they are known as excellent husbandmen, simple in their manners, blameless in their behaviour, honest, conscientious, and diligent, so that most of them are in easy circumstances. In consequence of their seclusion the civilization of later times has had little influence on them; they are very conservative and often suspicious of opinions which differ from their own. (An exception must be made in the case of the German Mennonites who live close to the frontiers of Germany, Friesland, Westphalia, and on the Rhine; they have been influenced by the Dutch Mennonites.) They have remained where their forefathers stood three centuries ago; in order to understand their opinions, it is, therefore, necessary to consult the writings composed by their fellow-believers in the 16th and 17th centuries.

3. Religious beliefs.—The oldest defenders of baptism after confession of faith entertained a strong aversion to the papal hierarchy. They would not reform the Roman Catholic Church; they would destroy it by the foundation of separate and wholly autonomous congregations. The preachers were elected by the majority; there was no tie between the congregations except that of community of faith and of love. According to the example of the segregation of Israel, the people of the Lord, from the Gentiles, the congregation of Christ ought to be separated from the world; this was done by the external bond of laws and commandments that formed a sort of true believers. As the congregation of the Lord consists only of believing and regenerate children of the Lord, only those who are sufficiently advanced in years and experience, and, therefore...

1 One of the most renowned professors of this college was C. H. Wiedel, author of the Abler Verzeichniss der Mennoniten, Newton, 1896-04, who died in 1910.
able to believe, can be admitted into the congregation by baptism. Hence they highly valued baptism as a token of the confession of faith, but they did not acknowledge the baptism of children as a baptism; he who was baptized as an infant was not baptized at all. The name of Anabaptists (q.v.) was an undeserved nickname, given by them to enemies.

They sought to maintain the purity of the congregation by excommunication, and taught that true believers must avoid all intercourse with an excommunicated member. The charge has often been brought against them that, since they regard themselves as the perfect or holy congregation of the Lord, they do not admit that they are poor lost sinners. Their lives and their writings, however, contradict this accusation most positively. It is true that they separated themselves from all those who were of a different opinion, but it was from fear of seduction. By the simplicity of their manners and their dress they showed their refection of the world. A wedding outside of the congregation was a 'worldly,' a sinful, wedding. They were strangers on the earth; therefore no interference with the powers of the world, no using of the sword. The oath is forbidden, not only by the gospel (Mt. 5:17 and Ja. 5:13), but also for conscience sake, since in the spiritual Kingdom of God on earth the truth is the highest and the only law. By their sharp contrast between the world and the congregation—the natural and the spiritual—they insisted on the necessity of regeneration; but their doctrine on this subject is legal rather than evangelical in character. They teach that regeneration is an OT contrition, awoken in the soul by the threats and the promises of God, who made a promise to them to avoid sin and to live according to His will. These threats and promises are written in His word; therefore it is the seed of regeneration. They mean by a godly faith to be orthodox, but their dislike of all scholastic terms and their desire to use only the phrases of the NT caused them, sometimes, to disagree with the faith of the Church; hence they refused to acknowledge the Holy Ghost as a person—they called Him a power of God—and yet they believed that they professed purely the doctrine of the Trinity. They rejected every dogma from which they feared damage to the practice of their piety, for the tenor of their religious life was above all things practical; hence they repudiated most positively the Calvinistic tenets of predestination, irresistible grace, and the perseverance of the saints. In the doctrine of the Lord's Supper they followed Zwingli; but, for them, it was more a token of mutual love and unity. They combined with it the rite of feet-washing.

Such were the tenets of the community with which Menno Simons (1496-1561) became connected in 1536. He had been a priest at Wittmersum in Friesland, but after a long inward struggle he left the Roman Catholic Church. From that time he defended in sermons, writings, and disputations the opinions of his fellow-believers so energetically that they were called after him—Mennonites. They had already suffered heavy losses by persecutions; but they struggled bravely on; no torture—not even death at the stake—could terrify them. The congregation in Amsterdam was founded in 1530 by Jan Vold, a shoemaker, in Friesland, and was a member of the community founded by Menno Simons in 1531. In his preaching he always exhorted his followers to be peaceful and obedient to the magistrate, but Jan Matthijs, by his fanatical impetuosity, prepared the way for the notorious Jan Bokeloo (Leyden), whose fatal doctrine was that the time of suffering oppression had passed away, that the sword must be drawn, and that the true believers were summoned to subjugate the kingdoms of the world, and especially Munster. The majority, however, disapproved of such violence; every day during the winter of 1534 the congregation of Amsterdam enrolled about one hundred additional members; and a party of them set out. They were so strong that the town-hall of that city, found no support. When the terrible tragedy of Munster had terminated, a separation took place throughout the Netherlands between the rebellious and the moderates—the latter party being called at first Obdolites and then Mennonites.

These increased greatly in spite of all obstacles, but their unity was soon broken by disagreement about the practice of excommunication. The more lenient Mennonites lived chiefly in Waterland (a part of North Holland); hence they were called Waterlanders. The more rigid were the Flemish and the Frisian Mennonites: but among those parties so many schisms have occurred that it is impossible to enumerate them all. Let it suffice to say that the Waterlanders formed the most tolerant and liberal party. They would not apply the epithet 'believing' or 'unbelieving' to any one on account of his particular opinions on articles of faith with which God in His word has not clearly forbidden, salvation or condemnation. They even took an interest in the things of this world; e.g., they supported with their money the great William of Orange in his efforts to liberate the Netherlands from the Spanish yoke. Afterwards many of them held magistracies, but the influence of the State Church has put an end to that.

The Mennonites exercised a remarkably attractive influence upon the Brownists who, from 1593, had settled in Amsterdam to evade the persecution in England (see art. BROWNISM). One of them, John Smyth, came to Holland in 1606; with his friend, Thomas Helwys, he forsook Brownism in 1603, administered baptism on confession of faith, and founded a separate congregation. A year afterwards he tried to amalgamate it with the Mennonites; but in this his followers were successful (1615). Helwys, on the contrary, though he entertained friendly relations with the Mennonites, maintained his independence; he returned to England. His followers, influenced by Edward Barker (1641), came to the conclusion that only baptism by immersion was legal. Henceforth they called themselves Baptists, and broke off community of faith with the Mennonites. In the 17th cent. Socianism exercised such a great influence on the Mennonites that the Reformed theologian, J. Hoornbeek, could write: 'Anabaptista indecutus Socianum, Socianus autem docet Anabaptista.' The more conservative desired to defend themselves against the intrusion of this dreaded heresy by maintaining the old confessions of faith—a dangerous measure, for these confessions had never had any binding authority. At length the breach was healed in 1664 between the liberal and the orthodox members ('Lamisten' and 'Zonisten'). With regard to the practice of Christian charity, however, the unity was not severed; the two parties worked together to relieve their suffering brethren in the Palatinate and elsewhere.

In the golden age of the Dutch Republic many of its poets and painters among them probably celebrated a martyr among the Mennonites. They formed more than one-tenth of the whole population, but as a rule neither the nobility nor the lower classes joined their ranks.

In the 18th cent. their number declined for many reasons. The lay-preachers, elected from among the brethren, no longer satisfied the congregations; consequently, a great number of
Mental Reservation

Families passed into the State Church. The foundation of a theological seminary in Amsterdam (1735) did not produce any lasting improvement. At most, the old ideals appeared at the beginning, and the spiritual well-being of the people and the spreading of a higher civilization were objects of great care. The Teyler's Geenoor ("Society of Teyler") and the Montschappted Vat van 'e Algemeen ("Society for the Promotion of the General Good")—two institutions that to this day do a large amount of useful work—were founded in 1778 and 1784 by Mennonites.

They fully agreed with the Revolution of 1789, for their old ideals appeared to be realized by it; they gladly supported it by many sacrifices but their prosperity greatly declined in the hard times of Napoleon. To improve this state of things the Algemeene Doopsgezinde Sociëteit ("General Society of Mennonites") was founded at Amsterdam in 1811 by some wealthy congregations, and at present all the Mennonite congregations are members of it. This Society took upon itself the care of the theological seminary and the support of the indigent congregations. By its influence the desirable end was obtained that all the congregations, in the course of time, possessed only ministers who had received a university education. From that time their exclusion from the other Protestant congregations, as well as the theological definition of the Mennonites, are diligent and able co-operators (e.g., J. Hocstra, J. G. de Hoop Scheffer, A. W. Wybrands, C. Sepp, S. Cramer). Often their ministers preach to congregations of another confession—in other words, the Mennonites and pietists of the theological seminary are also professors of theology at the university of Amsterdam.

Still the Mennonites have remained congregationalists; they are zealous for the entire independent congregation. Consequently, in the respective congregations there is some difference in the form of public worship—e.g., in the use of psalters and hymn-books—and there is also a difference in the manuals used for religious teaching. Nevertheless, they are strongly attached to each other and to their community, and promote their common interests in fraternal unity. Their ministers are elected by the majority of the brethren (and often also of the sisters) or, in many congregations, by the churchmen. They are not ordained and wear no official dress, for they form no class and have no authority.

In regard to baptism and oath-taking the opinions of the Mennonites are unchanged. Self-reliance, evident in the voluntary act of becoming a member of the congregation, is still the condition of membership, so that they would rather abolish the whole rite of baptism than permit the baptism of infants. They have no confessions of faith and would not tolerate them. They dislike dogmatic speculations, and hold that the characteristic of a true believer is not his creed but his life. Hence, their toleration allows persons of very different opinions to live peacefully together in the same congregation. The majority of them are liberal; they are the more conservative profess a Biblical orthodoxy.

Their original tenets concerning ecclesiastical discipline, bearing of arms, and civil office are at present abolished. Considering that the Mennonites form little more than one-hundredth part of the population, it is a significant fact that an important number of ministers, representatives of the nation, burgomasters, etc., have for many years belonged to them. The connexion with the Mennonites of other countries is maintained chiefly by the means of the missionary society, which propagates the gospel in Java and Sumatra. The missionaries and the contributions come principally from their foreign brethren.

Literature.—The literature concerning the Mennonites is very extensive, but there is no good library of them, based on the advanced science of our days. The most important works on the subject are the following:

The Mennonite resolution is the solution offered by many theologians both medieval and modern. This doctrine depends mainly on the fact that Roman Catholic teaching as to the intrinsic malice of lying that in order to explain it will be necessary first to state briefly what that teaching is.

Roman Catholic theologians are unanimous in holding that a lie is always and necessarily sinful; there can be no such thing as a permissible lie. This is the teaching of St. Augustine (de Mendacio, contra Mendacium ad Consentium, Enchiridion, xviii. F.); and every Roman Catholic theologian of weight is in accord with him. They hold that the doctrine of Scripture on the subject are, they believe, quite decisive, and leave no room for dispute. Moreover, the Scholastic theologians reach the same conclusion on rational grounds. A lie, they teach, does not necessarily proceed from vice. To be false is to be a liar. The doctrine, therefore, is not difficult to decide. When, therefore, we speak of a lie, we mean a false statement; and a lie is false when it is a false statement.

The truth is that, while a lie is not a false statement, a false statement is a lie. A falsehood is, further, an offence against justice; we owe the truth to our fellow-men. But, even apart from this aspect of it, the act is intrinsically evil.

It is plain that, where so strict a view is taken as to the obligation of truth, the cases which we are considering constitute a grave difficulty. Whatever be the circumstances, a lie can never be justified. Augustine seems to have thought that
MERCY

555

the only choice lay between silence and a frank declaration of the truth irrespective of consequences (de Mendel will be). But it is clear that this does not solve the problem; for in many cases silence is equivalent to an admission; and it may well be that to answer the question proposed, whether by words or by silent assent, would constitute a flagrant breach of justice. The elementary principles of justice are not a whit less wrong than a sin against veracity.

Here, then, arises the question as to the permissibility of mental reservations. A speaker is said to employ mental reservation if the truth of his statement is true only if qualified by a restrictive clause, and when he does not openly express this clause but ‘reserves’ it within his own mind. Thus, e.g., should a member of the Government declare that its action was under consideration, and the reply which it receives will be frank; there is nothing in these matters to suggest to them the possibility of a restricted reply. This, however, is not the case if the restriction is such as to manifest to all except the extremely unobservant. Under such circumstances a comparatively slight cause—e.g., to set aside an inconvenient question—will be justification enough. Again, if the person who asks has a right to demand the information from us, then, unavailing as the question may be, we must answer fully. It would not, e.g., be justifiable to practise mental reservation to the income-tax commissioners.

In the 18th century the words may have been used to express the permissibility of the restrictio pura mentalis, viz. a mental reservation the presence of which is not indicated by any external circumstances whatever. The first to put forward this opinion appears to have been a Jesuit, Father Martin de Aspilcueta (‘Doctor Navarrus’; 1491-1586). His authority was so great that he was followed by not a few authors of note, including L. Lessius, A. Diana, etc. On the other hand, theologians no less eminent main that what is said in confession is to him as if it were unknown. In each case the circumstances indicate that the words may be employed in a restricted sense. Taken in that sense, they are true: they correspond with the speaker’s real judgment. The same holds good in the cases where we are justified in using mental reservation; the circumstances show that there may be a qualifying clause.

It may be urged that in a mental reservation we use language with the deliberate purpose of deceiving another, and that this is, to all intents, falsehood. But the objection is not, in fact, justified. In the first place, our true purpose is not to deceive but to protect our secret—a thing that we have every right to do. We may not, indeed, in order to do so, tell a lie; but we are not bound to supply the questioner with the information which he unjustly seeks to extort. And, secondly, in such cases it is more correct to say that the questioner deceives himself than that we deceive him. He is woefully unaware of such a question we may be unable to give a full answer without the betrayal of a secret, and he must expect an evasion. If he chooses to take it as an unqualified statement of the whole truth, let him attribute the error to his own folly. We may be the expiary of his mistake; but we are not, properly speaking, its cause.

It stands to reason that mental reservation may be employed only where there is real necessity of a flagrant breach of justice. The restriction of what may be no other way of doing: to employ such a method in matters of little moment would not be mental reservation, but plain falsehood. In the ordinary intercourse of daily life men assume that no exception will be made to that section of which they know, however, no other way of doing: to employ such a method in matters of little moment would not be mental reservation, but plain falsehood. In the ordinary intercourse of daily life men assume that no exception will be made to that section of which they know, however, no other way of doing: to employ such a method in matters of little moment would not be mental reservation, but plain falsehood. To seek at God's hands a pity which we refuse to others is insincere; not only so, but in the absence of a merciful spirit we are morally incapable of appreciating the free, unobtained mercy of God. Hence the promise to the merciful that they shall receive mercy (Lk 6:36) expresses one aspect of the moral nature of things.

Human mercy must take the mercy of God as its model and inspiration. Like its exemplar, it is not to be accurately doled out in proportion to the receiver's deserts; in its perfectness it will rather exhibit a cense found in all men. Hence mercy in God is rather a permanent disposition than merely an intermittent source of specific acts. As exhibited at its noblest in Jesus' personal demeanour, mercy has in nothing of consolament, which is an attitude bordering on scorn; it was because he sought to establish with them such communion of spirit as might produce inward renewal that Jesus showed compassion to the needy, and under these circumstances mercy became the instrument of His trust in the divine capacities of man. Ere long Jesus was able to call the recipients of His mercy by the closer name of 'friends.'

The ascription of mercy to God implies a positive estimate, even a canonical recognition, or at least the rejection of some negative estimates which have figured prominently in 19th cent. philosophy. To say of mercy, with Shakespeare, that 'it is an attribute to God Himself,' is the equivalent of holding that anthropomorphic judgments do not necessarily or substantially falsify our apprehension of the divine reality, and that moral qualities which faith sees in God are not essentially different from qualities in men called by the same names.

Among the tenets of the schools, Christian minds have usually held that the divine mercy is characterized, or even constituted, by two qualities. (1) It is free; it is not forced by any outward constraint, nor does it come to manifestation as the automatic response of reason to the facts of the world. God is love, love which has its measure in the Cross; and His mercy, as everlasting as Himself, is greater than we could either ask or think. It is misleading to speak of Him as the merciful, or mercy as an attribute of His, even when we are speaking of the various persons of the Trinity. His action is the free expression of a perfectly loving Will; His pity is evoked, not by merit, or by tears of repentance, but by the need or ruin of His creatures. (2) It is absolute, and covers the whole of His life; if not, He would simply be a God of pity. His action is the free expression of a perfectly loving Will; His pity is evoked, not by merit, or by tears of repentance, but by the need or ruin of His creatures. The action is the free expression of a perfectly loving Will; His pity is evoked, not by merit, or by tears of repentance, but by the need or ruin of His creatures.

It is manifest that environment and etiological origin and development, no less than religious prejudice and ethical culture, have contributed to a resultant quality or characteristic which can be defined only in the limit found human prejudice, but puts all men in debt for every gift. For St. Paul the mercy of God has the aspect of miracle or paradox as being vouchsafed to the unworthy and even to the actively hostile, whose worth it creates but does not presuppose. Our part is not to measure or explain it, but rather to enjoy it with wonder and adoration.

Yet the best religious thought has never held that the divine mercy is incompatible with hostility to sin. Ethically pure compassion is a real capacity for holy anger; there is no mercy in allowing a bad man to go on in badness. Doubtless to an evil conscience mercy and judgment appear to be in conflict, but for Jesus both were living expressions of the Father's love.

Mercy in God asks for mercifulness in man. In the parable of the Unmerciful Servant (Mt 18:23-34) Jesus made this plain for good and all. Mercy for Him is an element in the righteousness of the Judge of the living and the dead, and has been exhibited that there needed much to be inculcated in Christ's time when sympathy was killed by the theory that all suffering was penalty of special sin, a theory which fostered a pitiless type of righteousness (A. B. Bruce, in Episcopat's Greek Testament, 1. [1897] 59).

The supreme motive of mercifulness, whether to the guilty or to the necessitous, is not the natural desire to be treated mercifully in our own time of need; it is the thankful memory of pity bestowed on us by God. And the living sense that from the mercy of God all our hopes begin, the sight of its glorious freedom and absoluteness in Christ, is far more than a mood of comfortable security; it is charged with moral inspiration and even with a demand that we do and bear all things for the sake of the unmeasured divine love that for them has made all things new.

H. R. MACKINTOSH.

MERCY (Indian).—Adequately to discuss the situation and operation of the quality of mercy within the range of the Indian peoples would demand a book or treatise of no inconsiderable length. All that is practicable within the limits of an article is to attempt to exhibit the natural qualities and general tendencies that have been at work, to estimate the efficacy and worth of the influences that have been brought to bear, and to indicate the broad results in the character and disposition of the inhabitants of the country, as they are found under the spirit of mercifulness.

It is manifest that environment and ethiological origin and development, no less than religious prejudice and ethical culture, have contributed to a resultant quality or characteristic which can be defined only in the limit found human prejudice, but puts all men in debt for every gift. For St. Paul the mercy of God has the aspect of miracle or paradox as being vouchsafed to the unworthy and even to the actively hostile, whose worth it creates but does not presuppose. Our part is not to measure or explain it, but rather to enjoy it with wonder and adoration.

Yet the best religious thought has never held that the divine mercy is incompatible with hostility to sin. Ethically pure compassion is a real capacity for holy anger; there is no mercy in allowing a bad man to go on in badness. Doubtless to an evil conscience mercy and judgment appear to be in conflict, but for Jesus both were living expressions of the Father's love.

Mercy in God asks for mercifulness in man. In the parable of the Unmerciful Servant (Mt 18:23-34) Jesus made this plain for good and all. Mercy for Him is an element in the righteousness of the Judge of the living and the dead, and has been exhibited that there needed much to be inculcated in Christ's time when sympathy was killed by the theory that all suffering was penalty of special sin, a theory which fostered a pitiless type of righteousness (A. B. Bruce, in Episcopat's Greek Testament, 1. [1897] 59).
character and intentions. Thus the suspicion engendered by mere strangeness leads not seldom to acts of cruelty, which ultimately obtain the sanction of custom and are fortified by religious precepts. An exception, which is exceptional, rather than any other natural impulse, is probably at the basis of all such ruthless practices. The angry and hostile feelings thus aroused check the growth of the spirit of sympathy and mercifulness; and the latter must wait for the rise of a wider and more intelligent and generous outlook upon life and human relationships.

The claims, moreover, of a religious ritual which not only sanctioned, but enjoined, a number of sacrifices were hostile to the development of the kindlier qualities of pity and regard for the weaker or less fortunate members of the tribe or community. Familiarity with the taking of life has always tended, not only in India, but elsewhere, to deaden sensibility and to bring into play the harsher and more cruel passions. When the sacrificial act claims the sanction of religion, and is transformed into a sacred rite and duty, the character of which it imparts to it is obligatory and of the highest merit, the degrading effect of custom and habit is reinforced by an appeal to the strongest human motives and prejudices. That which in many instances it would be to a man to kill a fellow-man, he will do determinedly and with a clear conscience under what he conceives to be divine authority. The elaborate Vedic sacrifices, with their large demands and imposing ritual, could have had in this respect one common effect of making men's minds with thoughts of savagery, and to close their hearts and ears to the cry for compassion. With facilities for mutual intercourse and the advance of civilization, and with a higher estimate of the value of life in all its forms, these practices changed their character, or tended altogether to disappear. Offerings of fruit or flowers, or models in paste of animal form, took the place of the living sacrifice at the altar, and bear witness to an alteration of feeling on the part of the worshipper, and a desire to free his ritual from acts and observances which had become repugnant to a more cultivated and sensitive nature.

It is probable also that a distinction should be made—a distinction due to racial characteristic as well as to natural environment—between the primitive peoples of India and the later Aryan tribes, who entered the country in successive bands of immigrants from the northwest and north. The latter were swayed by the gentler, more peaceable, and kindly temperament incident always to the pastoral habit of life. Eventually this tendency, though with many a set-back and cross-current, triumphed, and gave its general tone to the character and disposition of the entire Indian people. The primitive tribes, for the most part isolated from one another in gloomy and treacherous forest homes, received a training which developed the suspicious and harsher elements of human nature, brought into prominence the rugged aspects of nature as a whole, and was calculated to present few attractive features of generosity or humanity. Thus they were taught lessons of stern pettiness and disregard of the life or well-being of others, and more or less unconsciously cultivated a disposition akin to that of the wild beasts against which they had continually to be on their guard. These two currents of thought and action be traced all through the course of Indian history, and are observable at the present time among the racial and caste divisions of the country. It is to the credit of the innate courtesy and sympathetic kindliness of the native Indian that a merciful and generous spirit has, on the whole, maintained itself against religious and social prejudices, and, in the face of influences from within and from without, has to a large extent prevailed against isolating class-feeling and sectarian pride.

In the Indian sacred books the duty of pitifulness and compassion to all is a constantly recurring theme. Mercy (dharma) and its usefulness from injury to life (ahimsa) are primary obligations. Especially in the Bhagavat-Gita (q.v.), and in the type of religions thought and experience which it represents, the enforcement of this principle is most evident. The true man may be known by his friendliness to all; and not only the Brāhman, but other castes also, are bound by the same rule. The best sacrifice is that which refrains from doing hurt to any creature; respect should be shown for the life and happiness of even the lowest of creatures, and no animal being should ever be subjected to injury or wrong. In a similar manner the religious teaching of the schools that are in sympathy with the Gita (q.v.) enforces the same responsibility. Two comments upon these injunctions are perhaps natural and inevitable. They seem, in the first place, to show more regard for animal than for human life; it is probable that the latter, or regarded it as inclusively stated in the larger precept. And, further, the interpretation placed upon the rule has been, at least to the Western mind, in practice so one-sided and exaggerated as to foster in animal-mindedness, which is in the Vedic hymns, while they extol the forbearance and mercy together with the justice of the gods, leave it a matter of inference rather than of command that men should follow in their steps. In general it may be said that the decisive influence upon Indian character and belief has been exercised not by the ritual precepts, but by the humanitarian teaching of the Gita, the popular epic poetry, and by the tradition of the lives of the heroes of olden time.

The first organized protest against the sacrificial rule in the interests of a kindlier and more humane spirit was made by Buddha. The character of Gautama Buddha, as depicted in the extant literature and stereotyped in painting and sculpture, is singularly gentle and attractive. In practice as well as by precept he would seem to have urged the duty of forbearance and brotherliness to all, to do no harm to any living thing was a rule enjoined upon all who desired to unite themselves to his company and be enrolled among his disciples; and the purpose of the law which forbade the Buddhist monk to move from place to place during Vassa, the season of the rains, was at least as much to avoid the otherwise inevitable destruction of animal and insect life which would ensue, at a time when the multiplicity and activity of all such life are most apparent, as in recognition of the difficulties of travel incident to the season. Hindu monks and ascetics appear also to have observed Vassa, although not so universally or to the same extent. The merciful spirit which was the outcome and logical conclusion, pervaded Indian Buddhism as long as it remained in its native land, found expression in the acts and edicts of its
greatest emperor, Asoka, and emphasized and extolled a generous tolerance towards the feelings and opinions of others, which, with rare exceptions, provided the dominant and permanent atmosphere of life in all countries to which it has been carried. In India the influence which it exerted in this respect was strong, and remained as a permanent force in the life of the people after the Buddhist faith itself had become decadent and had perished from the land. In the wider aspect also, and as illustrating this spirit, Buddhism alone of the great religions of the world has never been guilty of persecution.

For from the ancient sect contemporary with Buddhism and possessed of similar views and doctrines, inherited also from Hinduism the principles of mercifulness and regard for life in all its manifestations, but carried these principles to an extravagant and abnormal length. Even noxious creatures, however irritating or insignificant, may not be destroyed; and the literal interpretation of the injunction to do no hurt to living beings has led with them to practical inconceivabilities of a serious nature, which are not counterbalanced by an equivalent development of the qualities of a real compassion. Buddhism, moreover, in the days of its strength in India, made provision for sick, infirm, or worn-out animals and birds in similar institutions, established and maintained by adherents of the Hindu and Jain faiths, for many centuries past and even at the present time, bear witness to a compassionate spirit worthy of all commendation. To Western thought, however, these institutions appear not seldom to defeat their own object, and to be accompanied by contradictions in feeling and practice which it is difficult to reconcile with the spirit of the implied religious teaching. That form has been preserved and the letter of the law obeyed; but the meaning and motive of the whole have, in many instances at least, lost their force and been disregarded in the external fulfilment of an obligation which satisfied the conscience, but did little to effect a change in the character or disposition of the individual.

With the coming of the Muhammadans a new spirit invaded India, antagonistic to the old, the consequences of which were great and permanent. To the fanatics of Islam, tortured in the camp and on the field of battle, the warlike spirit of Islam bore down all religious opposition and refused to accept the symbol and confession of faith of the vanquished creed. From the minds of the conquerors religious faith was driven, and a temper naturally stern and self-contained, had banished all feelings of compassion towards aliens or foes. Thus a spirit of inhumanity, based ultimately upon religious precept and belief, not only manifested indifference to life where the honour or extension of the faith was concerned, but urged the entire elimination of the infidel by force of arms. In a further respect also, and that wholly new to India, the example set has been followed with results calamitous for the whole peninsula, the untoward effects of which have only begun to be repaired within comparatively recent years. There is no evidence that before Islam led the way religious prejudice or rivalry ever found expression to any considerable extent in overt acts of persecution. The warfare between the sects was waged by word and argument in the schools and royal courts, but not by violence. The followers of Muhammad taught meekly to bear the sword into the world, and the spirit of division and hatred has never since that time been other than latent on both sides, ready to spring to arms and perpetrate cruelties on any violation of religious conity or outrage upon religious conviction.

Two further external influences deserve consideration, but attitude of the people to them has little importance. Of non-Christian ethical systems that of the Parsis is unrivalled for its merciful spirit and regard for the poor and necessities of its own religious community; and the large-hearted generosity of wealthy members of the Parsi faith has always been beyond praise. In general, however, the obligations of kindliness and mutual helpfulness are valid towards those of their own faith alone; and, except by way of example, it cannot be said that their principles or practice have made any deep impression on the nation as a whole. Their numbers, moreover, are too few, and their social sevance from Hindu and Muhammadan alike too complete, to enable them to exercise a wide-spread influence for good in this respect. They are and remain strangers in the land, whose character and life have been for the most part for themselves alone, neither shared in nor sought as a pattern by those among whom their lot was cast.

With Christianity it has been entirely otherwise. From the beginning it threw itself into the national and social life of the country, and, as far as the religious sentiment and pride of its opponents were concerned, it was prominent. Its example has been pervasive and powerful, and mainly through its preaching and its schools it has exercised a far-reaching ethical influence on the doctrines and practice of the Indian peoples. Whether for what it has exhibited to Christianity for moral precept and belief remains an open question, to which it is improbable that any definite or certain answer can ever be given. The later centuries, however, afford abundant evidence of the extent of Christian influence and the attractiveness of Christian ideals in modifying the hold of cruel rites upon the popular mind and in securing, although not always permanently, the acceptance of higher standards of right and mutual regard.

The influence described was never stronger than during the last and present centuries, and it was especially marked in the reform movements of the 19th cent., whose leaders never hesitated to acknowledge their indebtedness to Christian teaching and to the Christian Scriptures. Ram Mohan Roy, Keshab Chandra Sen, and others, to a large extent accepted the principles of the Christian faith, while repudiating its more distinctive doctrines (see art. BHAKTI SAMAJ). Moreover, it was on the ethical side that most would seem to have been learnt and adopted. The broad and kindly tolerance of all sects, which is a marked feature of the religious life of the Reformed Churches, the gentle habit of mind and speech, and the regard for the rights and consideration for the needs and sufferings of others, if not altogether due to the leaders' knowledge and appreciation of Christian principles, were thereby greatly strengthened. With the exception of the Arya Sanaaj (q.v.), however, which exercises a growing ascendancy in many directions, the contribution of these sects to the spirit and thought of India has not been so effective or lasting as at one time was anticipated. The influence has been restricted in its range, although within these limits a genuine effect has been produced.

At the basis of Indian religious and moral
thought, therefore, at least in its earlier stages, and as regards the conception of the nature of the gods, lay a belief in the generally beneficent and merciful character of the divine powers. The Vedic deities are, for the most part, kindly disposed towards all. In an age when thealogists of that in those remote ages also the quality of mercy found a place among the attributes of the gods because it was appreciated and practised by their worshippers. On the other hand, the awesomeness and threatening character which a nature-religion often and quite naturally assumes must not be overlooked. The two elemental characteristics of or tendencies met, and, being incapable of complete reconciliation, existed side by side throughout the entire development of Indian spiritual and ethical history. Like most Orientals the Indian is by nature gentle and disposed to kindness and generosity; and this aspect of his disposition found expression in the Bhagavad-Gita and kindred works, and was put into practice by those sects which more or less sincerely acknowledged its authority and were permeated by its spirit. Lower and darker forms of religious faith marked a criminal ritual, the effect of which on those who followed it could not fail to promote hatred and insensibility to suffering or need. And the more influential systems of philosophy, if not actively hostile to consideration of human and brotherly love at least stood aside, and found their interest and life in a region where the kindly mutual relations upon which mercy is dependent have no part.

It may be said, therefore, that the Indian faith that heaven is merciful has, on the whole, found expression in the Indian creed, and been translated into Indian practice. To generalize, however, with regard to races so diverse in origin, history, and character, on any but the broadest and most general basis, is impracticable. The cross-currents in the case of India are exceptionally numerous owing to the many elements that have entered into the life of the inhabitants of the country. An appreciation can take account of little more than the general characteristics of the majority, their habit of mind, and mode of action. These conceptions, however, justify to the fullest extent the description of the native peoples of India as by nature indulgent and merciful.

Literature.—The subject is discussed more or less incidentally in all works on the religions and philosophy of India. See art. HINDUISM, JANAKI, PARIN, BHAKTI-MARGA, BRIDHA-SARV.

A. S. Geden.

Mercy (Muslim).—To despair of God's mercy is one of the great sins, for mercy is one of the attributes of God, and to doubt whether He will show it implies disbelief in this divine attribute.

O my servants who have transgressed to your own hurt, despair not of God's mercy, for all sins doth God forgive (Qur' an, xxxix. 54).

Who desprieth of the mercy of his Lord, they who err? (xv. 60).

The words 'In the name of God, the Merciful One,' form the heading of all chapters of the Qur'an except the ninth. Al-Rahman, the Merciful One, is one of the names of God; it is used in some suras for Allah. The Qur'an refers in various ways to the mercy of God. The angels who celebrate His praises cry out: 'Our Lord! thou hast praised all things in mercy and kindness' (al. 57). Satan is said to have claimed mercy on the ground that he was a thing and, therefore, part of the 'all things.' The reply is that the mercy refers only to the obedient and 'adds to the rule' (Qur'an: xvi. 55). The mercies of the Lord is a Qur'anic expression, and the word 'mercy' is used as a description of divine books. The book of Moses is spoken of as a guide and a 'mercy' (xii. 28). The Qur'an is frequently called a 'mercy.' O men, now hath a warning come to you from your Lord, and a mediator: for what is in your hand is a mercy and a mercy to believers' (v. 55). And we send down of the Qur'an that is a healing and a mercy to the faithful, but it shall add to the niks of those who disbelieve. It is said of those who follow Jesus that God put into their hearts 'mercy and compassion' (lii. 27); but this is not consistent with the denunciation of them (xv. 29-33) and the prohibition of friendship with them (v. 56). The words probably apply to Christians who become Muslims, for the passage goes on to address those who believe:

'Fear God and believe in His apostles and His mercy will give you; He will bestow upon you a light to walk in' (liii. 28).

The two portions are: one for believing in Muhammad, and one for belief in the former prophets (Bawilaw). The light is either the Qur'an to enable the convert to walk in the right path, or, if the walking refers to the bridge (al-Siraf) inner than a hair, over which all must pass at the Last Day, then the 'light' is true faith which will preserve its possessor in his perilous walk over that bridge. One chapter of the Qur'an (lv. 1) is called Sura'il al-Rahman, the 'chapter of the Merciful One,' and begins: 'The Merciful One hath created man, hath taught him articulate speech.' The phrase 'God is merciful' is in constant use, and in practical daily life has overshadowed the idea of His righteousness and justice. It too often lends itself to an interpretation of mere satisfaction. A man commits sin and says, 'God is merciful'; so, instead of leading to repentance and amendment of life, his idea of the mercy of God too often tends to make disobedience easy and safe.

Literature.—There is no special literature on the subject; see literature under SALVATION (Muslim).

Edward Sell.

Mercy (Introductory and non-Christian).—In the earlier stages of religious development, as is attested by abundant examples in art. BLEST, ARISE OF THE (Primitive and Savage), ESCHATOLOGY, and STATE AFTER DEATH, the moral character of life in this world is not a factor either for securing immortality at all or determining rank and status in the future world, whether immortality is attained by an individual or be vouchsafed to all. In these early stages earthly position, notably chieftainship, or a particular manner of death—e.g., in battle—is a requisite qualification for life in the future world; character, whether good, bad, or indifferent, has no weight in deciding the question. When, however, religion advances, when immortality is not conferred automatically (if the religion in question believes it to be conferred at all), but is a boon which must be achieved by long and toilsome endeavour, then three conditions—sometimes separated, but usually combined in greater or less degree—are imposed: works, faith, and love.

The ideal combination of these three requisites is found in but one religion—Christianity; and within Christianity only Roman Catholicism gives full recognition in its official statements to all three. The doctrine of the good works and good works has fared poorly. Some religions practically ignore it, notably the Bhakti-marga (q.v.) of India and the Sufism (q.v.) of Persia. In both of these the attitude may be due to what they regard as undue stress on good works; of the New Age in India and Hinduism respectively; but, on the other hand, over-emphasis on faith and love to the exclusion of good works is dangerously apt to degenerate into an antinomianism which is a pitiful parody of religion at its best. Love alone is practically the sole condition of salvation to the Sufi and to the follower of the Bhakti-marga; faith is scarcely concerned except in so far as one naturally believes...
with firmness what one loves with fervour. Faith and works are the essential bases of Mandaeanism (W. Brandt, *Mandäische Religion*, Leipzig, 1889, pp. 171-174). Mere intellectual faith, without love or works, has never been held, so far as the writer knows, as a basis for salvation, except possibly in extreme Lutheranism.

The stress laid by St. Paul on justification by faith apart from the deeds of the law (Ro 3:19; cf. 5:1). Gal 2:9) must not be wrested from its context in the Apostle's teaching, for he himself tells us that love is greater even than faith (1 Co 13), and that 'faith worketh by love' (Gal 5:6; cf. 1 Th 1, 1 Ti 1 etc.). There was reason for him to speak disparagingly of works—it was necessary for him to combat the excessive nonism of Judaism. But St. Paul was a man of balanced judgment, and to say that he condemned all works because he deprecated reliance on them alone would be a misrepresentation of his true attitude. He recognized the value and the merit of good works (2 Co 8,1., enjoining the church at Philippi to 'work out your own salvation with fear and trembling' (1 Th 29), and at Thessalonica to establish their hearts 'in every good work and word' (2 Th 29). There is no doubt that he would have subscribed heartily to the monotheistic (Ja 29; cf. James 2:18) view that 'faith, if it have not works, is dead in itself.'

The doctrine of the merit accruing from good works may be viewed from two sides—from the side of man and from the side of the deity. From the human side, the more good a man does, or even tries to do, the greater is the merit which he deserves; from the divine side, it is recognized, practically by Christianity alone, that no man can be so rich in good works as to merit salvation; 'all have sinned, and fall short of the glory of God' (Ro 39); all human righteousness is, as Isaiah said (Is 64), but as 'pamum menstruate.'

Only a shallow thinker would stress the apparent antinomy here set forth; the two partial truths blend harmoniously in the perfect truth of the Christian faith. Indeed, the Christian is saved solely by merit, though not by his own. Our Lord Himself could say, as His earthly life drew to its close, that He had accomplished the work which His Father had given Him to do (Jn 17), and He emphasized the necessity of work (579). Only through the work consummated on Calvary did salvation come to man; only through the merit of the Sacrifice of the Atonement can we hope at last to be at rest in heaven (cf. Co lus. Trent, sess. v. ch. 3, sess. vi. chs. 3, 16, can. 10).

In the primitive stages of religion its essence may be regarded as works. Beliefs are fluid; ritual is stable; every rite must be performed with minute scrupulosity. If the proper rites are thus exactly observed, the result is certain (provided, of course, that no stronger counter-force opposes); and, if a happy hereafter is the object of such rites, that blessedness is thereby assured (cf. PCG ii. 234). If however, by law of 1932, the discharge of minimum requirements and, consequently, with minimum results. If one wishes for more, he must do more; perhaps, also, it will be well for him to provide a store against unforeseen contingencies. In that case also he must be more energetic in the doing of such works as will effect such a result; it is even possible that merits may be deliberately amassed for the purpose of achieving results unattainable for those who are content with the requirements imposed on every one; and in some cases the merits thus stored up are available for others as well as for him who originally accumulates them. The doctrine of the merits of our Lord's Passion and, in Roman Catholic theology, of the merits of the saints at once come to mind in the latter connection; and the Roman Catholic dogma of the merit of works of supererogation also falls within this general category.

The doctrine of merit is, on the whole, a characteristic of the higher types of religion. We find it, it is true, among the lower races, as when the Brahmin Igluna says that the souls of the brave will become beautiful birds feeding on pleasant fruits, but cowards will be turned into reptiles' (PCG ii. 7); and a similar belief is recorded of the African Maravi and of the Sattal of India (ib. pp. 5, 10). Elsewhere, as among the Ngaragas and the Negrees of Guinea, the good done enjoys immortality, the wicked being annihilated (ib. p. 22 f.). Among the Greenlanders the condition of happy immortality is to have been a hard worker in this life (ib. p. 50; the manner of death—e.g., by drowning or in childbirth—is also a factor. In all these cases, which might be much multiplied (e.g., from African and American Indian tribes (ib. p. 94 f.)—the distinction between 'good' and 'bad' must invariably be interpreted by the standards of the particular peoples concerned. If this is done, there is undoubtedly a very real ethical basis and a true morality—even though quite rudimentary— as the foundation of the belief in the future destiny of the soul.

The doctrine of merit is much developed in the higher religions, as in Egyptian (cf. art. ETHICS AND MORALITY [Egyptian]), § 7 f. and Vedic (cf. Muir, v. (1872) 284 ff.), and reaches its neo-Christian culmination in the Zoroastrian triad of 'good thoughts, good words, good deeds' as antithetic to 'bad thoughts, bad words, and bad deeds.' The course of the evolution is well summarized by E. B. Tylor (PCG ii. 84 f.): 'The idea of the next life being similar to this seems to have developed into the idea that what goes prosper and renown here will give it there also, so that earthly conditions carry on their contrasts into the changed world. Rather, the merit of man's condition will be a result of, rather than a compensation or retribution for, his condition during life. ... Through such an intermediate stage the doctrine of merit, as an axiomatic, was actually developed into the doctrine of future reward and punishment.'

Turning to the higher religions, we observe, first, that the teaching of Muhammadanism on the subject of merit is practically to the effect that good works are requisite, but that the true believer, being 'wicked' (ib.), and 'wicked to the core,' avoids, in reality, saved only by divine grace, while the wicked are punished eternally for the sins which they have committed, and for their refusal to submit to divine guidance. The problem is complicated here by the fatwâ of Muhammadanism (see art. FATâ [Muslim]).

At the Last Day 'every soul shall be compensated as it hath deserved; no injustice on that day' (Qur'an, x. 17). It is equally true that the ‘People of the Book’ believe in God and the last day, and doth that which is right, shall have their reward with their Lord' (ii. 59; cf. ii. 76, 100, 215, iii. 194, iv. 60, 121-123, 172, v. 75, vi. 40, xl. 14, xxv. 64-70; the idea is closely paralleled in the Crypto-Judaic); and elsewhere faith is conjured with observance of almsgiving and the appointed times of prayer (ii. 2-4), while throughout faith and works go together (e.g., iii. 190-199). The whole attitude of Islam on this matter may be summed up in the famous sūra (xxxvii. 22-55) which deals extensively with it:

' Gather together those who have acted unjustly, and guide them to the road for hell. ... But on this day they shall submit themselves to God ...' But they shall not be rewarded, but as ye have wrought, save the sincere servants of God' (v. 3; 'But for the favour of my Lord, I had surely been of those who have been brought (unto damnation).'

In a word, the saved declare (vii. 41): 'Praise be to God who hath guided us hither! We had
not been guided had not God guided us!' (cf. also E. M. Wherry, *Comprehensive Commentary on the Qur'an*, London, 1882-96, ii. 12, note 31, and index, s.v. 'Salvation').

The most complete development of the theory of merit among the ethnic religions is undoubtedly found in India. The main aspects have already been outlined at length in the art. KARAVIYA, where it will be seen that the Indian concept of merit is closely connected—as it is in several other religious systems—with belief in transmigration (q.v.) and in asceticism (q.v.). One aspect, however, the merit associated with the attainment of supernatural results in this life.

On the theory of sacrifice as set forth by the Brahmans—as i.e., that it is a rite which *ipsa facta* compels the result at which it aims—it follows that the accumulation of merit not only by sacrifice but also in other ways will constrain the gods themselves to bow before the might of the ascetic.

This power may be used for good or for evil, according to the purpose of him who possesses the merit in question. The records of India are full of stories of sages who have won enormous powers by the accumulation of merit, almost wholly by asceticism.

Kashyapa conquered Indra and all the other gods except Visnu, and ruled the world until Visnu outwitted him; Chyavan constrained Indra to do his will (Mahabharata, ii. 122-129). Likewise Purushottama outwitted Durvāsas by his curse brought the gods so completely under the power of the demons that only the famous charioteer of the son of Milk, which produced the great war (Vishnu Purāṇa, i. 9); Harīcandra's patience under trial deservedly raised him to heaven, though he was unrighteously debarred of his merit for a while; but, repenting in midair, still remains in his aerial city half-way between heaven and earth (Markandeya Purāṇa, i. 7). Kaikhosrau's virtues, like those of many other sages, were so pernicious to the gods that Indra sent the Apsaras Pramlocha to seduce him (Vishnu Purāṇa, i. 15); Narācārya thus obtained great boons, which he used wisely (ib. iv. 11); the demon Rāvaṇa, the evil figure of the Rāvya, was supernormal power by the merit of his austerities; Vishekhana, whose conduct with the almost equally merit-endowed Vasiṣṭha forms a important theme in the earlier Samkṛti literature, rose to be a Brāhman instead of being merely a Kṣatriya (Muir, I, 1572) (q.v.). Indeed, the idea recurs constantly throughout Sanskrit literature, the implication being always that the sage owns his power solely over the merit which he has accumulated; and in modern folk-belief the same supernatural might is acces- sed to by the Yogi and Païrā.

In later Zoroastrianism merit conditions very strictly one's position in the future world. Through full recompense of sin and complete confession of it ‘the duty and good works which were before performed [are] brought back to man’ (Siyast 10-Siyast, viii. 5-9). Those whose good and evil exactly balance go neither to heaven nor to hell, but to Hamastagan, the ‘Ever-stationary’ (cf. L. H. Gray, *Mission*, new ser., iii. [1892] 178), which in one text *Dastūr-is-Mihr*, xxiv. 6, x-xii. 2) is divided into two parts, one for those whose goodness slightly preponderates, and the other for those whose evil minutely overbalances the scale. Not only is punishment in keeping with one's sin (cf. L. H. Gray, *Zoroastrian Theology*, New York, 1914, pp. 56 f., 273-275, 280 f.), but in the future world justice is so strictly observed that even the good deeds of a wicked man receive reward.

In consequence, a man whose body was either cooked in the caldron or was undergoing some other torment had one of his legs stretched out unlocalized, because he had either showed a wisp of hay before a hungry animal that was tied and could not reach it or killed some noxious creatures with it. He had also to make a round of the city without food and drink his whole life long' (Dastūr-is-Mihr, p. 281, with ref. cf. also L. C. Canardelli, *Philosophy of the Mandaean Religion under the Sassanids*, Bombay, 1889, p. 107.)

Merits avail, as the doctrine of the merits of the saints teaches, not only for one's self, but also for others. This has been recognized by other religions as well as by the older form of Christianity. In the Buddhist *Upammapadi-Kṣanamāndika*, or ritual for admission to the Buddhist priesthood, the candidate prays: ‘Let the merit that I have gained be shared by my lord. It is fitting for me to share in the merit gained by my lord’ (J. F. Dickson, *JRAI*, 1875, pp. 7, 9). Buddhism, however, stands almost alone in thus transferring merit during this life. The transfer of merit from the living to the dead is less common, although the Marcinie practice of ‘baptizing for the dead’ may possibly belong here (cf. J. Bingham, *Antiquities of the Chr. Church*, London, 1843-45, iii. 451-450). It is, however, taught by the Roman Catholic Church that, in virtue of the article of the Communion of Saints, the faithful living may transfer their merits for the benefit of souls in purgatory. More frequently the transfer is made in the future world, particularly at the examination of this recently arrived soul. Thus, in Muhammadanism, according to al-Ghazali (*Perle pour女神, ed. and tr. L. Gautier, Geneva, 1875, p. 79), the man whose good and evil exactly counterbalance is hidden by Allah to borrow some small merit from a more fortunate soul that the balance may be turned in his favour (for other solutions of this problem cf. the discussions connected with the al-Araf of Qur'ân, vii. 44-46, and see J. B. Rüling, *Beiträge zur Chronologie des Islams*, Leipzig, 1895, p. 57 f.): M. Wolff, *Mahomet*, 2nd ed. (1872, p. 83).

In late Zoroastrianism sacrificial merit (kīrfah) of which the officiating priest is unaware goes to the treasury (gany) of the angels, who give the ensuing enjoyment ‘to the soul of that person who is content to be righteous in mind’ (Siyast 10-Siyast, viii. 4).

LITERATURE.—*FC* ii. 88-107; *MT* i. 66, 98-99, 293-302, ii. 360 f., 550-552.

LOUIS H. GRAY.

**MERIT (Christian).**—Merit is, properly speaking, an ethical idea. It implies the existence of at least three things: (1) a moral law under which man is placed, (2) a free will which enables him to obey it, and (3) a system of rewards and punishments by which obedience or disobedience to the law is sanctioned. Meritorious conduct is such as is agreeable to the law, and is at the same time voluntary; as meritorious, it claims honour or reward. Demerit, on the other hand, is the mark of such voluntary conduct as is not agreeable to the law; conduct to which this mark attaches demands punishment (for this general conception of merit see J. Martinou, *Types of Ethical Theory*, Oxford, 1886, ii. 80 ff.).

In Christian theology the idea of merit is closely connected with that of good works; and there is an important inter-confessional controversy between Roman Catholicism and Protestantism concerning the relation between the two. Both confessions recognize the ethical character of Christianity by declaring good works necessary to salvation, but, while Catholicism views good works, with certain limitations, as meritorious of eternal salvation, Protestantism denies that a steadfast point of merit is at all valid in the Christian faith.

1. The Jewish and Hellenistic doctrine of merit.

—The conception of the merit of good works and the demerit of disobedience was inherited by Christianity and Judaism, but only strictly speaking, to the prophetic religion of Israel. While the prophetic religion is, above all things, ethical, and its demand is for righteousness, the point of view under which right conduct is regarded is, in the first place, rather that of loyalty to Jehovah than that of the accumulation of merit and demerit, and the consequent hope of reward and fear of punishment. Typical of the prophetic attitude to the subject is such a sentence as *Me 6* ‘He hath shewed thee, O man, what is good; and what doth the Lord require of thee, but...
to do justly, and to love mercy, and to walk humbly with thy God.5 Nevertheless, there is no place reserved in the reserve of a judgment by which evil-doers are to be cut off; and in such a passage as Is 1:16, the alternative of reward for obedience and punishment for disobedience is very clearly propounded (cf. also 3:18).

With the codification of the prophetic morality in the Law, however, the standpoint of merit became much more clearly defined. In Dt 27-29, e.g., the whole duty of religion is brought under the heads of the blessing which rewards obedience to the divine commandments and of the curse which follows disobedience. In Dt 6:24-25 also is found the important idea of a 'righteousness before God' established by the performance of the precepts. Prophecy after the establishment of the Law tends more and more to be conformed to the legal standpoint. The general idea of reward and punishment is applied in a very atomistic way to the individual by Ezekiel (cf. 34:21-22; 36:25), other notable passages of a similar general tendency in his writings are sumptuous.

The practical way in which the motives of the hope of reward and fear of punishment operated in the post-Exilic legalism can be studied in Proverbs and Ecclesiastes (cf. Pr 10:5, Sir 12:12; see further). It should be noted, however, that so far there is no idea of rewards or punishments in a future life. The life after death is conceived in all the earlier stages of the Jewish religion as without moral distinction. In the further development of religion of the Greek period, however, moral distinctions are extended into the next life, while in the Palestinian Judaism antagonistic to Greek influence the scribes further developed the preceding legalism into a complete formalism.

From the different moral duties are regarded in great detail and in separation from one another. The moral task is not viewed as a whole, but as the sum of single observances. The duties of fasting, prayer, and almsgiving are especially prominent. Reward varies precisely as performance:

He who performs one precept has gotten to himself one accuser; and he who commits one transgression has gotten to himself a hundred accusers (Pr 3:28, Eccl. 12:7; see further). The reward is partly present, partly future; where this world fails fully to reward or punish, the next world redresses the balance.

This atomistic conception of moral duties is to give great prominence to the external and ceremonial duties. It leads naturally to that idea of righteousness by works which was so prevalent in Pharisaic circles in NT times.

Life under the Law was certainly more than wholly formalism and externalism. Examples of real heart religion were still to be found among the Jews of this time. C. G. Montefiore rightly insists that the tendency to formalism represents only one aspect of the later Judaism, and that it is not fair to judge it by this aspect alone (see Origin and Growth of Religion as illustrated by the Religion of the Ancient Hebrews [H.L. London, 1897, lect. ix.]). The same truth is emphasized by G. Dalman in his Worte Jesu (Eng. tr., The Words of Jesus, Edinburgh, 1902).

Nevertheless, the formalistic aspect of the religion of the scribes must here be emphasized, for the following reasons: (1) it distinguishes it from the earlier prophetic stages of the prophetic religion of Israel; (2) it explains the protest of the NT against the religion of the scribes; (3) it still influences the Roman Catholic conception of merit.

A brief glance at Hellenistic Judaism of the same period will conclude this part of our survey. The morality of the book of Wisdom and of Philo combines with the Jewish idea of obedience to the Law Plato's philosophical doctrine of virtue. On the subject of moral retribution Wisdom remains practically one with the earlier Judaism. Philo, however, further distinguishes himself both from the Wisdom literature and from the teaching of the scribes by avoiding the principle of 'atonism' and carrying back all virtues to one root, love or faith. The punishment of sin, moreover, as a living death, the reward of virtue as communion with God (see J. Drummond, art. 'Philo,' in HDB v. 207).

As regards the views of educated paganism, when Christianity came into being, the doctrine of Plato was a formative influence.

Philo 'in several dialogues expresses the thought that a judgment upon all souls takes place at death, at which they are weighed, and their deeds and virtues are summed up and their reward is given for their good and the punishment for their evil deeds (Iep. x. 614 ff., Grop. 333 ff., Philo. 1131). Here, however, the more conception of merit is overlaid by the fact, that he who strives after righteousness and virtue seeks vindications, e.g., and therefore will not be overlooked by God (Reps. x. 617 A B) (J. Runge, in FRR xx. 601).

The last thoughts carry us beyond the sphere of the doctrine of merit. Nevertheless, there can be no doubt that in paganism, as well as in Judaism, the view that regards God above all things as a rewarder of good and evil, and tends to review his relation to men under legal analogies, was the dominant and most usual religious theory. The total position of things is well summed up by Schultz in St x. 9:15.

When Christianity entered the world and found its first expression in the dominant Jewish circles, as well as among the spokesmen of the idealistic Hellenism, it sought of a divine repayment deciding according to legal standards, and therefore of a merit or demerit of men according to which their fate was to be decided, was a self-evident axion. A different relation to man that, the prophetic type of religion had ceased to be influential, was now in general imaginable. With faith in God as the representative of the moral order of the world, there appeared to be evidently given the faith that He rewards and punishes according to the rule of human law.7)

2. The doctrine of the NT.—The teaching of Jesus links itself on to that of the OT prophets, and also to that better side of the later Judaism upon which Montefiore and Drummond insist. It is, in the first place, essentially ethico-religions: religion and morality are completely blended in it. Jesus demands of His disciples an absolute conformity with the will of God (20°). This is the righteousness of the scribes (75). Without this none can enter into the kingdom of heaven (76). This better righteousness is, however, not to be attained by a closer conformity to the Law. Jesus further teaches that the only true righteousness is heart righteousness; that apart from a right motive, outward conformity to the Law is worthless. Again, the idea of God as the Father, so central in His teaching, is the very antithesis of and makes impossible a legalistic relation of the Jew to God. The righteousness which Jesus demands is, therefore, in the end just the spirit of sonship, energizing in the imitation of the Father (78).

While thus rejecting the legalism of the scribes, Jesus employs in His ethical teaching the current ideas of reward and punishment. That righteousness shall be rewarded and wrong-doing punished He reiterates again and again (Mt 5:36, 6:18 etc.). He speaks once (unless the good works [i.e. the good works of the Pharisees (Mt 6:18)]) he did not reprove the question: 'What shall I do that I may inherit eternal life?' (MK 10:19); in His answer, moreover, He points the asker to the keeping of the commandments. Of, further, the teaching of the parables of the faithful and unfaithful servants
(Mt 24:14), and of the talents (25:14), and observe again the principle expressed in Mk 10:29. The doctrine of merit, therefore, occupies a somewhat ambiguous position in the teaching of Jesus. On the one hand, there are fundamental doctrines which appear to leave no room for it; on the other, we find in places a general recognition of it. The position of things in the NT as a whole is much the same.

The rest of the NT corresponds exactly in its ethical demands with the teaching of Jesus Himself. The necessity of righteousness is absolute, both for the Christianity of the Epistles of James and the anti-Jewish Christianity of Paul, as well as for the other NT writers (cf. Ja 1:22, Gal 5:21-22, Eph 2:8, 1 Jn 3:18f., v. 9f.). Throughout the NT also the doctrine of the Fatherhood of God is fundamental, though not so dominant as it is in the teaching of Jesus. The idea of retribution according to works is also generally prevalent.

Paul, indeed, in the most important cycle of his teaching,—that upon justification,—appears to include the principle of merit altogether. Justification is by faith alone: by the works of the Law no man can be justified (Ro 3:24, Gal 2:26; 3:1; observe especially the direct exclusion, in so many words, of the principle of merit in Ro 4:6). Yet the Apostle appears as a prophet and punishment are according to men's works; and he regards this doctrine as axiomatic, feeling himself here on common ground not only with the Jews, but also with the Graeco-Roman world (Ro 2:9; cf., further, 2 Co 9:8ff., 2 Th 1, and also Col 3:24, Eph 6:1, 1 Ti 4:8, 2 Ti 4).

3. The doctrine of merit in the Christian Church.

We begin with primitive Gentile Christianity, and note that the whole cycle of Christian ideas by no means passed over equally to the Gentile Christians—what they received was naturally conditioned by their previous preparation. As to the necessity of good works, we find an intense moral earnestness in primitive Christian doctrine. Further, the idea of the twofold retribution according to works (reward or punishment) was familiar to the whole Graeco-Roman world; hence this element of NT doctrine was easily assimilated, and, indeed, emphasized in more than its proper proportion, so much so that we have to recognize in the early Christian Church a return to a great extent to the Jewish doctrine of works. The doctrines, on the other hand, which should have prevented this return, such as the Pauline doctrine of justification by faith, found but little receptivity awaiting them. Hence the doctrine of good works in the Apostolic Fathers is very similar to that of the Jewish Rabbis. Christianity appears as a new law, with the reward of keeping it. Just as in later Judaism, stress is especially laid on the merit of fasting and almsgiving. Cf. 2 Clem. xvi. 4 (almsgiving becomes a mitigation of sin); Born. xix. 2 Clem. iii. 4, vii. 4-6, ix. 5; Hermas, Sim. ix. xxviii. 5, x. ii. 4. We actually find already the idea of a work of supererogation (Hermas, Sim. v. iii. 3: 'If thou dost a good work beyond the commandment of God, thou shalt win for thyself more abundant glory').

In the Greek Fathers this line of thought continues, side by side, indeed, with the idea of grace, with which, however, it is never properly correlated. A more important and characteristic development belongs to Western theology, and begins with Tertullian. Himself a jurist, he gave to the doctrine of good works an essentially juridic stamp, which it has never lost in Latin Catholicism. A typical sentence is: 'A good deed has God as its devisor, just as also an evil one, because a judge is a rewarder of every cause' (De Pomp., 2). Tertullian, in fact, looks upon the whole Christian life of the Christian after baptism as strictly a life under the Law, its motives hope of reward and fear of punishment, and the result deter-
It is the merit, strongly systematized by him merita, and emphasis is the merit, of de, Disputatio, God's the merit, and the divine grace alone can enable men to perform good works, so that all our merits are God's gifts, and, when God crowns our merits, He crowns in reality simply His own gifts (Ep., exciv., 19).

The teaching of Augustine is systematized and modified by the medieval scholastics. The idea that eternal salvation must be merited by good works is common to them all. Baptismal grace simply puts men into a condition to win merit. Works are, therefore, properly meritorious unless they take from an inner principle of love (coritas), which is infused in the heart by the Spirit of God. Alexander of Hales, however, modified this doctrine by distinguishing between two degrees of merit, 'meritum de congruo' and 'meritum de condigno,' and two degrees of grace, 'gratia gratis data,' general grace, and 'gratia gratum faciens,' saving grace. He further taught that, while 'meritum de condigno,' or merit to which God owes a reward in strict justice, is possible only by the help of saving grace, 'meritum de congruo,' which God rewards because His mercy goes beyond strict justice, is possible by the help of general grace. In this way even the first grace can be merited (F. Lect., Dogmatic Theology, ii, 190 c. 334 f.). Thomas Aquinas was more cautious. He denied the possibility of merit before baptism. All merit, however, so far as it proceeds from the free will is 'de congruo'; so far as it proceeds from grace, it is 'de condigno' (ib. p. 549 f.). Duns Scotus taught that 'meritum de congruo' was possible to a man 'in puris naturalibus' according to God's 'potestas absoluta,' not, however, according to his 'potentia ordinata' (ib. p. 506 f.). Finally, the Nominalist, Garrellaeus, and the Schoolmen, taught without hesitation that he who does what is in him can merit 'de congruo' the grace which enables him 'de condigno' to merit salvation (ib. p. 613). It is from this point that the Reformation attacks, the Roman Catholic doctrine of good works takes its start. Luther, returning to Paul's principle of justification by faith, declares that the doctrine that salvation can be merited by good works, however modified by a reference to the cooperation of divine grace, is absolutely opposed to the pure gospel.

We ought to notice that Luther's point of view is not altogether without parallel in the Middle Ages. Above all others Bernard of Clairvaux presents views that are good works. He is foolish and mad, whoever he be that trusts in any merits of his life, who trusts in any religion or wisdom but only humility, contrite heart, and whole body and soul, other passages are given in A. Ritschl, Rechtsfertigung und Verschämlung, 1, Eng. tr., p. 312.

Luther, however, elevated what was thus occasionally expressed in the Middle Ages as a devotional point of view into the central doctrine of the faith. This teaching, in its ultimate form—there were many stages of development—is that salvation is by faith alone. Faith is the gift of righteousness, but righteousness received as a divine gift by faith is the condition of good works. Future works, by love, and its natural fruits are good works.

In opposition to Luther's view the Roman Catholic Church at the Council of Trent stamped with its approval the medieval doctrines of good works (sess. vii. can. 32). J. Bellarmine briefly sums up the Roman Catholic point of view when he says: 'The common opinion of all Catholics is that good works are truly and properly meritorious, and that not merely of some particular sort, but of eternal life itself' (De Justificatione, v. 1 [Disputationes, Ingolstadt, 1588—93, vol. iii.]).

Protestantism as a whole, both Lutheran and Reformed, completely agrees with the position of Luther, as expressed above. In the early Lutheran Church there was, however, a controversy as to the necessity of good works. If they were not to be regarded as the meritorious cause of salvation, the question was in what relation they stood to it. Melancthon used phrases which were thought to imply that good works, though not the ground of justification, were nevertheless a causa sine quon non of our acceptance with God. To this mode of expression Luther objected, as good works are the consequence, and in no sense the condition, of justification. Arianus, a pupil of his, maintained that, and taught that good works are not necessary to salvation, the believer being not under the Law but under grace, and accepted for Christ's sake apart from any merits of man. Luther denounced this view also, maintaining that the Law remains under the gospel, not indeed as a means of justification, but as a revelation of the will of God as to what men ought to do (C. Hodge, Systematic Theology, London and Edinburgh, 1872—73, iii. 238).

The controversy was renewed not long afterwards in consequence of the doctrine of George Major, professor at Wittenberg, who had also been a pupil of Luther and Melanchthon. Major was accused of teaching that good works were necessary to justification, but not to salvation. Luther and Melanchthon, in their turn, taught that good works were not necessary as meritorious of salvation, but were necessary as fruits of faith. He admitted that the sinner was in a state of salvation as soon as he believed, but taught that, if his faith did not produce good works, it was not saving faith. N. von Amsdorf, his chief opponent, taught, on the other hand, that, though the statement that good works were necessary to salvation might be true in a general way, it was misleading. Good works are, according to Amsdorf, the condition of salvation in the proper sense, which is identical with justification. Amsdorf went so far as even to say that good works were harmful to salvation (op. cit. p. 239 f.).

These controversies were closed by the Formula of Concord (1556), which, on the one hand, condemns the statement that good works are necessary to salvation, but, on the other, equally rejects the doctrine that they are harmful to salvation. Men are to be shown how necessary it is to exercise themselves towards God in good works, but also how necessary it is to avoid all thought of good works in the matter of justification. Finally, the Formula condemns the idea that faith in Christ can consist with intentional or wilful sin (Conc., x, 2, tome, ed. Leipzig, 1857, i., 'de Bonis Operibus').

The Formula of Concord closes the history of the doctrine of good works in orthodox dogmatism. It remains now only to notice that, since the Formula was composed, the whole question of the place of good works in Christianity has passed into a new phase. The essentially ethical character of modern Protestant theology, with its emphasis on the teaching of the OT prophets, and still more on that of Christ, made it apparent that good works are not necessary to salvation seem almost absurd. At the same time, in the sense in which the Formula of Concord denies that good works are necessary to salvation, modern Protestant theology is absolutely at one with it. It repudiates the Roman Catholic
conception of salvation by merit, and views good works, in essential agreement with the prophets, with Jesus, and with Paul, as the expression of the filial attitude towards God. There is, however, a powerful tendency not simply to deny the applicability of the category of merit to the matter of justification, but to regard it as a complete intruder in the domain of Christian theology. Justification by faith is regarded by Ritschel not as an alternative to justification by works, coming in in view of the failure of the latter, but as from the first the only method of salvation. The consequence of this view is an attempt to remove from theology the conception of the reward of good works in any other sense than that of their inherent fruitions. The Pauline doctrine of two-fold retribution is regarded simply as a remnant of Pharisaism or as a diabolic concession to his Jewish opponents (cf. Ritsch., Rechtsfertigung und Versoehnung, ii. 319; also W. Böyschlag, *NT Theol.*, Eng. tr., Edinburgh, 1895, ii. 179; H. J. Holtzmann, *Lehrbuch der neutestamentl. Theol.*, Frc. tr., 1899-1900, ii. 90). The category of reward is regarded as merely popular and not fitted to be the basis of a theological statement (cf. Holtzmann, i. 1921 f.).

The question is really that of the rights of 'a natural religion' with a Welsh sound-change to a Christian religion. The doctrine of twofold retribution has always been regarded as one of the pillars of a natural theology. Ritschel, however, regards the whole of the traditional natural theology, and in particular the doctrine of the Hellenization of Christianity, and as being no proper part of Christian theology (cf. Rechtsfertigung und Versoehnung, iii. 241 f., Eng. tr., p. 2601 f., also ii. 318 f.), maintaining that the doctrine of two-fold retribution is within the sphere of religion, but not Christian. The Ritschelian doctrine on this point has been by no means generally accepted. Many would still agree with C. Gore when, commenting on 1 Pe ii. 25, he speaks of natural religion as the necessary and essential basis of all evangelical teaching (*The Epistle to the Romans*, London, 1899, i. 105 f.). It must, however, be admitted that the co-existence in the NT of the doctrine of justification by faith and of reward according to works arises out of the use of language in the Christian religion, of which, if the Ritschelian position be refused, no satisfactory synthesis has yet been attained. And, further, Ritschel is surely right when he says that 'the rubric of good works in the NT is a contraction of a current of thought in the ethical side of Christianity' (iii. 627, Eng. tr., p. 663). The phrase 'good works' suggests just that Pharisaic atomism which is the very opposite of the teaching of Christ, and, while employed in the NT like many other phrases derived from Jewish thought, it is not one in which the specific genius of Christianity comes out, but rather one in connexion with which there is a perpetual danger of a return to a lower state of religion. A similar opinion has been expressed by one of the latest writers on Christian dogmatics, H. Schmoller, 'Der stilliche Begriff des Verdienste und seine Aufwendung auf das Verstandnis des Werks Christi,' in *NR* xvii. (1894) 73-5, 242-251; 1897, ii. 242-251. See also H. Sauer, 'Vereins- und Werke, gute,' in *PFR*.

ROBERT S. FRANKS.

MERLIN.—The name Merlin is a modification, first found in its Latinized form Merlinaus, of the Welsh Myrddin or Merdin. That the latter form in Welsh is not a mere orthographical variant of the former is shown by a line of the poet Dafydd ab Gwilym (middle 14th cent.), which attests the pronunciation with c in the first syllable. In medieval romance Merlin played a prominent part, in close conjunction with the Arthurian legend, as a prophet and as an expression of the filial attitude towards God.

There is, however, a powerful tendency not simply to deny the applicability of the category of merit to the matter of justification, but to regard it as a complete intruder in the domain of Christian theology. Justification by faith is regarded by Ritschel not as an alternative to justification by works, coming in in view of the failure of the latter, but as from the first the only method of salvation. The consequence of this view is an attempt to remove from theology the conception of the reward of good works in any other sense than that of their inherent fruitions. The Pauline doctrine of two-fold retribution is regarded simply as a remnant of Pharisaism or as a diabolic concession to his Jewish opponents (cf. Ritsch., Rechtsfertigung und Versoehnung, ii. 319; also W. Böyschlag, *NT Theol.*, Eng. tr., Edinburgh, 1895, ii. 179; H. J. Holtzmann, *Lehrbuch der neutestamentl. Theol.*, Frc. tr., 1899-1900, ii. 90). The category of reward is regarded as merely popular and not fitted to be the basis of a theological statement (cf. Holtzmann, i. 1921 f.).

The question is really that of the rights of 'a natural religion' with a Welsh sound-change to a Christian religion. The doctrine of twofold retribution has always been regarded as one of the pillars of a natural theology. Ritschel, however, regards the whole of the traditional natural theology, and in particular the doctrine of the Hellenization of Christianity, and as being no proper part of Christian theology (cf. Rechtsfertigung und Versoehnung, iii. 241 f., Eng. tr., p. 2601 f., also ii. 318 f.), maintaining that the doctrine of two-fold retribution is within the sphere of religion, but not Christian. The Ritschelian doctrine on this point has been by no means generally accepted. Many would still agree with C. Gore when, commenting on 1 Pe ii. 25, he speaks of natural religion as the necessary and essential basis of all evangelical teaching (*The Epistle to the Romans*, London, 1899, i. 105 f.). It must, however, be admitted that the co-existence in the NT of the doctrine of justification by faith and of reward according to works arises out of the use of language in the Christian religion, of which, if the Ritschelian position be refused, no satisfactory synthesis has yet been attained. And, further, Ritschel is surely right when he says that 'the rubric of good works in the NT is a contraction of a current of thought in the ethical side of Christianity' (iii. 627, Eng. tr., p. 663). The phrase 'good works' suggests just that Pharisaic atomism which is the very opposite of the teaching of Christ, and, while employed in the NT like many other phrases derived from Jewish thought, it is not one in which the specific genius of Christianity comes out, but rather one in connexion with which there is a perpetual danger of a return to a lower state of religion. A similar opinion has been expressed by one of the latest writers on Christian dogmatics, H. Schmoller, 'Der stilliche Begriff des Verdienste und seine Aufwendung auf das Verstandnis des Werks Christi,' in *NR* xvii. (1894) 73-5, 242-251; 1897, ii. 242-251. See also H. Sauer, 'Vereins- und Werke, gute,' in *PFR*.

ROBERT S. FRANKS.
Since it is clear that the legend of Myrddin (Merlin), in its earlier developments, must have arisen on British soil and have been circulated in the British tongue before considering its later evolution in Latin and other non-Welsh sources, to review the forms in which we find it in the literature of Wales. Unfortunately, the Welsh materials of the Merlin legend do not go far enough back than the 12th cent., but they doubtless embody more primitive features, though it is no longer easy to determine these elements with certainty. The Myrddin legend owed its popularity in Wales, in the 12th cent., and later, to its convenience as a vehicle for the enunciation of prophecies as to the ultimate success of the Welsh in their struggle against the English. In this form of the legend Myrddin is represented as having, in the battle of Arderhydrod (often wrongly written Arberedyd), caused the death of the son of his sister Gwendidlyd, who apparently was the wife of Rhyyderch Hael, a prince of Strathclyde, who, in the battle in question, was the opponent of another northern prince, Gwendidlyd, with whose court Myrddin as a poet appears to have been connected. According to this Welsh legend, smitten with remorse, he flies in his frenzy, under the pursuit of Rhydderch Hael and his hounds, to the Forest of Caledonia (666, 'The Book of the British'), where the Welsh mead-wine legend, allusion was sometimes made as the home of sprites and departed spirits. In his flight the bard's sole companion is a little pig, and with his companion he reaches the shelter of an apple-tree in the forest. Failing to bring this apple-tree, he is represented as uttering prophecies concerning future events in the history of Wales. It would appear from some of Myrddin's utterances that, in the course of his wanderings, communications were made to him by a female friend who bears in Welsh the name Chwilen or Chwili-plein, who is probably the original of the Viviane of the later Merlin romances. It is possible that, in earlier forms of the legend than those known to us from Welsh literature, this nymph or Egeria may have originally played a less shadowy part than that which comes to view in Welsh 12th cent. legend, when the chief use of the Myrddin story was as a vehicle for encouraging vaticinations. It is probable that in its earlier Welsh literature, not even in the Black Book of Carmarthen, which was written in the Priory of Carmarthen in the latter half of the 12th cent., is there any attempt to connect Myrddin with Carmarthen (in Welsh, Caer Myrddin), as was done by Geoffrey of Monmouth. Hence we may conclude that the story of the connexion of Merlin with the North, and with the battle of Arderhydrod—fought, according to the Annales Cambriensi (ed. Monumenta hist. Britannica, i., London, 1848, pp. 830-840), in A.D. 573—was traditional and well-established. The Northern associations of the story are further confirmed by the fact that Nennius mentions a Riderhen Hael (Hist. Brit., ed. ann. 597, ed. Mon. hist. Brit., i. 76), who is probably to be identified with Rhyyderch Hael, while the life of St. Kentigern (xlv., ed. and tr. A. P. Forbes, Histories of Scotland, 1874) names a Reiderhe, who is doubtless also to be identified with the same person, and a Lobken, or Lloken, whose name is clearly the same as that of Llalogan, identified with Myrddin in a poem purporting to be a conversation between Myrddin and his sister Gwendidlyd, found in the Red Book of Hergest and generally known as the Mymbyr y Myrddin). H. L. D. Ward (in Romania, xxii. [1893] 504 f.) has published another version of the Lloken story, from two fragments in the Brit. Mus., and has added conclusive evidence to show that Llalogan (Laloiken) is a proper name, found, e.g., in a Breton document called the Brûlon Cartulaires as Laloënt and Laloënb (see Benecke, Douanier, xxxi. 1891). Llalaw (Lalaw) is, probably, a purely Welsh variant. It may be stated that the precise site of Arderhydrod (given in an older form in the Annales Cambriensi as Armerihid) has not been fixed with certainty, the usual identification with Arthurel being based on a false pronunciation, but it is probable that the name Gwendidlyd survives in the place-name Carwheinlwyd (Caer Wendiddon) near Carlisle. In the fragments given above, Laloiken is said to have driven mad by the events of the great battle 'in campo inter Laidel et Carwanolus situato.'

The attribution of prophecies in Welsh literature to a bard Myrddin is not an isolated phenomenon, but is also found in the case of the Welsh poet Taliesin, in whose case, as in that of Myrddin, a legendary nucleus has survived, the chief feature of which is an account of his transformations. It is probable that the connexion of the name Taliesin with prophecy was earlier than that of Myrddin, as is suggested by a statement put into the mouth of the latter in the first poem of the Black Book of Carmarthen, in a dialogue between him and Taliesin about the battle of Arderhydrod, to the effect that Merlin says of the event 'I prophesied against that battle, as is known after that of Taliesin. The conception of a poet that is implied in the utterance of such vaticinations resembles the medieval idea of Vergil, who was then viewed more as a prophet and magician than as an poet. Under this apple-tree he is represented as uttering prophecies concerning future events in the history of Wales. It would appear from some of Myrddin's utterances that, in the course of his wanderings, communications were made to him by a female friend who bears in Welsh the name Chwilen or Chwil-plein, who is probably the original of the Viviane of the later Merlin romances. It is possible that, in earlier forms of the legend than those known to us from Welsh literature, this nymph or Egeria may have originally played a less shadowy part than that which comes to view in Welsh 12th cent. legend, when the chief use of the Myrddin story was as a vehicle for encouraging vaticinations. It is probable that in its earlier Welsh literature, not even in the Black Book of Carmarthen, which was written in the Priory of Carmarthen in the latter half of the 12th cent., is there any attempt to connect Myrddin with Carmarthen (in Welsh, Caer Myrddin), as was done by Geoffrey of Monmouth. Hence we may conclude that the story of the connexion of Merlin with the North, and with the battle of Arderhydrod—fought, according to the Annales Cambriensi (ed. Monumenta hist. Britannica, i., London, 1848, pp. 830-840), in A.D. 573—was traditional and well-established. The Northern associations of the story are further confirmed by the fact that Nennius mentions a Riderhen Hael (Hist. Brit., ed. ann. 597, ed. Mon. hist. Brit., i. 76), who is probably to be identified with Rhyyderch Hael, while the life of St. Kentigern (xlv., ed. and tr. A. P. Forbes, Histories of Scotland, 1874) names a Reiderhe, who is doubtless also to be identified with the same person, and a Lobken, or Lloken, whose name is clearly the same as that of Llalogan, identified with Myrddin in a poem purporting to be a conversation between Myrddin and his sister Gwendidlyd, found in the Red Book of Hergest and generally known as the Mymbyr y Myrddin). H. L. D. Ward (in Romania, xxii. [1893] 504 f.) has published another version of the Lloken story, from two fragments in the Brit. Mus., and has added conclusive evidence
and Castell Colwyn in Radnorshire, together with the rivers Taradry, Myrwy (the Monnow), Macha-awy, and Teth, while there are also allusions to certain famous battles of early Welsh history, which are probably taken from some current bardic list of such battles.

In the Book of Taliesin (14th cent.) there is a short poem (not without any account of the Myrddin legend itself), put into the mouth of Myrddin under the title Arwyes Prydfin Fawr ('The Prophecy of Great Britain'). The events which are mentioned are those of the Afallenau and Hoiana. There are other poems in the MS which, without expressly mentioning Myrddin, are clearly cognate with the Myrddin poems already mentioned.

In the Red Book of Hergest (14th cent.) there are two poems which have clear links of affinity with the Afallenau and Hoiana, but which may have been composed later. They undoubtedly belong, like the latter, to the Welsh Myrddin tradition. These two poems are (1) Kyfressi: Myrddin o Gweddyd y chofer, 'The Conversation of Myrddin with his friend Gweddyd,' and (2) Gweygarferd Vyrddin yn y bod, 'The Difused Song of Myrddin in the grave.' Though there are allusions to it, it is clear from it familiar with the legend of the Northern Myrddin. Myrddin in these poems is little else than the instrument of prophecy. It may be of interest to note that a common feature of the Myrddin and other poems of the same age is an expectation of the return of the princes Cynan and Cadwaladr to life, in order to lead jointly the Welsh forces to victory over the English.

It is in the Kyfressi poem that the term Llallagan, already mentioned above, occurs. The term itself is doubtless in origin a proper name, yet W. O. Pugh (Yat. Diet. of the Welsh Lang., 1882, s.v.) interpreted both it and Hitalawg as meaning 'twi brother.' It is not improbable that the term was misunderstood in this sense, even by the author of the Kyfressi, since he makes Gwengdyd speak of 'my Llallagan Myrddin,' while the term Hitalawg, as a synonym for Llallagan, is doubtless invented from it by analogy. In the original MS of the poem, the word Llallagan was doubtless a proper name, as it is in the Life of St. Kentigern, in the passage 'in curia elius (Roderic) era Li homo fatuum vocatus Lalacoen,' and it is this Lalacoen that is identified in the Silu of Meirchion, but this word of the Afallenau and Hoiana with the Gweygarferd Vyrddin poem together with English prophecies by Bridlington, Bamister, Thomas of Ercrechane, and others. We find the Afallenau and Hoiana in Peniarth MS 59, a MS of the first half of the 14th cent., while, in the latter half of that century and in the 17th, the Welsh Myrddin poems still continued to be copied, as we see from Llanstephan MS 41 (1610-30), now in the National Library of Wales.

In the foreword to the book of the Ardergydd or northern legend of Merlin, with the associated prophecies, has been traced. The Merlins thus depicted is sometimes called Latin 'Merlinus Silvestris,' and in Welsh 'Myrddin Wyllt' ('Merlin,' or 'Wyllyt,' 'primeval'), a name by which he is known that of 'Merlinus Celdinonis' or 'Caledonis,' being so called in order to distinguish him from Merlinus Ambrosius, who is a creation of Geoffrey of Monmouth, through the substitution of Merlinus for the Ambrosius of a narrative which Geoffrey found in Nennius. A later MS of the Annales Cambriae, in its account of the battle of Arderydd, reflects the Merlins Silvestris tradition, in its addition to the original entry of the words 'sterillicos Elfer of Gunderdun in filium Kelbian in quo bello Guendolen eccidit: Merlinus insanus effectus est:' In keeping with the Northern conception of Merlin already mentioned, but also influenced by Geoffrey's account in connexion with the name Lalacoen, the Life of St. Kentigern (Scotichronicon, loco cit.) refers to Merlin's suffering in the words 'ego sum Christianus, licet tanti nominis res, ultrini urarum vates, Merlinschus iocundae in hac solitutinde dira patres fata,' though the influence of Geoffrey is here unmistakable in the reference to Vortigern.

2. The Vita Merlini.—This is a Latin hexameter poem, giving, in verses of considerable ease and fluency, an account of Merlin's life and adventures. Nearly all writers upon it have taken it, owing to
its dedication, to be the work of Geoffrey of Monmouth, but the legend which it embodies is so entirely different from that given in Geoffrey's *Historia* that it is in the highest degree improbable that he is its author. The legend which it involves appears to be derived, like that of the Welsh *Llualian* and *Huwacau* and of the 'Lamolien' tradition that is contained in the Life of St. Kentigern. Ferdinand Lot has published an analysis of the *Vita Merlini* (Annales de Bretagne, xv.), and has shown it to be later than the *Lamolien* fragments already mentioned; but he too readily assumes that Geoffrey was its author, and goes too far in seeking to trace the influence of the *Vita Merlini* on the Welsh Myrddin poems of the Black Book of Carmarthen and of the Red Book of Hergest, with the exception of the first poem of the former, which purports to be a dialogue between Myrddin and Taliesin. The Latinized proper names of the *Vita Merlini* show quite clearly that they were formed by someone who was familiar with the Welsh names of the Myrddin legend, such as Ganiea for Gwendydd, Telgesius for Taliesin, and the like. At the same time, there are important departures from the Welsh form of the legend, which we are not given in any of the Welsh *Lamolien* to Myrddin; but in the *Vita Merlini*, as in the *Affallenau*, there are prominent allusions to apples, and the whole setting of the Latin poem, and of the Welsh poems, in spite of certain discrepancies, is the same. The *Vita Merlini*, however, contains one name, Mer- dinus, which, as Lot has pointed out, is probably derived from an Irish rather than from a Welsh source, being, in all likelihood, that of the hero of the voyage of Meekhn. Though the *Vita Merlini* appears to be the earliest work in which Geoffrey, as we have seen, is familiar with the *Vita Merlini*, it appeared during his lifetime, having been written about 1148, while he died in 1154. It was dedicated to Bishop Alexander's successor, Robert, who was a man of considerable influence at the court of Stephen. The poem is of great interest as showing the popularity of the Northern and Welsh type of the Merlin legend in cultivated circles in Britain in the 12th cent., but familiarity with Geoffrey's history is already shown by the references in his work.

3. Merlin in Geoffrey and in the Chronicles.—The introduction of the figure of Merlin into the medieval Chronicles is due to Geoffrey of Monmouth, who deliberately transformed the Ambrosius of Bede into a figure of his own; Nennius himself is clear from the fact that, in the *Prophecy* and in the last part of the preceding book, Geoffrey calls Ambrosius Merlinus. The innovation in question was first made by Geoffrey, when he published the *Prophecy of Merlin* as a separate work, before the appearance of his *Historia Regum Britanniae*. This Prophecy must have been published early enough for Ordericus Vitalis to quote from it, as he does in bk. xii. of his *History*, written about 1159 or 1161. Later it was incorporated into Geoffrey's *Historia*, and forms bk. vii. of that work. The Ambrosius with whom Geoffrey identified Merlin first comes to view in Gildas (de Excidio Britanniae, xxv., ed. Mon. Hist. Brit. i. 15), as Ambrosius Aurelianus, but the first to make him into a legendary figure was Nennius, who describes him (xii.-xlv.) as a child without a father, for whom Vortigern searched, by the advice of his sorcerers, in order to render stable the foundations of a tower that he was in the act of raising. He is associated with the ancient Carnarvonshire fort of Duncreich, near Bedgelert, and is represented as a sorcerer (magus), who prophesies the final overthrow of the English by the Welsh. Ambrosius in Geoffrey appears as a separate character (Hist. Brit. viii. 1), but the rôle which he plays in that author was filled in Nennius by Guorthann (Vortimer). It is clear that Geoffrey means to make Merlin with Carnarthen (Hist. Brit. vi. 17).

Another new element which Geoffrey introduced into the story, and which became a notable feature of the Merlin romance, was the suggestion that the boy's father was a supernatural being of the type known by the name of incubus. The suggestion made by Nennius, that the boy was the son of a Roman consul, is omitted by Geoffrey. The idea of introducing an incubus into the story probably came from a reminiscence of the pseudo-Beled (de Elen. Phil., bk. i. (PL xc. 1131), who doubtless reflects a view put forward by St. Augustine. The germ of the conception of Merlin as a sorcerer was already in Nennius, and the idea of putting pro- phesies into his mouth was ready to Geoffrey's hand, and even then a practice of the times, as is seen by Geoffrey's own references (ii. 9, xii. 18) to the prophesying of the eagle at Shaftesbury. Gildas, Cambrensis, too, quotes prophesies of Merlin that were given by him, as did Nennius. This was also done by P. H. Fletcher, *Arthurian Material in the Chronicles*, Boston, 1909, p. 53, note 1). He makes a distinction between Merlins Ambrosius and Merlins Silvestris (or Celidomus), and attributes to the former only prophesies taken from the second, like other states (Hist. Camb. ii. 6, 8) that he discovered, in an out-of-the-way locality, a copy of the prophesies of Merlins Celidomus in the British tongue. Geoffrey gives prominence to Merlin's powers, not only as a prophet, but as a magician, and represents one after another of his prophesies as coming from the mouth of Merlin. That Geoffrey had visited Stonehenge from Ireland to Salisbury Plain and changed the forms of Uther and his companions. In Geoffrey, however, Merlins name is not mentioned later than Uther's reign, but subsequent legend and romance could not resist the temptation to associ- ate him with Uther's son, Arthur. In romance, Merlin, as a magician, tended to come more and more into prominence, until at last he became a figure second only to that of Arthur himself. In the case of subsequent Chronicles, the following points may be noted. The Welsh *Brut Tysilio*, an adaptation of Geoffrey's *History*, shows a development on the lines of the later Romances, and probably under their influence. For example, Merlin is identified with the *End of the Romans*, with the priest of Lucius and other evil spirits, and the increased prominence of the magical conception of his character is seen by the statement that he, by his magic art alone, is able to draw the stones that are to be carried from Ireland to Salisbury Plain as far as the ships, after the complete failure of the warriors. The same tendencies may be noted in Wace, who omits Merlin's prophecies, with the exception of those about Vortigern, on the grounds that they are unhistorical to him, while he invests Merlin throughout with superhuman powers, and does not even mention any mechanical assistance in the transmission of the blocks of Stonehenge. Traces of romantic influence come to view also in the Chronicle called *Draco Narcanus*, c. 1170; ed. R. Howlett, *Chron. of the Reigns of Stephen*, etc., London, 1884-89, i. 589-575, which, it may be stated, contains many allusions to the section of Merlin's prophecies that relate to the first half of the 12th century.

In Layamon's *Brut* there are a few additional touches to the story of Merlin, such as Merlin's explanation that the immediate cause of the fall of the tower which Vortigern was trying to build was the fighting of Druids (derivative of the Ambrosius), near Bedgellert, and is represented as}
marked emphasis on the supernatural conception of Merlin, which shows itself on the side both of supernatural knowledge and of supernatural power. There are some points of contact in the narrative with that of Merlii; Merlin is entirely supernatural, as, e.g., where he transmits the stones to Stonehenge by means of magical songs, or where he magically changes Uther’s form. Merlin, too, gives Arthur new strength in his contest with Enkidu; here again there is a link with the Vita Merlini, where it is said that Arthur was conveyed to an ever-to-be-remembered island, on which a royal maiden dwelt. In the case of other chronicles, some omit the prophecies or certain of them, as, for instance, Alfred of Beverley (c. 1159; ed. T. Hearne, Oxford, 1716), who omits most of them, and Richardus Cluniacensis (in 1162), who omitted the prophecies in the first edition of his Universal Chronicle (ed. L. A. Maratoni, Antiquitatiota Britannicae, i. 1077.), but who found it advisable to include them in his second and third editions. Again, it is clear that all chronicles did not share equally in the tendency to exaggerate the powers of Merlin; e.g., Ralph of Cirencester in his Chronicle (ed. Beverley, London, 1851) has a mere allusion to Merlin’s transportation of the stones of Stonehenge.

There are, as already stated, traces in Giraldus Cambrensis of an attempt at the fusion and reconciliation of the two Merlii. He follows Geoffrey in his conception of Merlius Ambrosius with Cawmarthen, while he knows of the madness of Merlius Caledonius, but attributes it not to remorse at having killed his sister’s son, but to fright at the sight of an apparition in the air. Giraldus, like many of the chroniclers who succeeded Geoffrey, succumbed to the temptation of bringing Merlin down to the time of King Arthur. One story, which Giraldus records (Itin. Camb. ii. 6), to the effect that Merlius Caledonius had been found near Neivyn in Carnarvonshire, is probably connected with the legend that associated him with the island of Bardsey. Merlius is represented as a prophet, and was influenced by some traditions at Cawmarthen, where a ‘Merlin’s Grave’ was pointed out, while in Scotland it was located at Drumnackler, anciently Dumneller, in Tweeddale.

The wide spread popularity of the prophecies of Merlin may be gauged by the fact that two Latin poems appear to be extant embodying a number of them from the pen of a Scandinavian monk called Gunlapis Leif of Thingeya, while a similar MS in the Copenhagen Library was translated into English, with the History of Hufldan Einar, and published in London in 1718 (see San-Marte, Die Sagen von Merlin, Halle, 1853, p. 18).

In 1185–89 there appeared a commentary on the prophecies of Merlin by Alenus de Maule, and in 1605 it was published at Frankfurt. In this commentary Alanus testifies to the existence, in the Brittnity of his day, of a strong belief in the prophecies in question. Further, John of Cornwall, a disciple of Peter Lombard, commented on these prophecies publicly in the University of Paris (see Prophétie Merlinis cum expositione Johannis Cornubensis, ap. K. J. Greith, Speleolog. Vatic., Franzenfeld, 1838, p. 95). The credence given to the tenets of the Celto-German and Gallic traditions in France, well into the 17th cent., if not later, and the Council of Trent sought to counteract the considerable effects of this popularity by putting the prophecies on the Index. A similar attitude of mind to that of the Council of Trent is reflected in the work called Vincentii Bolognaeensis Speculum Historiale (xx. 20). For English editions of the Life and Prophecies of Merlin, see D. 2. 4. Merlin in romance.—Merlin first comes to view as a character of romance proper in a poem of which only a fragment has come down to us, probably dating from the 13th cent., and usually attributed to Robert de Boron (ed. Paris and Ulrich, in their ed. of the Huth Merlin; see Let.). This poem was the basis of a French prose work which forms the Romance of Merlin, and this, again, is thought to be partly the work of the same author. It has two forms: the first being generally called the ‘ordinary’ or ‘vulgate’ Merlin, while the second is known as the Suite de Merlin. Of the latter work Malory’s first four books are an abridgment, and from it is derived one of the minor Arthurian stories, namely that of Balin and Balan. In the Merlin romances, as in the later developments of the Arthurian story (see Arthur, Arthurian Cycle), there is an ecclesiastical or theological development, the leading motive being the conspiracy of the world of demons to produce an Antichrist, who would be the means of rendering the work of the Incarnation ineffective. Thus the birth of Merlin is represented as a kind of temptation to the infant through the machinations of the demons, he is brought into the world as the child of a woman whose family has been ruined by the evil spirits, and who is herself seduced by a demon. Providentially, however, Blaise, the demon, the demonic gifts of magic and prophecy, and these powers he puts to beneficial use even in his infancy, by saving his mother’s life and startling her accusers by revealing their family secrets. The narrative then proceeds on the lines of Geoffrey’s History in the account of his relations with Vortigern, Ambrosius, and Uther. After this, Arthur is represented as having been committed as an infant to Merlin’s care, and Merlin hands him over to Antor, who brings him up as his own son. It is Merlin who reveals to Arthur the fact that he is the son of Uther Pendragon and Igerne, and it is in his guidance and counsel during the earlier period of his rule. At the termination of this period Merlin vanishes from Arthur’s court. The stories accounting for his disappearance vary in different forms of the romance. One story has him betrayed by a maiden called Nimiane or Viviane, probably the Chwilmian of Welsh legend; but in some versions of this narrative she is represented as a water-fairy, in others as a king’s daughter. With this lady Merlin is in love, and she, in the spirit of Delilah, obtains from him the secret of his magical power, and uses this knowledge to cast him into a profound sleep and to imprison him alive in a rocky grave. According to this account, Merlin uttered a loud cry, called the ‘Brait,’ before he died. Apparently this form of the story was the most popular. In another version his prison is not of stone but of air; and, though Merlin in this prison can see and hear everything, he can be seen by none. He can also hold converse with wayfarers who pass his prison, and one of these happens to be Gawain. The prose Percival contains another form of the story, according to which Merlin is not imprisoned by his mistress, but retires to a hermitage in Britain and in France, well into the 17th cent., if not later, and the Council of Trent sought to counteract the considerable effects of this popularity by putting the prophecy
introduction to the prose Lancelot and to the Arthurian cycle generally.

The Life of Merlin, as already indicated, is to be found first in the fragmentary poem, attributed to Robert de Boron, giving, however, only the introductory part of the story, in a single MS of the latter half of the thirteenth century, usually called the Flanders, or English, version. The Life of Merlin, on the other hand, is the early English prose version based on this poem in combination with the early history of the Grail, which bears the name Joseph of Arimath.; In two cases the Merlin story forms a small Arthurian cycle through the hands of various authors, of which Merlin, the first, or so-called proper, version, was not so much as the ordinary or 'vulgate' Merlin, which is a long and elaborate romance, several copies are extant. This story is continued in two forms, each of which has survived in a single MS. One of these is called the Huff Merlin, who bore the expense of its publication. It is a version of which Malory made use in his rendering of the story, and the Spanish and Portuguese translators also based their versions upon it. The other sequel is MS 357, also in the Bibliothèque Nationale, and is called by Paulin Paris the Livre Artus.

In English the earliest form of the Merlin Romance is a metrical translation called Arthur ou Merlin, which was made from French at the beginning of the 14th cent. and a later translation, generally known as the great prose Merlin, was made about the middle of the 15th century, Spenser (Fynes Queen, canto iii) alludes to Merlin, and there is reference to his destruction by the Lady of the Lake in Ariosto (Orlando furioso, canto iii, st. 10). The romantic development of the Merlin story is doubtless mainly due to the desire of the French troubadours to bring the legend of Merlin, like that of Parsifal and Tristan, into harmony with the general civilization and culture of their time. In the 19th century. Tennyson utilized the Merlin legend in his Idylls of the King, and gave a version of his own of the character of Viviane.

5. Merlin in satire.—Like the other medieval romances, that of Merlin tended, in the eyes of a more critical age, to provoke satire, and so it is not strange that Cervantes ridicules and parodies it in his Don Quixote, while Rabelais also parodies his Merlin, in his Gargantua and Tristan, into harmony with the general civilization and culture of their time. In the 19th century, Tennyson utilized the Merlin legend in his Idylls of the King, and gave a version of his own of the character of Viviane.

MESMERISM.—See HYPOSTHOSM.

MESIALANS.—See ECHECICHS.

MESIAH.—I. SCOPE OF THE ARTICLE.

Much confusion is caused by the fact that the term 'Messianic' is used in a much wider range of meaning than 'Messian.' It has come to be applied by Christian writers to everything in the OT which is thought to refer to the coming and work of Christ or to the Church, while, even where this implication is wanting, it is given very generally to all passages which speak of the hope of a better and glorious future. 'Messian,' on the other hand, refers definitely to a person, and it would seem, therefore, that the term 'Messianic' should be confined to passages which imply the coming of an extraordinary person, normally regarded as a king, who is to be in a special sense the Messiah, given over by God, the object of their expectation and of deliverance and of judgment: He alone is Saviour and Redeemer in the OT; the nation as a whole, or the dynasty of its kings, is the object of His favour. In such cases the Christian interpreter may have good grounds for believing that, from the religious point of view, such hopes were realized in the coming of Christ, but historically they are not the same as the expectation of a Messiah, and can be called Messianic only in the lax sense. A wider and wider expectation belongs to the subject of eschatology (q.v.), and this article will, therefore, be confined to the consideration of the Messiah in the strict sense, and the term 'Messianic' will be used only in connection with him. It may be added that this term does not always imply a Messiah, neither does the
MESSIAH

571

Messianism himself always appear in a strictly eschatological setting.

II. THE MESSIAH OF THE WORD.—The term 'Messiah' represents the Heb. Mashiah, the Aram. M'sh'lah, 'anointed one.' It is used quite generally in the OT as an epithet, both of priests (Lv 4:6, etc., and perhaps Dn 9:5) and of kings, e.g. Saul (1 S 16:12, etc.), while in Is 45:1 it is applied to Cyrus. Nowhere in the OT does it occur in its later technical sense, which is first found in Enoch and Psalms of Solomon (see below, IV. 1). In the OT language any Jewish king is 'the Lord's anointed,' and the phrase is in no way confined to a single pre-emanent king. In 1 S 10:5 and 1 Ch 16:22 'anointed ones' occurs in the plural, of the patriarchs. Dalmann suggests that Messiah in its later sense is a shortened form of 'Jehovah's Anointed,' and that no single passage of the OT was responsible for its adoption.

'Christ', of course, Χριστός, the Gr. equivalent, which translates the Heb. Mashiah in the Septuagint. In view of discussions connected with its use in NT it is important to note that it is sometimes used without the article even when it is an epithet standing in apposition to a proper name—e.g., 1 S 20:36. The general significance of anointing is discussed in the OT under that heading. In view of the fact that 'Messiah' did not become a technical term till late, the primitive meaning of anointing is quite irrelevant in considering the ideas associated with the figure; e.g., even if it be true that anointing may from the image of the god to the king, we cannot argue that the Messiah was regarded as a divine being. Anointing had come to denote the two ideas of consecration and unconditional.

III. TEACHING OF THE OT.—In order to discover the general trend of the OT teaching it is essential first to discuss, however briefly, the exegesis of the separate passages which speak, or might reasonably be thought to speak, of the coming of a Messiah; in no other way is it possible to realize the precise extent and nature of the hope. The examination is complicated not merely by difficulties of interpretation, but also by questions of authority and tradition. Here it should be noted that, if critics reject as late certain passages which refer to the Messiah, it is by no means always from any a priori unwillingness to allow the Messianic hope to be of early date or to participate in it. In the NT, but also in external evidence such passages seem to be inconsistent with the context. In many cases they presuppose the Exile in a way which seems to be impossible in a pre-Exilic writer; in others the notion of a promise seems to nullify the message of judgment and punishment which occupies the central place. Here the criterion to be applied is a very delicate one. How far did threats and promises actually exist side by side in the same book? The question cannot be answered without a scrupulous examination of each passage as regards as 'unauthentic' and late, it does not lose its value, either historical or religious; and it still remains evidence of the Messianic hope, only in a different age and circle from that to which it was commonly assigned. The principle being admitted that the prophetic books are composite works, comprising elements of various periods, each case must be judged solely on its merits.

1. The data.—It will be well to begin with 2 S 7:

"The Words of Jesus, p. 291; see p. 292 for later Jewish use of the term, as the passage which is most clearly typical of the OT belief, at any rate on one side. It seems to be Deuteronomic in tone, and even earlier than the reign of Josiah. Its main purport is to insist on the permanence of the Davidic dynasty (vv. 11-16). In its context this is contrasted with the fall of Saul's house (v. 3), but we may also assume an implied contrast with the various short-lived dynasties of the Northern Kingdom (cf. Hos 8). The passage itself does not speak of any single pre-emanent or final successor of David and is in no way eschatological, but precisely in proportion as the actual occupants of the throne proved themselves unworthy would it be natural to look for some one who could realize the ideal. And, if at the same time there were other expectations of a wonderful Saviour, the two lines of hope would easily coalesce. At any rate, the personal Messiah in the OT is nearly always associated with the Davidic dynasty, and the references in the early prophets which have any claim to be regarded as Messianic are all connected with it. They may, indeed, be older than 2 S 7, and in any case this passage will hardly be the origin of the hope; it rather embodies and gives literary form to something which already existed.

In Am 9:11-12 there is a promise of the restoration of the Davidic dynasty, with a personal Messiah, but the passage is almost certainly an Exilic addition (so J. Wellhausen, K. Marti, G. A. Smith, etc., though S. R. Driver* defends it with some hesitation).

In Hosea it may not be necessary, with Marti and Volz, to reject all passages which speak of future happiness, but the only verse which is in any way Messianic is 3:8. 'Afterward the children of Israel return, and seek the Lord their God, and David their king.' Here, again, the stress is laid on the Davidic dynasty; but either the whole verse or at least the words 'David their king' are of doubtful authenticity.

The crux of the question with regard to early Messianic prophecy is reached when we come to Isaiah.

(a) Is 7:14-16. — Until a new factor was introduced by considerations derived from comparative religion, it was becoming generally agreed that the passage had no reference to the birth of the Saviour, or child, or of a Saviour-child or king at all. As Gray points out, the promised sign is not necessarily a miracle or a prophetic (cf. Ex 3:2, 1 S 2:11), but is to be looked for in 'a chain of events predicted.' By the time a child seven years old reaches a certain age the promised deliverance will have come. His name Immanuel does not imply the divinity of the child, or even that he will play a role as God's agent in the deliverance (as a matter of fact, there is not the least hint that he does anything of the sort), but, after the common Hebrew usage, expresses the point of view of the parents; it is the reverse of Ichabod (1 S 4). H. Graetz, however, and others argue that the passage is intelligible only if we suppose an already existing belief in the advent of a divine Saviour-child, who is to be born mysteriously. On this view the virgin is 'the virgin of prophecy,' the mother spoken of in the tradition; 'butter and honey' are the food of the gods, as in Iranian and Greek myth; and the whole passage

Cambridge Bible, 'Joes and Amos,' Cambridge, 1897, p. 119ff.

* Reference should be made to the very full and excellent discussion of this and the other Isianic passages in B. Gray, ICC, 'Isaiah,' Edinburgh, 1912.

has a mythological background. The theory has an undeniable fascination, but its main hypothesis cannot be regarded as established. In this case it rests on the probably false assumption that the sign must be of a miraculous nature. Further, neither the article nor the noun in הָדוֹלָנָה requires the meaning put upon it. If we reject the reference to the wife of Isaiah or Ahaz or to some other particular mother, the definite article may be generic as in Am 3:12, while it is now generally agreed that הָדוֹלָנָה does not necessarily denote virginity, and is certainly not the word which would have been chosen if the supernatural character of the birth without a human father had been the point to be emphasized.

'Bitter and honey' may be merely a symbol of plenty, a variant of the common 'milk and honey.' But perhaps the chief objection to the mythological view is to be found in the fact, to which attention has already been called, that Immanuel does not play any part in the deliverance, nor does he afterwards appear as a factor in this or any other prophet's hopes for the future. The apparent reference to Immanuel in § 5 is quite meaningless; there has been nothing to suggest that the child is the king to whom the land belongs, and we should probably read with LXX 'of the virgin's son' (cf. v. 16).

(b) Is 9:21 is a passage of a very different character. We have here a true Davidean Messiah, but it is important to note that the restoration is the work of Jahweh Himself; the child is not himself the Virgin's Son, but is in the hand of the Virgin. The fourfold name is remarkable, and, as Gray points out, 'mighty God' must not be toned down to 'mighty hero'; it is unique in the OT. Clemens admits that all four titles are 'perhaps mythological,' and the passage itself of the Hokstil (see below). The child apparently ascends the throne at once—a suggestion that it is empty at the time of his birth; this may perhaps imply an Exilic date, though there is nothing else in the passage itself which necessitates its being placed later than Isaiah. It is, in fact, the clearest and best passage to establish an early expectation of a Messiah. It is, however, very remarkable that the passage seems to have had no influence on later thought, and lies behind the picture of the Messiah as drawn in many apocalyptic passages; in a later term 'Baal' is used. Here, again, the Messiah is Davideic, with a special endowment of the Spirit. We note, too, the stress laid on the return of the Golden Age—a feature which may be derived from foreign mythology. At any rate, we have the Davideic Messiah in a clearly eschatological setting; v. 2 seems to imply a date after 386 B.C., 6 the metaphor is that of a tree cut down to the stump and sending out fresh shoots, which would describe exactly the revival of the kingdom after its ruin at the fall of Jerusalem see below, 2 (10).

Mic 5:5 is peculiarly difficult.* Omitting minor questions of reading and exegesis, the main points are as follows. (a) The passage follows, though it may not be originally connected with, an eschatological passage in ch. 4 (cf. Is 13:2) where there is no mention of a Messiah. (b) It speaks of a Messianic king born at Bethlehem Ephrathah, and, therefore, Davideic; in spite of his humble origin (so G. A. Smith, The Twelve Prophets, London, 1898, i. 413 ff.), he is to be between the supernatural character of the birth without a human father had been the point to be emphasized. And what is the meaning of 'she which travaileth' ? Gressmann and others explain it of the divine mother, and J. M. P. Smith admits this, but regards the verse as a late gloss, implying a Messianic interpretation of Is 7:14; the change of person from both v. 5 and v. 4 is very awkward, and so is the contradiction between Jahweh's abandonment of His people and the previous verse. But, even if a mysterious birth is hinted at, there is no suggestion that the mother is a virgin or that the child is in any way connected with Immanuel. Whatever the date of the verses, they do not follow any of the other commentators (Calvin, Orelli, etc.) and see in the phrase a reference to the birth-plays of Zion in 304, where exactly the same word is used for 'travail,' while in both cases the Passion is the main matter referred to (as Hos 13:4, Is 29:19, where the same figure of travail is used). 'She which travaileth' is, therefore, Zion personified. (c) Verse 5 certainly implies that there is no reigning king and, therefore, suggests an Exilic date. But it implies that the child was born under a different prophecy (tr. 'This'—not 'This man'—'shall be our protection'). The Messiah drops out, and the confidence of the passage rests on a different basis. 7

In Jeremiah the main stress is laid on the continuance of the Davideic line, and this figure prominently in the book as we have it—a feature which is significant in view of the Deutero-nomic origin of the fundamental passage 18 7. In 29:6-20 we have the reference to one man or to a single descendant, or to a belief in the actual return of David himself. Finally, we note that Jahweh Himself is consistently the agent of deliverance, the Davideic king appearing only after the salvation is completed.

* The general presentation in Ezekiel agrees with that of Jeremiah. We have references to 'David my servant,' as the ruler of the future (34:22, 27), with pictures of the Golden Age and a strong
stress on the presence of Jahweh Himself. In 17:26 the cedar twig planted on the mountain of the height of Israel may be a reference to the prophecies of Isaiah (5) and Jeremiah, while 'until he come whose right it is' (21?) suggests the Psalms prophet of an individual Messiah and, in particular, with the promises attached to the Davidic dynasty; these were too strong to be entirely ignored, but the priest-prophecy himself had little real interest in them.

In Hag 2:28 Zerubbabel is to be the ruler in the Messianic Age. So in Zec 3:6 ff he is the 'Branch and the servant of Jehovah. The importance of the passages is twofold; (a) we have the first undoubted example of the identification of a personal history with the Messiah; (b) the reference to the Branch shows, even more decisively than in Ezekiel, that earlier prophecies were being studied and interpreted in accordance with contemporary conditions.

This reference to another and a later prophecy, though the ass may originally have been the symbol of royalty (cf. Gn 49:10), it here stands for humility. The king is victorious over his enemies ('saved' rather than 'having salvation'), but the sustaining character of his rule. He is not explicitly David.

In the Psalms we are concerned with a group of royal Psalms, especially 2, 45, 72, 89, 110, 119. Here we are met with almost insoluble problems as to the dating. There is a general presumption which we have in the case of passages which stand in the writings of a particular prophet. Further, we must allow for the possibility of glosses in the course of the many editings, through which the various Psalters passed; such glosses may have emphasized a supposed Messianic reference—e.g., Ps 2:12:7. In all these Psalms we find startling language used of kings, the extent of their dominion, and their power, usually with stress on the Davidic covenant. It is common ground that such language was never strictly true of any Israelite king in either kingdom. Are these Psalms, then, addressed to the expected Deliverer of the future, i.e., to the Messiah? The objection to this is strong in many cases that a definite living king is addressed; e.g., Ps 45 is clearly an actual marriage song and is accepted as such, e.g., by Kirpatrick and Briggs. And, if some of these Psalms are to be understood historically, the general similarity of language suggests that the same principle is to be applied to all. A. F. Kirpatrick, in fact, argues that all have a primary historical reference, of course without relevance to their spiritual application. In interpreting the language we are helped by the existence of the Hophid, or 'Court style,' to which Gressmann and others call attention. Exaggerated language of this kind was a regular feature of the Assyrian and Persian emperors, and poets in honor of Oriental monarchs; cf. the language of Ps 21:9-11.

As showing that earlier prophecies were by this time definitely studied, see 38:9, where there is a re-editing of Jer 2:6, 7, 8:17.

The text is in disorder; Zerubbabel must have been originally mentioned in 6:1; cf. 'crown' in the plural and 'thou hast' here. When we put the Psalms in the order preserved in the Masoretic Text, then this prent the text was deliberately altered, giving us perhaps the first example of the Levitical Messiah (see Driver, Cambridge Bible, ad loc).

Certainly addressed to an actual king. It is possible that this Hophid is in Israel, and perhaps elsewhere (see below, 2 c d), included elements derived from the Messianic expectation. If we believed that some one member of the Davidic dynasty to be the greatest of all, it was natural for the admirers of any king to suggest continuance before that he and no other was the long-desired. In this case the Psalms may be called quasi-Messianic, and at least illustrate the nature of the Messianic hope.

A warning against the use of God's name an interpretation of this Hophid is to be found in the passages presented by the Babylonian hymns. We find Nannar addressed as 'begetter of gods and men,' 'King of kings who has no judge superior to him'; but the original he is the same, but there is no title to avoid too much part.

In the same way we must beware of laying too much stress on the uniqueness, majesty, or finality ascribed to the king addressed in any particular Psalm. Its language, taken literally, may seem to be applicable only to a unique individual. But a month of an Oriental its application is less strict or exclusive.

The following points are further to be noted. (i) As in the Prophets, the stress is on the Davidic covenant; 2 S 7 seems to be concerned continually before the poets' eyes. This is especially marked in Ps 89, which refers to the nation and the dynasty, the nation itself being personified in v. 8:6 (cf. Is 5, Ps 80:7). So 'firstborn in v. 13 seems to refer to the description of Isaiah 11:1, 2, while 'servant' in v. 8 suggests a parallel with 2 Isaiah. The Psalm as a whole is a prayer for the restoration of the dynasty and the nation, rather than for the coming of any particular king who is to mark a new epoch. The same applies to Ps 112, though 'horn of David to bud' (v. 15) may refer to 'the Branch.' Ps 45, however, is not Davidic (Briggs and Sellin ascribe it to N. Israel), nor is Ps 110 except in the title.

(ii.) The language of the Psalter had great influence on later Messianic ideas, terms being used which afterwards became titles of the Messiah. As they occur in the Psalter they are, however, hardly technical; they are not used of one definite figure to the exclusion of all others. We have 'anointed' (Ps 21 sqq. 110, 118) used in its general sense (see above, § II.), 'son' (2, probably not in 29), 'firstborn' (89), while 'thy throne, O God' (45), may imply deification.

(iii.) Ps 110 stands alone in speaking of a priest-king, who is not, however, Levitical; it is very generally regarded as Maccabean, referring to Simon (see, however, Briggs, ad loc.).

There remain a few other OT passages, mainly fragments of poetry embodied in the historical books, which require brief notice.

Gn 49:8,9—It may be taken for granted that Shiloh is not a personal title of the Messiah. The first hint of such a view is found in the Talmud (Sanh. 96b), and was used till the versions of the 16th century (Driver). The reading and interpretation are both doubtful, but it is possible that the passage is Messianic—'until he come whose right it is' (Ezk 21:8; see above) may be a reference.

The question then arises whether the Messiah, who is to be set up in the Temple, is to be an actual king or a priest-king. This interpretation, however, which is that of LXX and He 13:15, is open to grave objection, esp. that in v. 7 we have 'Jahweh thy God,' Driver suggests an interpolated address to God; Kirpatrick forms many suggestions, 'thy throne is the throne of God,' or else 'thy throne shall be for ever and ever,' Elohah having been substituted for an original Jhvih or Jhwh.

See Commentaries by Driver and Skinner, ICC, ad loc.

1 O. C. Whitehouse, however (DCV II, 173), thinks the Genesis passage is modelled on Ezekiel.
verse is a late addition on the basis of the Isaianic prophecies (Driver), or whether, with Gunkel, Gressmann, and Sellin, we are to regard it as a fragment of pre-prophetic eschatology, not specifically Messianic. But it is the case that Isaiah must be interpreted through a patient study of the whole of the prophetic literature, and in its relation to the rest of the Old Testament. When this is done it becomes clear that the words which we translate as 'Messiah' are at most an echo of the ideas of the older prophets, and that Isaiah is in the main a prophet of a different time and of a different people. The name 'Messiah' is first mentioned by Isaiah in the Vulgate, and its use is confined to the last chapters of the book. In the Greek translation it is replaced by the word 'Christ', and in the Latin it is transliterated as 'Messiah'. In the original Hebrew it is not used at all.

In his study of the name 'Messiah', Gressmann [1] believes that the word has a foreign origin, parallel with the Hebrew word 'Hashem', and that it was used in the Old Testament to denote a particular person or personage, who was to be the saviour of Israel. He points out that the name is used in the Bible both as a proper name and as a title, and that it is often used in a metaphorical sense, as in Isaiah 11:10, where it is applied to the Messiah as a 'branch of Jesse'.

Gressmann's view is supported by the fact that the word 'Messiah' is not found in the Septuagint, and that it is only used in the Vulgate and in the Latin translations of the Bible. It is, therefore, possible that the word 'Messiah' is a late invention, and that it was not used in the original Hebrew text of the Bible.

In his study of the name 'Messiah', Gunkel [2] has pointed out that the word is used in a metaphorical sense in the Old Testament, and that it is only used in a literal sense in the New Testament. He also points out that the word 'Messiah' is used in the New Testament to denote a particular person, who is to be the saviour of the world, and who is to be the successor of Jesus Christ. Gunkel suggests that the word 'Messiah' is a late invention, and that it was not used in the original Hebrew text of the Bible.

In his study of the name 'Messiah', Sellin [3] has pointed out that the word is used in the Old Testament to denote a particular person or personage, who is to be the saviour of Israel. He also points out that the word 'Messiah' is used in the New Testament to denote a particular person, who is to be the saviour of the world, and who is to be the successor of Jesus Christ. Sellin suggests that the word 'Messiah' is a late invention, and that it was not used in the original Hebrew text of the Bible.

In his study of the name 'Messiah', Driver [4] has pointed out that the word is used in the Old Testament to denote a particular person or personage, who is to be the saviour of Israel. He also points out that the word 'Messiah' is used in the New Testament to denote a particular person, who is to be the saviour of the world, and who is to be the successor of Jesus Christ. Driver suggests that the word 'Messiah' is a late invention, and that it was not used in the original Hebrew text of the Bible.

In his study of the name 'Messiah', Eusebius [5] has pointed out that the word is used in the Old Testament to denote a particular person or personage, who is to be the saviour of Israel. He also points out that the word 'Messiah' is used in the New Testament to denote a particular person, who is to be the saviour of the world, and who is to be the successor of Jesus Christ. Eusebius suggests that the word 'Messiah' is a late invention, and that it was not used in the original Hebrew text of the Bible.

In his study of the name 'Messiah', Matthew [6] has pointed out that the word is used in the Old Testament to denote a particular person or personage, who is to be the saviour of Israel. He also points out that the word 'Messiah' is used in the New Testament to denote a particular person, who is to be the saviour of the world, and who is to be the successor of Jesus Christ. Matthew suggests that the word 'Messiah' is a late invention, and that it was not used in the original Hebrew text of the Bible.
was a common possession of the ancient world, especially in Egypt and Babylonia, and that the OT language is intelligible only when understood as one expression of that hope. Sellin especially argues of the antiquity of W's belief, which he regards as not merely pre-prophetic but as pre-Davidic, while he rejects the hypothesis of its foreign origin, being ready to admit foreign influence only in colouring and details.

We have already had examples of the principles of this school as applied to such passages as Is 7, Mic 5, etc. It is further suggested \(^2\) that the Messiah is the Urnensch, or primal man, the hero of Paradise, who is to return with the Golden Age of Daniel. Gressmann rightly points out that the Messiah is the prince of peace rather than a conqueror; i.e., he is the king of the Golden Age restored by Jahweh. Sellin\(^3\) develops this idea. Job 15\(^7\) suggests a tradition of the first man as precog of the Messiah in Micah is unshakable of Zoph, the idea of a mysterious origin disappears; the Shiho passage is open to so many interpretations that it is very unsafe to build on it. It is quite true that with regard to eschatology in general (and it must be remembered that the Messianic hopes of the Bible are and still are) we are considering starts from eschatology and not from the Messianic hope in particular) the prophets from Amos onwards give the impression of dealing with ideas already to some extent familiar, and it is equally the case with the Messianic passages, but this does not justify us in finding the solution of every obscure passage in hypothetical popular traditions. We have already argued that the way in which the allusions to the Messiah are introduced does suggest that the idea was general and popular, used only occasionally and with some reserve by the prophets, so that it cannot be regarded as the discovery of any one of them. But of its great antiquity it is hard to prove. The passages in which it occurs are in many cases placed late on quite definite grounds, and we could hardly prove that it existed 'before the Exile except in the form of expectations connected with the permanence and glory of the house of David.' We must, in fact, admit that data are wanting whereby we might fix with any certainty the period in which the hope arose. We can only say that the way in which the allusions are introduced does militate against its origin being placed in the Exilic period, in spite of the lack of definite evidence to the contrary, though they do not in any way carry it back to a dim antiquity.

A similar verdict of 'not proven' must be passed on the hypothesis of a foreign origin (with regard to foreign influence on O.T., whereas in the Hiphil and partial parallels, especially at a later period, the case is somewhat different). The preceding discussions have already dealt with many of the points. Sellin\(^4\) discusses the supposed parallels in some detail, and concludes that there is no parallel to the expectation of a divine deliverer to come at the end of history or to usher in a new era. The most that we find is a yearning for the return of the Golden Age of Paradise, together with the courtier's flattery applied to some particular king that he will be the one to bring this about—e.g., the famous Letter to Assurbanipal. A. H. Gardiner\(^5\) has shown that the Layden Papyrus has been misinterpreted and contains no reference to a 'Messiah,' while the Golenisheff Papyrus refers to a contemporary king Amen-em-net I.

To return to the OT, the hypothesis of the wide-spread exportation of a Messianic hope is clearly unnecessary and is not necessary to explain its language. We have in the earliest Messianic passages expectations connected with the revival and increased glory of the dynasty of David. There are also the eschatological hopes of the return of the Golden Age, which, Sellin concludes, is peculiar to Israel: 'The ancient East knows no eschatological king.'

IV. DEVELOPMENT SUBSEQUENT TO THE OT.

1. The data.—In passing to the period covered by the Apocryphes and the apocalyptic literature, it will be well again to begin by some examination of the actual data.\(^6\)

(a) Books where the Messianic hope is ignored.—In the eschatology of the Apocrypha, with the exception of 2 Esdras, the Messianic hope is practically ignored. It is just possible that there may be a hint of it in the reference to the coming of the 'faithful prophet' in 1 Mac 14\(^7\) (cf. 4\(^8\)), but, if so, the hope appears in a very attenuated form. In the primitive sense, or, in the context, the restoration of the Davidic kingdom is mentioned with no reference to the Messiah. In the rest of the books, though there may be hints of the Messianic kingdom in the wider sense (e.g., 2 Mac 2\(^7\), Bar 4\(^7\), Sir 44-50), nothing is said about a personal Messiah. Wis 2\(^4\) deals with the sufferings of the righteous in a way that recalls Is 53, and with the future life, but is clearly not Messianic.

\(^1\) P. 231 ff.; see also Clemens.
\(^2\) Gressmann, p. 256 ff.
\(^3\) P. 170 ff.
\(^4\) Skinner and Oxford Heb. Lexicon, however, translate 'look at.'
A similar silence is found in some of the apocryphal books, and the silence is all the more significant since the writers are dealing directly with the hopes for the future. The Messiah does not figure in Enoch i, xxxvi., lxxix., lxxx., xxi., except in ev., where 'my Son' is used to describe the Chosen One of God. In Dan. we find Messiah as a title in the context of the Ancient of Days. In the picture of the Golden Age in Job. 1, 29, xxiii. 26 there is no Messiah; in xxxi. 18 he figures, though not prominently, as the descendant of Judah and as ruler in the temporary Messianic kingdom; Charles, however, considers the clause to be an interpolation. In the Assumption of Moses, which comes from a 'Pseudepigraphic' writer, there is again no reference; Taxo (ix. 1) cannot be the Messiah; Jahweh himself is the avenger, and Moses the only mediator. The Messiah is in the same way ignored in 3 and 4 Macc., the Secrets of Enoch, the Letter of Aristeas, and the later parts of the Apocalypse of Baruch.

(6) Books where the Messiah is mentioned.—In Enoch lxxiii.—xxe. (106-116 B.C.) the Messiah appears after the judgment as the 'white bull,' a human figure, with no very active or definite role. In the 'parables,' however (xxxvii.—lxxi. ; 94-94 B.C.) the Messiah richly figures. In lxxvi. vii. he is the central figure, the pre-existent Son of man, judge, ruler, champion, and reactor. Besides Son of man, he is called 'the Elect One' and 'the Righteous,' titles which appear in the NT. 'Messiah' or 'His Anointed' also occurs in lxxvi. 10, lii. 4, and Charles regards these as the first example of the use of the word as a technical title, though Dalman 1 strikes out the passages as interpolations.

In the Testaments of the Twelve Patriarchs the salient point is that the Messiah is descended from Levi, and is a priest (cf. Ps. 110); see Test. Reub. vi. 7—12, Test. Levi. viii. 14, xviii., Test. Jud. xxxiv. ff., etc. In Test. Jud. xxxiv. 51, however, we find the usual Messiah ben Judah; so perhaps Test. Naph. iv. 5. According to Charles, the former conception is the original, and the book dates from 109-106 B.C., the palm days of Hyrcanus, the Maccabean dynasty, which came of a priestly family, being recognized as Messianic. But, after the breach between it and the Pharisees, and the infamies of Hyrcanus' successors, additions were made to the book, reverting to the ordinary view. The conception of the Messiah is that of a prophet and a king, perfidious, with power over evil spirits, and bringing sin to an end; the ethical note is strongly marked.

In the Psalms of Solomon (70—40 B.C.) there is no reference to the Messiah in i., xxvi., though the future deliverance is dealt with. In xvii. and xxiv., however, there is a very important description. He is Davidic in contrast to the non-Davidic dynasty of the Hasmonaees; though himself human, he comes with the power and special endowment of God, to conquer the nations and purge Jerusalem of sin. The whole picture is full of enthusiastic and vigorous touches, and there are no transcendental traits in the conception. The end and the duration of the Messiah's kingdom is not clear, but 'throughout his days' in xvii. 42 suggests that he is regarded as mortal. He is called 'His' or 'the Lord's anointed,' the title being here certainly a technical one, its first occurrence, if the passages in Enoch are rejected.

The Dead Sea Scrolls (165—51 B.C.) we read of a 'holy prince' who is to reign over the whole earth for all ages, though, somewhat inconsistently, judgment being also looked for. He speaks of a king from the sunrise sent by God who is to bring peace to every hand. In the later fifth book (before A.D. 130) we have (108) again a king sent from God who apparently destroys Nero redemptive (Antichrist). The Messiah is 'the anointed man' from the plains of heaven, who destroys evil-doers and sets up the new temple.

The Fragment of a Zadokite Work, 2 published first by S. Schechter in 1910, is placed by Charles in 18—2 B.C. and by most scholars before A.D. 70, and seems to have come from a reformation party among the priests. 'A Teacher of righteousness' has already appeared (i. 7, etc.), and a Messiah is expected (ii. 10, viii. 2 f.); i. 10, 29, xx. 4, xviii. 8) who is to arise 'from Aaron and Israel.' Charles interprets this phrase as pointing to the sons of Marianne and Herod. This is not quite certain, but the Messiah is clearly Levitic, as in the Testaments, the book being marked by hostility towards Judaism. The 'Teacher of righteousness' or the 'Lawgiver' (viii. 5) is a forerunner of the Messiah, though at a considerable interval, and is identified with the 'star' of Nu 24i, the 'sceptre' of the same passage being applied to the Messiah.

In the so-called Apocrypha where the Messiah appears in the three earlier Fragments, A', A', A', written before A.D. 70. In xxvi. i. (A) he is revealed mysteriously, apparently from heaven, whether he returns in glory; his role is a passive one, and the whole conception is materialistic. In xxxix. i. (A') and lxxii. 6, (A') he is the warrior slaying enemies and ruling over the Gentiles; the influence of Is 11 is marked. In lxx. 9 the phrase 'my servant Messiah' occurs, but the whole verse is regarded as an interpolation. In the three later Fragments, B', B', B', there is the so-called Messianic Kingdom without a Messiah.

4 (2) Esdras is again composite. In 7. (Ezra Apocrypha) we have the remarkable conception of 'My Son the Messiah,' revealed with his companions and dying after a reign of 400 years (cf. 149). In 12. (the 'Eagle Vision') he is the Lion of the seed of David who destroys sinners; the text has been interpolated to represent him as pre-existent, and who, at the end, in order to agree with 72. Of chief importance is the 'Son of man' vision (ch. 13), where the Messiah is 'the man,' as in Daniel. 'My Son,' pre-existent, destroying the ungodly by the fire of his mouth and the breath of his lips, and restoring the ten tribes to the heavenly Zion.

Philo makes only very slight references to the Messiah, who is really foreign to his system. That he is mentioned at all must be regarded as a concession to the popular standpoint. De Exercrat. 8 f. speaks of the restoration of Israel on one day; the dispersed are to return led 'by a divine superhuman appearance, which, though unseen by all others, is visible only to the delivered.' So in de Pneum. et Per. 15—20 the Messiah is a man of war, reference being made to Nu 24.

In the same way the Messiah is recognized by Josephus only very occasionally, and that in a way which shows that he did not take the subject very seriously. In B. J. vi. 4. 4 he practically treats Vespasian as the Messiah in the sense that he is to be the destined 'governor of the habitable earth'; cf. the account of his interview with the same emperor in ii. viii. 8, and see Suet. Vesp. ch. 4, and Euseb. Chron. 130. 3. The New Testament passages which show that the existence of the Messianic hope was a first

2 In xvii. 96 'Anointed Lord' (hypéron eousos) is generally recognized as a mistranslation or misreading of 'the Lord's Anointed.'
recognized feature of Judaism. In Ant. x. x. 4 he renews to explain the 'stone' of Dan 2 26 as on the ground that his history is not concerned with the future.

As evidence of popular views, though not of the belief of Josephus himself, we have the various quasi-Messianic risings which he records: Thedmas (Ant. xx. v. 1), the Egyptian (Ant. xx. vii. 6, 7xii. 3), and the unnamed impostor (Ant. viii. 10).

A Samaritan Hymn for the Day of Atonement, dated A.D. 1576, but certainly embodying earlier material, speaks of Messiah under the title Tzuch, which probably means 'the Restorer,' though A. Merx explains it as rezilena, i.e., probably Moses, whose return was expected. This Tzuch is not supernatural, but restores the lost dominion of the people, and is a prophet, the conception being based on the figure of Moses in opposition to the beliefs of the Jerusalem Jews. He dies 110 after years, and his death is followed by the Judgment and the end. In 425 shows the antiquity of some Messianic belief among the Samaritans (cf. Jos. Ant. XVII iv. 1).

2. Survey of the teaching. — (a) We note the sporadic character of the Messianic hope, as in the OT. Certainly the Messiah is mentioned somewhere in nearly all appearances where we have in some cases a few more details, but it is still true that until the fall of Jerusalem he is not an essential element in Jewish religious thought or even in its eschatology. If it were not for the NT, we should never have heard of the Messiah, and there was a period when the expectation of his coming could be taken for granted as accepted in almost all circles and as the centre of the hope for the future. This aspect is sometimes discussed (e.g., W. Baldensperger, 'Die messianischen Anschauungen des Judentums,' Strassburg, 1903, p. 92 ff.) as though the problem were the disappearance of the Messianic hope during the Maccabean period. If our interpretation of the evidence is correct, this misrepresents the facts, since there is nothing to show that the hope was at any previous period either universal or essential. It may be true that the figure of the Davidic king came to seem too small for the larger stage on which Israel now found itself, and that this was one of the reasons why the Messiah left the pious Jew for a time well content, but it is best to recognize that the data are insufficient for anything like a chart of the rise and fall of the Messianic hope. The one thing we can say is that in the 2nd cent., when the whole had become far more universal than ever before, we recognize that then and in the Abs. of Moshe, and is not taken very seriously by Philo or Josephus; but the NT evidence is indisputable, and is confirmed by the fact that the Messiah is an integral part of the creed of later Judaism. The explanation is probably to be sought in the political circumstances of the day and in the dislike of the rule of the Hasmoneans.

(4) The evidence which suggests that, as before, the hope was mainly an element in the popular religion. The Apocalypse in which it figures were largely popular products, and the NT proves that its chief strength lay among the people; 1

1 See A. Cowley, 'Samaritan Doctrine of the Messiah,' in Exp. 5th ser., l. (1895) 161 ff.; Bousset, pp. 298, 305.
2 It is possible that the place of the Messiah was sometimes taken by Michael as a personification of Dan 12 26, and not the Messiah, Is the champion of Israel; so in Abs. Moshe, x. he is the angel who avenges Israel; note his prominence in Rev. 12. Bousset, Die Offenb. Geschichten, 1906, p. 74. Baldensperger suggests that the Christology of Hermas can be understood only if we see the same proper title in Jewish thought by Michael; cf. also Rev 1416, where the Son of man on the cloud seems to be an angel; note the language of Ps 40.
3 Bousset, Rel. des Judenstums, p. 265 ff.

VOL. VIII. — 37

the popular risings recorded in Josephus show the same thing.

(a) We may see two influences at work which tended to throw into higher relief the person and function of the Messiah. From the religious side there was the growing tendency to remove God from active interference with the affairs of the world and to fill His place with a series of intermediate beings. Hence the role of the Messiah becomes more important, and functions which in the OT are ascribed to Jahweh Himself are now transferred to him. He becomes the Deliverer and Saviour, as in the Sib. Or., Baruch, and Esdra, and the new conception thus neutralizes the Terah. Again, as outward conditions became more hopeless, it was inevitable that he who was to restore the nation should be increasingly conceived of as endowed with supernatural powers, or as himself more than man. His coming is to be a solution of the world, though it is still always regarded from a strictly Jewish and national standpoint. As a keener interest is taken in the fate of the individual, so the conception is linked with beliefs of judgment and resurrection, and receives altogether a more decided and more varied eschatological colouring, though we remind ourselves once more that it is not an essential element in the eschatology of the time.

(5) Attempts to distinguish varying types of the hope at different periods and in different classes of writings are not always very convincing. We can, however, trace a double development, though the two lines overlap, and each includes contradictory elements derived from the other — e.g., in the combination of the conceptions of a Warrior-Conqueror and of a supernatural Avenger and Judge, or of earthly and heavenly bliss. 4 (1) We have the conception, which is essentially that of the OT, of the Messiah as a human figure, however miraculously endowed, a warrior and a conqueror, and the Son of David. This is seen best in the Psalms of Solomon (where the title 'Son of David' occurs for the first time), and is implied in many passages of the Gospels dealing with the popular hope, especially in the attempts to make Christ king, and in the charges brought at His trial, as well as in the Messianic movements mentioned by Josephus. In this Messiah is the typical figure of the Maccabean, and left the pious Jew for a time well content, but it is best to recognize that the data are insufficient for anything like a chart of the rise and fall of the Messianic hope. The one thing we can say is that in the 2nd cent., when the whole had become far more universal than ever before, we recognize that then and in the Abs. of Moshe, and is not taken very seriously by Philo or Josephus; but the NT evidence is indisputable, and is confirmed by the fact that the Messiah is an integral part of the creed of later Judaism. The explanation is probably to be sought in the political circumstances of the day and in the dislike of the rule of the Hasmoneans and the Romans.

(2) We find a belief in a transcendent Messiah, connected chiefly with the title 'Son of man,' in the parables of Enoch and 4 Esdras (cf. also Sib. Or. v. 414). The phrase is derived from Daniel, and, whatever its meaning and origin there, there can be no doubt that in Enoch and Esdras it has a definite Messianic significance. It is possibly even a recognized technical title. 4 The fact is, as Baldensperger 2 points out, that Daniel, though not

1 See Baldensperger, ch. ii.
2 This eschatological colouring, the figure of the coming of the Messiah ('the Messianic woes,' etc.), the duration and nature of the Messiahian kingdom, and its relation to the judgment and resurrection, together with the varying ideas as to the fate of the Gentiles therein, are definitely in art., John of Damascus, which reference should be made. See also Schürer, JHF P ii. 167 ff.; W. V. H. Hague, JThSt xii. (1909) 57.
3 See Hague, p. 72 ff.
4 Baldensperger, p. 111 ff.
5 We have not sufficient material to justify us in regarding this as a specifically Jewish eschatological conception as opposed to a Pharisaic Messiah ben David.

6 For connexion with the Testamenta, etc., see H. Windisch, Hesberteraen, Frankfort, 1916, p. 67.
7 Dalman, p. 243.
8 So Charles, Eschatologia, p. 261.
9 P. 97 ff.
in itself directly Messianic, revived hopes for the future and prepared the way for the apocalyptic Messiah. 1 This transition led 2 Messiah into an ascension of the righteous in Enoch xlii. 2, and still more decidedly in 4 Es 130. 272. The most significant feature, however, is his appearance as judge, not only of men and the nations, but of evil spirits (Enoch iv. 4, etc.); this function is not ascribed to the human king. Except in 4 Es 122, a Christian interpolation, the transcendent Messiah is never represented as a descendant of David—a fact which may throw light on our Lord’s question (Mk 12. 22). 3 He may have been followed by a formalized history of thought which found the Davidic descent too narrow for the great conception. As is well known, He never speaks of Himself as ‘Son of David.’ We may note that, though the Apocalypses apparently reject the Davidean descent, they yet use Davidean passages, such as Is. 11, Is. 72, 89, in their picture of the Messiah, 4 (c) Pre-existence and mysterious origin. — The Son of man is clearly in some sense pre-existent in Enoch (e.g. xlvi. 3, 6, xlv. 1) and in 4 Es 13 and perhaps in 72. 12, though the former passage is doubtful, and G. II. Box regards the latter as interpolated. 5 The question arises how far a personal pre-existence is really implied. In Jewish thought everything of supreme value was regarded as related to the spirit of the age to some extent under the influence of the Platonic doctrine of ideas. This applied to such things as the Law and the Temple, while even Moses is pre-existent in Ass. Moses, i. 14, ii. 12; it is this sort of pre-existence which is verbally granted to Messiah or his ‘Name’ in the Targums. 6 But it must be allowed that in Enoch and Esdras the Messiah seems to be regarded as pre-existent in a personal sense and revealed from heaven, and this was certainly the view of Enoch. 7 Though, however, we be noted that in 4 Es 79 ‘my Son, the Messiah’ who is thus revealed dies after 400 years; i.e., he is not a divine being.

This point of view should be distinguished from the hints which we have of the mysterious origin and birth of the human Messiah, where the Son of man of Enoch and Esdras is, of course, not born as a man at all. We have doubted the existence of such ideas in Isaiah and Micah, but they are clearly found at a later period—e.g., in the mysterious star of Test. Levi, i. 12, and in the apocalyptic Sib. Or. iii. 632 (cf. Bar 291). We have no evidence of the belief in Jn 75, Justin Martyr (Dial. 8, 110), and the Talmud, the general idea being that the Messiah was to be born in secret (at Bethlehem) and hidden on earth, or even in Paradise, until the time of his revelation. Some such tradition seems to underlie Rev 12; on the question of foreign influence see below, (g).

At the same time the passages cited as evidence of a belief in his birth of a virgin or a mother are unreliable. 8 Test. Jos. xix., which seems to speak of a virgin-birth, is with good reason regarded by Charles as corrupt; so in Enoch xlii. 5, ix. 29 he reads for ‘son of a woman’ 9 ‘Son of man,’ while the Midrash Ekhath on Lk 3 is obscure and of very doubtful date. Nor, again, can the ‘travail of the Messiah’ imply anything of the kind; the expression is figurative, and applies to the Messiah, not to his mother. According to

1 Jn 75 is interpreted Messianically by Aquila (c. a. 120), and according to LXX is interpreted as the name for the Messiah, Jn 75, ‘Enoch Man’ (Dahlman, p. 245).
2 As late as 1832.
3 The LXX of Ps 109 [110], εξ γεννηματος του ἀνθρωπον aiiropoy evy- eftwv sa, suggests some kind of pre-existence.
4 While it is, however, argued that there are traces in Biblical Literature of a real pre-existence of the thought
5 Dahlman, p. 351; Hezner, p. 81.
6 See G. ii.
7 Jerome, p. 39; see Clemens, p. 292. Justin, Dial. 49, the Jewish belief that the Messiah is to be born ἀπόρως καὶ ἄνθρωπως.
8 To the circle of ideas connected with pre-existence belongs the notation of the creation of the Messiah with the first or the spiritual man. 1 Something has been said of the theory that this underlies the figure of the Son of man (see above, III. 2 (d)). Philo (Leg. Alleg. i. 51, p. 49, de Op. Mundi, 134, p. 32) knows of an earthly and a spiritual man, the latter, whose creation is recorded in Gn 1, coming first, while the former is the man of Gn 2. St. Paul (I Cor 15:22) represents the spiritual man as coming after the psychic or earthy, evidently opposing the former view, and identifying himself with the Messiah. So in Test. Levi the Messiah brings back Paradise, while the Samaritan title Tsebh seems to mean ‘Restorer’ (cf. ἱερόν ἧς ἀποκατάστασις in Acts 3). The general idea in St. Paul, however, is the identification of Christ with the ideal archetypal man, as opposed to the historical Adam, and not with any first king of Paradise.
9 (f) Forerunners of the Messiah. — The starting-point is Mal 3:1, where Elijah is to return before the Day of Jehovah (cf. xlvi. 49), the Messiah is not mentioned, and possibly Elijah is a kind of substitute for him. 3 In the Gospels, however, he has become a forerunner of the Messiah (Mk 1:6-8; 9:11; Jn 19). There are again traces of a belief in the return of Elijah in such passages as Jer. 3:14; the two are combined in the Transfiguration; these are probably the ‘two witnesses’ of Rev 11. In the later Antichrist legend the two witnesses are Enoch and Elijah, 1 who were translated without death. There is evidence for this interpretation of the Messiah in 4 Es 73-75, 122. Ezra appears as such in 14, Barnach Bar 76, Jeremiah in 2 Mac 2:15; cf. Mt 16:12. We may compare the two predecessors of Sosannith (see below, (g)).
10 Foreign influence. — The turmoil of theories which traced the origin of the Messianic idea to foreign sources, but this does not exclude the possibility of foreign influences at a later time on the details of the conception. Such influence is undoubtedly found in the development of Jewish Apocalyptic. We cannot discuss the wider question of the syncretistic character of its eschatology in general, but must confine ourselves to points which directly affect the conception of the Messiah. Naturally it is in the transcendent Messiah that foreign and mythological element comes hack in strong feature, 2 following Gressmann, 3 argues that such ideas lie behind 4 Es 13, and even goes further in holding that a star myth is implied in the appearance of the man ‘from the sea.’ He also traces 4 the whole idea of a mysterious revelation of the Messiah to Is 43-5, ‘Verily thou art a God that hidest thyself, O God of Israel, the Saviour,’ which, he agrees with Gressmann, 5 cannot be of Jewish origin. He traces it to language such as that used by Assurbaniah: 6 ‘I was born in the midst of mountains which no man knoweth . . . thou (Ishtar) . . . hast brought me forth from the mountains, hast called me to shepherd thy people.’ Many critics argue in the same way with regard to the conception of the miraculous birth, comparing the language used by Sargon I. (‘My mother was poor, my father I knew not’), the beliefs connected with Sosannith, and the legends of the birth of Cyrus, Alexander, and others; there is, in fact, a general tendency to regard exegetical and extraordinary

1 See H. Lietzmann, Handbuch zum AT, Tubingen, 1910, on 1 Co 15:24; Clemens, p. 152 ff.
2 This conception seems to occur in Baraddas v. 5, v. 12. For later developments see Bouquet, Hauptprobleme der Gnosis, Gottingen, 1911, p. 172 ff.; Kyrillos Christos, do. 1913, p. 54.

6 P. 291.
7 P. 291.
Roman ideas affecting at any rate the periphery of the Messianic hope and its development under Christianity. After Alexander the title savor ("Saviour") became common, with designation of kings and emperors, accompanied by hints of their wonderful origin. We may instance the well-known Priene inscription, where Augustus is called "Saviour." But here, again, it is doubtful whether we really have proof of the existence of a belief in a final world-Saviour who is ushered in a new era, or only the inevitable court flattery which regards each king as greater than any of his predecessors. The single exception is Vergil's famous Messianic Eclogue. Here, whether the child who is to be born be the son of Octavian and Scribonia or not, we have a remarkable and almost unique agreement with OT conceptions—the era of Paradise and its king, the Golden Age following on his conquests, plenty without toil, animals sharing in the regeneration, together with the ethical note. Whether through the Silvianus Books or directly through the LXX, Jewish teaching may have penetrated to Roman literary circles, or we may have an echo of Zoroastrianism. On the other hand, the parallel may point to an independent spread of something like a Messianic hope in pagan circles.

(2) Interpretation of prophecies. A feature of this period is the habit of working on earlier prophecies—a tendency which we have found as early as Ezekiel and Zechariah; for a later example see To 14. In the apocalyptic books there are certain prophetic passages and ideas which became part of the stock-in-trade and are constantly referred to in dealing with the Messianic hope. The chief are Dn 7, Is 11, used continually (e.g., Ps. Sol., Bar.), Ps 2, (e.g., Ps. Sol.), Ps 45 (e.g., Test. Juod. xxiv, 1), in which the Messiah is king der Erdezeit, and there is no trace of this transformation in Iranian legend. We may add that there is also no trace in Hebrew legend of the Messiah as originally king of the first Paradise (see above, (i)).

(3) There is undoubtedly a remarkable parallelism between the Messiah and Sassanian, which is originally an epithet rather than a title. The renovation of the world is accomplished by the process of the restoration of the Iranians in the Sassanista. In the Gathas these are simply Zoroasthrus himself and his fellow-workers, whom the Prophet's faith-picture as assuredly leading on to an immediate regeneration. The hope failed, and Zoroastrism was transfigured to the extent of reducing the Sra. hekmat of Shb, Or. iii. 659, and the LXX árævax for 'branch' in Jer 33:15, Zec 6:12 (cf. Lk 19).

We must also allow for the influence of Greco-

1 For foreign influences see Rev 22 see Bouret, Offenbarung, ad loc., and Chyse, pp. 77 ff., with criticism in Cleaera, p. 300 ff.

4 So Moulton, p. 31, interpreting the simile of the fastening the chains as a reference to the story that Zoroaster laughed when he was born.

5 It may be remarked that there are rarely any traces in the LXX of an attempt on the part of the translators to introduce a Messianic meaning. This is evident in the case of Heb. may not Messiah. It is no exception (see above, 3), but the title of Ps 45, "Song of the Beloved," for 'song of Songs,' may be intended to suggest a Messianic interpretation. For árævax for 'branch' see above, (c).

6 But not Is (see above, 3) or 7.

7 This, however, is comparatively rare (Dahmow. 208 ff.).

8 Balfour, p. 104.

9 V. H. St. John, J. H. v. 301, art. 'Messiah'; see, further, Driver and A. D. Neubauer, Jewish Interpreters of Is. litt., London, 1887;
The most decisive proof of this position comes from the NT. It is clear that the death of the Messiah was not regarded in the Gospels, in John, or in the Apocalypse as having been followed by the resurrection, but that the crucifixion of Jesus was the great stumbling-block, while it was not easy to find proof of its necessity from the OT. The story of the Ethiopian eunuch (Acts 8:28) seems to be intended to call attention to an interpretation of Is 53 which is evidently not that generally accepted. The admissions of Trypho (Justin, Dial. 68, 80 f.) do not express the Jewish belief, but are put into his mouth under the stress of the argument, while the "pangs of the Messiah" do not refer to his personal sufferings, but to the woes which are to precede his coming.

The Messiah ben Joseph, who does, in fact, die, in contrast to the Messiah ben Judah, appears clearly only after A.D. 135. According to Bonnert, he is the Messiah of the ten tribes, slain in the battle by Gog and Magog: the conception seems to be derived from Dt 33:2, Zec 12:9, and certainly has no connexion with Is 53. It is possible that this figure is connected with the failure and death of Bar Kokhba, explaining them on the lines of the expectation of a preliminary Messiah who was to fall in battle against the enemies of Israel (Rome).

V. DEVELOPMENT UNDER CHRISTIANITY.

The starting-point of the evidence of the NT, and especially of the Gospels, is Is 53, in which the Messianic hope is represented as universal. As we have seen, it is taken for granted in the Apocalypse where it occurs, but it is still sporadic in its appearances, and the future can be painted without reference to it. But in the Gospels the expectation of the Messiah is common to all. It appears, indeed, to be taken more seriously by the common people than by their leaders; but Pharisæes, priests, and Sadducees all accept the hope without questioning its reality, for they alone know whether Jesus is really the Messiah. As regards the nature of the hope, it would appear, as against A. Schweitzer, that it was at least as much political and national as transcendent, corresponding closely to what we find in Ps. Sol. The Messiah is to be a king descended from David, and his rule will be opposed to that of the Romans.

A full discussion of our Lord's own attitude to His Messianic claims will be found in art. Jesus Christ. The following is an introductory survey.

(a) As against W. Wrede, it is certain that He did regard Himself as in some sense the Messiah. He did not, indeed, proclaim Himself as such in His public teaching; it was His "secret," discovered by S. C. P. and finally avowed to the world at His trial.

(b) His favourite designation of Himself in this connexion was "Son of man," the title being chosen as containing in it elements of transcendence and mystery, and as free from the political implications of Messiah, and still more of Son of David, a title which He avoids. The difficulty is to reconcile His use of this phrase with the absence of any public proclamation of His claim, since from its use in Ezech we should infer that it would not once be recognized as a synonym for "Messiah." Itself. The difficulty is increased by eliminating, on literary grounds, a certain number of the passages in which it occurs (cf. e.g., Mt 5:9 with Lk 6:7, or Mt 16:15 with Mk 8:29), while in others its use is ambiguous, since it might be supposed to refer to some other unnamed person (Mt 8:27). It is not, however, possible, except by somewhat drastic criticism, to eliminate all passages where it is used publicly of Himself or privately to the disciples before St. Peter's confession. We must, therefore, suppose that the whole did regard as Messianic only in certain circles, and that it could still be used, as in Is 8 and Ezekiel, in a wider sense.

(c) He did not regard Himself as the Messiah merely in the strict sense in which we have used the term, but as gathering up in Himself the various lines of OT hopes and promises. It does not, however, appear that direct argument on the basis of the OT played any considerable part in His teaching, except as recorded in the Fourth Gospel. The proofs from the OT in the NT seem rather to reflect a later stage of controversy between Jew and Christian, in which each adopted the same scribal methods of interpretation.

(d) Christ added considerably to the content of the Messianic hope, especially in His teaching as to the necessity of the death of the Messiah. It is not possible to decide with any certainty as to the lines by which He was led to this conviction, though it was, no doubt, helped by a growing recognition of the hostility of the ruling powers to His claims and of the inevitable results of their attitude. Further, He must have meditated on the deeper teaching of the OT as implying, especially in Ps 22, that the Messiah's death was an essential part of the condition of glorification; it was to be found only in suffering, and this quite independently of whether such passages technically applied to the Messiah or not. Though in Acts and Peter the Servant Songs passages are quoted, they are used but little in the Gospels, and hardly at all in Christ's own teaching (see Lk 23:27, Mk 15:28,19). It would seem, then, that as the ultimate source of His conviction we are forced to fall back on an intuition of which the Christian will regard as a revelation from the Father.

In the light of the expectation of the Parousia, the idea of a twofold advent of the Messiah was introduced, assuming that Jesus was not merely 'the Messiah of the future' during His lifetime. There is no trace in earlier literature of any belief in two comings of the Messiah.

(e) It follows, finally, that the title 'Messiah' or 'Christ,' as used in the NT and in Christian literature generally, is a far richer and more complex content than any that we have felt justified in ascribing to it in earlier periods. It gathered itself into the ideas associated with the Wisdom and Logos, and came to include the whole work of redemption from sin accomplished by Jesus. He has become the centre of history and the inaugurator of a new age in a way which both differs from and transcends anything that we find in the OT or Apocalypses as associated with the future Deliverer. He is the mediator of a new covenant and the bearer of a new revelation to a world of which the outward conditions remain unaltered, while with the passing of the Jewish State the nationalist element dropped away once for all. At the same time, the title 'Christ,' with its historical associations, is a reminder, even to those to whom the promises of the OT may seem little in themselves, that the coming of Jesus of Nazareth was not something new and unexpected, but was the true climax of the long preparation of the chosen people. In particular, the fact that functions which in the OT are reserved for Jahweh and not for the Messiah

Dalman, Der leidende und der sterbende Messias, Berlin, 1888; Schurer, ii, 154. Bonnert, Kyrios Christos, p. 27 f. (for a Jewish Messianic interpretation of the dying and raising god may have influenced Jewish Messianic ideas.

2 See P. Wrede, Antenturnu, p. 204, Anticrist Logos, p. 103. But in JB, e.g., 'Messiah,' the connexion with the ten tribes is denied.
MESSIAH (PSEUDO.)—From the final loss of the independence of the Jewish State until within a few generations ago, Jewish history has known the frequent advent and passing of self-styled Messiahs, prophets of hope in the darkest periods of the Diaspora, self-appointed leaders of the Jewish race in the Return to the land from which their ancestors were exiled. The appearance of a Messiah was often, especially in the case of the earlier ones, accompanied by revolts and uprisings, and these almost invariably occurred at times when, and in locations where, anti-Jewish persecution was prevalent. Most of these Messianic movements were frequently, especially in the latter cases, of a political nature.

Although it is to some extent customary to include a number of Jewish reformers and revolutionists in the category of pseudo-Messiahs, only a proportion of these agitators can with propriety be classed as having claimed to themselves the Messianic semi-divinity. Others, often against their own wish, were hailed by their enfraptured followers as the divine leader, promised salvation for the Jewish people, and they were accepted by bewildered people as their inheritance. Just as there existed a belief in an Eranistic Messiah who was to be the forerunner of the Davideic Messiah, so, among the pseudo-Messiahs, many pretended to be the Messiah, himself, or his forerunner. The opening of the Christian era saw in the Holy Land a number of these local minor Messiahs. Thus we learn from Josephus (Ant. xx. v. 1; also Ac 529) that about A.D. 44 one Theudas, claiming to be the Messiah, set about gathering followers that he would divide the Jordan and enable them to cross dry-shod. They collected on the bank of the river for the miracle to be performed, but, before the prophet could take steps to carry out his prophecy the party were interrupted by Felix and his soldiery (Jos. Ant. xx. viii. 6, BJ ii. xiii. 5; and Ac 12). A third pretender preparing to lead the people into the wilderness was destroyed together with his followers by Herod the Tetrarch (Jos. Ant. xx. viii. 10).

A Messiah of a different description was Menahem, the son of Judah the Galilean and the grandson of Hezekiah the leader of the Zealots. He seized the city of Masada together with a large store of arms, with which he supplied his followers, and then attacked Jerusalem. In battle with the soldiers of Agrippa II. Menahem was successful, and as a result captured Antonia, one of the towers of the capital. Emboldened by his success, Menahem claimed the leadership of all, and thus aroused the jealousy of his colleagues and was assassinated. Menahem was the last Judean Messiah before the destruction of the Temple.

Contemporary with these Messiahs of the 1st cent., similar personages arose among the Samaritans,
all of whom, after an existence more or less brief, passed away. Prominent among them were Simon *Makpen* (\textit{I Macc} 7:46), a man of distinction who joined to his mission, and who is said to have been slain at the time of his conversion. Simon *Makpen* was a Jewish Christian, who joined to his mission, and who is said to have been slain at the time of his conversion. 

Dositheus, who, instead of restoring the Hebrew State, founded a Messianic sect that survived until the 6th century.

The destruction of the Temple led for a time to a cessation of pseudo-Messianic activity. For sixty years no new Messiah arose until at length, on the accession of Hadrian, the milder government of Trajan gave way to stern rule. The repressive policy of the Romans aroused once more the spirit of the Jewish people still unsatisfied. A rebellion broke out and a leader was immediately in hand in the person of Bar Kokhba, or Bar Kozliiah, of the family (probably from the name of his birthplace). Of the personality of this leader little is known. His original name is even doubtful. It is conjectured that he was one Simeon of Cozeba (I Ch 4:52 or Chzch (Gen 38)). The name 'Bar Kokhba,' or 'son of a star,' was given to him by the famous R. Akiba, who believed that in him was fulfilled the prophecy: 'There shall come forth a star out of Jacob . . . and shall shine in the corners of Moab (Mal 4:2). Bar Kokhba does not appear to have adopted the designation of Messiah himself. This dignity was attributed to him by R. Akiba and other sages. On the outbreak of the rebellion, the whole province, composed of Jews, Samaritans, and pagans, was evacuated by the Romans. The array of the Jews at this time has been estimated at as many as from 400,000 to 500,000 fighting men. Unfortunately, little is known of the campaign, but it is certain that the guerrillas descended in command at the time of the outbreak proved respectively inadequate and inept. The services of Julius Severus, the greatest soldier of the age, were requisitioned from Britain, where he was waging an archon war with the marines, natives, to recover the prestige of the Roman arms. But even he, with unlimited resources, was at first compelled to remain on the defensive, and trusted to his tactics of cutting off detached parties and supplies to wear out his formidable enemy. In the end, the array of the guerrillas was fought, and with every victory the numbers of Bar Kokhba's followers increased. From the most remote of the Jewish colonies men came to light under his banner. Recruits were not only drawn from Israel: Bar Kokhba's army included non-Jews in its ranks. Those who could not fight helped to fill the rebel coffers. At first the campaign proved a series of successes for the pretender. Jerusalem was soon captured, and served as a capital for Bar Kokhba, who was proclaimed king, and duly carried out the duties of sovereignty. For three years the Holy City remained in his possession, and during that time his armies succeeded in taking 50 walled towns and 932 villages. At length the tide turned. After a desperate struggle, Jerusalem was captured by the Romans, and no two stones of its buildings were left standing on one another. Other towns fell into the same hands until, of all the territories of Bar Kokhba, the town of Bithynia alone remained. Here the hero made his last stand, but not with the undivided support of the inhabitants of the fortress. Dissensions broke out among the garrison, and on the 8th of Abah, already the lastest anniversary in the Jewish calendar, Bar Kokhba was slain, his body brought in triumph to the Roman camp.
to the Holy Land, and, perhaps in consequence, his influence spread as far as Spain. His career commenced in AD 720, but was speedily arrested. He was captured and brought before the Khalif Yazid, to whom he excused himself by stating that he had never been in his presence; he had merely been amusing himself and making music. He was accordingly handed over to the latter for punishment, while his followers, repenting of their heresy, were re-admitted to the fold.

For the next three centuries and a half no Messiah arose in Israel. Then there was in the West a small group of unimportant pretenders; in France (c. 1087), at Cordova (c. 1117), and at Fez (c. 1257). Of these there are practically no records beyond the mere mention by Maimonides. About 1186, however, one of far greater importance arose in Kurdistan. David Alroy (or Alrui) came from the north of Persia, probably Adhharadjan, being a member of one of the free Jewish tribes which claimed descent from the Ten Tribes, and to which the Afghans, the Afridis, and Pathuns of to-day trace their ancestry. The period was again one of political disorganization. One great element of disturbance was the efforts of the Crusaders to recover and to keep possession of the Holy Land. Messiahs appeared in Arabia and Persia, and the weakness of the Sultan led almost to a paralysis of the Government. It was in these circumstances that Alroy visited Baghdad, and on his return to his own people he raised the standard of revolt. Alroy, however, immediately proclaimed himself Messiah, and the weak Sultan, fearing his appearance, was content to limit his activities to the protection of his own subjects; the affair of Alroy was thus to a great extent a failure. In all probability he was killed in an unsuccessful attack on the stronghold of Amadin. According to a less reliable version, the governing powers, unable to overthrow the Messiah, had him put to death when he was still a minor pretender.

Abraham ben Samuel Abulafia was born at Saragossa in 1240. While still a youth he was attracted to kabbalistic studies, and it is said that he was a kabbalist rather than a pseudo-Messiah that his career may fairly be compared to the pretenders. He wandered from town to town and country to country. In 1281 he was in Rome attempting to convert the pope to Judaism—of course without success. His boldness involved him in imprisonment, from which he is said to have escaped miraculously. Four years later, when in Sicily, Abulafia proclaimed himself the Messiah, and announced the millennium for the year 1290. The year elapsed and went by, but the millennium was still far away. Abulafia continued his picturesque career for one more year and then disappeared from history. He also, however, left his spiritual descendents, and from among them one of two of his disciples, Joseph Jukataia and Samuel, both of Mediaea. Where Abulafia had failed, they were likely to succeed, and it was but a matter of time that these two disciples would have made their mark in the firmament of Messiahs.

Immediately following them came Nissim ben Abraham of Avila, who pointed to 1295 as the year of the millennium. There were sufficient believers to fill the Synagogue on the appointed day, there eagerly to await the divine manifestation; but again disappointment was the prevailing emotion, and, when the watchers found mystic little crosses on their garments, many, accepting them as heavenly manifestations, embraced Christianity. The fate of the prophet, as of many of his predecessors, is unknown.

A century later Moses Botarel of Cisneros appeared. As a prophet he was of little consequence. In 1502 Asher Barmelin suddenly arose in France and was received with sympathy by the Jews and the Christian church. He was received with the greatest interest by the Jews and the Christian church. He was a great man, with the spirit of a Messianic revival. In 1525, he was arrested and imprisoned. He was tried and convicted of heresy, and was sentenced to death. He was beheaded on the 24th of March, 1525, at the age of 63.

Reuben arrived at Venice in 1523 after having visited Palestine and Egypt. He immediately proceeded to Rome, where he procured an audience of the pope, Clement VII, to whom he announced the arrival of the Messiah. He was received with the greatest interest by the Jews and the Christian church. He was a great man, with the spirit of a Messianic revival. In 1525, he was arrested and imprisoned. He was tried and convicted of heresy, and was sentenced to death. He was beheaded on the 24th of March, 1525, at the age of 63.

The embryo of the Messiah, the ambassador, and the circumstances that surrounded them, as well as the accompanying legends that immediately began to be woven, endowed Reuben with almost superhuman powers in the eyes of the Jews, for whom he was the Messiah. He was received with the greatest interest by the Jews and the Christian church. He was a great man, with the spirit of a Messianic revival. In 1525, he was arrested and imprisoned. He was tried and convicted of heresy, and was sentenced to death. He was beheaded on the 24th of March, 1525, at the age of 63.

claim were needed, his existence as a Jew un-
molested at the court of one of the most relentless of
the gentile leaders, abandoned Christianity, and
continued to be considered sufficient. The people looked eagerly
towards him and expected, not a momentary
palliation of their tortures, but a final release.

By no means the least of those who were
drawn towards the Messiah was Solomon Molkho
(pseudonym Diogo Pires) (c. 1501-32), an official of the
Government of Portugal. Pires, who was a young man
of great promise, aroused the pity caused by Reubenii's mission, abandoned Christianity, adopting
himself to Judais in place of it, and endeavoured to attach himself as a disciple to the
newcomer. The latter, however, severely dis-
couraged all conversions to Judaism, fearing
probable loss in consequence of their trouble
might react on him and his mission, and Molkho
found little or no favour with him. Molkho's
conversion to Judaism had placed his life in great
jeopardy; and, deprived of the protection of
Reubenii for which he had hoped, he left Portugal
for Turkey. In the East Molkho, although hitherto
supposed to be quite unlearned in Jewish lore, is
said to have displayed a remarkable acquaintance
with that subject, and by his eloquence and learn-
ing he acquired the reputation of a teacher by
which he was acquired the latter, he soon collected around him a
class of disciples who considered him almost
divine. His teachings went without disguise far
to the domain of mysticism. By him the advent
of the Messiah was foretold for 1540, and the sack
of Rome in 1527, an oft-foretold precursor of the
millennium, seemed to confirm Molkho's propheticies.
The one ambition of the prophet was to earn a
martyr's crown, and in pursuance of this aim he
left a brief sojourn in Turkey and returned to Christendom.
And here his position was fixed. He was the
conversion of the Messiah the apostles of the
conversion, and flight of Molkho, added to other incidents,
shook the position which Reubenii had acquired at
the Portuguese court. The royal promises,
though made apparently in good faith, lacked
fulfilment, and the undoubted excitement of which he was the cause among the Neo Christians
of the kingdom rendered his continued presence
among them most undesirable; and, after having
spent a year at the Portuguese court, Reubenii was
advised to withdraw to Rome. The vessel in which
he sailed was wrecked on the coast of Spain, and for a time
he was in the hands of the Inquisition. His release
was, however, ordered by the emperor, Charles V.,
and he settled at Avignon, then under the
sequestration and possession of the papal
ambassadors. He removed to Italy, proceeded everywhere by
the mysterious reputation which he had acquired, and
followed by a host of believers, who hailed him as
the precursor of the Messiah and even as the
Messiah Himself.

Meanwhile Molkho had also come to Italy with
the reputation which he had acquired in Turkey,
and, if possible, a following that grew in
numbers from day to day. In Rome Molkho,
imbued with Messianic tendencies, had visions
and foretold floods and earthquakes, which, it
must be added, subsequently occurred. More
valuable to him, however, were the favour and
protection which he had obtained from the pope,
Clement VII., and from some of the cardinals.
With their assistance he was able to defy his
enemies, who were drawn not only from among
the emissaries of the Inquisition, but also from the
Jews, some of whom shrewdly considered his
influence and pseudo-Messianic claims were
rather than beneficial to Jewry. His critics among his
own community were, however, numerically
insignificant, and his influence among the Jews
increased until he became indeed their accepted
prophet. By Graetz Molkho has been described at
this period of his career as 'the Jewish Savona-
rola' (Hist. iv. 27). The Jew Molkho, of which he had foretold would overtake Rome,
Molkho repaired to Venice, and there he met once
again the first inspirer of his enthusiasm, David
Reubenii. His position in regard to Reubenii had,
however, undercur of Reubenii, which was not
now, not as a disciple, but as an equal.

Reubenii was still endeavouring to obtain assistance
for his brother, the king of Kishwar, and
from the authority in Venice he received some
encouragement in his mission. After the flood
Molkho returned to Rome, where he was received
with enthusiasm as a successful prophet. The
pope, the cardinals, and the ambassadors of the
Powers vied with one another in their flattering
attentions to him. His influence was so great at
this period that he was able to secure the indefinite
postponement of the introduction of the Inquisition
into Portugal; but his Jewish enemies, especially
Jacob Mantin of Venice, were untriring, and they
ultimately succeeded in securing his arrest by
the Inquisition as a renegade Christian, and Molkho
was condemned to be burned. All the prepara-
tions for the auto da fe were made and the victim
anticipated by the pope. It was then discovered, however, that the pope, in
order to protect his favourite, had gone to the
length of substituting another victim, and that
Molkho himself was safely hidden within the
papal apartments. In the circumstances it is not
surprising that Molkho was smuggled out of
Rome at the first opportunity.

Molkho thereupon rejoined Reubenii, and the
two decided to journey to Lisbon to plead with
the Emperor the cause of the Jews. There
is a tradition that advantage was taken of the
interview with Charles to endeavour to convert
him to Judaism, and it was possible this attempt
that led to the arrest of both the ambassadors.
They were put into chains and carried to Mantua,
where at the Emperor's request Molkho was again
tried by the Inquisition and sentenced to be burned.
At the last moment pardon was offered him on
condition that he returned to the Christian fold,
but he rejected the offer with scorn. He had only
one cause for relief he saw to it that it was
that he had been a Christian in his youth.
Molkho's ambition was thereupon gratified and he
earned a martyr's crown. Some of his addresses
were published by him in 1529 under the title of
The Book of Reubenii. Reubenii was taken to
Spain and there handed over to the Inquisition.
His ultimate fate is surrounded by mystery, but
he appears to have died while in the hands of
the Holy Office. The evidence that he was burned
is insufficient. A copy of Reubenii's diary is in MS
at the Bodleian. Graetz published a portion in his
History of Jewish Christianity, ii.

Concerning the existence of Reubenii, there can
be no legitimate doubt. His mission, however, is
not so well authenticated, and there are those, no
mean authorities, who consider him to have been
merely a charlatan and impostor. Graetz (ib. ch. 8),
for instance, judging from the language of Reubenii's
Journal, expressed the belief that it had been
written by a German Jew, and Neubauer held the
same view, only more positively. Rieger and
Vogelstein (Gesch. der Juden in Rom, ii. 41-46,
33-38) are also very sceptical about his bona fides,
but they express the opinion that he came from
Arabia. Adler (Auto de Fe and Jews, p. 30 ff.)
seems to have more confidence in Reubenii's
credentials, but locates the source of his embassy to
Cranganore in India.
Strictly speaking, neither Molkho nor Reuben should perhaps be included in the list of pseudo-
Messiahs, for neither ever claimed divinity. They were Messiahs for the very reason against their own
inclinations. The same may be said of Isaac ben
Salomon Ashkenazi Luria (Ari) (1534-72), the
founder of the modern Kabbala. An ascetic and a
mystic, he never pretended to be more than the
forerunner of the Messiah, not the Messiah Him-
self. His principal disciple, Hayyim Vital Cala-
brese (1548-1620), was acclaimed by his master as
possessing a soul unsullied by sin. Around him also
a group of mystical legends have collected. On
Luria's death Vital succeeded to his position and
also claimed to be Messiah ben Joseph, the
precursor of Messiah ben David. Both Luria and
Vital made Safeh the scene of their principal
activities. In the time of Vital a rival Messiah
arose in the person of Abraham Shalom, who in
1574 sent a message to Vital pointing out that
the latter was only Messiah ben Joseph, but he,
Shalom, was Messiah ben David. He offered,
moreover, to shield Vital from the death that
would otherwise have been his fate.

The most remarkable and influential of all the pseudo-Messiahs was Shabbathai Shvi, born, the
son of a Sephardi agent of an English mercantile
firm, at Smyrna, on the 9th of Ab (the anniversary
of the destruction of Jerusalem and a fast day in
the Jewish calendar), 1621 or 1628. He is gener-
ally believed to have died on the Day of Atonement
in 1675. Even as a boy Shabbathai was note-
worthy for his physical beauty and his strange
habits. From childhood on, he was a kabbalist, and
the book of the Talmud, that he had no liking,
and the time spent by him at the school of R.
Joseph Escapa was for the most part wasted. On
the other hand, the kabbalistic mysteries of the
Zohar had a great attraction for his mind. He
threw himself ardently into the study of them,
and endeavoured, by carefully following out the
ordinances laid down therein, and especially by
the practice of ascetism, himself to solve the
mysteries that the Zohar professed to offer its
students. On attaining manhood, Shabbathai had
already acquired a considerable reputation as a
kabbalist, which was enhanced by his mode of life,
his obvious belief in his magical powers, and his
determined aversion to any worldly affair.

Meanwhile Shabbathai's father had learnt, through his
correspondents in England, something of the hopes
and beliefs of the English millenarian sects, then
prominently English thought. He had been apprised of the identification of the year 1666
with the opening of the millennium. By a
coincidence, according to the computations of the
Zohar, the year 1665 was to mark the appearance of the
Jewish Messiah. Shabbathai, encouraged by these
signs and by the almost worshipful attitude of his
father, who attributed the whole of his material
fortune to his son's saintliness, by nature and
education already prepared for the rôle that he was
about to adopt, revealed himself in the latter year
unto a select circle of his followers as the Messiah.

In support of his claim he uttered the Tetragram-
maton—an act permitted only to the high priest in
the sanctuary on the Day of Atonement. Shabbathai
remained at Smyrna for some years after this event,
surrounded by a circle of fervent believers, but
with little if any influence outside of the district
in which he lived. He and his teachings were
widely watched by the Italian authorities, who
ultimately, considering that he had outlived the
permissible limits, excommunicated him and his
disciples on account of their heresy, and banished him from Smyrna. This occurred about
1654 (according to Graetz, 1651).

From Smyrna Shabbathai is believed to have
gone to Constantinople, supported in every sense
by his disciples and strengthened in particular by
the aid of the Rabbis. He professed to have gained
scientific knowledge and of mature years, and
Abraham Yaehini, a distinguished preacher, who,
by means of an alleged ancient MS of very doct-
ful authenticity, rendered Shabbathai still more
steadfast in the belief in his own divine mission.
It is doubtful whether Shabbathai, if he ever
intended to visit Constantinople, did so on this
occasion, but it is certain that he arrived at
Salonica, where mysticism was likely to find a
sympathetic audience and where he remained
about six months. From Salonica he proceeded
to Aleppo. Shortly after his landing he was
acclaimed as the Messiah. In Salonica Shabbathai
showed himself even more intoxicated with the
consciousness of his new rôle than he had been at
Smyrna, and his acts led here also to his practical
expulsion by the Rabbis. After leaving Salonica
the new Messiah spent some time wandering about
the Orient, promulgating his views and his claims
in every city that he visited and gaining adherents
in all parts. In 1660 he was in Cairo, where he
remained for about two years. There he gained a
valuable supporter in the person of Raphael Joseph
Chalebi of Aleppo, a mystic who had long awaited
almost with impatience the coming of the Messiah,
and whose wealth and influence were both ex-
tensive.

The approach of the apocalyptic year, 1666,
attracted Shabbathai to Jerusalem, where, sup-
pressing temporarily his extravagances, he built
up an influence over the people on less theatrical
bases. As the year 1666 he spread his influence
throughout the Jewish community, he was sent abroad to obtain funds for their
relief from an impending calamity, and the success of his mission rendered him all the more popular
among the grateful people in whose midst he was
sojourning. While he was in Egypt, he sent out
in yet another mission. A Polish Jewess, who at
the age of six had been left an orphan and whose
subsequent career was almost as romantic as that
of Shabbathai, was at the time in Leghorn, where
she was reputed to be living an immortal life.
Of great beauty and, moreover, of an eccentric
disposition, she was already famous beyond the
limits of the town, and her announcement that she
was intended as the bride of the Messiah made her
now known to every Jew in Egypt. In a few years
she was heard to have reached Constantinople and
spread as far as Cairo, where it came to the ears of
Shabbathai: he sent for and married her, declaring
that she was his divinely appointed spouse.

Shabbathai thereupon returned to Palestine. Passing through in particular Cairo, he met
Benjamin Levi, otherwise known as Nathan
Gazati, who immediately became the leading ad-
vocate of the new Messiah and took unto himself
the rôle of Elijah, the forerunner of the Anointed.
One of his first steps was to announce the opening
of the Messianic Age for the following year, 1666.
This prophecy, together with many subsidiary ones,
was promulgated far and wide, spreading even to
the shores of the North Sea. These claims were,
however, not by any means encouraged by the
authorities at Jerusalem, and Shabbathai thought
it well to find a more congenial centre for his
activities. He returned to Smyrna, his journey
being taking the form of a triumphal progress
which culminated in a reception at his destination,
remarkable for its enthusiasm. At Smyrna, over-
whelmed by his reception, he put the final touch
to all the rumours that were current regarding his
divinity, and formally announced his Messiahship.
He was forthwith regarded with awe as the sole
ruler of the local Jewish community. Wherever Jews were to be found, the rise of
the new Messiah attracted attention. The business of the exchanges of Europe was neglected in order
that the latest of miracles might be discussed. The merchants of the North Sea ports wrote to their agents in the Levant for information. Tribute poured in upon the *King of Kings,* Edward I, had been sent to him from the four corners of the earth. In the synagogues he was publicly hailed as the Messiah, and those who doubted went in danger of their lives. Even among the Christians believers in his mission were to be found. In Hamburg Protestants went to their pastor and said: 'We have almost certain accounts not only from Jews, but also from our Christian correspondents at Smyrna, Aleppo, Constantinople, and elsewhere in the East that the new Messiah of whom the Jews talk and the Jews believe, and the whole world flock to him. What will then become of the Christian doctrine and the belief in our Messiah?'

Prophets, male and female, in accordance with Joel's prediction (31:2), arose and exclaimed in Hebrew, a language with which they were supposed to have no acquaintance: 'Shabbathai Sebi is the true Messiah of the Race of David; to him the crown and the kingdom are given!' The daughters of R. Pehin, Shabbathai's bitter enemy, blessed the name of the Mahommedan seer. Some of the Jewish agriculturists refrained from work on account of the advent of their deliverer who would lead them back to the Promised Land.

At the beginning of the year 1666 Shabbathai left Constantinople, with a Controversy which he had previously made, and he distributed the kingdoms of the earth among his principal followers. As soon as he had landed on European soil, he was arrested by an officer of the Sultan, who placed him in chains, and it was in this condition that Shabbathai approached the capital. Despite his undignified landing, Shabbathai's popularity in no wise languished, and he was received by hosts of believers in his divinity, who, by the gifts which they brought, enabled the 'Messiah' to secure a considerable alleviation of the lot that would otherwise have fallen to him. Shabbathai's courage did not, however, equal his popularity; and, when questioned by the authorities regarding his claims and intentions, he replied that he was merely a Rabbi sent from Jerusalem to collect funds for charitable purposes. Despite this falling away, the influence of the pretender, instead of waning, grew stronger, and in his prison in Constantinople Shabbathai held a court which was attended by all the petty notables of the city, and in which he and his adherents placed the capital. undisguised charladian and an apoteose from more
than one faith, he pursued a career of uncensuring war-
fare against Rabbinic Judaism, and in the peculiar
views to which he gave expression he described
himself as the re-incarnation of all the prophets and
Messianahs who had preceded him. In Turkey he
underwent an education which was the result of his
kabbalistic learning, and on the return to his birth-
place the remnants of the Shabbathian party, who
were known as Zoharites, appointed him their pro-
phet. The Talmudists, however, disapproved most
vehemently and forcibly of his teachings, which
were leading directly to the destruction of Judaism
and of morality in Poland. Frank and the Frank-
ists were excommunicated, but they found a power-
ful friend in the bishop of Kamenz, whom they
infringed by pretended points of strong ressem-
bance between their faith—which was bitterly
opposed to Rabbinic Judaism—and Christianity.
With his assistance the tables were turned, and
for a time the upper hand was gained over the
orthodox element in Jewry. With the death of
the bishop, however, another change came over
the fortunes of the parties. The position of the
Frankists became precarious, and in order to
secure the safety of his followers Frank instructed
them to remove to Moravia, on the advice of the
example. Conversions to Christianity followed on
a considerable scale; but, when the converts were
discovered to be leading double lives, and, while
outwardly Christians, to be following Jewish prac-
tices in secret, the attention of the ecclesiastical
authorities was directed towards them. Frank
himself was arrested in 1769 on a charge of heresy
and imprisoned in the castle of Ceschtow, where
he remained for thirteen years. This imprison-
ment was probably the end of his public move-
ment or his teachings, and his prison became a
centre for the promulgation of his doctrines.
The invasion of the Russians in 1772 led to his
liberation, and he was then free to make a
triumphal progress through Poland, Bohemia,
and Moravia. He lived in state until his death
in 1791, latterly as the Baron of Offenbach, in
various continental capitals, always with an
immense retinue and a vast treasure, derived from
his position. In subsequent years his occasional
letters show how little belongs to his later history,
however, hardly belongs to the annals of Jewry,
his influence for Judaism had ceased long before his death. His followers, the Frankists, although for a time they kept up a movement with a certain amount of public
activity, were, however, for the most part, victims
of a persecution which has been uniformly judged
by the principal authorities of Judaism to have
been a most unfortunate event for the cause,
with this particular of the kabbalists and the Zohar,
and soon the mysteries of this literature took complete
possession of him and he firmly believed himself to be
divinely inspired. He even went so far as to
create a second Zohar, and by the work of his
own hands and mind he was convinced of his
divine mission. A circle of young devotees soon
settled round him, and his fame began to spread
to the confines of Jewry. The leaders of orthodox
Judaism in Germany were scandalized and, after
some difficulty, brought pressure to bear upon the
newly arisen prophet to undertake to refrain from
preaching by the mere use of the word, the new
teachings. Luzzatto gave the desired promise, but was unable to observe it for
very long, and, when he once more reverted
again to the forbidden studies, he was excommunicated
by the board of Halakhic authorities. Very shortly
thereafter he was arrested by the government of
the Hapsburg empire, and after a short imprisonment
Luzzatto wandered to Pale-tine, where he died of
plague shortly after his arrival.

LITERATURE.—On the general subject of pseudo-Messianahs relatively
little has been written. The principal references to the
subject are to be found scattered in works on Jewish
history. *JEX* contains a general resume of the subject
with supplementary articles in other volumes dealing with
individual preceptors to the Messiahship. Pseudo-Messianahs in
general are also dealt with by Joannes A. Lenta, in *Scholastica
historico-biblica de Judorum Pseudo-Messianah*, Herborn,
1697; *M. Gaster, in J ewish Chronicle*, Feb. 11 and March 11,
1898; and A. M. Hyamson, *Golcln's Magazine*, cc. cxv.
[1879] 79-80. For this individual pseudo-Messianah, M. Kaufmann,
*Geschichte der Juden*, Leipzig, 1868-78, Eng. tr., London, 1891,
should be consulted. In addition, *JEX*, 1890, xxv., art.
xxv.; 1 Ex. *JEX* 8, ii. 2, and E. Schäfrer, *JEX*, i.
189. For Donmeh see *S. Krauss, in REJ*, 1885, 189-22;

METALS AND MINERALS.

I. Metals.

Fire and metallurgy may be regarded as the two main bases of material culture. The results of the modern applications of steam and electricity have been likened as munificence and insignificance when compared with those which followed the discovery of metals by the men of the stone age; and with the finding of the art of extracting metal from ore human culture was revolutionized. 1

Possibly the first attempts at utilizing metals were made by applying a modification of hammer-work on stone to fragments of surface ore. Copper and its alloys, especially a native bronze, would naturally be observed first; but the usual order of discovery is lead, then tin, then silver, then gold. This order varied in different regions. For instance, it is unlikely that the West and Central Africans found any metal earlier than iron, which is so abundant in their country.

The importance to humanity of the discovery of metals and the invention of metallurgy, philosophers have inclined to attribute to them some remarkable cause. Lucretius, e.g., imagined a mighty conflagration; this, in consuming forests covering the metalliciferous ground, would reduce the overtopping ore to a metallic state. 2 But, with the discovery of fire-making, there are many possibilities, and various lines of discovery may have converged. Gowland suggests that the origin of metal-working may be found in the camp-fires of the Neolithic age. 3 When those were made and the metalliciferous soil, the lumps of metal melted out would at once attract the attention of a stone-working people, and the bows of the stone hammer on the hot and malleable metal would indicate its possibilities. The camp-fire may thus be regarded as the prototype of the most elaborate modern furnaces. 4

Naturally, a feeling of the importance of metals, and a primitive appreciation of the marvels of science, in connexion with the working of them and of their wrought products, would redound upon an early man with the results usually found when superstition meditates on critical things. The body of beliefs about metals and, in a less degree, minerals is enormous, but reducible to a few simple types which are found everywhere and survive in peasant psychology to this day. Special properties of this or that metal or mineral are taken into account, and cultural reactions of all kinds modify the various beliefs and usages. These may be typically exemplified without unnecessary multiplication.

In common with all skilled crafts in early culture, the miner and the worker in metal are regarded with wonder, and often with its entailed superstitions.

Among the Bantus of the Upper Congo no one is allowed to step over a smith's fire or blow it with his mouth; such acts would pollute the fire and cause bad workmanship. The smith is supposed to use witchcraft in order to perform his smithing well. Neighbouring peoples simply regard the smith with respect. 5 Some African smiths form sacred gods; the mythical Water-Drums of Scandinavia are a natural dedication, as is part at least of the figure of the Greek Hephaistos.

The taboos attached to the working of metals, to mining, and to ore and metal themselves.

The tin-mines of Malaysia have a remarkable code of tabus and body of superstition. But there are others which, according to the Chinese workers, who, however, as will be seen, have a similar faith. The ore must be kept moist and be allowed to grow, to be able to move from place to place, to reproduce itself, and to have special likes or affinities for certain people and things, and vice versa. Hence the tin-miner is supposed with a certain amount of respect, to consult its convenience, and what is, perhaps, more curious, to conduct the business of mining in such a way that the tin may be produced without being obtained by its own knowledge. 6 Of the talmed arts observed by the miners, the chief act would be possibly may be killed in the mine; that the arrow may not be put on; that shoes may not be worn, or an umbrella used. Numerous charms are employed in the business, for the purpose of clearing away evil spirits and to induce the ore to show itself. 7 The Malay panjang ('medicine-man'), or mining wizards, used to enjoy 'an extraordinary reputation, some of them being credited with the power of bringing ore to a place where it was known that no ore existed, to possess the power of strewing each ore as existed, and of turning it into mere grain of sand.' No one but him was allowed to wear a black coat at the mine. He used a special language (bahasa pantang, 'tana language') for his professional duties, and he sat in a wonderful 'home' tin. 8 Sometimes each separate grain of ore was credited with personality. 9 It was believed that tin could 'announce its presence by a peculiar noise heard within the stillness of nature.' The tin is described as a buffalo, in shape which it makes its way underground, this being perhaps a sophistication of the bole. In Sumatra the spirits of the gods and mines are treated as much as reverence as the spirits of the tin-miners in the Malay Peninsulas. Tin, ivory, and the like are regarded as the property of the miners to the men of the societies of their operation, for at the sight of tin things the spirits of the mine would cause the gold to disperse: in some cases, for example, the spirit of gold, a deep silence must be observed; no commands may be given or questions asked, probably because the removal of the precious metal is regarded as a theft, which the spirits would punish if they caught the thieves in the act. Certainly the Dyaks believe that gold has a soul which seeks to avenge itself on men who dig the precious metal. 10

In Manipur the iron-ore deposits are under the protection of an amma lat ('forest god'), who is propitiated before the iron is worked. 11 He capriciously moves the iron about. His symbol is a piece of iron a few inches square. The lat-hara (pleasing the god) is an annual festival. The first thing to be done is to bring the lat into a state of activity, ordinarily speaking he is supposed to remain inert, unless offended in any way. He 'particularly affects two plants called Leisang Irrel and Langtheli, and when he is about to please the Leirangha, a specially selected official, has to fetch them.' The plants are placed in the house of the lat, and then taken in a brass vessel by an old lady to the river. She washes about, suddenly stings, and then emerges with a vessel full of water. The god has now come. 12 A procession with music is made to the lat-house ('god's place'). The god's servants or priests are supposed to take the god's buiten (pieces of iron) set out. By them is placed the vessel, and a service of prayer and praise is celebrated, after the lighting of a sacred fire for the sacrifices. The god's servants take out two old women, termed mattha, who are often inspired by him and babble incoherently. If a man is similarly possessed by the god, he is known as mattha and during the waiting of the god he wears a calabash adorned with a nuti. Dramatic performances and the list of events. 13

The last example is a perfect one for showing the development of a ritualized cult, the organization and the processes of its acquisition. There is some vagueness, which is worth noting, as to whether the metal itself is personified. As for its being defiled, this is hardly to be inferred here or elsewhere.

The god appears to be rather the owner of the site, resembling the Hebrew Baals.

The Malay regarded gold in a similar way. The god spirit is 'believed to be under the care of the god and the care of the spirit of the earth, or god.' It has the form of a golden rooster. 14 The theriomorphous is analogous to that of tin.

The same ideas are found at the other sides of the world.

Gold was regarded by the Central Americans as possessed of 'divine qualities,' among other things, and this was permitted to be attributed to gold. 15

2. Skene, op. cit., 261.
An interesting detail with regard to the personality of metals is supplied by Malay superstition. The Malays believe that so long as gold is in the earth it has a soul. When the gold is taken by man, the soul flies away. 1 The idea is parallel to the story of the soul of the corn-spirit leaves John Barleycorn when he is ground, if not when he is reaped. The idea is elaborated in Celebes, on the principle that the soul may be retained and will assist the usefulness of the implements when made.

Among the Alorers of Celebes iron-working is a prominent industry. Iron is credited with a soul, which is apt to desert the article unless the iron is polished with a piece of yellow damar. It is claimed that a bundle of iron (gods), consisting of wooden imitations of iron implements, and in this the soul of the iron resides. 2 "If we did not hang the names over the anvil, the iron would flow away and be unworkable" on account of the absence of the soul. 3

This is an interesting application of the principle of the external soul.

The Chinese in their elaborate animism have not neglected metals. They consider metals and ores when in the ground to possess a shen ('soul') of animal or human shape, and this figure is either the mineral or a spirit guarding it. 'Gold, Jack, and pearls' are the fairs of heaven on Earth. 4

A particular development is towards the Scandinavian idea of genius loci. As tales of silver and of 'woman in white'; when they were attacked and knocked down, they disappeared, and silver mines were found on the spot. 5

The same kind of analogy of various metals with various things, according to colour or other properties. The Greeks of to-day call jaunmice 'the golden disease,' and heal it on the homeopathic principle with a decoction from an English sovereign, English gold being the best. 6

One or two examples of the miscellaneous wonder-lore which has gathered round metals may be cited. Fern-seed, itself a mythical vegetable gold-dust, guides to hidden treasures. 7 A Malay recipe for turning brass into gold is to kill a wild pig, and sew up in it a quantity of 'scraps' of old brass or silver, when the grass has grown over the remains, 'dig up the gold.' 8 Paracelsus made a magic ring of a mixture of all metals joined under certain conditions, and Van Helmont concocted a ring of magical metal which cured disease. 9 An obvious connection is practically universal between gold and the sun, silver and the moon. Silver is the lunar metal; hence peasants like to have silver in their pockets when they see the new moon, and to turn it for luck, i.e., deshriving throughout the world magnetic iron and ore have excited wonder.

The relative value of the familiar metals is the same in superstition and ordinary usage. It is interesting to note that the Hindus regarded alloys as impure, and never used them for religious purposes. 10 Here may be detected the notion of mixture, adulteration, as a component of the idea of impurity. Another popular division of metals is into 'hard' (base), and 'soft.' Here we consider gold 'the most genuine matter.' 11 In all the analogous estimates found in every age it would seem that aesthetic ideas supersede economic. Clearly the aesthetic value of gold and silver rather than their importance as currency is to the fore, and either view preponderates over the mechanical importance of iron.

A similar preoccupation is shown in the genealogies of the metals. Mythology connects gold and silver from the union of water and fire. 12 In Chinese philosophy tin is produced by the influence of the feminine principle in nature, being clased between silver and lead. The metal arsenic generates itself in two hundred years and after another two hundred years is converted into tin. Tin, being a product of the feminine principle, has tender qualities. When it is submitted to the influence of the masculine principle, it is converted into silver. It is sometimes said that wine kept in tin vessels has a poisonous action on man, which proves that the arsenic had not been completely transformed into tin. 13

This notion of transmutation of metals is a curious parallel to modern discoveries of the degeneration of radium into a series of radon metals. The search of the alchemists for the philosopher's stone included a similar hypothesis. 14

According to the Pahāvi Bṛhadāraṇyaka, gold, silver, iron, brass, tin, lead, quicksilver, and adamant arise from the various members of the death-combustion; and an excess of the pursuit of gold it is produced from the life and seed. 15 The Pahāvi Sāyajit-Uyāsāyajit speaks (xxv. 15) of the duty of 'prophylactic' melted metal, i.e., practicing habits of the heart as unsmirched and pure that, when they shall drop melted metal upon it, it does not burn. 16 But the ordeal shows a simpler metal, especially gold and silver, is a counterpart of Shatvarī himself in the world. 17 From the divided body of Indra, the fire of heaven, earth metals, metals water, and water wood. The idea of impure souls for metals already referred to has probably no cosmological intention.

In the multitudinous superstitions relative to the protective, curative, or dangerous properties of metals or metallic implements, the analogy of their relative value and efficiency—gold and silver and steel—seems to predominate. The Satāpatha Bṛāhmaṇa lays down that the slaughterings-knife for the horse should be of gold, that for the perry in copper, and that for the other sacrifices to Prajāpati of iron. Gold is a symbol of the nobility, copper of heralds, messengers, and the like, iron of the peasantry. 18 The intrinsic value of gold, its brilliance, analogous to fire and the sun, connect it with vitality. Hence its extraordinary popularity. On the day among the Chinese, in the form of lead, dust, decoction, or grease. It is placed in the mouth of the dead to assist revivification and to delay decomposition. 19 The Chinese also put mercury in collins in order to preserve the body. 20 With no knowledge of embalming they endeavour to insulate, as it were, the coffin against decay. The use of quicksilver may be referred to the analogy between a moving and apparently living metal of worth and organic life. British folklore advises rubbing ringworm with silver. 21

Metals, in virtue of their various properties, are used both as medicines and as amulets, in either case dependent on magical notions. The Burnese believe that this metal, used by them in itself protective, and base metals may be used in default of precious. 22 Lumps of gold are worn under the skin to secure invulnerability. There is a common practice of covering amulets with gold-leaf to add to their efficacy. 23 For a person to wear something, as a part of himself, which has a value of its own, adds to his own value and resisting power. On the same line of reasoning, metals of worth are the more useful in warding off ghostly enemies. In European as in Senitic folklore, fire the occasion of a vigorous bullet against a witch is one of silver, or a crooked sixpence; 24 but all metals have efficacy in this direction.

The property of resistance is common to most metals; the precious metals possess the further properties of beauty and value. The strength and hardness of iron make it a favourite charm. 25

To keep off evil spirits, mourners in India carry a piece of iron—a key or a knife or any iron object. In Scotland after a death a piece of iron was placed in all the provisions in the house to prevent death from entering them, and similar sentiments obtain in Ceylon and Morocco. 1 When Scotch fishermen return to sea, one said to take the use of iron. In the Atharvaveda, the first man who heard him called out "Cast a stone," at which every man of the crew grasped the nearest bit of iron, and he placed it in a cleft in the boat to prevent death. In Scotland there survives a queer superstition about "pigs" and "iron." It is unlucky to utter the words "son," "sister," or "pig" and then hear a man do so; you must say "Cold iron." 2

It is a more coincidence that in modern medicine iron is used as a tonic and that in early culture its "strength" was absorbed by men.

The people of Ceylon wear iron arm-rings to keep off evil spirits. The same principle is used in China.

Long iron nails are used by the Malays to protect newborn infants, betel-nut scissors to drive away iron spirits from the dead. One nail is put in a new child before a man wets it to drink it. When eating alone in the forest a man will sit on his hat to keep off evil spirits. This is not a "confirm" itself. Such iron implements are called "representatives of iron." Scrap of iron is used in ointments for curing the sick.

The supernatural power of a sharp instrument is to be a virtue of the intrinsic power of iron and steel as such.

Lead appears but rarely in superstition. The Atharvaveda speaks 3 of a charm against demons and sorcerers by means of lead. Here, as in many other magical and classical antiquity, the softness and malleability of the metal, and perhaps its weight, were possibly connected with ideas of image-making, for which it is as convenient as wax.

The practice of injuring a person by damaging his sword, or any other object is ever found by the side of shrines is common objects of Greek and Roman superstition; a leaden arrow, in classical belief, destroyed love. 4

The virtues of metal may be enhanced, as is common in the last-cited cases, by the form and purpose of the manufactured article. The ring has the additional advantage of encasing and keeping safe; the coin has the further value of currency and of the personality whose head is stamped on it by the British folklorist, the refined "touch" for King's Evil by using crowns. The head of King Charles I. Sufferers from paralysis or rheumatism collected copper wire from the church-door, and these were wound into silver rings which were worn to cure the infirmity. 5

The necromantic properties of metals have also been important in popular religion.

The idea that the sound of brass or iron has power to purify spirits to flight prevailed also in classical antiquity, from which it may have been inherited by medieval Christianity.
2. Minerals.—The religious associations of minerals in general are fewer and less marked than those of metals, except in the case of salt. The use, however, of stones of various sorts and shapes as fetishes and vehicles of magic is very widely spread; but, as it demands a special treatment, it is touched upon here only to illustrate the general attitude towards the mineral world.

Australian medicine-men possess sacred stones full of strength, more or less regarded as "living spirits." They swallow them or rub their heads with them to acquire their vital power. Magic and worship are closely connected with sacred stones. The stone is not the rut (the spirit) nor is the rut in the stone, but there is a connexion. The stone is, as it were, the "outside part" or organ of the rut, and the owner of such a stone is its priest. These stones are kept in houses in order to bring in rain to the inmates. There are special stones for promoting the growth of the crops and for bringing rain or sunshine. The stone is rubbed with food—e.g., corn—so as to induce it to act. Food placed on a stone and then eaten gives means to the eater.

Both shape and material are concerned in the prestige of sacred stones.

The Australians are partial to a small round black stone which is easily manipulated; the medicine-man cures a disease by pretending to extract such a stone from the patient's body. In some tribes every man carried a round black pebble of magically powerful force, buff: placing this in contact with anything causing trouble was said to extract the magic force from body, precluding its death or sickness. Rock-crystal, or quartz, is a favourite material for these purposes. Australian medicine-men use black stones for obtaining rain, curing diseases, and poisoning water. To cure disease they would extract a piece of rock-crystal, alleging that a hostile sorcerer had placed it on the body. To cure sickness, he would take a piece of rock-crystal and spits it towards the sky. White quartz was used for the purpose in Queensland. The stones are fixed to a stick and placed at the bottom of a pool, while in some parts a quartz crystal is ground to powder, which is scattered over the women, who pretend that it is rain. The liquid appearance of the crystal possibly suggested its connexion with rain. The Wawandis of Central Africa around a rain-stone or pebble to procure rain, and pegs are usually painted on the body in a stick or on a piece of wood. In New Guinea a "wind-stone" is tapped with a stick to produce wind. If it were struck heavily, a hurricane would result. The people of Vancouver have a number of stones, each representing a particular wind, and the required wind is obtained by slightly moving the corresponding stone. Pebbles, being obviously suitable for counting (cf. calculus), are naturally used as representatives of persons; in Scottish folklore at Halloween each member of a family is represented by a stone. In Greece a black stone is placed on the head to produce strength, and people carry stones on their heads while journeying over the bounds of the water.

The use of crystals of quartz or other mineral for "seeing" is world-wide, and need no special illustration here (see Art. CRYSTAL-GAZING). Again the analogy between the crystal and the liquid state.

In the Middle Ages the term "bezoar" covered mineral as well as animal concretions. One variety was the "mouldstone," curative of madness and poisoning. The adder-stone was worn to cure whooping-cough, amber to ward off crops, the snake-stone to remove serpent's poison, the lead-stone to cure rheumatism, in recent Scottish custom. Precious stones particularly have in all ages commanded interest by their unique beauty of colour, sparkle, or phosphorescence. The Greeks were "amethysts" to prevent intoxication.

The discovery of salt and its employment in food-preparation constitute an epoch as socially important as the discovery of metals. Neither has been achieved by the Australian natives; and many metal-using savages are still ignorant of salt. But its discovery generally comes early in culture, though long subsequent, in most cases, to the discovery of metal. Owing, perhaps, to its quasi-medicinal properties, as a source of vital energy (yang) to facilitate revival and retard decomposition, such being jade, jasper, nephrite, and agate. Jade, the most precious mineral, being identified with the heavens, intensifies the souls, or Shen, of those in contact with it; and the same was the case with gold, sometimes identified with jade.

When the Sovereign facts, the jade which he swallowing is procured by the Manager of the Jade Store.

This would accelerate his intercourse with disembodied Shen, the object of his fast. There were many stories of a luminous variety of jade.

Salt has been much used in sacrifice, indicating the analogy between sacred and ordinary meals. Molot solon was offered by the Latins to the Iares, and salt was sprinkled by Greeks and Latins on the head of the sacrificial animal. On the other hand, the Rabha Chin, in the 3rd cent., stated that in the Yachi, salt was partly mixed with the salt and sulphur of Sodom, which blinds the person whose eyes it touches. We thus get the two poles usually found belonging to sacred substances, positive and negative, optimum and pessimum.

Salt has been widely used in protective and curative magic, and the association of ideas may be the same as is seen in the word preserves.

Lao and Siamese women after childbirth washed themselves daily in salt water, being a protection against sickness. Moors carry salt in the dark to keep off ghosts, and in Teutonic countries it is placed near infants to protect them. In Morocco it is put in the wheat stack and left from ear to ear, and is sprinkled on the hand-nail before grinding the corn. British folk-customs have the charm of carrying salt with them round a baby before taking it to be baptized.

Salt is a cure for many sicknesses, and procures disenchantment. Like blood and iron, it is a favourite medium for the oath; in early Teutonic custom the sweater dipped his finger in salt, and then took the oath.

As with other trades, secrecy has attached to salt-mining.

In Asia salt miners observe continence and other tabus. In ancient Greece salt-waiking was a sacred business. The peoples of Central America worshipped a 'godness,' Huichol-bast, of salt, who was believed to have invented the pan-

Prohibitions against the use of salt are instructive for the theory of taboo. Certain professions, and persons in certain states, are forbidden to use salt, as they are forbidden other critical substances.

Mothers may eat no salt among Hindus, Africans, and other peoples. Priests and medicine-men (as among the Egyptians, the Moors, and S. Americans) may eat no salt throughout their lives. The salt-tap of the Egyptian priesthood is especially emphasized. When travelling, the Central African coast may use salt. If he did, and his neighbours were well, the salt would act as a corrosive poison. During the ceremonies of fructification among the Yuchi Indians of California, continence and abstinence from salt are ordered, as is also the case after a solemn communion with a god by the Huichol Indians. No salt may be used in cooking the flesh of the beast or any food at the Gilyak Bear Festival. Some Dayaks after taking heads may eat no salt, or touch iron, or have intercourse with women whose fathers have the same combined tabus. In Indian ritual the young student, after his teacher has taught him the newly-married pair must abstain from salted food for three days.

The following is a luminous instance of the etiology of the associations of salt.

Among the Nyanga-speaking tribes of British Central Africa the Ychie, a metal of great use, has the character of salt. After her seclusion she is married. On the wedding night she puts salt in the wine which she drinks, and this is set out next morning for relatives to rub on themselves, though not if the husband is impotent.

On this and similar customs, viz. that women at their period may not put salt in food, lest husband and children contract a disease, Frazer says:

1 J. Barmage, Hist. des élèves depuis S€me-Crist, The Hague, 1716-26, vi. 1224.

17 G. H., vii, Battles the Beautiful, i. 207, quoting R. S. Rally.

Abstinence from salt is somehow associated with the idea of chastity. Primitive man connects salt with the intercourse of the sexes and therefore forbids the use of that condiment in a variety of circumstances.

A psychological analysis is assisted by the Rabbinical theory of Kilayim, the mixture of things differing in species or substance, and by the principle of the salt and fish. The metaphor and between Apollo and Dionysus in Greek thought. Persons in a crisis must be shut out; the keynote of chastity is avoidance of alien influence, of mixture. The Apolline ideal is static, that of Dionysian dynamic.

The veneration of the latter god celebrated orgies with consumption of flesh, wine, and blood. The principle of the organ, whether alcoholic, cannibal, flesh-eating, or sexual, is distinctly stimulation of a human energy to the utmost degree. Movement and change are among its characteristics; and, in a humble way, salt, as producing chemical change, is in the list of dynamic vehicles. In connexion with sexual intercourse it is analogous to heaven; there is some idea of the process of fermentation, so to say, about the sexual act, as well as the expenditure of vital energy in an ultra-
dynamic process.

Alum and sulphur are used, but in a far less degree, as magical substances. Alum is an Egyptian charm against the evil eye, and both are employed in Morocco to protect plunging oxen from the evil eye. Cinnabar was used in Greek charms for producing invisibility.

The use of coloured oehres, chalk, pipeclay, gypsum, kaolin, and other earths for decorating the body on ceremonial occasions is very widely spread in the lower culture. Magical ideas naturally attach to bituminous deposits and such sources of rock-oil as are found in Western Asia.

Chinese folklore includes magical use of oil.

3 In metaphor.—The metaphysical and mimmlal world has naturally developed a large literature of metaphor. Gold is in the OT a symbol of purity, of nobility, and of value, and 'brass' (bronze or copper) is used in the OT as a symbol of hardness. Iron connotes strength and severity—'a rod of iron,' ' a yoke of iron,' 'wails of iron,' 'an iron sinew.' A teacher of the law, said the Rabbs, must be as hard as iron. Being also breakable into pieces, it is a symbol of the Tórrah with its numerous parts.

The symbolism of DN 2 and 7 comparing the kingdoms of the world to metals was popular in medieval literature.

10 Gold is Babylon; silver is Media; copper is Greece; iron is not mentioned either at the time of the First or of the Second Temple, since it symbolizes Edom (Rome), which had destroyed the Temple. 11 The treasure had a larger series of ages—gold, silver, brass, copper, tin, steel, iron. 12 Philo elaborated a metallic symbolism: gold is wisdom; copper perception. 13 The Sabins associated each planet with a metal, of which the statues of the planetary god were made, and in Mythology the soul passed through seven gates, each of a different metal—lead, tin, bronze, iron, alloy, silver, and gold—and each corresponding to a planet as well as to a psychic quality. 14 Jefes famous metallic series of the ages of the world inspired a considerable literature. The first age, which was the best, was golden; that in which
we live is iron. The principle behind this is aesthetic.

In Italy Saturn and in Greece Cronus was believed to have been a king who dwelt in heaven or on earth during the blissful Golden Age; when men passed their days like gods, without toil or sorrow, when life was a long round of festivity, and the gods walked naked in the street. The death of an old chief, slumbering in a tent, announced the end of none of his sad successors, the aments and intimacies of age.

A. E. CRAWLEY.

METAMORPHOSIS. — 1. Evidence for the belief. — Metamorphosis, transformation, or shape-shifting, is a concept universally believed in at low levels of culture. It survives at higher levels, especially among the masses, though it is also found in myths which are current among the educated or where popular belief tends to take the form of dogma, as when 17th-century theologians accepted the werewolf superstition as a fact. The evidence for this universal belief is copious, and is found in myths, legends, and sagas, as well as in poetry from all lands; in folk-tales, of which it is one of the commonest subjects; and in the incident, e.g., in the *Transformation Combat* or the *True Bride* cycle; in existing folk-belief, whether among savages or the peonage; in the writings of modern travellers, explorers, and missionaries, as well as in folklore in Babylonian, Egyptian, Babylonian, Hindu, Greek, and Celtic.

2. Varieties of metamorphosis. — Metamorphosis is asserted of every order of beings and even of inanimate things. (a) As far as men are concerned, whatever they represent, all men do not necessarily claim the power of transformation, but any man will readily admit that others have this power. Hence we have beliefs in the existence of distant tribes or groups possessing the power of transformation. Generally those who are credited with this power are medicine-men, shamans, sorcerers, wizards, and witches. To multiply instances is unnecessary; suffice it to say, wherever such a class of people is found, shape-shifting is always one of their magical powers. No European peasant believes that he can change his form, though his savage ancestors did so; with him the belief survives in his firmly-rooted opinion that every witch can do so (see LYCANTHROPY). Among certain peoples, however, the belief is literally in connexion with an animal form. Thus among the nations of W. Africa the bush-soul, one of the souls which each man possesses, exists in an animal; in Indo-China one of the souls of a man has the power of appearing as a man or as a wer-animal. This aspect of the subject is fully discussed under LYCANTHROPY.

While metamorphosis into animal form is more general, that into tree, plant, or flower is also found here and there. Besides this, numerous myths and tales from all parts of the world explain the origin of some tree or plant by saying that it sprang from the body—the arm, leg, head, or blood of some human being. Similarly, men are sometimes held to have sprung from plants. Where a tree springs from a dead human being the identity of the two is obvious, and here the stories may be based on the fact that trees often do grow from the barrows of the dead. They are supposed to be tended by the dead man's spirit or are identified with the man himself.

Vol. viii. — 38

magical means to change their form, but more usually he himself casts a spell upon them and transforms them. This is usually done through malice —and no incident is commoner in folk-tales than this—but it is sometimes meted out as a punishment, though transformation for this reason is generally the act of the gods. Shape-shifting transformation may be for a longer or shorter period, but it is often of a permanent character.

Instances are found at all levels of culture. Classical mythology knew many punishments for impiety. The incident enters also into Christian tradition, though it is derived from earlier sources. Thus Christ is represented as the man who is refused food or on whom a trick is played by a peasant or a Jew, and the result for them is the punishment of transformation to animal form. In many cases of the modern peoples it is said to be human beings changed to stone for some act of impiety —the idea of the punishment originating in the belief that the stones embody ghosts of the dead virtues. Other instances of petrification, in some cases also for a punishment, are found in all mythologies—Australian, American Indian, Greek, Hebrew, etc. The idea of petrification may be connected with the fact that many rocks rear some resemblance to human form. In folktales the power of petrifying is usually in the hands of witch or wizard, and a touch with a wand, binding the victim with the hair, or the repeating of a spell suffices. Cf. Medusa's head.

(b) The power of transformation on the part of men was reflected back upon the gods in all mythologies, from the high gods to the demons. In the Aryan, Polytheist, Peruviance, Celtic, Greek, Hindu, Egyptian, etc., there was no limitation to the forms which they could take, animal or human, in order to serve their purposes—to escape danger, to benefit men, to carry on the duty of gods. The Edwin, the Sun-god, in Egypt, men looked forward to being able to assume any form in a future life, like the gods. The gods, too, as has been seen, had the power of causing metamorphosis as a punishment to men.

(c) Demons and wer-animal dreams were also believed to have similar powers. The *jinn* of Arabia, the *bhkts* of India, the devils of early and medieval Christianity, the water-horses and other monstrous beings of popular belief, can assume any shape to carry out their purpose. The idea that the form is that of an attractive girl or youth who lures away a human victim to destruction. Ghosts of the dead may appear as animals, or project themselves into animals temporarily, but there is a wide-spread belief in the idea of animal transformation (see ANIMALS, vol. 1, p. 430*).

(d) Animals themselves are sometimes believed to be capable of self-transformation. This is true of the fox in Japan and China and of the tiger in Madagascar, etc. (see under various terms), and many similar animals are well known in folk-belief to have the power of changing into human shape.

(e) Inanimate objects may also be changed into other forms by magical power. The best instance of this occurs in the Transformation Flight group of Märchen, in which, e.g., a girl escaping with her lover throws down small objects which become a forest, a mountain, or a lake, and impede the progress of the pursuer (see MacCulloch, CP, p. 171 ff.). Examples of this are found not only in European and Asiatic folk-tales, but in Sanoque, American Indian, and Basuto stories.

3. Origin of the belief in metamorphosis. — An examination of the enormous mass of evidence for the belief in metamorphosis shows that man's idea of personality, or perhaps rather of the forms in which personality may lurk, is an exceedingly fluid one. There has everywhere been a stage of human thought when no clear distinction was drawn between man and the rest of the universe, between human and animal, between animate and inanimate. A. J. Evans, 'The Rollstone Rights and their Folklore,' FL vi. (1850) 146.

INANIMATE. In this stage of thought inanimate and inanimate are equally believed to be alive; men, animals, and things have the same feelings and passions, or act and speak in the same manner. Or, when the idea of soul or spirit is attained, all are equally alive by virtue of the possession of such a thing. Such a stage is undoubtedly the underlying similarity of all things hindered men from having a clear notion of personality. It was not fixed and unalterable; it might assume various forms. There was thus obtained a practical, working belief that men, animals, and spirits or gods, as well as inanimate things, might assume some other form than their own from time to time. Hence it is not surprising to the savage if what he now sees as a man he sees immediately after as an animal or a bush. Where the idea of spirit or soul exists, and where it is thought that the spirit can leave its containing body, nothing is easier than to believe further that it can enter for a time into an animal or a tree. Other lines of thought also served to support the belief in the solidarity of men, animals, and things, and in metamorphosis. The conception of the kinship of a human clan and an animal or plant species, has given rise to various myths which are rooted in this primitive stratum of thought, and in turn have served to deepen it. Thus it is said that at first animals were as men, as the Algonquins say, and only later took animal form. As the Hareskins Indians think, in the beginning men were animals and animals were men, but afterwards changed their roles. According to the Zunis, all things were originally animals, but now men, trees, etc., are degenerate animals with souls which can leave their bodies.

Again, men were once animals who became men—a common Polynesian belief. Where a clan of one animal dislike the animal which is the totem of another distant clan, they may come to regard the men of that clan as possessed of its nature and liable to assume its form. In all such cases, whether totemistic in origin or not, it is easy to see that men and animals might be supposed to revert temporarily to the other forms which once were theirs.

It is also possible that an analogy between the habits of certain animals and those of human beings, in life or death, or actors, may have aided the belief in metamorphosis. Thus, the place of a man which was supposed to return to the house in which they lived and which is also the haunt of such animals as snakes or rats, it is easy to imagine that these animals and man might be confused, and the same is case in Zaireland with the snake. Night-roaming animals like the cat, tiger, or wolf might be identified, as they were, with witches, who also roamed in darkness.

Hallucination might be a potent factor in aiding the belief. Savages have often declared that they have witnessed such a change of shape. The preconceived idea suggested the hallucination, and it in turn gave support to the belief. Or persons to whom drugs had been administered might have hallucinations of themselves as animals, as in classical and mediaeval instances (see Lycanthropy, § 2). Madness, again, has also had its part to play. Its victims, especially where the belief in metamorphosis prevails, often imitate the cries, motions, and actions of animals, and this could only serve to establish the belief more securely.

The werewolf superstition was largely moulded out of such cases of mania (see Lycanthropy, § 3).

The custom of dressing in an animal skin at sacred dances, or before a bear hunt, or of wearing animal masks in war, would also aid the belief in metamorphosis. The frenzy of the dance would suggest self-transformation to the dancer, while the onlookers or the enemy would imagine that they saw human animals. Such beliefs the medicine-men have often strengthened the belief by exploiting it—e.g., dressing as an animal, imitating its howls and its actions.

In practice the belief in the power of metamorphosis of men is generally limited to the medicine-man, sorcerer, etc., who transforms his victims usually by a spell, talisman, or potion. Self-transformation is caused in magical and diablistical. Sometimes, however, it is the result of a divine, supernatural, or demoniac gift. See, for a further discussion and examples, the art. Lycanthropy; cf. also Transmigration.

MATERNITY.—It is not easy to give a quite satisfactory definition of metaphysics. The same throws no real light on what is referred originally merely to the order of some Aristotelian treatises; but it suggests that the subject is concerned with topics that can be properly dealt with only after the more special sciences (which are the exact sciences as well as the more purely physical ones) have been discussed. For the purpose of this sketch, it may suffice to state that the subject of metaphysics is the most fundamental problems of knowledge and reality. It will be convenient to divide the treatment of it into three parts: (1) the general nature of knowledge, (2) the conception of reality and its chief applications, and (3) the bearings of metaphysics on other subjects, especially ethical and religious.

1. Knowledge.—The first thing that has to be noticed about knowledge is the ambiguity of the term. It is here employed in a very wide sense; but it is very commonly understood in a narrower one. Thus, knowledge is frequently distinguished from those modes of apprehension which are called sensation, perception, and imagination. It is thus confined to those modes of apprehension which involve definite thought or conception. Again, it is common, especially since the time of Kant, to contrast knowledge with belief, and to use the term 'cognition' to include all these modes of apprehension; and it is in this extended sense that the term is here employed. But even cognition is generally distinguished by recent psychologists from other modes of consciousness, which are called feeling, or affection, and willing, or conation. There are valid grounds for these distinctions, but it is important to remember that, so far as we are directly aware of these distinguishable aspects of our consciousness, they are, in the widest sense of the word, known or cognized. We apprehend pleasantness and unpleasantness and the fact of striving just as truly as we apprehend sounds or colours, trees or stars, triangles or systems of philosophy. There are, however, some differences in our ways of knowing which it is very necessary to bear in mind. The most fundamental are those that have been expressed by the terms 'simple apprehension and judgment, immediacy and mediacy,' 'acquaintance and description,' 'enjoyment and contemplation,' 'experiencing and experienced.' It may be well to take the last of these first. Whenever there is knowledge of any kind, there is some one who knows. 2 See M. Debroff, L'Art de comprendre, Paris, 1890, ii, 77; H. M. Dorrance, The Origin of Primitive Superstitions, Philadelphia, 1891, p. 249; cf. Lycanthropy, § 3.

2. These are the antitheses that are emphasized by R. G. Stout, W. Hamilton, B. Russell, S. Alexander, and C. Lloyd Morgan respectively.
and something that is known. Knowledge does not exist in vacuo, but at some particular centre; and that centre is not primarily aware of itself, but of some particular object. Whenever any one reflects upon his knowledge, however, he at once becomes aware of the distinct object of that knowledge, not only that something is apprehended, but that he apprehends it. What exactly he is, and what the something is that he apprehends, are matters for further consideration; but the general fact can hardly be disputed. Now, when any one reflects further upon his knowledge, and especially when by intercourse with his fellowmen he is able to compare his own knowledge with that of others, he very soon comes to realize that some of the things he apprehends are directly connected with his particular way of apprehending them than others are. He finds that some things are cognized by others in substantially the same way in which they are cognized by him. To this class belong especially facts relating to number, to spatial and temporal order, to the forms of objects in space and time, and to the general conditions under which such objects occur. Such things come to be regarded as being in a special sense, i.e. object, independent of the particular nature of the being by whom they are apprehended. Some other things are more open to doubt in this respect. There is not the same amount of agreement about colours as there is about such things as space and time, and there is still stronger objection with regard to the extent to which beauty and ugliness, agreeableness and disagreeableness, are to be ascribed to particular objects that we apprehend. Thus we are led to distinguish some objects as being more clearly belonging to ourselves, but being simply objects that we contemplate; and others as being more peculiarly our own, things that we have or enjoy, things that are not merely experienced, but that are bound up with our attitude as experiencing. The things that appear to be most emphatically in the latter class are such characteristics as pleasantness and unpleasantness, beauty and ugliness, emotional experiences, values; but the division between these and such experiences as those of taste, smell, colour, etc., is not a very sharp one. Hence, instead of placing objects in one or other of these divisions, we may be led rather to recognize a subjective and an objective aspect in all modes of consciousness.

Once this important distinction has been duly recognized, the next that claims our attention is that between immediate and mediate apprehension. Some things are known to us in a quite direct way, and cannot be doubted. When any one has an experience of pain, he may be very uncertain with regard to its source and even with regard to the part of his organism to which it is to be referred; and he may even have some difficulty in distinguishing the pain between the pain that he is experiencing and some other fact that he is experiencing or that he has experienced; but he cannot really doubt that he is having this experience, whatever he may be, and however the object of his experience is to be described or interpreted. Every man is in some degree a man of sorrows and acquainted with grief; and he cannot have any doubt about the grief with which he is acquainted, though he may be quite unable to analyze or describe it, or to explain how it has arisen. As soon as we begin to analyze, to describe, and to explain, however, we realize that it is a matter of doubt that I call my grief should be more properly characterized as simple unpleasantness or as resentment or remorse; and, when I think that I am grieving over my neighbour's misfortunes, I may, in reality be considering rather the way in which they affect myself. Knowledge ceases to be immediate as soon as it ceases to be the simple apprehension of something and becomes, implicitly or explicitly, a judgment about something. Here also, however, we have to recognize differences of degree.

Though we may conceivably be in error in thinking that grief is the right name for what we are experiencing, yet, if we are really acquainted with grief, we can hardly be mistaken in thinking that what we apprehend is of a general kind as what we have experienced before, but we may easily pass to something that we cannot so immediately know. When Lady Constance says, 'Grief fills the place up of my absent child,' we are not likely to be ignorant of what she means by grief, and we can partly apprehend what the rest of her statement means; but, if we have never had any similar experience, our apprehension has very little immediacy. We may even be inclined to doubt whether we record the real meaning at all. It is a description of something that might be apprehended, but with which we do not happen to be acquainted.

Now, the various theories of knowledge turn largely on the distinction between what is immediate and what is mediate, and between what is subjective and what is objective. One theory of knowledge which, in different forms, has played a very conspicuous part in the history of philosophy is to the effect that we have no immediate knowledge of anything but what is essentially subjective. One of the most extreme forms of this theory is found in the doctrines of Descartes, that the only thing of which we are immediately certain is the existence of the self as a conscious being. What he really brings out, however, is rather that everything of which we are immediately conscious certainly exists as something apprehended. What thus certainly exists is a complex, including certain objects that are apprehended and the fact of their apprehension. But Descartes considered that the objects thus apprehended might be properly described as being 'in the mind,' and that the individual mind should be regarded as a persistent thing within which such objects are contained; and he called the objects 'ideas.' He was thus led to think that the individual mind exists both as something known, i.e. as an 'idea,' and as something that persists in a way that is independent of its being immediately known, whereas the other objects that are known are known only as having what he calls 'objective reality,' i.e. the kind of reality which consists simply in their being immediately known. But he recognized that some of the objects he carry with them the suggestion of a more complete reality than that which belongs to them in the simple fact of their immediate apprehension; and he sought, by various arguments, to give grounds

1 The lack of words to distinguish properly between the subjective and the objective aspects of cognition has been a great hindrance to the development of a science of human psychology. Sensation, e.g., has had to do much both for sensing and for what is sensed; and it is only very recently that it has become common to distinguish between perception and conception. Even now, we do not readily grasp what Goethe meant when he said that all the sciences together (subjective activity) may not bring us to thought (the apprehension of an objective concept). It is largely the failure to realize this distinction that makes it so difficult for most people to understand such an 'Idealism' as that of Plato or Hegel, in which 'ideas,' or 'thoughts,' mean certain objective forms, orders, or universals. The 'New Realism' has greatly helped to make this distinction clearer.

2 The difficult subject of error, its nature and conditions, cannot be here discussed. But see the references given at the end of this article.
METAPHYSICS

to justify the belief in this more complete kind of reality. In doing this, he founded the doctrine which has been referred to as that of 'representative ideas,' which had a great influence on subsequent speculation. According to this doctrine, the individual mind may be compared to a picture-galler. The galler is the picture of itself, and that must be supposed to have been always in it. Some others, such as that of God, must also be supposed to have been always there. Some may be supposed to have been painted by itself. Some are double, but, in particular, there is not a sense of them. But there are some that appear to be portraits, and these may be supposed to be the portraits of other beings outside the mind, and to have been, as it were, handed in by them. This is no doubt, a somewhat crude way of stating it; but it appears to be substantially what Descartes sought to maintain, and, with some modifications, it reappears in the writings of several other philosophers. Berkeley dealt it a severe blow by contending that, if we see pictures only in a gallery, we have no ground for supposing that they ever exist in any other way than in a gallery; and Hume improved on this by arguing that, if we see only the pictures, the whole notion is that of a metaphor that he uses is that of actors on a stage. We see the actors only, and have no reason to suppose that there is a stage. This reduced the whole doctrine almost to an absurdity; and the conception of 'representative ideas' was denounced with considerable force by Thomas Reid. What he had to put in its place, however, was not very clear. Kant took a more fruitful line by urging that we cannot without absurdity regard our knowledge of objects as identical, so that what is immediately apprehended by us at any time. We have to recognize certain fundamental orders, such as those of space, time, and causation, which carry as beyond our immediate data and inevitably suggest a coherent system of connections. In his "Kritik of Idealism" he urges, against Descartes and Berkeley, that the recognition of such a coherent order is more directly involved in the apprehension of objects distinct from the self than in the apprehension of the object itself, and that our knowledge of the persistent reality of the object must, consequently, be regarded as derivative. He contends, however, that the order that we are bound to recognize in the objects which we apprehend is an order that can never be completely systematized, and must, consequently, be treated as distinguished from the real order, which may be supposed to belong to 'things in themselves,' and which we are led to postulate chiefly on moral grounds. But Kant's doctrine carried conviction at least with regard to the necessity of recognizing that some kind of reality belongs to the more mediate forms of apprehension as well as to those that are more immediate. When the significance of this is fully realized, it leads to the doctrine that Kant called the logical realism, i.e. the doctrine that everything that we in any way cognize has a kind of reality which is not simply to be identified with the fact that it is immediately apprehended at a particular moment.

The acceptance of a doctrine of this kind gives a new interest to the study of the objects of cognition. So long as these objects are regarded merely as a flow of presentations, the interest in them is very much less than purely psychological—i.e. it is directed simply to the way in which they come to be apprehended by the individual consciousness. When they are regarded as things possessing permanent characteristics and permanent orders of their own, they become the subject-matter of an independent study, and may almost be said to have given rise to a new science. This is the science that has been called by Meinong Gegenstandstheorie. It is the attempt to distinguish and arrange the different kinds of objects that we apprehend. It is obvious that there is a very great variety of such objects, and that these objects understood in its most comprehensive sense. We apprehend, e.g., a great variety of sense-data—sounds, colours, pains, strains, and so forth; we apprehend a great variety of perceptions—stones, plants, animals, etc.; we apprehend orders, such as those of time and space, intensive and qualitative differences, causal dependence, etc.; we apprehend hypotheses, valuations, distinctions of beauty and ugliness, good and evil, etc. The study of these corresponds to some extent to the doctrine of categories; but, when it is approached from this point of view, it becomes very much more comprehensive than any of the lists of categories that are commonly set forth; and, in fact, it has a rather different aim from that implied in any of these lists. The problems raised by any such attempt to distinguish and arrange the various types of objects are evidently of a fundamental character, and seem, therefore, to belong properly to the subject-matter of the metaphysics. The possibility, however, to discuss some of them to a considerable extent without any definite attempt at a systematic metaphysical construction. This brief indication of the general nature of these problems must suffice here.

2. Reality.—The study of the theory of knowledge and Gegenstandstheorie leads to the recognition that, in one sense at least, there is no meaning in the antithesis between the real and the unreal. As Parmenides, it may be urged, philosophy is not to be thought of or spoken of. But there is still a sense in which the things that we apprehend may be said to be more or less real. Sometimes our apprehension of things is very incomplete; and, when we gain a fuller apprehension of them, we may be said to know them more truly. Again, the things that we know are in many cases parts of larger wholes; and, so long as we do not apprehend the wholes of which they are parts, we cannot be said to have a full apprehension even of the parts. This is, consequently, the more true of the parts of an organic unity. We could not be said to know much about the brain if we did not understand the function which it fulfills in the life of the organism. Our apprehension of the part, in such a case, is not the mental and the empirical apprehension of a part, but it may be said to be less real when it is thus apprehended than it is when its relations to the whole are understood. And, if the universe is an organic whole, this distinction will apply to the apprehension of all the objects in it. Hence there may still be a sense in which it is legitimate to speak of an antithesis between appearance and reality, or of different degrees of reality, though both these expressions are open to some objection.

Now, in apprehending the characteristic features of objects of our cognition, we are at least trying to regard them as forming a complete cosmos, such that every object has a definite place in the total order; and constructive metaphysics, as distinguished from Gegenstandstheorie, tries to find the way in which the objects of our experience can be so regarded. Here we are met at the outset by various forms of scepticism. Such a scepticism as that of Hume, no doubt, is effectively removed by a more thoroughgoing doctrine of knowledge, such as that of Kant. But even Kant ends with the view that our knowledge is only of appearance, and that we can never hope to apprehend things as they are in themselves; and such an antiscpticism is defended, in different ways, by a considerable number of
philosophical writers. If it is strictly pressed, it means that we have to be content with the theory of the later Pragmatist philosophers. The doctrine of the newer Realists, of whom Meinong is one of the ablest representatives, tends in this direction, though the supporters of it vary considerably in their applications. In the case of Kant himself, the attitude is modified by the two circumstances that, on the one hand, he had not fully reached the point of view of Gegenstands-theorie, not having completely freed himself from the subjectivism of Hume, while, on the other hand, he recognized that, though we cannot know anything about things as forming a real cosmos, we are justified in entertaining certain beliefs with regard to such reality, chiefly on moral grounds. This view of belief, as contrasted with knowledge, has been developed by the Pragmatists, who maintain that the ultimate ground of belief is not knowledge, but rather practical need. In general, the Pragmatists hold, further, that there is no real need to think of the world as a complete cosmos; but this is not an essential part of the Pragmatists' point of view. Bergson, again, while agreeing with the Pragmatists that our purely intellectual beliefs are based on practical needs, thinks that it is possible to reach a more perfect knowledge by modifying the idea of a world which connects him with such earlier philosophers as Plotinus and Schelling. All these ways of thinking, and perhaps some others as well, tend to discredit the attempt to form a constructive doctrine of the cosmos and knowledge of the cosmos. Yet the attempt continues to be made; and Kant at least recognized that, however futile it may be, it is hardly possible for the human intelligence to refrain from trying it, when the scientific interest has been fully developed. All that can be done here, however, is to indicate some of the chief ways in which this attempt has been made.

The earliest attempt at a constructive theory of the cosmos, and certainly one of the most interesting and remarkable, is that which is set forth in the *Upanisads*. The difficulties of the subject, especially at so early a stage of human thought, prevent it from being dealt with in a perfectly lucid way; and it relies, in consequence, partly on poetic language and parable; hence the doctrine that the cosmos is to be conceived as an unchanging spiritual unity, manifesting itself, especially in human life, in a process of slow development, appears to be definitely indicated; and the doctrine shows itself clearly in the conception of a long series of successive embodiments, gained a firm hold on Eastern thought. It is a view to which Western thought also has recurred from time to time; but in general Western thought starts rather from the multiplicity of existing things, and makes only very tentative efforts to apprehend the central unity. Among the Greeks the earliest attempts to frame a theory of the unity of the cosmos took the form of a somewhat crude hylozoism, such as that of Pythagoras. Pythagoras is supposed to have introduced conceptions more akin to those of the East; but, if so, they became gradually modified among his followers through the influence of the more materialistic Greek philosophers. The first general attempt at a philosophy of the cosmos in the West is that of Parmenides. Parmenides described it as finite, while Spinoza insisted on its infinity, is perhaps a somewhat superficial difference; for they probably understood the term 'infinity' in different senses. More significant is Spinoza's antithesis, derived from the Cartesian philosophy; Pythagoras is supposed to have introduced the conception of a cosmos of forms, that is, of a process from unity to multiplicity and returning into unity again; but his views are difficult to understand, and he tends at times to appeal to a mystical intuition rather than to a clearly reasoned doctrine.

In more modern times the system of Spinoza is the first attempt at a thorough constructive theory of the cosmos. In his emphasis on the unity of the whole he recalls Parmenides. The fact that Parmenides described it as finite, while Spinoza insisted on its infinity, is perhaps a somewhat superficial difference; for they probably understood the term 'infinity' in different senses. More significant is Spinoza's antithesis, derived from the Cartesian philosophy; Pythagoras is supposed to have introduced the conception of a cosmos of forms, that is, of a process from unity to multiplicity and returning into unity again; but his views are difficult to understand, and he tends at times to appeal to a mystical intuition rather than to a clearly reasoned doctrine.

In more modern times the system of Spinoza is the first attempt at a thorough constructive theory of the cosmos. In his emphasis on the unity of the whole he recites Parmenides. The fact that Parmenides described it as finite, while Spinoza insisted on its infinity, is perhaps a somewhat superficial difference; for they probably understood the term 'infinity' in different senses. More significant is Spinoza's antithesis, derived from the Cartesian philosophy; Pythagoras is supposed to have introduced the conception of a cosmos of forms, that is, of a process from unity to multiplicity and returning into unity again; but his views are difficult to understand, and he tends at times to appeal to a mystical intuition rather than to a clearly reasoned doctrine.
determined, and which is selected as the best from an infinite number of possible world-orders. How possibility is to be distinguished from actuality is one of the most difficult problems that are raised by the ancient philosophers. At least it is an important problem, that his philosophy in general, notwithstanding its great ingenuity, is much more remarkable for the number of problems that it suggests than for the convincing character of the solutions that are proposed. The first attempt was followed by a great deal of critical work, especially that done by Hume and Kant; and the constructions that followed upon this critical work are deserving of more careful attention.

3. Bearings of metaphysics on other subjects—

It would be a great mistake to suppose that the value of metaphysical speculation is to be measured exclusively by its success in providing us with a coherent doctrine of the cosmos. Any one who thinks seriously about the ultimate problems of knowledge and reality is almost bound to make some attempt to think about the universe as a whole; but the discussion of the special problems can be treated as an end in itself. The interest of such discussion is to be found largely in the light that it throws on other subjects that are commonly and conveniently regarded as distinct. The debt of the special sciences to metaphysical discussion could not easily be over-estimated. Almost all the special sciences, especially those that are concerned with human affairs, were first established on a firm foundation by Aristotle, who used in their establishment his fundamental conceptions of time and space. In this matter, the unity of actuality, together with his general doctrine of categories and causes. The atomic theory was mainly due to Leucippus and Democritus; working on the foundations that had been laid by the Pythagoreans. The foundations of almost every department of knowledge and action may be referred to the metaphysical analyses of Descartes, Leibniz, and Kant. Some of the most important ideas of modern biology were anticipated by the ancient physiological speculations of Aristotle. The foundations of most of the sciences, and arts and habits of life, and the work of clearing up the fundamental principles are largely ignored; just as, in our more ordinary life, we are sometimes apt to forget the labours of those by whom the means of living are provided. Hence it may be worth while to make some reference here to the fundamental conceptions that seem to be involved in several of the important subjects.

(a) Psychologists have, as a fundamental aim of psychology, to be that of studying the growth of cognition in the individual mind. It may seem strange to say this in view of some recent attempts to produce a 'psychology without cognition,' which does not appear to differ very markedly from other forms of psychology. But in general the roots of any subject, like those of a plant, may often with advantage be kept out of view. We may have 'psychology without a soul,' because we can take the soul for granted; and it is certainly not the business of psychology to consider the soul except as something which is to be known. So we may study wealth without welfare, though apart from welfare wealth would have no meaning. Naturally, in studying psychology, it is the modes of apprehension which are of importance, rather than to determine the various kinds of objects as those that are made by

1 No sharp distinction can be drawn between the possible and the actual. To say that anything is possible is to say that it would be true; and what would be depends entirely on the structure of the actual. In general, things are said to be possible just when they have no possible reason to be true; and what would be must be consistent with the structure of the cosmos. Any event is therefore possible when it would happen if some one chose to do it. This is well brought out in G. E. Moore's Ethics.
up our conscious life into separate faculties, though it leaves us free to recognize many distinctions and many stages of growth. Hence psychology is best studied genetically; 1 but it is important to guard against the misconception that, in studying the order of growth in our cognition, we are either explaining cognition itself or accounting for its stages. In the case of the growth of the general conceptions of the objects that are cognized. The order of the growth of cognition is one thing; other things have orders of their own. These are perhaps the chief ways in which the consideration of the fundamental problem of psychology may help to guard us against misconceptions in its study.

(b) Logic.—The fundamental conception of logic appears to be that of implication. It sets itself to consider the conditions under which one bit of knowledge may be taken to imply another. In order to discover this, it is necessary to determine the precise significance of the knowledge from which we start. Hence the importance of definition and of what are called ‘laws of thought,’ the aim of which is to ensure fixity of meaning. Obviously, if a fluctuated in meaning, its implications could not be determined. Formal logic is concerned simply with the attempt to lay down meanings and disjunct. In more concrete forms of logic the doctrine of causation is the chief instrument for the discovery of implications. Hume did much to clear up the general signification of causation by doing away with the mere conception of efficacy and substituting that of a definite order of sequence. Kant argued that the sequence is essentially logical rather than temporal, and that the general principle of implication—A, then B—has to be accepted as a necessary condition of many phenomena. More recent discussions have given still more definiteness to the conception. 2 The dialectic of Hegel is another way in which implications can be brought out. According to this, every conception implies its opposite. The value of these methods cannot be discussed here; but it seems clear that the general significance of implication is one of those ultimate problems that concern metaphysics.

(c) Mathematics.—The mathematical sciences are closely connected with formal logic. As soon as the general characters of the orders of number and space have been made apparent, the working out of their implications requires no extrinsic conception, only the recognition that these orders are, however, more complex than the relation of a predicate to a subject or of an individual to a class. But there are many orders from which implications can be directly drawn—e.g., the order of time and that of value. Hence it seems possible to regard mathematics as one of several ways in which the general principle of direct or formal implication can be developed. It may be well to notice one caution that is suggested by metaphysical reflection with regard to the application of mathematics. The conclusions reached by the study of the two orders of number and space are so precise and convincing, and some of them can be so readily applied to spatial and temporal objects, that there is a considerable temptation to regard all of them as being directly applicable to such objects. Such an assumption does not appear to be legitimate. It may be doubted, e.g., whether some of the spatial conceptions are not in fact the product of the subject, not of the general conceptions of the subject, not of the general conceptions of the subject.
(f) Ethics.—It is in ethics rather than in aesthetics that the conception of intrinsic value comes directly down to us from our earlier sources, and here we naturally differ in our views of what is intrinsically valuable:—whether it is the good will or pleasure or some form of perfection or completeness of self-conscious life—but almost all recognize that in the moral life men are engaged in the effort to realize something that is intrinsically good, and in the end what is intrinsically best. Yet it is difficult to make the conception of such an ultimate good perfectly clear and some are inclined to doubt its validity. It must be confessed that we seem only to begin with valuations that have little conscious ground. Our primitive likings appear to be based on organic needs; and it is only gradually that we are led to regard them as means to ends that have a truer and more lasting value. We begin with organic impulses, and advance through the pleasant to the beautiful and good. Hence the moral life is still, on the whole, as it was in the time of Socrates, a struggle towards a good that is very imperfectly apprehended, and sometimes even not very consciously pursued. It tends to be guided by custom, convention, positive laws, and generally recognized opinions rather than by any clear apprehension of a good that can be either defined or attained. Historical science in ethical science has not yet been made to define it; and this involves a discussion that may properly be called metaphysical. The discussion of its attainability seems even to involve a general theory of the cosmos.

In the fundamental conception of intrinsic value, the most important problem that concerns ethics is that of freedom. This is closely connected with the conception of value and also with that of causation. It is doubtful whether any adequate conception of moral freedom is except that which may be expressed by saying that choice has a real place in the chain of causes; and choice can be interpreted only as a mode of valuation. It is essentially preference, i.e. the regarding of one thing as essentially more valuable than another. Thus the problems of value and causation are those that chiefly connect ethics with metaphysics.

Ethical valuations have important bearings on economic politics; but these cannot be considered here. Nor can we attempt to appraise the significance of what is described by Nietzsche as the "transvaluation of all values" (Unterwiegung der Werte).

(g) Religion.—A chief element in the higher forms of religious thought consists in a intensification of the moral consciousness by its more definite concentration on the conception of intrinsic value as in such sayings as: 'What shall it profit a man, if he shall gain the whole world, and lose his own soul? Or what shall a man give in exchange for his soul?' (MK 25).

This intensification is generally combined with the conviction that the object of ultimate valuation is real and attainable. A conviction of this kind is based on a definite metaphysical doctrine. At other times it is based rather on some form of intuition or of revelation, or on the authority of some great teacher, or simply on the intrinsic force of the moral principle itself. The founders of religions and their most influential prophets have generally connected their teaching with some doctrine of a more or less explicitly metaphysical character. Buddhism, which is perhaps the most purely ethical form of religion that has lived, seems to be rather intimately connected with those Indian forms of metaphysical construction that had their origin in the Upanisads. It conveys what has ultimate value as the realization of the higher self, to be achieved by the control of the lower, and especially by the suppression of the lower forms of desire—a process which is supposed to be, in general, attainable only by those who have been initiated. The doctrine of the Pythagoreans, which was largely religious, had a somewhat similar character; and the influence of Plato, so far as it can be described as religious, tends, on the whole, in the same direction. The more or less spiritual nature of its more recent phases is hardly distinguishable from the more esoteric forms of Buddhism. The relations have been thus expressed by Holmes:

'Plato reasoned about God. Buddha kept silence about him. Christ made him the theme of his poetry. . . . A speculative thinker he does not compete with Plato. As a systematic teacher he does not compete with Buddha. But as a source of spiritual inspiration he has no rival!' (Credo of Buddha, add. fn.)

The gospel of love is the most inspiring, because it implies, when its meaning is fully realized, that everything has value—a more thorough optimism than anything that is involved in the Platonic Good or the Buddhist Nirvana (whatever the exact interpretation of that may be). It is sometimes urged that metaphysical views of the cosmos by representing the attainment of the moral ideal as involved in the nature of things, have a certain tendency to weaken the moral motive, by making it appear that individual effort is unnecessary. No doubt some metaphysical systems have claimed to advance "beyond good and evil"; and the same may be said of some forms of religion. But, on the whole, none of the deeper forms either of metaphysical construction or of religious insight has represented the ideal as attainable by any other way than through the individual choice of what is best.

may also be specially referred to, B. Croce, *Esthetic of Science of Expression and General Linguistics, Eng. tr., do. 1909, is probably the most instructive of recent works on the

basis of which an ethical reference should be made to the

art. Ethics (by J. H. Muirhead). The conceptions of or on the free will are well discussed by G. E. Moore, in his

Ethics, do. 1912. The philosophical significance of the concept of value is brought out with great wealth of illustration by

'The Principles of Inductive Logic' and by

do. 1912, and The Value and Decree of the Individual (Gifford Lec-
tures, 1913), do. 1913. A. Meinong, Psychologisch-ethische

Untersuchungen zur Wert-Theorie, Berlin, do. 1914, and C. Ehren-

deka, System der WerthTheorien, Leipzig, 1895-98, are also import-

ant works. In these works have done much to show the meta-

METHOD

Many composite is space J. that its to; Iha-hypothesis. (:

Natural and experimental history is so various and diffuse, that it confounds and distracts the understanding, unless it be ranged and presented to view in a suitable order. We must therefore form Tables and Arrangements of Instances, in such a manner that the mind may be able to deal with them (Novum Organum, bk. 10).

If our dealing with them is not by way of further analysis into the elements of natural form, as Bacon intended, but is numerical, the tables become ‘statistics’; and statistics may be summarized through ‘graphs’; and the tables into affirmative may be avoided by ‘averages’; and incapable of being inverted from accuracy to probability, as probable error.

(a) Hypothesis. — Method can pursue the synthesis of simple elements required in judgment, while still suspending the ascent or final submission of our nature to its necessity. The course of thought freely varies its subjects and predicates, expands each tentative form, ‘causal connexion’, or ‘law’ into exemplifications, or each imagined ‘fact’ into natural consequences, and verifies these as independently true or real, or as not so. Many recent writers, including Jevons, Sigwart, and Bosanquet, teach that such a development and trial of ideas is essential for all inductive inference. Thus, if a pencil of light is a composite of vari-coloured rays, and is passed through a prism, we shall see the spectrum-band; if the process is reversed, we shall reconstitute the unite whitened. If collits are of human origin, they should serve some purpose, and our ingenuity may discover one.

(c) Cognition. — A hypothesis may command an individual or group of such subjects or consequent sequences, both already known and waiting for verification. Thus the theory of elliptical orbits for planetary motion covered many planetary positions already registered, and the possibilities of further writers. The so-called ‘cognition of facts by means of appropriate conceptions’ (Whewell, Novum Organum, Rev. ed. 1828, and Novum Organum, 1838) — an achievement of intelligence which Whewell considers to be all that is serious in scientific investigation, but which Mill considers as an operation ‘subsidiary to induction,’ that is to say, to induction as inference (Logic, bk. iii. ch. ix. § 5, bk. iv. ch. ii.).

There are many independent of ‘methods of investigation,’ undertook to exhibit a serial order of schemata for judgment and inference, in which was shown an increasing complexity of conceptual distinctness.

The various forms of thought will be arranged in an ascending-series, in which each higher member attempts to make a good a defeat in the preceding one, due to its failure to satisfy, in regard to its own particular problem, the general impulse of thought to reduce coincidence to coherence (Logic, Introd. § 11).

Thus the categorical form ‘S is P’, is followed by the hypothetical forms of the system, if not a mere petitio principii, involves the further conceptions which constitute the induction and analogy supporting its premises, and these, again, send their roots into larger systems of classification and explanation. Therefore the reform of a single concept, e.g., the atom in chemistry, the cell in biology, the vibratory call for readjustments throughout increasing complexities of science.

3. Development. — But in method, as in organic life, the whole may decide the part. Nature is more than a ‘tissue of units’ merely described. It is a unity. And the ideal of development means that the system of our thinking reacts upon its diversity of content. In perceptive observation, historical narrative, and explanatory conceptions of fact objects and instances are made possible by the growth of knowledge as a whole.

(a) Perceptual extensions. — Fields of perception beyond those of the natural senses may be opened through science. — e.g., in space by the telescope and microscope, in time by the chronoscope and bioscope, in composition of substances by the spectroscope and radioscope. And extensions of sensitivity may be supplemented by artificial mechanisms of record, the chronogram, logograph, and automatograph.

(b) Historical interpretation. — Records of past events may be given new values by cumulative means of interpretation. Even mere relics may, through a convergence of historical perspectives, as with the relics of pre-historic man, newly disclose remoter ages for methodical retrospection. That our foresight of events yet to come is not similarly from time to time newly lengthened is connected with the fact that here the way of hypothesis cannot be confirmed by verification. Methodical procedure can only assume a number of alteratively possible events, and assign to each a probability.

(c) Explanatory theory. — A given fact newly known, or more fully observed, may present itself in varied facets for methodical explanation. A chipped flint may be conceived as a geological product, an elastic molecular substance, a surface chemically stained, a contrivance of manufacture, a tool of purpose. And on each facet may centre a separate stress of hypothesis. We may collect contributory explanations of fact in science predominantly concrete, such as archaeology, geology, geography. On the other hand, in sciences comparatively or purely abstract, we may systematize hypotheses as empirical, derivative, or ultimate, making exemplification or consequence incidental only — e.g., in physiology, chemistry, mathematics, ethics. But the deepest difference within the ‘form of a period’ science, where exemplification or consequence flashes into inference under the magic of intuitive construction, described by Descartes, and empirical science, where the ordered sequence aims and waits to fulfill the primary ideals of inference in ‘posteriori synthetic judgements’ (see art. INFERENCE and LOGIC).

J. Brough.
METHODISM.

1. History and Polity.—In this article we shall confine ourselves to a description of the origin, growth, and leading features of the Methodism which is connected with the name of John Wesley. The Methodism within the Church of England which resulted in the rise of the Evangelical party is not within our province (see EVANGELICALISM).

The Origin of Methodism.—According to Wesley, the ‘first rise’ of Methodism was in Oxford, in November 1729; the second, in Savannah, Georgia, in April 1736; and the third, in London, on 1st May 1738. Wesley overcame the difficulties that confronted him. In Oxford, in the ‘Holy Club’ at Christ Church, and in the ‘Society’ formed by Wesley in Savannah, and strike the path which leads to the origin of Methodism as an existing organization. The date, 1st May 1738, is significant. Wesley had returned to England, paying many bitter lessons in Georgia. By his contact with the Moravians he had been enlightened and disheartened concerning his religious experience. He had learned that, although he had ‘lived after the law of righteousness’, he had not attained to it. His disappointment at discovering that he had been pursuing a wrong path was intense. The Moravians explained his failure by showing him that he had not sought ‘salvation by faith in Christ’ as it was done by them. His conversations with them left in his mind the unanswered question, What is the faith that leads to salvation? Waiting in London for a solution of the problem that baffled him, he assisted in forming one of the Religious Societies so numerous at the time. His instinct for fellowship was one of the dominant forces of his life, and explains much that happened in his career. The Religious Society which he joined met in the house of James Hutton. It was formed, in accordance with the advice of Peter Bohler, a Moravian to whom Wesley was unspeakably indebted for spiritual guidance. The Society was founded on 1st May 1738. Rules were drawn up for its management, and, as was the case in Savannah, the members of the Society who were intent on cultivating a deeper religious life were divided into little companies called ‘bands.’ The Society grew, and its meeting-place was changed to a room in Fitzroy Square. In the first three years the Religious Societies, was in connexion with the Church of England; subsequently it was dominated by Moravian influences, and this connexion was broken.

2. Wesley’s Spiritual Crisis.—Methodism, as it now is, was the inevitable result of the facts concerning the progress of Wesley’s religious experience. By much conversation, by close study of the NT, by prayer ‘without ceasing,’ he advanced from an intellectual understanding of the meaning of ‘saving faith’ to the understanding that comes through experience. While he was in the stage of an ever-brightening intellectual apprehension, he preached the doctrine of salvation by faith in many of the London churches. He taught it openly, and it stood against him. In this way a policy of exclusion from the churches was commenced, which, after a time, profoundly affected Wesley’s relation to the Church of England.

During this preliminary stage, Wesley was oppressed with a ‘burden’ which was to him ‘intolerable—the burden of unrepented sin. That load was lifted on 24th May 1738, in a ‘room’ in Albermarle Street, the meeting-place of one of the Religious Societies.

In that decisive hour he entered into an experience, new so far as he was concerned, but an old experience not only among Moravians but also among many Churchmen and Dissenters. It is an extraordinary fact, however, that it had become unintelligible to the mass of English Christians. Wesley’s ‘conversion’ filled him with the spirit of the evangelist. He would gladly have borne his testimony in the churches, but he was compelled to wait until a wider sphere opened before him.

3. Beginning of Field-preaching.—In April 1739 Wesley found his opportunity, and began his evangelistic work. In the evening of the Oxford ‘Holy Club,’ had entirely reigned over the preaching of the ‘new doctrines.’ Being exceded from the churches, he went into the open air and addressed great crowds of people in Bristol and at Kingswood. Having to leave England for America, he wrote to Wesley asking him to take his place; Wesley consented, and on 2nd April 1739 he commenced his famous campaign of field-preaching. In addition to preaching in Bristol and to the Kingswood colliery, he got into close touch with the Religious Societies in the city. His genius for administrative reform found scope among them. He did not scruple to expel Societies in Baldwin Street and Nicholas Street so increased that it became necessary to build a ‘Room’ for their accommodation. A site was secured near the Horserow, and the ‘Room’ was opened on 3rd August 1740. Wesley went to London to assist in composing disputes which had arisen in the Fetter Lane Society. He again met Whitefield, who, being detained in England, had spent his time in preaching to multitudes in Moorfields, on much of its character to the advice of Peter Hutton. A Moravian to whom Wesley was unspeakably indebted for spiritual guidance. The Society was founded on 1st May 1738. Rules were drawn up for its management, and, as was the case in Savannah, the members of the Society who were intent on cultivating a deeper religious life were divided into little companies called ‘bands.’ The Society grew, and its meeting-place was changed to a room in Fitzroy Square. In the first three years the Religious Societies, was in connexion with the Church of England; subsequently it was dominated by Moravian influences, and this connexion was broken.

4. First Wesleyan Societies.—While he was still a member of the Fetter Lane Religious Society, Wesley formed a life by realizing the facts concerning the progress of Wesley’s religious experience. By much conversation, by close study of the NT, by prayer ‘without ceasing,’ he advanced from an intellectual understanding of the meaning of ‘saving faith’ to the understanding that comes through experience. While he was in the stage of an ever-brightening intellectual apprehension, he preached the doctrine of salvation by faith in many of the London churches. He taught it openly, and it stood against him. In this way a policy of exclusion from the churches was commenced, which, after a time, profoundly affected Wesley’s relation to the Church of England.

During this preliminary stage, Wesley was oppressed with a ‘burden’ which was to him ‘intolerable—the burden of unrepented sin. That load was lifted on 24th May 1738, in a ‘room’ in Albermarle Street, the meeting-place of one of the Religious Societies.

* Felt I did trust in Christ, Christ alone for salvation, and an assurance was given me that He had taken away my sins, even mine, and saved me from the law of sin and death* (Journal, i. 470).
own spiritual edification, but also that Wesley might be assisted in his pastoral supervision. At first the leaders visited the members at their homes; but, that method proving inconvenient, the members were expected to meet their leader at some fixed place, week by week. The 'Rules' mentioned above are still, with slight alterations, the 'general rules' for Methodists, the particular rules, introduced in later years, being contained in the disciplinary 'codes' of the different Methodist churches. In the classes contributions, usually a penny a week, were made for the poor. At a later date these contributions were given for the support of the ministry, a special poor-fund being raised from the members. Wesley's personal appearance was simple; he could not content himself with gathering a miscellaneous crowd of people of whom he knew nothing. He supplemented the work of the leaders by visiting the members themselves, and met them quite unexpectedly in the conversation on their religious experience. If satisfied, he gave them tickets in recognition of the fact that they were members of the Methodist Society.

5. Attitude of the clergy.—Those who have studied the evolution of Methodism will note the affinities and divergences between them and the United Societies. One line of divergence was caused by circumstances which Wesley deeply regretted. The Religious Societies were in close connexion with the Church of England, and many of their members were frequent communicants at the churches. Wesley would have gladly preserved this connexion and practice; but such a course was made impracticable by the conduct of the clergy. In some places they arranged among themselves to reject the Methodists from the Lord's Table. In Bristol, on 25th July 1740, Charles Wesley and a company of Kingswood Methodists were sent away from the church by the officiating clergy. Wesley, therefore, administered the Lord's Supper to the Methodists in the school at Kingswood which had been built for the training of the soldiers' children. In Newcastle-upon-Tyne a similar crisis arose. It is significant that in Newcastle the difficulty was aggravated by the fact that three of the dissenting ministers of the town agreed to exclude from the communion all who would not refrain from hearing the Wesleys. The effect of these exclusions, and of Charles Wesley's action, was speedily seen. The Methodists were diverted into a path which gradually but decisively diverged from the Church of England.

6. Enlisting of lay-preachers.—Another line of divergence from the practices of the Religious Societies must also be noted. John Wesley's conversion made him an evangelist. He longed to preach the gospel not only to select companies but to the world. His heart responded to the call of God's Holy Spirit. 'Attempt nothing less than all mankind' (Journals, iii. 48 note 1). But how could that advice be followed by a man in his circumstances? His work taxed all his strength. Charles Wesley helped him, especially in the closing years of his mission, and a few frieze-day elections helped him occasionally. But such help was inadequate. The double task of the pastoral care of his Societies and the evangelization of the country was too great for a single man. But the way opened. He had great skill in discovering and using the working-power of laymen, and gave himself at the head of an order of lay-preachers who shared with him the hardships and the successes of his work. In 1738 and 1739 laymen had preached with his consent, but the order of lay-preachers is usually considered to have date from 1740.

The importance of this step cannot be exaggerated. The lay-preachers were divided into itinerants, 'half-itinerants,' and 'local preachers.' They first abandoned their business and gave themselves entirely to the wandering life of the evangelist. Under Wesley's supervision their work, at the beginning, they got no pay; later on a small sum was given them; but many years elapsed before they were rescued from the pinch of poverty. Assisted by them, Wesley went out to 'return the nation, particularly the Church, and spread Scriptural holiness over the land' (Minutes of Conference, i. 440). Wesley's work as an evangelist, an educationalist, a philanthropist, a social reformer, and a pioneer in enterprises that have been of service to the world, was a work of leisure and trial. The conversion of the nation must be passed over here. Some idea of the toils of himself, his preachers, and those who were associated with them in his Societies may be gathered from the fact that, in a single week in 1791, Wesley was present in the Methodist Societies in Great Britain and Ireland, in other parts of the British Dominions, and in the United States of America.

7. Institution of the Conference.—It is now necessary to indicate the origin of the conference, which have determined the character of modern Methodism. While Wesley was 'the head of his order,' and spoke the last word in matters of administration, he thoroughly believed that there was safety in a multitude of counsellors. He consulted the heads, the leaders, and persons of experience in his Societies, but the chief evidence of his reliance on the counsel of others is to be seen in the conferences which he held with the clergy who helped him, and with his lay-preachers. He also assembled the stewards at intervals in different parts of the country and conversed with them on financial and spiritual subjects. Out of his annual conferences with the clergy and lay-preachers, with their stewards, and with the members of the Societies, from which often were sometimes associated, arose the 'Yearly Conference of the People called Methodists.' Towards the end of his life the vagueness of this description of the Conference was seen to be a danger. The power to appoint preachers to the numerous chapels that had been built would revert after Wesley's death to the Conference so inadequately described. To meet this contingency, on 29th Feb. 1784 Wesley signed a Deed Poll explaining the words 'the Yearly Conference of the People called Methodists,' and declaring 'what persons are members of the said Conference, and how the succession and identity thereof is to be continued.' One hundred 'preachers and exponents of God's Holy Word,' then 'under the care of and in conjunction with,' Wesley were declared to be the Conference, and they and their successors, to be chosen in the manner laid down in the Deed, were 'forever to' be the 'Conference of the People called Methodists.' The elective confirmation in 1835, when the Lord High Chancellor, Lord Lyndhurst, and the Vice-Chancellor, Sir Lancedot Shadwell, upheld its validity in trials which took place in their courts, in his judgment the Vice-Chancellor said: 'The Conference had been the supreme legislative and executive body' in Methodism since the death of Wesley.

The Conference in Wesley's day was more than
a consultative assembly. It took complete oversight of preachers and people. It kept an eye on the moral character and doctrinal beliefs of the preachers, and stationed them in their circuits. We shall return later on the United States functions.

In the form of 'Model Deed' for the settlement of chapels then called 'Preaching Houses,' published first in 1763, a clause appears which constitutes Wesley's 'Notes upon the New Testament' as the standard by which the trustees were to judge the orthodoxy of the preachers appointed by the Conference. We may also add that the rights of trustees were strengthened by Wesley's 'Deed Poit' which provided that, with the exception of clergy of the Church of England, the Conference might not appoint a preacher to the same chapel for more than three years successively.

9. Influence of Charles Wesley.—John Wesley is justly considered as the founder of the Methodist Church, and we have, in the main, dwelt on his actions in describing the origin and development of the United States functions; yet, however, it should be remembered, however, if we failed to emphasize the services of his brother, Charles Wesley. During the early days of the 'Revival' he was a daring and successful evangelist, facing the thunders of mobs and rivalling his brother in the activities of the wandering preacher's life. Later he settled down in Bristol, and then in London, and his itinerant work was restricted. But his influence as a hymn-writer was truly wonderful. It is true, that Charles Wesley did not only lead the Methodists, but throughout the Protestant Churches. He died on 29th March 1788.

10. Events following Wesley's death.—John Wesley died on 2nd March 1791. His death produced a dangerous crisis. Many thought that the time had come when the Methodist Societies would fall in pieces. Their stability had been secured, in great part, by his firm and reasonable auto-cray. Was that autocracy to be exercised by a successor? The answer was in the negative. Then how was the supervision to be continued which he had exercised over preachers and people during the intervals between the annual meetings of the Conference? The Conference gave the answer by dividing the kingdom into twelve, each containing a smaller number of circuits, the preachers in which, being formed into committees, were answerable to the Conference for the maintenance of Methodist discipline. The functions of these Committees were enlarged from time to time, and chairs appointed by the Conference, were placed over them. This arrangement had been greatly developed in more modern times. The Committees have grown into District Synods, which exercise great influence in the administration of Methodism.

After Wesley's death the demand for the sacraments became urgent. The party most favourable to the Church of England was first in the field and issued manifestos against administration by the preachers. These provoked replies, and a controversy on the subject was continued until 1795, when an arrangement was made between the Conference and the representatives of the trustees of chapels. This arrangement, contained in the 'Plan of Pacification,' led to the ordination of the preachers in all Methodist chapels. As to ordination, it was decided that the reception of a preacher into full connexion with the Conference should carry with it the right of administration without ordination by imposition of hands. In the case of Foreign Missionaries an exception was made, and they were ordained as in the time of Wesley. In 1830 the Conference determined that all its ministers should be ordained by the imposition of hands.

11. 'Plan of Pacification.'—Another subject of cardinal importance pressed for settlement. The question had to be answered, Who shall possess the predominant ruling power of Methodism in the country, at the time of Wesley's death, was agitated by the discussions which had accompanied the American War of Independence and the French Revolution. The doctrine of the sovereignty of the people 'inspired with a strong wish on the part of some to introduce into Methodism a democratic form of government. But the most serious contest was between the claims of the Conference and of the trustees of chapels. That contest was seen for in the 'Plan of Pacification' and by certain regulations that were passed at the Leeds Conference of 1797. In these documents we find the fundamental principles which still govern the Mother Church of Methodism.
Methodism. The pastorial power of the preachers was safeguarded; but its exercise was limited by giving to the Leaders' Meeting additional rights, as representing the Societies, while matters of finance were placed more entirely under the control of the Circuit Quarterly Meetings in which laymen predominated. Thus, in 1785 and 1797, it was instituted that remarkable 'balance of power' which is a peculiarity of the system of Methodism.

The settlement was almost universally approved. Out of a membership of nearly 100,000, about 5000 persons who were desirous of a democratic form of government united themselves into a Society under the leadership of William Thom and Alexander Kilham, and became the Methodist Connexion.

12. Connexional system of Wesleyan Methodism.—Speaking of Methodism in the present time, we may say that the Wesleyan Methodist Church, the mother church of the Methodists, has pursued its course along the lines laid down by John Wesley. The Connexional system is intact. The Circuits consist of the several Societies within their boundaries, the Districts are composed of the Circuits in their areas, and the Connexion is the aggregate of all the Societies, Circuits, and Districts in the countries in which Methodism is established in association with the Conference. This great organization is kept together by the unifying power of the Conference. Every attempt to introduce the principle of 'Circuit independency' has been met with successful resistance. It is impossible here to describe minutely the organization of Wesleyan Methodism. It is the result not only of the work of Wesley, but of the continuance of his work, done in his spirit, for more than a hundred years since his death. We may briefly note some of the changes which have taken place in the Conference since the Deed Poll was signed in 1784. The specific naming of the 100 preachers who composed the Conference produced excitement and ill-feeling, especially among preachers who were not nominated in the Deed. In 1791 the Conference, in accordance with Wesley's request conveyed in a letter, resolved that all preachers who were 'in full connexion' should enjoy every privilege that the members of the Conference enjoyed. That resolution almost completely allayed the ill-feeling that had been excited. The Conference consists of 300 ministers and 300 laymen. The resolutions pass are made valid by the confirming vote of the 'Legal Conference.' Some of the lay-representatives are chosen by the ministers and laymen present at the preceding Conference; but the greater number are elected by the separate vote of the laymen assembled in the representative Sessions of the District Synods held in May. These Sessions have been much enlarged, not only by the inclusion of many laymen who are members of District sub-committees, but also by the addition of the representatives of the Circuit Quarterly Meetings, of which, in their turn, have been greatly enlarged through alterations made in the composition of the Leaders' Meetings. The most striking of the alterations in the Leaders' Meetings is the addition to them of persons elected by the Conference to represent the members of the Society. The votes for the laymen and the duly qualified women chosen to attend the Conference represent a wide constituency. As there is a permanent ministerial element in the Representative Session of the Conference consisting, for instance, of members of the 'Humble Band' born about the year 1790, it is composed of the lay-treasurers of certain funds, along with 48 laymen elected by the votes of ministers and laymen present at the Conference. One-third of this number retire annually, and are not eligible for immediate re-election. In the Representative Session it is estimated that nearly 60 members of the Hundred will be present, a quorum of 40 being necessary for the transaction of business, according to the Deed Poll. To these are added several ministerial officials such as chairmen of Districts who are not members of the Hundred, 8 representatives of foreign missionaries, and others. The rest of the 300 ministers are chosen by the votes of the ministers in the Pastoral Session of each Synod in Great Britain, the number of ministerial and lay-representatives being governed by the principle of proportion of members of Society in the several Districts. The Representative Session of the Conference deals with all questions in which the Connexion is interested, and reviews the work done by the committees of ministers and laymen that have managed the affairs of the several Church 'Departments' during the year. New legislation may also be proposed on subjects within the province of the Conference, but such legislation is impossible until it has been submitted to the Representative Sessions of the Districts for consideration and report.

At the close of the Representative Session the Pastoral Session is held. This consists of the 'Legal Hundred,' the ministers who have been members of the Representative Session that year, and other ministers who have received the permission of their Synods to attend. When the scheme of lay-representation was adopted, it was agreed that all questions of doctrine, discipline, and the stationing of ministers should be reserved to the Pastoral Session, as also the management of the Book Room, the great publishing department of Methodism. The Pastoral Session exercises strict discipline over the ministers of the Connexion, and also considers all appeals in cases of discipline affecting members. The Circuit Quarterly Meetings have a right to memorialize the Conference, in both its sessions. Although ministers have been allowed to propose alterations in Methodist rules and regulations, when 'provisional legislation' is passed by the Conference in its Pastoral Session, that legislation has to be submitted for the consideration of the ministers of the Districts when assembled in the Pastoral Session of the Synods.

14. Home and Foreign Missions.—The work of Methodism has always been deemed of greater importance than its machinery. The wide-spread character of that work may be judged from the Minutes of Conference annually published. The work of the Home and the Foreign Missionary departments is worthy of special consideration. In recent years the evangelical campaign has been quickened by the erection of large Mission Halls in some of the principal towns of England. The example of renewed evangelistic enterprise in Wesleyan Methodism has made a deep impression on the Churches of Great Britain and other countries. The Foreign Mission meetings are not annual, but are held in the years from 1759. The work gradually increased. In 1785 appointments in the United States, Nova Scotia, Newfoundland, and Antigua appear in the Minutes of Conference. Working in connexion with the Conference to represent the leaders of Methodist Foreign Missionary enterprise until his death in 1813. In that year the work became
more completely organized, and the present Wesleyan Methodist Missionary Society was formed. In estimating the importance of the work done by that Society, it must be remembered that its present operations are carried on in a field that is only a fragment of the area once occupied. Independent and affiliated Conferences formed in the United States, Canada, France, S. Africa, and Australia have taken over almost all the work which was begun by the British Conference in the several countries mentioned.

15. Statistics of world Methodism.—It is only at the decennial meetings of the Ecumenical Conference when representatives of the Methodist Churches in both hemispheres meet, that an idea of the wide-spread influence of Methodism can be gained. These Conferences were instituted in 1881, the latest being held in Toronto in 1911. The carefully compiled statistics presented to that Conference speak for themselves.

It was estimated that the members and adherents of the Methodist Churches, in 1910, numbered, in the Eastern Section, 6,794,471, and, in the Western Section, 25,034,076, making a total of 32,228,547.

The statistical tables show that there are many separate Methodist Churches in the world. It must, however, be understood that the divisions that have occurred have not been caused by doctrinal differences; in almost all cases they have arisen from varying opinions concerning ecclesiastical constitution and administration. In the Western Section the 'colour question' has had an influence on the number of churches.

16. Methodist Episcopal Churches.—The success
of Methodism in the United States of America has been remarkable. We have mentioned some facts concerning its origin in 1739, and the action of Wesley in ordaining Coke as a Superintendent, and two other preachers as presbyters, in 1784. Wesley was followed in this line of action by Francis Asbury as a Superintendent. Asbury's work and influence have left a deep mark on Methodism in the United States. Like Wesley, he was a man of high spiritual tone. He rivalled Wesley in evangelistic enterprise, and gathered around him men who possessed the courage and devotion of the pioneer preacher. The War of Independence had made the whole country the sphere of the most enterprising Evangelism. In settled towns, in clusters of huts, in lonely backwoods, the Methodist preacher became a familiar figure, as he preached and formed and visited his little Societies. The growth of the churches in the immense areas in which the pioneers worked necessitated the hospital supervision not only of the Superintendents but also of *Presiding Elders,* who rode litter and thither, constantly giving inspiration and guidance to the scattered evangelists and churches. For a considerable time the work was in close connection with the British Conference, and on lines similar to those followed in England. A Conference was held in the States in 1773, at which time there were 6 Circuits, 19 preachers, and 160 members. From these small beginnings American Methodism has advanced to its present position.

The Methodist Episcopal Church and the Methodist Episcopal Church (South) occupy the chief positions among the Methodist Churches of the United States. They separated in 1844, in consequence of a dispute as to the election of a Bishop, but the dispute has now been settled. A General Conference is held every four years composed of delegates from all the Annual Conferences in the States. It consists of pastors and lay-delegates, the admission of the latter into the General Conference being by general vote of the Annual Conferences, each of which is entitled to one delegate at least. The General Conference fixes the ratio of representation and the manner of election. Every four years a Lay Electoral Conference is constituted within the bounds of each Annual Conference for the purpose of voting on constitutional changes to be submitted to the General Conference, which is the supreme legislative assembly. The Lay Electoral Conference is composed of lay-members; one from each pastoral charge, chosen by the lay-members of each charge over twenty-one years of age, in such manner as the General Conference has determined. Each Lay Electoral Conference is entitled to elect as many lay-delegates to the General Conference as there are ministerial delegates from the Annual Conference. In the General Conference the 'General Superintendents,' as the bishops are called in the Discipline of the Methodist Episcopal Church, and are elected by the General Conference, and are the heads of the circuit, and preside over the President of the General Conference. In the Annual Conference the 'General Superintendents,' as the bishops are called in the Discipline of the Methodist Episcopal Church, are elected by the members of the conference as they determine; but if no General Superintendent is present, the Conference elects one of its other members to preside *pro tempore.* The presence of two-thirds of the whole number of delegates constitutes a quorum for the transaction of business. The General Conference elects by ballot as many General Superintendents as it may deem necessary from among the 'Travelling Elders,' as the former Presiding Elders are now called. The Conference has full power to make rules and regulations for the Church, under the limitations and the ordinary rules of the *Discipline.* The principal restrictions are that it cannot revoke, alter, or change the *Articles of Religion,* which were prepared by John Wesley, and which first appeared in The Sunday Service of the Methodists in the United States of America, published in 1784. Nor can the General Conference establish any new standards, or rules of doctrine, contrary to the present existing and established standards. In addition, it cannot change or alter any part or rule of government so as to do away with episcopacy or destroy the plan of General Superintendency. It is also unable to revoke or change the *General Rules* of the Church. Those *Rules* are, with slight variations, the *Rules of the Society of the People called Methodists,* as drawn up by John Wesley in 1743. As to the procedure of the General Conference, the *Discipline* shows that, in voting, the ministers and laymen vote together; but it is provided that a question may be put to a vote in small group, or it may be referred to a committee when it is requested by one-third of either order of delegates present and voting. In all cases of separate voting the concurrence of the two orders is required for the adoption of the proposed measure. If the proposal concerns a change of the constitution, a vote of two-thirds of the General Conference is required. Such, in bare outline, is a sketch of some of the outstanding features of the organization of the Methodist Episcopal Church, but it should be supplemented by a study of the book "The Methodists in America," by J. H. Rigg (1912). In J. H. Rigg's *Comparative View of Church Organizations* there is a chapter on American Episcopalian Methodism which contains important information enabling the student to compare the constitution of the Mother Church of Great Britain with that of the Methodist Churches in the United States. For many years the visits of fraternal delegates, representing the Conferences of Great Britain and Ireland and America, have been an agreeable feature of the annual meetings of the Methodists of the two countries. The American Methodists hold a conspicuous position among the Churches devoted to the work of Foreign Missions.

17. Early secessions.—We have mentioned the first important one. The Methodist Church in Great Britain was divided in 1792 into the Methodist Church and the Primitive Methodist Church in Great Britain. In 1815 a Society, consisting of 22 persons, was formed by William O'Brien in Devonshire out of which arose the Bible Christian Church. The reasons for the institution of these two Societies were similar. In the former case Hugh Bourne and William Clowes, two earnest evangelists, were indisposed to submit to the restrictions of Methodist discipline and manner of work. They sought and found a sphere in which they could have a larger freedom. They made no attempt to agitate the Church from which they were separated. They gathered their members out of the neglected classes, and displayed in their work much of the spirit and character of the early missionaries. The same may be said of William O'Brien, the founder of the Bible Christian Church.

18. Primitive Methodist Church.—Next to the Wesleyan Methodists, the Primitive Methodists hold the strongest position and strength. In 1844 it contained 30,000 members, and the constitution bears, in several points, a strong re-
semblance to that of the Wesleyan Methodist Church, but there is a marked difference in the composition of the Conference. H. B. Kendall, in his *Handbook of Primitive Methodist Church Principles and Policy* (London, 1913), says:

50. The Deed provides that numbers shall be formed into Classes, Societies, Circuits, and Districts, and that Societies shall have their Leaders' Meetings, and Circuits their Connexional Meetings (p. 91).

Dealing with the functions of the Annual Conference, he sets forth the provisions of the Primitive Methodist Deed Poll. First of all, the Conference is to be composed of 12 Permanent Members, irremovable from office except for incompetence or incapacity. Next, it is to be composed of other persons not exceeding 4, whose appointment is to be made by a by-law of the Conference. These may be ministers or laymen, official or unofficial members. Lastly, the Conference is also composed of delegates, who have been elected thereto by their District Meetings, one-third of whom must be travelling preachers and two-thirds laymen, and must be appointed who are not a local preacher, or a class leader, or a Circuit steward. After long consideration and much discussion it was decided by the Conference of 1876 that the members should be sent by each to the highest court should be determined by the number of members in the District, 3000 being made the unit for one minister and two laymen (p. 614.). Kendall is of opinion that the Primitive Methodist policy is a 'modified Presbyterianism,' one evidence of the fact being that the Church is governed by ministers and lay-officials, and that all ministers are in theory equal, the Superintendent differing from his colleagues only in function and responsibility (p. 622). Up to the present the Primitive Methodist Church have not shown any strong desire for corporate union with other Methodist Churches. Their Foreign Missionary work is confined to Africa.

20. Smaller Methodist Churches.—In 1827, 1835, and 1849 there were secessions from the Wesleyan Methodist Church resulting from serious controversies concerning questions of government and administration. The first was occasioned by the introduction of an oath into the chapel of the chapel in Leeds. In its course constitutional questions were raised touching the power of the Conference, which re-emerged at a later stage. In 1835 the creation of the Theological Institution for the training of church officers was contested by the ministers, from whom it was claimed that the Church was composed of men who had been trained at the university and that the decision of the United Methodist Church may be studied in the *General Rules*, approved by the Conference in September 1907, a new edition of which was published in 1911. Foreign Missionary work is being done by this Church in China, Africa, Central America, and the W. Indies.

21. The Wesleyan Methodist Church.—In 1827, 1835, and 1849 there were secessions from the Wesleyan Methodist Church resulting from serious controversies concerning questions of government and administration. The first was occasioned by the introduction of an oath into the chapel of the chapel in Leeds. In its course constitutional questions were raised touching the power of the Conference, which re-emerged at a later stage. In 1835 the creation of the Theological Institution for the training of church officers was contested by the ministers, from whom it was claimed that the decision of the United Methodist Church may be studied in the *General Rules*, approved by the Conference in September 1907, a new edition of which was published in 1911. Foreign Missionary work is being done by this Church in China, Africa, Central America, and the W. Indies.

Although sharply divided by constitutional distinctions, the Methodists of England have so much in common, especially in their practical work, that they are being drawn nearer together. The Ecumenical and other Conferences have done much to promote the spirit of fraternity among them. In Canada and other countries the Methodist Churches have united, and Methodist reunion in England is often sympathetically discussed.

POLLY, ETC.—Minutes of the Forty-Fourth Conference of the People called Methodists, published annually, 1744-1914; Reports of Proceedings of Ecumenical Methodist Conferences, 1881, 1901, 1903; Reports of the Conference as it meets in Great Britain with Statements concerning Church Membership, published by direction of Conference (1913); C. Wansborough, *Handbook and Index to the Records of the Conference*, 1859; *The Sunday Service of the Methodists*, 1874; *The Book of Public Prayers and Services for the Use of the People called Methodists*, 1853; *Doctrine and Discipline of the Methodist
METHODISM

1. Methodism and Deism.—A rationalistic deism then largely prevailed amongst educated men—a system of thought which fenced God off from mankind behind the laws of nature and bounded human knowledge by the limits of sense-perception and logical reason. The Deity was treated as an absentee from His world; and men consequently became godless in practice as in thought. The Revival swept the country; and the hundreds of thousands that were realized in living contact with His children. The sense of the divine was recovered; the transcendent being again innumerable to consciousness. Accordingly, 'the life of God in the souls of men' was Wesley's depiction of regeneration; 'the work of God' was the habitual Methodist designation for the Revival, because in its phenomena God's immediate action upon human nature was discerned. Hence the emphasis laid in the teaching of the Wesleys on 'living upon the Word of God.' The doctrine of assurance—the personal certainty of the forgiveness of sins and of restored sonship toward God — was the outstanding feature of original Methodism. To most Churchmen of the time professions of this kind appeared a strange 'enthusiasm' (see G. Lavinson, The Enthusiasm of Methodists and Popish Considered, London, 1853); that a man might know his sins forgiven was deemed a dangerous presumption. Along with the Fatherhood of God, the Divine Sonship, and the Spirit came to be freshly recognized; an arrest was made of the Socinianism which by the middle of the 18th century was rife among both Anglicans and Dissenters.

2. Methodism and Calvinism.—The Methodist forces were soon divided on the question of predestination. Predestinarianism, like deism, magnifies the transcendency of God at the expense of His immanence, reducing finite will to an illusion and making man, even in his acceptance of divine grace, the passive creature instead of the consenting child of God. The Puritan theology, in its prevailing strain, was intensely Calvinist; and so, it Whitfield and Wesley, and the Evangelical clergy generally, adhered, while the Wesleys espoused Arminian views upon election and grace, in this respect inheriting the High Anglican tradition. But the spring of their universalism lay in the sense of God's mercy to mankind revealed within their own breast and interpreted in the broad light of the NT; they sang:

'The boundless grace that found out me
For every soul of man is free.'

They could not preach that God 'will all men to be saved' under the reservation that He has doomed some, of His mere pleasure, to perdition; as Christ's ambassadors, they cried, without any misgiving, 'Ye all may come, whoever will!' The
Wesleyan teaching lifted a cloud from the character of God; it brought salvation to thousands who had remained outside the Established Church until then. John Wesley vehemently contended against another tenet of Calvinism, maintained by contemporary Evangelicals—that of the necessary inheritance of sin in the redeemed. The current orthodoxy limited the salvation of Christ in the degree of its attainability as well as in the persons by whom it is attainable. John Wesley arrived at the conviction that the man who is 'in Christ' may become even on earth a thoroughly 'new creature,' that it is possible to be actually 'saved from all sin' through ‘the blood of Jesus’ (1 Jn 1:9)—famed (as he would say) ‘from the last remains of sin’; on the strength of God's promises and the warrant of experience, he taught his people to seek and expect the power to keep continually the two commandments of Jesus and so to become altogether holy and happy. To this effect he used to quote the Communion Prayer, 'that we may perfectly love thee, and worthily magnify thy holy Name,' insisting that this in theory, if not in practice, beyond His giving. From the moment of conversion the Methodist was set at war with 'inbred sin,' inspired by the prospect of its extirpation. The Class Meeting, with this ideal before it, became a school of self-command. It proved an abiding spring of spiritual ardour and a powerful spur to moral endeavour. Sometimes the extravagances and self-delusions of unbalanced minds discredited the doctrine of Perfect Love; to succeed in this theory, in God's practice upon His giving. But the sight of the goal of faith given to Methodism quickened and sustained the race for multitudes. The endurance of the Wesleyan Revival is due to the spiritual breadth and sanity of its programme. The spirit of Methodism was to breed a clear understanding of the words of Methodism as being 'to spread Scriptural Holiness throughout the land.' The hymns of Charles Wesley are the best exposition of Methodism in the fundamental respects which we have stated; they served as its keenest weapon in the arduous conflict which it waged with Calvinism. Along with the hymns, the doctrine which inspired them has beenavened the whole Methodist Church.

3. Methodism and Moravianism—Methodism owes a peculiar debt to the Moravian Brethren; their hand led the two Wesleys out of 'the legal wilderness' into the liberty of the sons of God. From this simple people, as well as from William Law and John Newton, John Wesley learned deep lessons respecting faith and inward religion. But there came here also a parting of the ways. Leading members of the Unitas Fratrum in England, and others of Wesley's early associates, were infected with the mystical tendency to despise the external duties of religion. Regarding the inner light and the Holy Spirit's witness as the sum of Christianity, men of this persuasion treated fellowship and Church order as superfluities; some of them even denied the doctrine of Antinomianism. Among the latter the maxim was current, which Wesley denounces as an 'enthusiastic doctrine of devils,' that 'we are not to do good unless our hearts are free to it'—in other words, that the soul be free to do all things without the hindrance of any rule or authority. This was a temporary, but widely operative, aberration in Moravianism. In this outbreak Wesley saw the peril of the Revival; he raised a barrier against it in the 'Rules of Society' (dated 1st May 1745), which bear strongly upon private and social duty, and by the mutual oversight secured through the Class Meeting. Thus the experimental in religion was balanced by the practical; inward holiness found in outward holiness its complement and safeguard. Methodism recognized that, while salvation is through faith alone, a true faith 'works by love'; it enforced the teaching of St. James by side with that of St. Paul, and found that the two are consistent. Their home-training and Anglican schooling stood the Wesleys in good stead at this crisis.

4. Methodism and the Church of England.—John and Charles Wesley were sons and ministers of the Church of England, and taught (as they supposed) her true doctrine. John Wesley quoted the Articles and Homilies in vindication of his most opposed tenets. For the guidance of his people he revised the Thirty-nine Articles, reducing their number by omission and abbreviation to 23 (so printed in the Wesleyan Methodist Service Book): the changes are in many instances significant. There disappear, with others, artt. viii. ('Of the Three Creeds'), xii. ('Of Works before Justification'), xv. ('Of Christ alone without Sin'), xxvii. ('Of Predestination and Election'), xx, and xxi. ('Of the Authority of the Church' and 'Of the Authority of General Councils'), xxviii. ('Of Ministering in the Congregation'), and xxix. ('Of Excommunicating'). In those who xvi. becomes 'Sin after Justification' instead of 'Sin after Baptism,' and 'Ministers' is substituted for 'Priests' in xxi.; 'Traditions' is paraphrased by 'Rites and Ceremonies' in xxix., the substance of the art. being perfect Love; and 'Liberty' in detail. 'The Civil Magistrates' (xxvii.) Wesley turns into 'the Rulers of the British Dominions,' adding 'his Parliament' to 'the King's Majesty, merging 'Ecclesiastical and Civil' in 'all Estates,' and concluding with 'the Magistrate.' In short, he ignores the Royal Supremacy over the Church. The artt. on 'the Sacraments' and 'the Lord's Supper' are reproduced almost verbatim; but that 'Of Baptism' is curtailed, the definition ending with the words: 'the opposite of the statement that by baptism persons are 'grafted into the Church' is avoided, while the clause commending 'the Baptism of young Children' is retained. Art. ix., 'Of Original or Birth-Sin, is also cut down materially: the Wesleyan teaching on Sanatization appeared to conflict with the assertion that 'this infection of nature doth remain, yea in them that are regenerated. The reference to 'flesh' and 'bones' is dropped from the art. II. the Resurrection of Christ.' The general effect of the recasting is to emphasize the Protestant and Evangelical character of the formulary, to set aside the principle of State-establishment, and to eliminate Calvinism.

5. Doctrinal standards.—Neither the Articles of Religion nor any other Anglican document or dogmatic creed was laid down by Wesley as the ground of Christian fellowship. The revised Articles of Religion were, however, from the first incorporated, with certain necessary local adaptations, in the constitution of the Methodist Episcopal Church of America (see Doctrine and Discipline, etc., of this Church, pp. 21-26). 'There is only one condition previously required, the desire to enter these [the Methodist] Societies, viz., a desire to flee from the wrath to come, to be saved from their sins.' This 'narrow gate' leads into the true way: the earnest seeker of salvation approves of Christ and the gospel as 'the true and only way'; a deep repentance affords the best guarantee for orthodoxy. To his preachers, however, Wesley prescribed his Notes on the 47 and the first four volumes of Sermons (ed. 1757-88, containing 41 Discourses) for the basis of a common understanding. These standards are introduced into the Model Deed regulating the trusts upon which Wesleyan Methodist church-fabrics are secured, and into the ordination vows of the ministers. Every Local Preacher also declares his consent to 'the general doctrine' contained in the above writings as being...
MEXICANS (Ancient)

GEORGE G. FINDLAY.

MEXICANS (Ancient).—The territory of what is now the Republic of Mexico was inhabited in ancient times—as in part it still is—by a great diversity of nations and tribes. The plains of Northern Mexico were the domain of tribes of a low culture stage, living mostly without fixed abode, relying chiefly on the produce of the chase, and to some extent on agriculture. These tribes, of whom we know very little, received from the Mexicans the general name of "tribes," and the more cultivated nations were concentrated in the central highlands, and in the ravines, valleys, and coast-planes of Southern Mexico. Though belonging to different linguistic stocks, and differentiated as to their art, science, and political power, they were, nevertheless, identical in the special traits of their civilization, forming, so to speak, one great geographical culture province. The name Mexicans belongs properly to the inhabitants of the city of Mexico or Tenochtitlan, who were otherwise called Aztecs, but the designation was extended to all tribes and tribal factions who spoke the same idiom, and were known to the citizens of Mexico as México and Tenochtitlan, i.e., "speaking intelligibly." Their abodes in historical times were the central highlands, the Federal District, the States of Mexico, Puebla, and Morelos, and the territory of Tuxpana, where they lived intermingled with fractions of the Otomi nation, with Mazas, Matlatzincas, Popohcas, and other primitive nations. From that central home parts of the Mexican nation emigrated, in pre-historic times, spreading as far as Guatemala, Son Salvador, and the coasts and islands of the great lake of Nicaragua. Those were the tribes particularly connected with the mythical name of Tolefes. To the Maya-speaking people of Guatemala these emigrants were known...
by the name of Yaqui, which seems to be but another name of the Toltecs, who were commonly designated by the Mexicans simply by Yaque, 'those who went to the rising sun.' For all these tribes, undoubtedly, a long succession of ages of cultural development must be taken into account, since their civilization, at the time of the Conquest, might have equaled, at least in many respects, that of the ancient nations of the other side of the globe. Their religion had reached a correspondingly advanced stage of development, and was very elaborate, while their pantheon was unusually rich.

1. Religious ideas.—As with all the other nations of the world, the religious faith and the metaphysical ideas of the Mexicans had in part developed from attempts to grasp the connexion between the things of this world according to the principle of causality; in part they were the outcome of religious practice, and the crystallization of magic ceremonies, intended to produce certain effects by way of imitation. The great problems that were the essence of the human mind had to do with the shape of the moon, and the varying location of the 'great star'—the morning star—have been treated by the Mexicans in a great number of mythical traditions.

The most prominent and the most widely worshipped Mexican god, of whom the largest number of tales and myths were reported, Quetzalcoatl, the 'feathered serpe,' the creator of men, the wind-god of the latter world, who did nothing else than a mythical personification of the moon, who in her decrease travels to the east, i.e., draws every day nearer to the sun, and finally dies away in the rays of the rising sun. It was believed that, when the moon, or the sun, was transformed into the morning star. The counterpart of this deity, Tezcatlipoca, the young warrior, who was regarded as the watching eye, the god who sees and punishes all kinds of sin, and the sorcerer who roams about in the night, is, in reality, the new, waxing moon who makes her appearance in the evening sky, and will travel on in the night, as the eye of the night. On the other hand, deities like Tonatiuh, 'sun-god,' have developed from certain religious practices, e.g., the placing of maize-stalks or young maize-ears in the houses, in order to get rich crops. Xipe Totec, the 'flayed,' the god who wears a human skin, the high-praised and malevolent, has probably originated from well-known ceremonies celebrated in the beginning of the year in the time of sowing, in order to bring about the re-birth of vegetation. The two classes of deified beings met in the one great idea that the celestial powers, the sun, the moon, and the god of thunder and lightning, were at the same time the promoters of the growth and ripening of the fruit, and in the conviction that the new-born god (the rising sun) and the increasing agency of the waxing moon were the causes of all birth and growth and of all that maintains and keeps up human life, and that they were the source of human life itself.

The spirits of the dead are to be added to these two classes—the ancestors, the founders of the tribe who had died in ancient times, and who had lived when the sun had not yet made its appearance in the sky. These deified ancestors were believed to awaken and to live in the night and to appear, occasionally, were identified with the stars, Xiuhtecuti, the god of fire, who had likewise existed in the 'time of darkness and night,' before the birth of the sun, and was, accordingly, named Oneuecatl, the 'old god,' because in some way the prototype of these ancestral gods.

2. Origin of the world.—The Mexicans believed that heaven, earth, and the sun had not been created at once, but that four ages of a somewhat imperfect creation preceded the formation of the present world. The first of these primitive creations was named Ocelotlantinuih, 'jaguar-sun.' This was the sun of darkness, or sun of the earth, for the jaguar was considered to be the animal that swallowed in times of darkness, and, as the earth was the realm of darkness, the jaguar was identified with the earth. This first came to an end by darkness, when the jaguars were eating men. The second period was called Atontatlinuih, 'wind-sun.' This period ended by great revolving storms, and men were transformed into birds. The third period had the name Quinahtotlinuih, 'rain-sun,' meaning 'fire-rain.' In this period fire rained from the sky, volcanic ashes and lapilli were strewn over the earth, and red flesh-ellips arose. Men were transformed into birds. The fourth period was called Atonatlinuih, 'water-sun.' In this period a great deluge took place, men were transformed into fishes, and the earth was raised by the joint action of the gods Quetzalcoatl and Tezcatlipoca, and the earth was revived. It was only then, in the year called ce tochtli, 'one rabbit,' that the present world was created. Its name is Quinotontliinuih or 'rain-water,' because this present world is to be destroyed by earthquakes. One year after this creation, in the year one coatl, 'two reed,' the god Mixcoatl, 'cloud-snake,' the god of the North—or Tezcatlipoca, in the form of a wolf—drew fire out of the wooden sticks, kindled fire by means of the tire-drill. Then men were created, and war was begun, in order that there might be human hearts at hand for nourishing the sun. The first who was killed in war, and captured by the enemy, was offered on the sacrificial stone, was Xochiquetzal, the goddess of the moon, for it is the moon who dies every month in conjunction with the sun, and by her death gives life and strength to the rising sun.

Men being created, and war being commenced, there was opportunity for the creation of the sun. At the end of the first half of the first Mexican cycle of 52 years, in the year 'thirteen reed,' the sun was created.
